For the composers of the first generation after Beethoven, it was the works of Haydn and Mozart in particular, along with Beethoven's op.18, that constituted the canon of the genre, with the later addition of Mendelssohn's three quartets of op.44 (1837–8). These tied in with a 'classicizing' approach, taking its lead from the quartet style of Haydn and Mozart with an attempt to conflate the principle of the 'song without words' with classical techniques of motivic working. Significantly, no place was found for Mendelssohn's earlier string quartets, opp.12 (1829) and 13 (1827), which explicitly relate to Beethoven's late quartets (as well as his opp.74 and 95) in their technical extremism and experimentation, or his op.80 (1847), which marks a withdrawal into subjective introspection notwithstanding its classical formal conception. The E♭ quartet of 1823 does not come into consideration because it hardly rates serious comparison with Mendelssohn's own later quartets, any more than does op.81, the posthumous compilation of quartet movements from various periods of his career, assembled in 1850.

That the string quartets immediately after Beethoven show so few traces of him – indeed show a noticeable distance from him – is one of the most characteristic elements of the genre across the middle years of the century, alongside the increasing technical complexity of detail and the tendency to move towards compositional extremism. Schumann was strangely wary of orientating himself by Beethoven's example in the three string quartets of his op.41 (1842), considering how hard he strove to do so in his symphonies. He is known to have studied Haydn's and Mozart's quartets while composing his own.

He in fact sought ways of superseding thematic development and the form it generates and to transfer to the string quartet the poetic, associative language of detail that he developed in his piano music, notably in the 'character' variations and the use of the variation to develop nuclear thematic ideas. Brahms's incursion in the development of the string quartet around 1870 marks a new stage in the genre's history, even if he didn't explicitly take up from where Beethoven had left off.

The combined effect of sociological and musical phenomena is illustrated by the spread, from about 1830, of professional quartets and chamber music societies. Examples include the Quatuor Armingaud, founded by Jules Armingaud (1820–1900), the Gewandhaus Quartet (1836–73), the Dresden String Quartet (1840–60), the quartets founded in New York by Theodor Eisfeld (1816–82) and Boston by W.H. Schultze, the Riga String Quartet (founded 1850), the Hellmesberger Quartet (1849–91), the Müller Quartet (1855–73), the Trieste String Quartet (1858–1901), the Florentine String Quartet (1866–80), the Joachim Quartet (1869–1907), the Russian quartet ensembles attached to local branches of the imperial music societies, and the chamber music societies of William Mason (1829–1908) and Theodor Thomas (1835–1905) in New York, the Harvard Musical Association (recital series from 1844), the London Quartet Society (from 1846), and the Società del Quartetto founded in various Italian cities from 1850 onwards.

Hand in hand with these new developments went an increasing professionalization. Although this particular type of music-making had originated in aristocratic music rooms and then entered the middle-class and domestic sphere, the transition to a more public environment did not mean the death of its intimate character. Even after 1830, intimacy remained a defining characteristic of chamber music, and to no branch did that apply more forcibly than the string quartet. This raises the issue of the aesthetic difference between Beethoven's quartets and those of the following generations. Even in his last quartets, Beethoven wanted discourse and a public hearing, whereas the composers after him wanted nothing of such 'superficial' values. The small recital room met the middle-class need for a space appropriate to the intimacy and esoteric nature of chamber music in both acoustics and atmosphere; when Adorno spoke of such a room as 'the site of a truce between music and society', he was addressing the element which, alongside the string quartet's advanced techniques, gives the genre its unique status.

These developments are generally seen to have first manifested themselves in the German-speaking countries. The Leipzig Conservatory, founded by Mendelssohn and his colleagues in 1843, played a role in this through the special attraction it held for composers from America, Great Britain and Scandinavia. One group of composers belonged almost to Beethoven's time, among whom the most important and productive were Ferdinand Ries, with a total of 25 string quartets, Bernhard Romberg with 11, Carl Reissiger with eight and Louis Spohr, who published 30 string quartets and six *quatuors brillants* between 1808 and 1857 (his two last, from 1857, remain unpublished). Spohr's increasingly extensive work with motivic cells and, in the late quartets, the integration of concertante elements and the masterly handling of formal development are notable features.

In the circle of Mendelssohn and Schumann, and among those immediately following them, a generation of composers produced some outstanding works. The most significant include Robert Volkmann, whose string quartets (one early, unpublished work and six others, 1846–61) enjoyed great popularity until the early 20th century, and J.J. Raff (five quartets, 1855–67). Four quartets survive by Norbert Burgmüller (opp.4, 7, 9 and 14, of which only the last was published, in 1844) but they are almost completely forgotten. That is also true of the one by Fanny Hensel Mendelssohn (in E♭, 1834; published 1988), which explores new ways of formal development, eschewing a sonata-form first movement. Hermann Hirschbach owed the attention he received early in his career above all to his 13 string quartets, especially for their radically 'poetic' musical language. Julius Schapler's *Preisquartett* (published 1841) is out of the ordinary and was well received by Schumann. Hans von Bülow's only quartet (before 1850, unpublished) and Anton Bruckner's 1862 quartet were explicitly composed for study. Although many of them remain unpublished, the string quartets of the following meet all the demands of the genre: J.J. Abert (op.25, published 1864), Ignaz Assmayr (at least three works, *c*1850–51), Ferdinand Böhme (at least five, *c*1850–60), Max Bruch (three, 1851–60), Karl Goldmark (op.8, 1860), Karl G.P. Grädener (at least three, published 1861), Johann Herbeck (at least three, *c*1858–60), Friedrich Kiel (op.53, 1868), the three Franz brothers (at least six, 1843–50), Ignaz (at least seven) and Vincenz Lachner (at least three, published 1856–75), Bernhard Molique (eight, published 1841–54), Carl Reinecke (six, 1843–90), J.C.F. Schneider (at least ten) and August Walter (three, 1845). There are also quartets by H.G. Goetz, Ferdinand Hiller, Joseph Mayseder, Otto Nicolai, Benedikt Randhartinger, E.F. Richter, Alexander Ritter, G.A. Schmitt, C.E. Schuberth, Ludwig Schuberth, Simon Sechter, C.G.W. Taubert and Hugo Ulrich. Some of these composers' quartets hover between originality and academicism, characteristic of their time.

In France the production of string quartets followed largely in the tradition of Viennese Classicism, as illustrated by the works of Napoléon-Henri Reber, A.P.F. Boëly and J.-B.-C. Dancla. Dancla founded a quartet ensemble in 1838 and composed no fewer than 14 string quartets between 1840 and 1900. Georges Onslow took a different path, gaining recognition well beyond France with his 36 quartets printed between 1810 and 1840 (Breitkopf & Härtel began publishing a 'complete edition' in score and parts in 1830). The early ones seem akin to exercises in style, but the later display a wealth of formal and harmonic invention. Edouard Lalo composed one remarkable quartet (op.19, 1859, revised 1880 as op.45). As founder-member and viola of the Quatuor Armingaud, which was dedicated to the German tradition, Lalo knew the works of the Viennese Classical school as well as those of Mendelssohn and Schumann. In his own quartet, this familiarity is demonstrated above all by the first movement, reminiscent of Haydn and Mozart, but the second shows the influence of Mendelssohn's 'song-without-words' style. Despite the relatively large number of string quartets composed in France, no distinctively French string quartet tradition developed until 1870; the influence of the Viennese Classical masters and Mendelssohn remained dominant. An *ars gallica*, independent of the

Germano-Austrian tradition, had to await the time of César Franck and his circle, beginning around 1870.

Italy provides an interesting example of the failure of any native quartet tradition to develop, despite the foundation of many societies devoted to chamber music and the string quartet and even despite the composition of a respectable body of work. Such composers as Ferdinando Giorgetti (three string quartets, 1851–6), Giovanni Pacini (six, 1858–65) and Antonio Bazzini (five, 1864–92) orientated themselves by the tradition of Viennese Classicism and Mendelssohn. Verdi's String Quartet in E minor (1877) did not change the situation. Things were similar in the Netherlands, where the leading composer of string quartets was J.J.H. Verhulst.

England, especially perhaps in the 50 examples composed by John Lodge Ellerton between the 1840s and the 1860s, bears witness to Mendelssohn's influence and to an affinity for a musical language at once academic and Romantic. The situation was little different in the USA, where string quartets were composed by Léopold Meignen, W.H. Fry, Charles C. Perkins, Frederic Ritter, George F. Bristow and J. Knowles Paine, but were neglected in public musical life by comparison with the symphony.

The countries of northern Europe gave chamber music a warm reception while only exceptionally paying attention to their own indigenous production. Friedrich Kuhlau in Denmark composed a significant string quartet (op.122, 1831) in which he amalgamated stylistic elements characteristic of Beethoven with elements of the *quatuor brillant*. He was followed in the genre by J.P.E. Hartmann (five works), P.A. Heise (six, 1852–7), C.F.E. Horneman (two, 1859 and 1861) and – the outstanding figure in this group – Niels Gade. Gade published only his op.63 (1888), however, not his quartets in F minor (1851) and E minor (no definitive version, 1877). Development in Norway was influenced by the Leipzig Conservatory, whose most prominent Norwegian alumni were Christian Sinding, Johann Svendsen and Edvard Grieg – although Svendsen was the only one to compose a wholly classicist string quartet in this period (op.1, 1865). The picture in Sweden is more varied, although most of the quartets by A.F. Lindblad (seven), Ludwig Norman (six) and Franz Berwald (three, 1818–49) remained unpublished. Berwald's early string quartets show a tendency towards irregular proportions, which he deliberately sought, presumably in an attempt to detach himself from the Viennese model, taking his lead instead from the *quatuor brillant*. After his year in Vienna the tendency became more radical, and shaking off the Viennese norm became a cause for Berwald, as the idiosyncratic formal conception of his E♭ quartet (1849) demonstrates. But the radicalism and modernity of Berwald's late quartets had no influence, as they were hardly ever performed and long remained unpublished (the E♭ work appeared only in 1885, the A♭– also 1849 – not until 1903).

It is noticeable that the Germano-Austrian tradition was adapted in varying degrees in almost all European countries. In Russia, folk music played an important role, as Glinka's chamber music demonstrates. His two quartets (D, 1824; F, 1830) are in the classical mould, however, to such an extent that they make an anachronistic impression in places. Anton Rubinstein's ten quartets (1852–80) are a contribution to set alongside Glinka's. His early quartets (op.17, 1852–3) are in the manner of Mendelssohn. A more independent treatment of form and the influence of Russian folk music assert themselves in the middle and later works (op.47, 1856; op.90, 1871; op.106, 1880). The genre's norms are still essentially intact in Rubinstein's quartets, despite the pull of national musical influences, as his conception of them all in cycles of two or three implies. Nikolay Afanas'yev was as prolific as Rubinstein, with 12 quartets, including 'Volga' in A minor and a 'Hebrew Quartet'.

The two most important Czech composers of string quartets in this period were Václav Veit and Antonín Dvořák. Smetana's two quartets, though influenced by Veit and Dvořák, were late works, composed after 1870. Given the political circumstances of the time, development in the Czech lands of the Habsburg monarchy, as in the Balkan provinces, was strongly influenced by Vienna. Veit published four string quartets between 1836 and 1840. A distinctively Czech quartet tradition evolved in several stages, not emerging fully until Dvořák's substantial contribution: his 14 string quartets (1862–95) are central to his output. His first quartet (op.2, 1862) shows him coming to terms with cyclic structures, under Mendelssohn's influence. It was followed by three without opus numbers (B♭, 1869; D, 1869–70; E minor, 1870), which show the influence of Liszt and Wagner. They are exceeded in their experimental radicalism by scarcely anything else Dvořák ever wrote, and might be said to threaten to dissolve traditional form and 'classical' quartet writing from within. That Dvořák thought of destroying these three works is understandable, given his retreat halfway back towards tradition in op.9 (1873), although Wagnerian influence is still apparent. His op.12 (1873) was probably left unfinished because it was superseded by op.16 (1874), in which Dvořák returned wholeheartedly to classical formal principles and clear thematic structures, which he combined with melodic features of Czech folk music. His later quartets (op.80, 1876; op.34, 1877–8; op.51, 1878–9; op.61, 1881) conform to the same model and intensify the input of national stylistic elements, but preserve the differentiations in texture and technique proper to chamber music. The influences of Schubert and Brahms can hardly be dismissed. Op.96 (1893), composed in the USA, probably owes its popularity in the present-day concert repertory to Dvořák's intentional simplicity and reining in of musical demands, such that he seems to have looked to Haydn as his model. The last two quartets (opp.105 and 106, 1895), a pair, especially with respect to style, are characterized by the subtle treatment of the medium, late Romantic elements in the harmonic and thematic development and an introspective musical language.

5. 1870–1900. Some impetus for the quartets of the 1870s and 80s must have come from performing ensembles that now began to proliferate. Dvořák wrote his E♭ Quartet (1878–9) for the Quartetto Fiorentino, a German-Italian group, and his C major (1881) for Joseph Hellmesberger's ensemble, which had been active since 1849; while Brahms's quartets were badgered out of him by Joseph Joachim, who also led a quartet. Perhaps by now, too, the historical distance of the classical core quartet repertory was no longer a problem but a solution, for nostalgia and respect for the past were part of the tone of the time. Beethoven's late quartets at last began to be admired (not least by Wagner), regularly played and eventually taken as models. But still the four-movement pattern was the norm, and Brahms's first two quartets,

forming his op.51 (1873), look back most intently to Beethoven's op.59 as well as to Schubert, Mendelssohn and Haydn, whose op.20 quartets he owned in autograph manuscript.

One difficulty with the quartet for Brahms and other composers of this period was that four parts seemed too few. Brahms published two string sextets and a piano quintet before his first quartets, and later turned to the quintet with added viola or clarinet. But constraint could be helpful. It pushed him to exploit multiple-stopping in the inner parts, especially in op.51 no.1, and enhanced the sense of striving in both these minor-mode works. Brahms's retirement from quartet writing, after the formally more adventurous op.67 (1876), may have been due to the medium's inconvenience, but could also have been prompted by the emergence of a more natural quartet composer, Dvořák, whose quartets (discussed in §3 above) tend to look back and forth between the Viennese tradition and folk music (notably in the most popular of them, op.96 in F, composed in the USA and using pentatonic themes).

Other quartets with local colour include Grieg's (1877–8). The rival claims of central high culture and nationalism were also felt in Russia, not least by Tchaikovsky, who published three independent quartets in the 1870s. Borodin's two abundantly tuneful quartets of 1874–81 suggest an easy facility (like Dvořák, he was a string player) and avoidance of the aesthetic high ground, a relaxation essayed elsewhere, in two somewhat later botanical sets – Dvořák's *Cypresses* (1887) and Puccini's *Crisantemi* (1890)—and in Wolf's *Italian Serenade* (1887). Lighter pieces were also written by several composers in Russia for the Friday recitals organized in St Petersburg from 1891 onwards by Belyayev; among his beneficiaries was Sergey Taneyev, author of six quartets (1890–1905) that nobly and elegantly espouse an idealized classicism.

Other composers were at last starting to embrace late Beethoven – even Borodin, who included in his no.1 a theme from Beethoven's op.130. Wolf responded more deeply to late Beethoven in his huge D minor Quartet (1878–84), where the response is inseparable from an autobiographical urgency. In Smetana's two quartets the autobiography is explicit, especially in no.1 (1876), subtitled 'From my Life'. Raff – a more lightweight composer, and perhaps the last to publish a set of three quartets, his op.192 of 1874 – also wrote to a programme in the middle member of this set, 'Die schöne Müllerin', where the story is told in six movements, while his op.192 no.1 is in the form of a Bach suite. Generally, though, the prestige of its classics kept the quartet from venturing far into programme music or alternative forms.

In Paris, Beethoven's last quartets were being revived by the Maurin and Armingaud Quartets, both active from the mid-1850s; Lalo played second violin and viola with the Armingaud, and completed the revision of his single quartet in 1880. Members of Franck's circle began to cultivate the quartet, including de Castillon, Lekeu, Chausson and Franck himself, whose grandly voiced D minor Quartet (1889) made a great impression. Even Debussy was enthralled, and even he felt he had to keep to four-movement form (uniquely for him), though in his G minor Quartet of 1893 he undercut the monumentality of Franckian cyclic thematic recurrence by means of shorter ideas, more fluid relationships among them, flexibility of tempo and far more textural variety, which in turn had its effect on Ravel's Quartet (1903).

The development of quartet playing and quartet composition in France, Russia, Italy and Bohemia was paralleled in England, where Stanford wrote the first three of his eight quartets in the 1890s, and the USA, where Dvořák's presence may have helped alleviate the strong German influence felt by such composers as Chadwick (five quartets, 1878–98). Ives based his no.1 (1896) on American hymn tunes.

6. 1900–14. With Mahler and Strauss working in very distant fields, Reger became the central figure in the Austro-German quartet tradition, his influence unavoidable for Schoenberg and Bartók. His no.1, in G minor (1900), has highly chromatic outer movements, fast and driven, checked only by intensive counterpoint (the finale is a double fugue), though the middle movements are more in the nature of genre pieces, the scherzo having a combination of weight and wit equally typical of the composer. His no.3, in D minor (1903–4), has first and slow movements that each play for about 20 minutes. Schoenberg reacted to this expansion of scale, and perhaps also to the same quartet's cyclic form, in his own D minor Quartet (1905), an immense single movement in which scherzo and Adagio episodes emerge from within continuous development. Zemlinsky followed this procedure in his no.2 of 1914. Like Reger, Schoenberg pursued the quartet as a polyphonic instrument; unlike Reger, he introduced effects – harmonics, pizzicato, sul ponticello – that can be expressive or ironic. A very different D minor, more Dorian, contributes to the aloofness of Sibelius's only quartet, subtitled 'Voces intimae' (1909). Meanwhile, Bartók had gone forward from Reger to folk music in his no.1 (1908), which begins with a slow, chromatic, meandering fugue and ends with a dance.

The leading quartet of the moment in Budapest was headed by Jenő Hubay, who was no friend of Bartók's music, and so a new one was formed by Imre Waldbauer, then only 17, to give Bartók's no.1 and Kodály's their premières. They also introduced Bartók's next three quartets, and gave their last concert, in 1946, for the Hungarian première of his last, no.6. Older quartets of the period included the Bohemian (later Czech) Quartet, which played between 1892 and 1933, and in which Josef Suk was second violin, and the Viennese quartet led by Arnold Rosé, also founded in 1892. These two respectively gave the first performances of Dvořák's last two quartets; the Rosé also introduced quartets by Reger and Schoenberg (nos.1 and 2).

Schoenberg's no.2 (1907–8) was the site of his break with tonality, but hardly less radical was its introduction of a soprano to sing poems by Stefan George in the last two movements. As a union of four equal voices, the quartet is greatly compromised when it has to accompany, rather than play along with: an added viola or cello, or even a clarinet or piano, is far less disruptive. Accordingly, Schoenberg's invention of the 'soprano quintet' was little copied. Webern did not publish his quartet song of 1913; Berg kept the presence of a Baudelaire/George text in the finale of his *Lyric Suite* a secret and probably did not intend it to be sung. Other works with voice are sporadic, and range from Barber's *Dover Beach* (1931) to Ferneyhough's no.4 (1989–90).

Much more influential, of course, was the extension of harmonic resources in Schoenberg's no.2. In a sense, the

addition of the sung poems was a conventionalizing gesture, for it enabled Schoenberg to retain four-movement form – in which respect this work is much more orthodox than his no.1 had been. Without tonal harmony, and without words to supply a frame, traditional musical form disintegrated. The first quartets of Berg and Webern (1909–10) are sets of two and five shortish movements respectively. The end of the line was Webern's Six Bagatelles (1913), each occupying just a page in score and over in less than a minute. These works of Berg and Webern also go on from Schoenberg in their use of pizzicato, col legno, sul ponticello, sul tasto and harmonics. By the time of Webern's Bagatelles, 'normal' sounds are a rarity.

Stravinsky's Three Pieces (1914) are even more alien within the quartet context: a mechanism of ostinatos and drones; a clownery with brusque gestures and, at one point, the second violinist and violist holding their instruments like guitars; and finally a homophonic chant. Stravinsky went on to write more quartet music – the Concertino (1920), the introduction to the graveyard scene in *The Rake's Progress* (1951), a strand in *In memoriam Dylan Thomas* (1954) and the Double Canon in memory of Raoul Dufy (1959) – but not a quartet, still less a cycle of quartets: continuity with the tradition was broken.

It was also broken in Ives's case. About 1905, he began a quartet in several disparate movements, some including other instruments: double bass (which, surely unknown to Ives, the teenage Reger had brought into the finale of a quartet), flute and piano. 'In short', as he wrote, 'this quartet was not a quartet at all – perhaps maybe because of the fact that the Kneisel Quartet played so exquisitely "nice" that I lost some respect for those four instruments'. But he abandoned this idea, and in 1911–13 went another way to 'have some fun with making those men fiddlers get up and do something like men' in his no.2, where the instruments are characters in debate and argument (the second violin being the custodian of tradition) who finally, in wide, complex chords, 'walk up the mountain-side to view the firmament'.

7. 1915–40. In the work of other composers, the tradition was remade, at least partly because postwar conditions favoured smaller genres and more orderly surfaces. Bartók, whose five later quartets are the outstanding works of this period, moved from the exacerbated Romanticism of his first two quartets into a style where vividly expressive elements become building-blocks in structures of closely made mirror patterns and symmetries in nos.4 and 5 (1928, 1934), and finally reached a new Romantic style in no.6 (1939). His order was not the old one. His sonata forms are often concealed, and the larger form is established by overarching palindromes (nos.4 and 5) or variations (no.6), while continuity is created at a very local level by intensive imitative textures. These are rarely conversational. The quartet is less an ensemble of four individuals than a unit, and its resources are increased by string effects and textures Bartók heard from village fiddlers, encountered in Schoenberg and Berg or dreamed up himself.

Apart from the Hungarian Quartet, led by Waldbauer, ensembles of this period promoting new repertory included the Flonzaley of Switzerland (1902–28: Stravinsky's Three Pieces and Concertino), the Pro Arte of Belgium (1913–40 with original members: Roussel's Quartet, Honegger's nos.2 and 3, Martinů's Concerto), the Amar of Germany (in which Hindemith played the viola) and above all the Kolisch of Vienna (1922–39), who gave the first performances of Bartók's last two quartets, Schoenberg's last two (1927 and 1936) and his String Quartet Concerto (1933, after Handel), Berg's *Lyric Suite* (1925–6) and Webern's op.28 (1937–8). All these groups except the Amar moved to the USA, and the Kolisch owed their record of premières partly to the beneficence of Elizabeth Sprague Coolidge, who established a fund for chamber music at the Library of Congress.

Berg's *Lyric Suite* follows a private programme relating to the great love affair of his later years, and to that end uses quotation (notably from *Tristan und Isolde*), an estranged but nonetheless passionate Romantic voice and great delicacy of scoring. This use of the quartet as a confessional medium was matched from a very different stylistic perspective by Janáček in his two quartets of the same decade, subtitled 'The Kreutzer Sonata' (with reference to Tolstoy's novella advocating extra-marital love) and 'Intimate Letters'. Works such as Berg's and Janáček's were not in any practical sense confidential: they were technically beyond the scope of the amateur quartet, which was anyway by this point in retreat. Indeed, the great quartets since at least the time of Brahms and Dvořák had been written for professional ensembles and for concert performance. But still the quartet retained its aura of privacy, and indeed, for many composers, of primacy among genres.

Certainly that was so for Schoenberg, who returned to the quartet once he had proved his serial method could support big structures. Nos.3 and 4 are in the usual four movements, but differ in texture and harmonic reach, no.4 being altogether richer. At the opposite pole, Webern's op.28 quartet weaves a tight canonic skein of sounds through each of its three movements, with an extreme reduction in the intervals and rhythmic values that can appear. Its transparency fascinated later quartet composers as different as Cage and Kurtág.

More immediately influential were the quartets of Bartók and Berg, which seem to have been accepted almost at once into the repertory. Composers impressed by them included Bridge (nos.3 and 4, 1926 and 1937) and Crawford Seeger, whose quartet of 1931 is a remarkably vital exercise in algorithmic forms and new sonorities.

8. 1940–75. Bartók's and Berg's quartets, together sometimes with Schoenberg's and Webern's, helped stimulate the immense and various output of quartets that began in the 1940s, demanded by a greater number of performing ensembles at work internationally. Shostakovich wrote more quartets than any other front-rank composer during this period; Milhaud, Villa-Lobos, Hába, Holmboe, Maconchy and Simpson were other multiple quartettists of the time, and as these names suggest there was a sense, at least in Europe, of the quartet as a bastion of tradition at a time of unrest – unrest represented by the single quartets of, for example, Boulez (*Livre pour quatuor*, 1948–9) or Xenakis (*ST/4*, 1962), both full of fearsomely complex textures and untraditional sounds. So great were its technical problems that Boulez's *Livre* was only performed piecemeal, and for a long time the composer withdrew it from performance, feeling that the genre belonged to the past. In 1968 he began an

arrangement for string orchestra, *Livre pour cordes*, to rescue the music.

But unrest is intimated too by Shostakovich's 15 quartets, all but one of which were written for the Beethoven Quartet of the Soviet Union. Material may seem too banal for the purpose of a quartet, forms too short (the C major Quartet of 1935, no.1, is all over within 15 minutes), textures too bare (the second movement of this piece opens with a ten-bar viola solo) and contrasts too extreme between the trite and the soul-searching. Shostakovich evidently adhered to the view of the medium as intimate: his no.8 (1960) is explicitly autobiographical, being filled with self-quotations and marked by his musical cipher of his name. He may even have felt the quartet as a refuge from the kind of scrutiny any larger work motivated, especially during Stalin's later years, which is when he began writing quartets regularly. But his expressive manner is always ironic.

In the USA – perhaps because the quartet there was an esoteric medium, removed from the public world of symphony concerts, but also because American musicians did not share European reservations about tradition – notable quartet cycles were begun by some of the most radical composers, including Carter and Babbitt. Indeed, Carter effectively became a radical in his no.1 (1950–51), where he treated each member of the ensemble as a distinct musical character defined not only by intervallic preferences but by speed of utterance, with a system of metric modulation devised to make possible diverse tempos at the same time. Babbitt's no.1 is unpublished; his no.2 (1954) is a lucid and playful introduction to hearing serial patterning.

Other American composers who wrote notable quartets during this period include Cage (Quartet in Four Parts, 1949–50, which takes further Webern's limitation of notes and durations), Perle, Feldman, Wolpe and Ben Weber, all of whose works were played and recorded by a number of quartets specializing in contemporary works (the Juilliard, the Composers and the New Music). The arrival of similar specialist quartets in western Europe, such as the LaSalle in Germany or the Parrenin in Paris, prompted a similar florescence there from the late 1960s onwards, but often from a sceptical position. Ligeti's no.2 (1968; his no.1 had been written in Hungary under Bartók's influence 14 years earlier) expresses its scepticism in the unstable sounds of harmonics, in playfulness and in ostinato machinery. But Kagel's Quartet (1965–7) goes to the ultimate point in deconstructing the genre. Near the start, for instance, the cellist is placed as normal while the violist walks across the hall playing and the two violinists are heard from offstage. What the musicians play is similarly heterodox. Not only are strange techniques employed – bowing with notched pieces of wood, drumming the strings with the fingers, attempting to play with a thick leather glove on the left hand—but sometimes the instruments are prepared, in the sense of Cage's prepared piano, with objects placed between strings.

9. 1975–2000. The widespread outbreak of quartet composing since 1975 has, like other postmodernist phenomena, multiple causes. Composers arrived for whom the partisan conflicts of the 1950s, between an avant garde and a body of traditionalists, were history; Abrahamsen and Rihm might be cited here. At the same time, the joining of eastern central Europe into the Western musical commonwealth brought international attention to composers who had been obliged and able to use conventional means in unconventional ways – composers such as Kurtág, Schnittke and Gubaydulina. Performers, too, played a crucial role. Many new quartets of the period, while concentrating on the literature from Haydn to Bartók, also took contemporary pieces into their repertories: Rihm's no.4, for instance, was played by the Alban Berg and Emerson Quartets. Meanwhile, two other quartets – the Kronos of San Francisco, founded in 1973, and the Arditti of London, who began playing the next year – devoted themselves indefatigably to new works, which they toured internationally and recorded.

These two ensembles had dissimilar interests. The Kronos found their centres in American minimalism (Reich, Young, Riley, Glass, Adams) and in composers close to traditional musical cultures, whether African (Volans) or European (Górecki), Jewish (Golijov) or Chinese (Tan). They were also involved in the first performances of several late Feldman pieces, including his String Quartet II (1983), which plays for five hours without interruption. For the Arditti, the emphasis was on high modernism, diversely represented by, for example, Carter, Birtwistle, Ferneyhough, Xenakis, Dusapin, Lachenmann and Cage. Such was their technical command that Boulez released his *Livre* to them and both Nancarrow and Scelsi wrote works for them some while after having abandoned the genre. The groups were different, too, in performance style. The Kronos customarily played with amplification: they had come into existence to play Crumb's *Black Angels* for amplified quartet (1971). They also featured dramatic lighting and special costume, whereas the Arditti tended to look like any other quartet – except when playing Stockhausen's *Helikopter* (1993), in which the players are remotely linked to each other and to their audience while performing from inside separate helicopters.

In a less physical sense, as well, the quartet in the late 20th century remained an elevated medium. The quartets of such dissimilar figures as Glass and Ferneyhough, or Kurtág and Reich, or Nono and Dutilleux, are among those composers' finest works, and may be judged, too, worthy of the company they keep as quartets.

CLIFF EISEN (1–3), ANTONIO BALDASSARRE (4), PAUL GRIFFITHS (5–9)

String quintet. A composition for five solo string instruments; the term is usually applied to works written since the mid-18th century rather than to earlier consort music in five parts. The origin of the genre is frequently traced to the Italian sinfonia and concerto or to the generically fictive German divertimento, but it is closer in spirit to the south German and Austrian symphony, including works in five parts whose style is often indistinguishable from one-to-a-part solo ensemble music. Characterized chiefly by refinements in writing for a strings-only texture, the history of the genre is closely bound up with that of the string quartet. At the same time, its greater mass often resulted in works more closely approximating an orchestral style; only Mozart appears successfully and consistently to have composed quintets exclusively in the 'sonata' style.

The quintet was first cultivated in Austria during the 1750s and early 1760s, chiefly at monastic institutions. The majority of these works, by J.N. Tischer, J.M. Malzat and F.J. Aumann, are usually titled 'divertimento', which at the time designated soloistic instrumental music in general and was compatible with a variety of scorings, styles and character. Almost invariably for two violins, two violas and cello or violone, the early Austrian quintet relied heavily on thematic repetition between first violin and first viola, with the other voices mostly relegated to accompaniment; frequently the two lead voices move in parallel 3rds or 6ths. Michael Haydn's more sophisticated and stylistically advanced *Notturni* of 1773 (P108 and P109), as well as Mozart's K174 (also 1773 and frequently said to have been modelled on Haydn's quintets), belong to this tradition, as do early quintets by Gassmann and Vanhal. The 'modern' title Quintetto and a scoring of two violins, two violas and cello did not become common until the 1780s, chiefly in Vienna; even then, 'older' titles and alternative scorings continued to be cultivated, by Michael Haydn (Divertimento for two violins, two violas and double bass, P110, 1784), Dittersdorf (K185–90, 1789, for two violins, viola and two cellos) and Anton Wranitzky (op.8, *c*1801–2, for violin, two violas and two cellos).

Elsewhere the quintet was promoted less intensely. The earliest French examples, by Cambini, who composed more than 100 quintets, date from about 1770; the first Italian quintets may be Sammartini's (for three violins, viola and basso, 1773; six quintets by Francesco Zannetti, published in London in 1763, include a part for basso continuo). Boccherini and Gaetano Brunetti, both Italian-born, were attached to the Spanish court; like Cambini, they began writing quintets just after 1770 (Boccherini: op.10, composed 1771, published in Paris, 1774; Brunetti: op.1, published in Paris, 1771). Boccherini's numerous elegant, texturally imaginative and formally inventive quintets for two cellos in particular are little beholden to national traditions of quintet composition; widely disseminated throughout Europe in both manuscript copies and printed editions, they were highly influential. Some later quintets, composed for the cello-loving Friedrich Wilhelm of Prussia, are sometimes said to have stimulated Mozart to compose quintets, but that is unlikely. In America, an early and isolated set of six quintets was composed in 1789 by the Moravian J.F. Peter.

Mozart neither 'invented' nor 'perfected' the quintet, which was a popular and widely cultivated genre in Vienna of the 1780s; locally available works, all of them preceding Mozart's, included quintets by Albrechtsberger, Pleyel, Hoffmeister, Boccherini, Sterkel, Piticchio and Anton Zimmermann. But his were the earliest consistently composed on a four-movement plan, similar to the string quartet (most earlier Viennese quintets are in three movements) and the first to exploit fully the rich textural possibilities of the medium, including antiphonal effects between upper and lower groupings of instruments (K516, K593) and real five-part polyphony (K593 and 614). Quintets by Pleyel and Hoffmeister, while skilfully crafted and attractive, generally lack textural variety.

During the 1790s and the early decades of the 19th century the string quintet was second in popularity only to the string quartet, supplanting the earlier string trio. Viennese quintet composers of this time included Beethoven, Eybler, E.A. Förster, Gyrowetz, Hänsel, Krommer, Pichl and the brothers Wranitzky; arrangements for quintet of popular opera tunes, symphonies and other works were also common. A concerto-like style of quintet, usually for solo violin but sometimes for solo cello, with quartet accompaniment, similar in character to the

quatuor brilliant, flourished after about 1805; Antoine Reicha's Variations on a Russian theme for cello and string quartet and Ignaz Schuppanzigh's *Solo brillant et facile avec Quatuor* are prominent examples, as is Henry Vieuxtemps' later *Souvenir d'Amerique, Yankee doodle: Variations burlesques avec Quatuor* op.17. Other scorings are also frequently found. Schubert's only work in the genre, D956 (1828), belongs to a longstanding tradition of two-cello quintets which in the early years of the 19th century was extensively represented by George Onslow; later examples include Ferdinand Ries's *Souvenir d'Italie* op.183 (1836), Cherubini's E minor quintet (1837), an early quintet by Borodin (1853–4), Ethel Smyth's op.1 (1884), Glazunov's op.39 (1891–2) and Henry Cowell's *Ensemble* (1924).

An ensemble of two violins, two violas and cello nevertheless remained the standard; in Vienna it is best represented during the first half of the 19th century in works by E.A. Förster, Joseph Mayseder, Sigismund Neukomm and Andreas and Bernard Romberg. After about 1820, however, the genre was also widely cultivated outside Vienna, by Onslow, Mendelssohn (opp.18 and 87), Ferdinand Ries, Louis Spohr and Friedrich Fesca; the quintets of both Spohr and Fesca are noteworthy for their concertante first violin parts. Brahms's two magnificent quintets, opp.88 and 111 (1882 and 1890), no longer belong to a specifically Viennese tradition but to a pan-European style also cultivated by Bruckner (1879), Carl Nielsen, Dvořák (op.77, 1875, for two violins, viola, cello and double bass) and Anton Rubinstein.

Since Brahms, the quintet has been little cultivated. Among the few 20th-century examples, quintets by S.I. Taneyev (opp.14 and 16, 1901 and 1904), Bax (1908), Cowell (*Ensemble*, includes three thundersticks in addition to two violins, viola and two cellos), Martinů (1927), Milhaud (three quintets, 1952–6, each differently scored) and Roger Sessions (1958) are particularly significant.

CLIFF EISEN

String trio. A composition for three string instruments. The term is generally used to refer to works from the Classical period to the present, scored either for two violins and cello or for violin, viola and cello; many Renaissance consort pieces and Baroque sonatas, however, were also written for three string instruments, either viols or violins, with or without continuo (*see* SONATA, §I).

The trio for two violins and cello was an outgrowth of the Baroque trio sonata, and many such works in the mid-18th century bore the title 'sonata', including trios by J.G. Schwanenberger, J.F. Reichardt and C.A. Campioni (*Six Sonatas or Trio's*, *c*1764). There was a tendency at this time, as in much pre-Classical music, towards a texture in which the two violins were treated on more or less equal terms while the bass was used to provide harmonic support and a pulsating rhythm. In some cases (Campioni's sonatas and Pugnani's op.1, 1754) the bass part was still figured for keyboard continuo. In Schwanenberger's sonatas and in trios by Fils, Haydn, J.C. and C.P.E. Bach, Boccherini and Dittersdorf, it is impossible to be certain whether or not a continuo instrument was still envisaged by the composer, although in the later examples by Boccherini this is most unlikely.

Johann Stamitz's *Six sonates à trois ou avec tout l'orchestre* op.1 (Paris, *c*1755) and similarly described works by Cannabich op.3 (1766), Mysliveček (London, 1768) and, with optional horn parts, Gossec op.9 (1766) are characteristic of a genre precariously balanced between orchestral and true chamber music, in which orchestral performance was either permissible or actually called for. (A similar flexibility in the medium of performance is found in the early history of the string quartet.)

During the 1770s and 1780s both the use of continuo and the possibility of orchestral performance were gradually dropped. Although the trio for two violins and cello was not wholly abandoned even during the 19th century, that for violin, viola and cello began to take precedence. Haydn seems to have been the first to use this combination, soon followed by Simon Le Duc (op.1, 1768), Boccherini (op.14, 1772) and Giardini (opp.17 and 20). The 1770s also saw the development, stemming largely from Paris, of the *trio concertant* (*see* QUATUOR CONCERTANT), a genre which persisted to the close of the century, in which the three instruments were treated with equality in an obbligato fashion in a comparatively rich and elaborate texture. Cambini's opp.1 and 2 are typical, although the former retains the somewhat old-fashioned instrumentation of two violins and cello.

The earlier Classical trio often adopted a three-movement plan. Haydn's preference is for an initial Adagio or Allegro and an extended minuet placed second or third. Four-movement schemes, however, are not unusual in Boccherini's later trios, and five or six movements are commonly found in divertimentos. The highpoint of the string trio repertory is Mozart's Divertimento for violin, viola and cello K563, a *trio concertant* in six movements. Beethoven's early string trios exemplify both types: op.3 is closely modelled on Mozart's Divertimento, while the three trios of op.9 belong to the four-movement category. Mozart's fine introductions to his arrangements of fugues by J.S. and W.F. Bach and the two trios by Schubert complete the most valuable part of the Viennese repertory.

The term 'Grand Trio' was used at the beginning of the 19th century to distinguish full-scale and technically advanced compositions from those of slighter proportions

often intended for amateurs or students. The *trio brillant* (e.g. Rodolphe Kreutzer's op.16, *c*1800) represents another category in which one instrument is treated in a soloistic fashion with brilliant passage-work, double stops and sometimes cadenzas, while the others provide little more than an accompaniment. Such trios often consisted of or incorporated variations on fashionable operatic airs. The violin was not invariably the concertante instrument: B.H. Romberg's op.38 is for concertante cello with a viola and a second cello.

The slender nature of the medium seems to have been unattractive to late 19th-century composers. There are trios by Reger and Brahms's friend Heinrich von Herzogenberg; but the most rewarding is Dvořák's Terzetto for two violins and viola, a rather unusual combination which, however, had been used previously in the *Six trios* (1764) of J.C. Bach and later by Cambini, and was revived subsequently by Kodály, Martinů and Henk Badings.

During the 20th century a leaning towards clear-textured media led to a marked revival of the string trio. Important contributions include two trios in neo-classical style by Hindemith (1924, 1935); two that employ 12-note serial techniques – Webern's two-movement Trio op.20 (1926–7) and Schoenberg's single-movement Trio op.45 (1946), a major landmark in the repertory (apparently prompted by his near-fatal heart attack in August of the same year); and some finely sculpted works by Dohnányi (Serenade, 1904), Willy Burkhard (1929), Jean Françaix (1933), Frank Martin (1936), Albert Roussel (1937), Ernst Krenek (his elegantly titled *Parvula corona musicalis ad honorem J.S. Bach*, 1950) and Wolfgang Fortner (1952). More recent examples include a Trio for two violins and cello (1984) by Wilhelm Killmayer, Alfred Schnittke's String Trio (1985), a two-movement work, classically designed but with exacting modernist textures, which was written to mark the centenary of Alban Berg's birth, and works, similarly for the standard combination, by Aribert Reimann (1987) and Annette Schlünz (1989).

MICHAEL TILMOUTH/BASIL SMALLMAN

Strisciando (It.). *See* GLISSANDO.

Stritch, Elaine (*b* Detroit, 2 Feb 1925). American actress and singer. She studied drama at New York's New School. Her first musical role on Broadway was in the revue *Angel in the Wings* (1947), in which she sang the hit *Civilization (Bongo, Bongo, Bongo)*. After winning critical successes in revivals of *Pal Joey* (1952) and *On Your Toes* (1954), she created her first musical leading role in Leroy Anderson's underrated *Goldilocks* (1958). She starred as cruise hostess Mimi Paragon in both the New York and London productions of Coward's *Sail Away* (1961), but her most memorable performance occurred as Joanne, the weary, boozy society matron of Sondheim's *Company* (1970). Stritch's punchy, baritonal delivery of *The Ladies who Lunch*, Joanne's acerbic tribute to her fellow 'dinosaurs', was the hit of the show.

From 1972 to 1982 Stritch lived in London, where she concentrated on straight drama and film roles and co-starred with Donald Sinden in the television series *Two's Company*. In 1983 she wrote *Am I Blue?: Living with Diabetes and, Dammit, Having Fun!* (London, 1983). She returned to musical theatre in the 1985 New York concert performance of Sondheim's *Follies* and portrayed Parthy Ann in the 1994 Tony Award-winning revival of Kern's *Show Boat*. Her characterful contralto encompasses stentorian, booming growls as well as twangy, teasing purrs; although her voice often has the hard, open sound of the Broadway belter, she is always on pitch and has a masterful sense of rhythm.

HOWARD GOLDSTEIN

Strmčnik, Maks (*b* Črna na Koroškem, 23 Oct 1948). Slovene composer. He graduated from the composition class of Škerjanc and Krek at the Academy of Music in Ljubljana in 1974. In 1983 he became general secretary of the Society of Slovenian Composers and in 1996 was appointed professor of composition and improvisation at the Ljubljana Academy. He is also an active organist and appears regularly as a harpsichordist with the Ljubljana Baroque Trio. In 1989 his Concerto for Organ, Musical Saw and Orchestra won the Prešeren Foundation award, one of the most important cultural awards in Slovenia.

Most of Strmčnik's works are original explorations of sound. He avoids prevailing trends or set patterns though also rejects the desire to be modern at any price. Rather, his musical language is a combination of various modernist styles, past musical forms (e.g. medieval models in the Concerto for Organ, Musical Saw and Orchestra or the adaptation of a chorale in the String Quartet) and improvisation, as in *De monotematični gradaciji* ('Two Monothematic Gradations', 1979–81). A prominent place in his output is reserved for sacred music.

MATJAŽ BARBO

Strmić [Stermich di Valcrociata], **Nikola** (*b* Zara [now Zadar, Croatia], 17 Feb 1839; *d* Zara, 16 May 1896). Croatian violinist and composer. His father Antonio (*d* Zara, 1866) was an amateur composer, and his brother Šime (1825–93) was a baritone and a board member of the Zadar Società Filarmonica. Strmić studied the violin at the Milan Conservatory with B. Ferrara, simultaneously taking private lessons in composition with P. Bona. Fragments of his first opera, *Desiderio, duca d'Istria*, were performed in Milan in 1856, and the entire work in Zara in 1861. Upon his return to Zara in 1860, he became director of the Casino (a cultural society) and subsequently was put in charge of musical performances at the Zara theatre and became director of the Società Filarmonica. He also performed as a solo violinist and with various ensembles. His second opera, *La madre Slava*, first staged in Trieste (1865) and Zagreb (1866), has a romantic plot describing the love story of a betrothed couple from two quarrelling Montenegrin tribes. Though Strmić, by incorporating folk melodies, attempted to place the work in a local setting, the work is predominantly Italian in style. In his solo and chamber pieces, which are often written in a virtuoso manner, the emphasis is on extended melodic phrases, which frequently develops into ornamental chromaticism.

ZDRAVKO BLAŽEKOVIĆ

Strobel, Heinrich (*b* Regensburg, 31 May 1898; *d* Baden-Baden, 18 Aug 1970). German music critic and administrator. He was a répétiteur for a year (1918) at the Regensburg Stadttheater before studying musicology under Sandberger and Kroyer and theory under H.K. Schmidt at Munich University, where he took the doctorate in 1922 with a dissertation on Johann Wilhelm Hässler's life and works. He was music critic successively of the *Thüringer Allgemeine Zeitung* in Erfurt (from 1921), of the *Berliner Börsenkurier* (1927–33) and of the *Berliner Tageblatt* (1934–8). In 1933–4 he was editor of *Melos* and then its successor, the *Neues Musikblatt* (1934–9). He moved to France in 1939, and resumed the editorship of *Melos* when it was revived in 1946. In the same year he was appointed director of the music division of SWF, Baden-Baden, and in 1956 he became chairman of the ISCM. He worked constantly and energetically to promote contemporary music and young artists; he was an early supporter of Hindemith and helped many young musicians by initiating annual festivals such as Donaueschingen, concert series and regular broadcasts of contemporary music. In the 1950s he wrote a number of opera librettos for Rolf Liebermann. He received many honours, including the Schoenberg medal (1952) and the honorary doctorate at Basle University (1961).

ALFRED GRANT GOODMAN

Strobel, Otto (*b* Munich, 20 Aug 1895; *d* Bayreuth, 23 Feb 1953). German musicologist. He studied musicology at Munich University, where he received a doctorate in 1924 for his dissertation on Wagner's view of his works. During the emergence of national socialist Germany and the enthusiasm for Wagner that went with it, Strobel turned his attention to sifting and evaluating the vast number of autograph manuscripts owned by the Wagner family. From 1932 he was archivist of the Wahnfried Archives, Bayreuth, and from 1938 director of the short-lived Richard Wagner Forschungsstätte. He wrote extensively on Wagner's sketches and working methods, mostly in short articles for the *Bayreuther Festspielführer* and local German periodicals, and edited the first publication of some important documents, including the manuscript texts of the *Ring* and the correspondence between Wagner and Ludwig II. Although his exclusive and largely uncritical devotion to Wagner limited the intellectual perspective of his writings, his work is regarded as an important foundation-stone in Wagner scholarship.

JOHN DEATHRIDGE

Strobel, Valentin [Valten, Walten] (i) (*b* Thuringia, *c*1575–80; *d* Weimar, bur. 16 Oct 1640). German lutenist and composer, father of VALENTIN STROBEL (ii). He was employed in the Hofkapelle of the Ernestine court by 1602, the year in which the court moved from Altenburg to Weimar. From at least 1611 he served in the Hofkapelle at Halle and was on friendly terms with Scheidt, who was there from 1609. He left before the Thirty Years War spread to the Halle area in 1625 and moved back to Weimar, where he is still recorded as a member of the Kapelle in 1638 and 1640. As a composer he is known by seven pieces in *Testudo gallo-germanica* (RISM 1615[24]) and a praeludium (in H.D. Bruger, ed.: *Schule des Lautenspiels*, ii, Wolfenbüttel, 1925). Among his works are arrangements of pieces by John Dowland. His pieces are of some artistic worth, with independent part-writing, imitative passages and sequences.

HANS RADKE

Strobel, Valentin (ii) (*b* Halle, bap. 18 Oct 1611; *d* Strasbourg, after 1669). German composer and lutenist, son of VALENTIN STROBEL (i). From 1629 he worked as a lutenist and theorbo player in the Hofkapelle at Darmstadt. After a temporary stay at the Stuttgart court, where he obtained 30 florins as severance pay on 1 June 1634, he entered the service of Margrave Friedrich V of Baden-Durlach. The margrave was forced to leave his territories after the battle at Nördlingen on 6 September 1634, and he moved with his court to near Strasbourg. Together with other musicians, Strobel was dismissed after 1638, but he remained in Strasbourg. He married there on 28 July 1640, and on 15 August of the same year he acquired rights of citizenship. From this time until the early 1670s he seems to have taught the lute to students at the University of Strasbourg (see Meyer and Rollin).

Together with Johann Gumprecht, who lived in the city from 1643, Strobel established Strasbourg as an important centre of lute-playing by the mid-17th century. Chappuzeau reported that 'Messieurs Gumprecht & Strobel touchent le lut avec une délicatesse merveilleuse. L'un & l'autre est parfaitement honeste homme, & en grande estime dans Strasbourg'. Strobel was also an admirable composer of lute music. He adopted the new French arpeggiated manner of playing – the *style brisé* – but combined it in many pieces with a cantabile style. The bass is often melodically independent. A Gigue in D minor became extremely popular among late 17th-century lutenists and is found in over 20 manuscript versions, some arranged for other instruments; in three sources it is attributed to Denis Gaultier or Dufault, but five name Strobel explicitly. It is especially well represented in Swedish sources (see Rudén). While most surviving pieces for the 11- or 12-course lute use the D minor tuning which became the norm during Strobel's later career, a number require the 'accords nouveaux' or transitional tunings typical in mid-century manuscripts. Several lute pieces exist in arrangements for the *angélique* in a manuscript copied about 1681 in Strasbourg. In 1658 J.E. Rieck, organist at St Thomas, published arrangements for strings of a suite by Strobel and other lute music by Gumprecht and Jean Mercure. Strobel's consort music involving several plucked instruments, advertised between 1648 and 1668, has not survived. His *Melodien* are dance-songs, which include ritornellos for two violins.

Strobel had a son, Johann Valentin (*b* Strasbourg, bap. 16 Nov 1643; *d* Darmstadt, bur. 30 Aug 1688), who matriculated at the University of Strasbourg on 12 April 1664 and was employed on 12 June 1668 at the Darmstadt court as a valet and lutenist.

HANS RADKE/TIM CRAWFORD

Strobl, Rudolf (*b* Opawa [now Opava], Silesia, 15 April 1831; *d* Warsaw, 14 May 1915). Polish pianist and teacher, probably of German descent. He studied with Joseph Fischhof and Friedrich Volkmann at the Vienna Conservatory, then taught music in Zhitomir. In 1855 he moved to Warsaw, where he quickly won a high reputation as a teacher. From 1866 to 1896 he taught the piano at the Warsaw Institute of Music, of which he was administrative chairman from 1888. Strobl taught a

whole generation of distinguished pianists, including Paderewski, Śliwiński, Lewita, Aleksandr Różycki and Melcer. He prepared teaching editions of music (*Collection Strobl*) and a new edition of the collected works of Chopin, *Fryderyk Chopin: Dziela fortepianowe* (Warsaw, 1902–3), based on Kleczyński's revisions.

ZOFIA CHECHLIŃSKA

Stroe, Aurel (*b* Bucharest, 5 May 1932). Romanian composer and teacher. At the Bucharest Conservatory (1951–6) he studied harmony with Negrea, composition with Andricu and orchestration with Rogalski; in addition he received instruction from Kagel, Ligeti and Stockhausen at the 1966–9 Darmstadt summer courses. In 1962 he returned to the Bucharest Conservatory as reader in composition. He was visiting professor at the University of Illinois (1985–6) and professor of composition at the Mannheim Hochschule für Musik (1986–93), before returning to teach at the Bucharest Conservatory.

One of Stroe's aims is the creation of a complex work of art uniting the various forms of visual art and music, dependent on the contribution of technology; the first materialization of this concept was the cycle of eight orchestral pieces *Démarche musicale* (1962–71). Using all manner of contemporary techniques, Stroe carefully controls a range from powerful explosions of sound to the most delicate nuances; he has employed the mathematics of logic, morphogenesis and probability (with the aid of computers) and places the greatest importance on timbre. His highly original style explores unusual sonorities, mixing basic instruments (metal and wooden plates, gong and cattle bells to evoke the ancient world) with electronic sources, such as magnetic tape and organ. He draws on microtonal harmonies and explores vocal techniques ranging from Sprechstimme and spoken recitative to shouting; vocal soloists are required to play instruments and instrumentalists to act on stage. Works have been commissioned by the Kassel Opera, the Royan and Jean Villar festivals and the French Ministry of Culture. He has also been honoured by the Romanian Composers' Union.

VIOREL COSMA

Strogers [Strowger, Strowgers], **Nicholas** (*fl* 1560–75). English composer, possibly related to E. Strowger. The name was common in East Anglia in the 15th and 16th centuries. He was a parish clerk at St Dunstan-in-the-West, London, from Christmas 1564 to 1575, and was in charge of music there and probably played the organ. Hawkins's statement (ii, p.572) that he was an organist during the reign of James I is almost certainly erroneous; it was probably based on the inclusion of Strogers's Short Service in Benjamin Cosyn's collection, where it is described as one of 'the six Services for the kings Royall chappell' (*GB-Lbl* R.M.23.l.4). The service was printed by Barnard in 1641, but its style and certain archaic elements in the text suggest that it was composed before 1580. The same service occurs in the Chirk Partbooks (*US-NYp*) as 'Short Service for meanes' attributed to 'Strogers of Heareford'. Thomas Whythorne noted a 'mr Strgrs' as one of the most famous musicians of his time in his list of doctors and bachelors of music. Since Strogers's music is often found with that of Byrd and Parsons he may have been associated with them during the 1560s.

The Short Service was the most widely copied of all his works. It has a *Deus misereatur* as an alternative to the *Nunc dimittis* and some sources give a different setting of the Kyrie. An interesting technical feature is the opening common to, or at least similar in, each movement (except the alternative Kyrie). Probably his only other Anglican work is a setting of the Collect for the ninth Sunday after

Trinity (*Grant unto us O Lord*). Of his Latin music, the two *Magnificat* verses are merely exercises in counterpoint, whereas *Non me vincat*, a setting of a non-Biblical prayer for strength in adversity, is a motet in the central tradition employing imitative texture throughout.

The consort songs best show Strogers's melodic gift. Particularly appealing is *A doleful deadly pang*, with its D major coda to the repeated 'I die' of the text. Some In Nomines for consort survive complete, but most of the remaining instrumental ensemble music is too fragmentary to be evaluated. The 'In Nomine' pavan appears to have no connection with the usual cantus firmus. The keyboard works are ascribed simply to 'Mr Strowger' or 'Mr Strowgers', but there can hardly be any doubt that Nicholas Strogers is the composer rather than E. Strowger. These non-liturgical pieces are analogous to the consort In Nomines rather than to E. Strowger's liturgical *Miserere*, which must date from before 1549. The cantus firmus of the 'Ut re my fa soul la' must be played by a second person in notes which are 'two [semibreves] long', possibly at the same keyboard; a strikingly similar layout was adopted by Byrd in his 'Ut re mi fa sol la' (in F) for two players.

JOHN CALDWELL, SUSI JEANS/ALAN BROWN

Strohfiedel. A simple, early type of European XYLOPHONE.

Strohm, Reinhard (*b* Munich, 4 Aug 1942). German musicologist. He studied musicology, Latin and Italian literature in Munich and Berlin with Georgiades, Osthoff and Dahlhaus (1961–71) and took the doctorate in 1971 with a dissertation on Italian opera arias of the early 17th century. After attending the Milan Conservatory, he worked in Munich as editor of the Wagner collected edition (1970–82). In 1975 he was made lecturer at King's College, London, where he worked until he was appointed professor at Yale University (1983–90). He returned to King's College in 1991 and was made professor; since 1996 he has been Heather Professor of Music at Oxford University. He is an honorary member of the AMS and a Fellow of the British Academy and in 1977 he was awarded the Dent medal of the Royal Musical Association. He has worked as editor for *Acta Musicologica*, *Early Music History*, *Orbis musicae*, Dramaturgia Musicale Veneta and the critical editions of Vivaldi and Locatelli. In addition to his numerous publications, he has contributed 36 articles on opera composers to *Pipers Enzyklopädie des Musiktheaters*. His principal areas of research include medieval, Renaissance and 18th-century music, the history of opera and the historiography of musicology.

CHRISTIAN BERGER

Stroh violin. A type of violin developed for early gramophone recordings by (John Matthias) Augustus Stroh (*b* Frankfurt, 7 May 1828; *d* London, 2 Nov 1914) in London between 1899 and 1901; it was manufactured in London by his son Charles Stroh from 1901 to 1924 and then by George Evans until 1942. Augustus settled in Britain in 1851 and worked as an engineer and inventor in the fields of electrical telegraphy and acoustics; he was Charles Wheatstone's assistant from the mid-1850s until the latter's death in 1875. From 1878 he experimented with gramophone recording. Until the advent of electrical recording techniques in the early 1920s the sounds made by the performers usually had to be directed at a single large horn; those of a normal body of strings were neither sufficiently loud nor sufficiently directional to record well, so Stroh devised an appropriate instrument which incorporated elements of the gramophone.

The body of the Stroh violin consists of a long, narrow piece of wood, the upper surface of which serves as the fingerboard, and a flexible membrane, to which a straight metal horn is attached, mounted at one side of the bridge. Concert models feature a second, smaller horn directed towards the player. The tone, perhaps surprisingly, is not at all metallic. A few violas, cellos, double basses, guitars, Hawaiian steel guitars and mandolins based on this principle were also produced by the Strohs. The Stroh violin was played in dance bands and in the open air until World War II, and is still occasionally used for Morris dancing. Patents for 'horned violins' were issued in the USA to a dozen other inventors between 1900 and 1949. Modified copies of the Stroh violin are still manufactured in Myanmar, and similar instruments are built for Transylvanian dance music, based on the German-made Tiebel-Radio violin from the 1920s. In 1973 Franz-Ernst Peschke in Darmstadt constructed similar instruments for Kagel's *1898*, in which the bells of a trumpet, trombone, flugelhorn and sousaphone were attached to the bodies of (respectively) a violin, viola, cello and double bass. The Stroh violin is featured in Hugh Davies's music theatre work *The Birth of Live Electronic Music* (1971) and, in the 1990s, in scores by Dennis James for 1920s 'silent' films.

A single-string variant of the Stroh violin, known as the Phonofiddle, was introduced in 1904 by Arthur Howson; it was normally tuned to *d′*. Several manufacturers, including Charles Stroh, produced models with straight or curved horns (some under the names One String Fiddle or Japanese Fiddle).

HUGH DAVIES

Stroke (i). A sign used in English virginal music and elsewhere to indicate an ornament of some kind. *See* ORNAMENTS, §3 and 6.

Stroke (ii). An articulation mark used to indicate STACCATO. Before the second half of the 19th century, strokes or dashes were likely to have the same meaning as dots, although from the time of Quantz (*Versuch*, 1752) some notators and theorists interpreted them as meaning different degrees of staccato. In such cases, the stroke or dash has usually been considered to indicate a shorter and sharper execution, and the dot a longer and lighter one. The supposed distinction between dots and strokes in Mozart's autograph scores has been much debated. *See* ARTICULATION MARKS, §4.

□

Stroke (iii). For bowstrokes, *see* BOW, §II.

Stromentato (It., now *strumentato*: 'scored for instruments'). Short for *recitativo stromentato*, i.e. RECITATIVE accompanied by the orchestra. It is sometimes held that the term implies a recitative in which the orchestra plays an independent part, in the form of dramatic interpolations, as opposed to ACCOMPAGNATO, where it merely accompanies. It is not possible, however, to draw any clear distinction between the two.

JACK WESTRUP

Stromento (It.). *See* STRUMENTO.

Strong, George Templeton (i) (*b* New York, 26 Jan 1820; *d* New York, 21 July 1875). American lawyer, musical amateur and diarist, father of GEORGE TEMPLETON STRONG (ii). He played the piano and the organ as a child and later attended Columbia College; he was admitted to the bar in 1841. In 1869 he founded the New York Church Music Association, which offered public concerts

of religious music. He was also an original subscriber of the Philharmonic Symphony Society of New York (founded 1842), of which he was president from 1870 to 1874.

Strong's diary, with over four million words, confirms him as one of the most comprehensive and important 19th-century commentators on New York life. Along with accounts of personal, local and world affairs, it contains observations on hundreds of musical performances, including orchestral and choral concerts, opera, solo recitals, services at Trinity Church and chamber music. It also describes Strong's role as an organizer. A conservative idealist, he fought unsuccessfully to excise the music of such composers as Berlioz, Liszt, Robert Schumann and Wagner from Philharmonic programmes in the name of (as he said) 'fine and great music'. The diary offers a colourful mode of expression, an insider's view of the politics and economics of musical institutions, and a detailed account of a city's musical culture.

KAREN AHLQUIST

Strong, George Templeton (ii) (*b* New York, 26 May 1856; *d* Geneva, 27 June 1948). American composer, son of GEORGE TEMPLETON STRONG (i). As a youth Strong studied the oboe. In 1879 he went to Leipzig, where he studied counterpoint with Jadassohn and horn with Gumpert. During the years 1881–6 he visited Weimar and came to the attention of Liszt, to whom Strong's symphonic poem *Undine* is dedicated. In 1886 Strong settled in Wiesbaden, where began a lasting friendship with MacDowell. After returning to the USA in 1888, MacDowell brought Strong's music to the attention of the American public, and he urged Strong to return, helping to obtain for him a position as theory teacher at the New England Conservatory (1891–2). Strong then went back to Europe, and, apart from occasional visits to the USA, he spent the remainder of his life in Switzerland.

Strong's compositions, most of which were written and published in Europe, include three symphonies, a number of symphonic poems, choral works, chamber music, piano pieces and songs. Chromatic harmony, cyclic themes and rhapsodic construction characterize these works, such as *Die Nacht*, which was taken up by Toscanini and the NBC SO. A collection of his manuscripts, together with correspondence and other papers, is held at the Library of Congress.

JAMES R. SMART/R

Strophic. A term applied to songs in which all stanzas of the text are sung to the same music, in contrast to those that are THROUGH-COMPOSED and have new music for each stanza. The term 'aria' as used in 16th- and early 17th-century Italy nearly always implied strophic setting of a stanzaic text, and pieces such as chorales and hymns are by definition strophic. So, too, are the vast majority of folksongs and folk ballads, as are many 18th-century art songs which attempt to capture their spirit (*volkstümliches Lied*). Schubert used the form in setting simple lyrics and some narrative poems (*Heidenröslein*, *Der Fischer*) but frequently modified the basic structure by slightly changing the vocal line from stanza to stanza or by varying the figuration of the accompaniment (*Im Frühling*). One or more stanzas may also be set to different music or with a change of tonality (Schubert's *Die Forelle*; Brahms's *Wie bist du, meine Königin*). In fact every shade of modification is possible between the purely strophic and the through-composed song. The principle can also be adapted as a compositional or analytical tool for instrumental music (for example, variation sets are in a sense strophic). Occasionally, and particularly in recent times, the implicit or explicit use of strophes in vocal or instrumental works harks back to the poetic forms of classical antiquity such as the ode.

MICHAEL TILMOUTH/R

Strophicus. In Western chant notations, the name sometimes given to the APOSTROPHE, and to groups of two or more *apostrophes* (DISTROPHA, TRISTROPHA etc.); it is also used as an adjective to describe neumes including the *apostrophe*. The *strophicus* was distinguished from the VIRGA or PUNCTUM (or groups of these) probably by the manner of its performance, although it is not certain what this may have entailed. Aurelian of Réôme (*fl* 840–50) spoke of a staccato delivery (*GerbertS*, i, 57), an interpretation favoured by most modern writers. Wagner believed that intervals of less than a semitone might have been involved. (For illustration *see* NOTATION, Table 1; see also P. Wagner: *Neumenkunde: Paläographie des liturgischen Gesanges*, Fribourg, 1905, rev. and enlarged 2/1912/*R*.)

DAVID HILEY

Strophic variations. A form of Italian vocal chamber music of the first half of the 17th century in which the vocal melody of the first strophe is varied in subsequent strophes while the bass is repeated unchanged or with only slight modifications, generally of rhythm; the term itself is modern and was not used by composers or theorists of the period. The sectional nature of works in this form, which are normally secular solo songs or duets, distinguishes them from those built on a ground bass or ostinato over which the music unfolds continuously. Strophic variations undoubtedly originated in variation techniques used in the 16th century in instrumental as well as in vocal music. It is significant that popular melodies dating from that period, such as the romanesca or Ruggiero, were used in the early 17th century as the bass in many strophic-variation settings of ottavas, a schematic type of verse with which they had often been associated. There are several such settings by Antonio Cifra in particular, Sigismondo d'India and other composers of solo songs and duets; the most celebrated is Monteverdi's duet *Ohimè, dov'è il mio ben* (seventh book of madrigals, 1619).

Whether a bass was traditional or the composer's own, it was common in strophic variations for each pair of lines of an ottava to be set over one statement of it. The equally schematic form of the sonnet was sometimes subjected to a comparable division into four strophes, nearly always over the composer's own bass. Having served as the foundation of the four-line strophes of the octave, an original bass could be adapted to fit the three-line strophes of the sestet more conveniently than could a borrowed bass; Stefano Landi's *Altri amor fugge* (*Arie*, 1620), for solo voice and continuo, is a good example of a sonnet set as strophic variations in four sections. Larger and, very rarely, smaller divisions of a poem are also found. It was common for the last phrase of the bass in any section (but especially the final one) to be repeated with new music over it. The texts in each section are not of course genuine strophes but arbitrary, though regular, sections of a complete strophe or poem. Composers sometimes suggested that their music for such a text might be used for other texts identical in structure.

The principle of strophic variation was sometimes applied to settings of genuinely strophic poems, which, however, in early 17th-century Italy (as in other countries and periods) were normally set simply as strophic songs, with the same music for each verse. In some settings of such poems not only does the vocal line change from verse to verse but the bass too changes so much that the songs cannot still be called strophic variations. Conversely, in songs such as Caccini's *Ard'il mio petto misero* (*Le nuove musiche*, 1601/2) the changes from verse to verse are so slight that the pieces are virtually written-out strophic songs. Caccini called that song an aria, but most sets of strophic variations are similar in style to solo madrigals (i.e. in common time and with relatively slow-moving basses). Orpheus's great song 'Possente spirto' in Act 3 of Monteverdi's *Orfeo* (1607) is essentially a set of strophic variations, in which, in the dramatic context, the form is treated with notable imagination and psychological acumen. The ritornellos between its strophes are an element found in some other songs in this form. In the songbooks of the period the first genuine strophic variations on composed basses appeared as late as 1616: examples occur in the collections of songs and duets published in that year by the Florentines Domenico Belli and Domenico Visconti. Rome became the most important centre of them: Landi and G.D. Puliaschi were prominent composers of them, and there are several examples as late as the sonnets of Domenico Mazzocchi's *Dialoghi, e sonetti* (1638).

By the 1630s, however, the technique of strophic variation was dying out in all parts of Italy, though there are later instances of it in, for example, Roman cantatas of the mid-17th century and certain arias in the operas of Cavalli. In Venice (where Cavalli worked) such composers as Alessandro Grandi (i) and G.P. Berti had begun to apply it from at least 1620 to sectional songs whose repeated basses move more actively, predominantly in crotchets. They called such pieces cantatas, and it is customary to refer to them now as strophic-bass cantatas (*see* CANTATA, §I, 1). Grandi also adopted this technique in motets.

The term 'strophic variations' is occasionally used too of music of other periods, for example isorhythmic motets of the 14th century, constructed according to principles similar to those outlined above.

NIGEL FORTUNE

Stroppa, Marco (*b* Verona, 8 Dec 1959). Italian composer. He graduated in the piano (1980) and choral music and conducting (1981) at the Verona Conservatory, composition (1982) at the Milan Conservatory, studying with Renato Dionisi and Corghi and electronic music (1983) under Vidolin at the Venice Conservatory. Between 1984 and 1986 he was at MIT, where he pursued graduate studies in cognitive psychology, artificial intelligence and computer music. From 1977 onwards he has taught and given masterclasses at various universities, conservatories and research centres. He established, directed and taught at the International Bartók Seminar in Hungary and, in 1997, took up the post of professor of composition at the Musikhochschule in Stuttgart. He has been awarded a number of prizes, including the Kompositionspreis at the 1996 Salzburg Easter Festival.

In 1982 Stroppa was invited to IRCAM and for several years was involved there as a composer and researcher. The same year saw the first version of *Traiettoria*, a work for piano and computer, which established him internationally; in this piece the computer, sound world is conceived as a closely connected extension of the acoustic piano, taking structures of multiple harmonics and specific instrumental gestures as points of departure. The quartet *Spirali* (1987–8) marked the beginning of his exploration of the spatialization of sound, incorporating the spatial dimension into the compositional structure itself, while the first book of *Miniature estrose* for piano (1991–5) masterfully demonstrates how to stress the modern qualities of such a historically resonant instrument without recourse to avant-garde techniques. The piano's central role in Stroppa's output, together with his music's fertile, if indirect, relationship with music history, is underlined in *Upon a Blade of Grass*, which contains echoes of the piano concerto tradition. Another example of historical interplay is displayed in the radio operas (*Proemio* and *In cielo, in terra, in mare*): in their narrative structure they make a direct link with the first Italian examples of the genre from the end of the 1950s, while the vocal writing evokes the pre-operatic Italian tradition. *In cielo, in terra, in mare* led in 1995 to the 'azione musicale' entitled . . .*1995*. . .*2995*. . .*3695*. . ..

GIORDANO FERRARI

Strouse, Charles (Louis) (*b* New York, 7 June 1928). American composer. A classically trained pianist, he began to compose at the age of 12, then studied orchestration and composition at the Eastman School of Music, composition with Copland at Tanglewood for three years, and harmony and composition with Boulanger in Paris in his later teens and early 20s. In 1949, while supporting himself by playing the piano for ballet classes, summer stock choreographers and dance bands, he met lyricist Lee Adams. In the early 1950s Strouse and Adams, along with Michael Stewart, following the tradition of Jerry Bock and Sheldon Harnick, Fred Ebb and Herman Wouk, wrote weekly revues for the Green Mansions summer resort in the Adirondacks, and within a few years were inserting songs into small professional revues. After more than a year as a piano assistant to Frank Loesser during the composition and rehearsals of *Greenwillow*(1960), Strouse, with Adams and Stewart, was hired to write what is widely considered to be the first rock and roll musical. *Bye Bye Birdie* (1960), was a good-natured spoof about a popular singer, much like Elvis Presley, and the teenage girl in a small town chosen to kiss him goodbye on the eve of his induction into the army.

Strouse and Adams followed this Tony Award-winning hit with three less successful shows. *All American* (1962), the story of an immigrant professor who coaches a football team, is remembered primarily for the song 'Once Upon a Time'. *Golden Boy* (1962), adapted from Clifford Odets's popular play and film, starred Sammy Davis jr as a poor black boxer seeking wealth and fame at any cost. Arguably Strouse's finest and most ambitious score, it began innovatively with a rhythmic counterpoint of boxer's grunts and groans during a workout and continued with an array of exceptionally lyrical songs ('Night Song', 'Lorna's here' and 'I want to be with you') and jazz-influenced songs ('Don't forget 127th Street' and 'Can't you see it'). *'It's a Bird, It's a Plane, It's Superman'*, which emphasized the human side beneath the cartoon caricatures, was the first of several attempts over the next 30 years to bring a famous comic strip character to life on the stage. The last collaboration with Adams ended successfully with *Applause* (1970), an adaptation of the Academy Award-winning classic film *All About Eve* (1951). With a book by Betty Comden and Adoph Green and starring Lauren Bacall as Margo Channing, the famous actress betrayed by her sycophantic protégée Eve Harrington, *Applause* earned Strouse and Adams their second Tony Award and bequeathed a legacy of lasting songs about the theatre ('Welcome to the theatre', 'But Alive' and the title song). Seven years later Strouse, with Martin Charnin, turned another comic strip character, Little Orphan Annie, into his third Tony Award-winning musical, the spectacular hit *Annie*, and Broadway's eleventh-longest-running book musical of all time.

Future attempts at success on Broadway and in London proved elusive. Three Strouse shows received relatively successful off-Broadway runs, *By Strouse* (1978), a revue based on Strouse songs, *Mayor* (1985), a revue that revolved around colourful New York City Mayor Edward Koch, and *Annie Warbucks* (1993), the long-awaited sequel to *Annie*. Many of Strouse's failed shows contained well-received scores, especially *Rags* (1986), and an abundance of collaborative talent: *Bye Bye Birdie* librettist Stewart and lyricist Adams in the failed sequel *Bring Back Birdie* (1981); *My Fair Lady* librettist and lyricist Alan Jay Lerner in an updated version of Robert Sherwood's play *Idiot's Delight* as *Dance a Little Closer* (1983); *Fiddler on the Roof* librettist Joseph Stein's and *Godspell* lyricist Stephen Schwartz's original musical about the travails of Jewish immigration in New York City for *Rags* (1986); and *West Side Story* and *Gypsy* librettist Arthur Laurents's adaptation of Dashiel Hammett's novel and film, *The Thin Man* as *Nick and Nora* (1991). Nevertheless, the total of Broadway performances for these shows and two others (*A Broadway Musical* and *Charlie and Algernon*) was an astonishingly low 36. Even in less successful musicals Strouse has rarely failed to deliver a tuneful score. His stylistic malleability, however, may have contributed to his relative obscurity compared with composer-lyricists like Irving Berlin or teams like Rodgers and Hammerstein: for example, few of the millions of Americans familiar with 'Those were the days', the nostalgic theme song to the 1970s television series *All in the Family*, know that Strouse was its composer. On Broadway and film Strouse's ability to capture the stylistic essence of an era is especially evident in his musical depiction of New York City *c*1910, as in *Rags*, the 1930s for *Annie* and the films *Bonnie and Clyde* (1967) and *The Night They Raided Minsky's* (1968), and other more contemporary popular styles. In fact, the flair for 1950s rock and roll parody he exhibited in *Bye Bye Birdie* ('The Telephone Hour', 'One Boy', 'Honestly Sincere' and 'One Last Kiss') led to a genuine rock and roll song *Born Too Late* that reached no.7 for the Ponytails on the American charts in 1962.

WORKS

(selective list)

STAGE

unless otherwise stated, all are musicals and dates are those of first New York performance; where different, writers shown as (lyricist; book author)

Bye Bye Birdie (L. Adams; M. Stewart), orchd R. Ginzler, Martin Beck, 14 April 1960 [incl. Kids, A Lot of Livin' to Do, One Boy, Put on a happy face, Rosie]; film, 1963

All American (Adams; M. Brooks, after B.L. Taylor: *Professor Fodorski*), orchd Ginzler, Winter Garden, 19 March 1962 [incl. Born Too Late, I've just seen her, Once Upon a Time]
Golden Boy (Adams; C. Odets and W. Gibson), orchd R. Burns, Majestic, 20 Oct 1964 [incl. Don't forget 127th Street, I want to be with you, Lorna's here, Night Song, No More, This is the life]
'It's a Bird, It's a Plane, It's Superman' (Adams; D. Newman and R. Benton, after the comic strip: *Superman*), orchd E. Sauter, Alvin, 29 March 1966 [incl. You've got possibilities]
Applause (Adams; B. Comden and A. Green, after M. Orr: *All About Eve*), orchd P.J. Lang, Palace, 30 March 1970 [incl. But Alive, Think how it's gonna be, Welcome to the theater]
Six (Strouse), Cricket Playhouse, 12 April 1971
I and Albert (Adams; P. Allen), Piccadilly, London, 6 Nov 1972
Annie (M. Charnin; T. Meehan, after the comic strip: *Little Orphan Annie*), orchd Lang, Alvin, 3 May 1977 [incl. I don't need anything but you, It's a hard knock life, Little Girls, N.Y.C., Tomorrow, You're never fully dressed without a smile]; film 1982 [incl. Dumb Dog, Let's go to the movies]
By Strouse (revue), Ballroom-off-Broadway, 1 Feb 1978
Flowers for Algernon (D. Rogers, after D. Keyes: *Charlie and Algernon* and *Charly*), Citadel, Edmonton, AB, 2 Dec 1978; [incl. I got a friend, Whatever Time There Is]; rev. as Charlie and Algernon, orchd Lang, Helen Hayes, 14 Sept 1980
A Broadway Musical (Adams; W.F. Brown), orchd R.M. Freedman, Lunt-Fontanne, 21 Dec 1978
Bring Back Birdie (Adams; Stewart), orchd M. Hummerl and D. Troob, Martin Beck, 5 Mar 1981 [incl. Middle Age Blues, Young]
The Nightingale (after H.C. Andersen: *The Emperor's Nightingale*), First All Children's, 25 Apr 1982
Dance a Little Closer (A.J. Lerner, after R.E. Sherwood: *Idiot's delight*), orchd J. Tunick, Minskoff, 11 May 1983 [incl. Another Life, Dance a little closer, I never want to see you again, There's always one you can't forget, There's never been anything like us]
Mayor (revue, Strouse; W. Leigh), orchd C. Bankey, Village Gate Upstairs, 13 May 1985
Rags (S. Schwartz; J. Stein), orchd M. Starobin, Mark Hellinger, 21 Aug 1986 [incl. Blame it on the summer night, Brand New World, Children of the Wind, Greenhorns, Rags]
Lyle (B. Waber, after Waber: *The House on 88th Street*), Lyric Hammersmith, London, 3 Dec 1988
Charlotte's Web (after E.B. White), Wilmington, DE, 17 Feb 1989
Annie 2 (Miss Hannigan's Revenge) (Charnin; Meehan, after the comic strip: *Little Orphan Annie*), Kennedy Centre Opera House, Washington DC, 4 Jan 1990; rev. Goodspeed-at-Chester/The Norma Terris, Chester, CT, 17 May 1990; rev. as Annie Warbucks, orchd K. Levenson, Marriott's Lincolnshire Theatre, Chicago, 6 Feb 1993 [incl. Annie just ain't Annie anymore, Changes, A Younger Man]
Nick and Nora (R. Maltby jr; A. Laurents, after D. Hammett: *The Thin Man*), orchd Tunick, Marquis, 8 Dec 1991 [incl. Everybody wants to do a musical]
Contribs. to revue, lyricist in parentheses: Shoestring Revue (Stewart), President, 28 Feb 1955; The Littlest Revue (Adams and Strouse), Phoenix, 22 May 1956; Shoestring '57 (Adams), Barbizon Plaza, 5 Nov 1956; Upstairs at O'Neals (Strouse), O'Neals Restaurant, 28 Oct 1982
Incid music to Sixth Finger in a Five Finger Glove (S. Michel), Longacre, 8 Oct 1956

OTHER WORKS

lyricists in parentheses

Films: Bonnie and Clyde, 1967; The Night They Raided Minsky's (Adams, S. Cairn, Strouse), 1968 [incl. A Dancing Man, Living Alone, The Night They Raided Minsky's, Take Ten Terrific Girls]; There Was a Crooked Man, 1970; Just Tell Me What You Want, 1980
Songs: Born too late (F. Tobias), 1962; Those were the days (Adams), 1971 [theme song to *All in the Family* and *Archie Bunker's Place*]

GEOFFREY BLOCK

Strowger, E. (*fl* 1540). English composer, possibly related to Nicholas Strogers. His sole surviving composition is a short canonic *Miserere* for organ (*GB-Lbl* Add.29996; ed. in EECM, vi, 1966).

JOHN CALDWELL

Strowger [Strowgers], **Nicholas.** *See* STROGERS, NICHOLAS.

Strozzi, Barbara [Valle, Barbara] (*b* Venice, 1619; *d* Padua, 11 Nov 1677). Italian composer and singer, adopted (possibly illegitimate) daughter of GIULIO STROZZI. She was sometimes referred to by him as Barbara Valle; by 1650 she was his sole heir. Her mother was Isabella Garzoni, called 'la Greghetta', Strozzi's longtime servant. Barbara was a pupil of Francesco Cavalli and the dedicatee of two volumes of solo songs by Nicolò Fontei, the *Bizzarrie poetiche* of 1635 and 1636, for which Giulio Strozzi wrote most of the texts, and which Barbara sang at his home in the presence of various Venetian *letterati*. Her performances were institutionalized in 1637 when Giulio founded the Accademia degli Unisoni, a musical offshoot of a more important literary academy, the Accademia degli Incogniti. As indicated by published minutes of the Unisoni (*Le veglie de' Signori Unisoni*, 1638), Barbara both sang at the meetings and suggested the subjects on which the members exercised their debating skills.

Strozzi's career as a professional composer began in 1644 with the first of her eight publications, a volume of madrigals for two to five voices on texts by Giulio Strozzi, which she dedicated to Vittoria della Rovere, Grand Duchess of Tuscany. All but one of her subsequent surviving publications – op.4 is missing – appeared after Giulio's death in 1652. Dedicated to a variety of important patrons, including Ferdinand II of Austria and Eleanora of Mantua (op.2, 1651), Anne of Austria, Archduchess of Innsbruck (op.5, 1655), Nicolò Sagredo, later Doge of Venice (op.7, 1659) and Sophia, Duchess of Brunswick and Lüneburg (op.8, 1664), they suggest that she may have been forced to rely on her abilities as a composer for her livelihood after her father's death. She apparently dedicated the missing op.4 to Carlo II, Duke of Mantua in 1655. She composed several songs for the duke in 1665, a year after her last known published works. Although Strozzi never married, by 1651 she had four children; it seems likely that the father of at least three of them was Giovanni Paolo Vidman, a friend of Giulio Strozzi, and the dedicatee of his *La finta pazza* of 1641. Her two daughters, Isabella (*c*1642–57) and Laura (*c*1644–86), entered the convent of S Sepolcro in Venice in 1656, the latter taking her final vows in 1661. Strozzi's son Massimo (*d* after 1680) took vows in the Servite order in 1662 and became a monk at the monastery of S Stefano in Belluno. Another son, Giulio Pietro (*b c*1641), was still alive in 1680.

Apart from the madrigals of op.1 and the solo motets of op.5, nearly all of Strozzi's surviving works are ariettas, arias and cantatas for solo voice (mainly soprano) and continuo. A few works call for strings as well. Although the generic categories are not fixed, and terminology is only loosely applied in the publications themselves, the simplest pieces are the ariettas, which are essentially short arias in strophic form (such as most of the pieces in op.6). The most complex are the cantatas (such as those in opp.7

and 8). These are lengthy, varied works containing several sections and a mixture of vocal styles: recitative, arioso and aria, responding to textual distinctions between open narration and formal lyricism. The arias are generally shorter than the cantatas, often strophic, and frequently enclosed by a refrain at beginning and end.

The texts, many of them apparently written to order and about half of them anonymous, are in the Marinist vein: precious love poetry filled with various conceits, ironic and lachrymose by turns. The known poets include, besides Giulio Strozzi, several figures associated with the world of opera in Venice around the middle of the 17th century, among them P.P. Bissari, Aurelio Aureli, Pietro Dolfino, Marc'Antonio Corraro, Nicola Beregani, Francesco Piccoli and G.B. Maiorani; G.B. Pellicani wrote texts for several dramatic works presented in Bologna. Although she wrote no operas, the best of her works (most notably the *lamento* 'Sul Rodano severo', opp.2 and 3) convey dramatic action in which the progress of a protagonist – partly described by a narrator – towards a resolution of his predicament unfolds in a carefully calculated series of musico-dramatic events. In cantatas as well as arias, her primary formal procedure is contrast, usually combined with some kind of refrain idea. Strozzi's style, with its easy shifts between unmeasured and measured passages and between duple and triple metre, and her occasional use of the *stile concitato*, all in response to a faithful adherence to the form and meaning of the texts, reflects her training in the *seconda prattica* tradition, as exemplified in the music of her teacher, Cavalli. But her melismatic expansions are longer and repetitions of text more frequent than his, and her style is altogether more pointedly lyrical, more dependent on sheer vocal sound. It is emphatically singer's music, and very grateful to the lyrical soprano voice, neither excessively virtuoso nor especially demanding as far as range or tessitura is concerned. The similarity in vocal style among her works, the scoring for soprano and continuo, and the frequent puns on her name in the texts suggest that she sang most of her music herself, at academic meetings and similar social occasions.

The Genoese Bernardo Strozzi painted a portrait of Barbara Strozzi and by 1639 he had made a copy of it for a Venetian patron. The *Female Musician with Viola da Gamba* (now in the Gemäldegalerie, Dresden) is most likely Strozzi's original portrait of the composer.

ELLEN ROSAND (with BETH L. GLIXON)

Strozzi, Giulio [Zorzisto, Luigi] (*b* Venice, 1583; *d* Venice, 31 March 1652). Italian librettist, poet and dramatist; BARBARA STROZZI was his adopted (possibly illegitimate) daughter. He was himself the illegitimate (later legitimized) son of Roberto Strozzi, a Venetian banker and member of a prominent Florentine family, of which Piero Strozzi was an earlier member. He was educated in Venice and at the University of Pisa, where he graduated in law. He then moved to Rome, where he attained the rank of apostolic prothonotary and was instrumental in founding about 1608 the Accademia degli Ordinati. This literary circle, which met at the house of Cardinal Giovanni Battista Deti, was formed in opposition to the influential Accademia degli Umoristi. Strozzi later resigned from the position of prothonotary and left Rome, where he seems to have become a controversial figure. He worked for a time at Padua, where he wrote the tragedy *Erotilla* (Venice, 1615), and at Urbino, where he served the duke as 'prefect of the bedchamber'. He finally returned to Venice, probably in the early 1620s, and spent most of the rest of his life there.

Strozzi was active in Venice in both literary and musical circles. In company with several of the early librettists of Venetian opera he was a member of the Accademia degli Incogniti and shared the academy's libertine philosophy. He himself founded two other academies at Venice. The

Giulio Strozzi: portrait attributed to Simon Vouet, c1627 (Ashmolean Museum, Oxford)

first of these met at the house of Marquis Martinenghi Malpaga. The second – the Accademia degli Unisoni, founded in 1637 – met at Strozzi's house and was devoted not only to the reading of academic discourses but also to musical performances in which Barbara Strozzi played a major role; the published papers of the academy – *Veglie de' Signori Unisoni* (Venice, 1638) – are dedicated to her. Strozzi and his academy seem to have achieved some notoriety: both were attacked in an anonymous and strongly worded series of satires, dating from late 1637 or early 1638.

Strozzi's literary output includes orations, plays, poetry and descriptions of Venetian ceremonial, several of which contain useful information on Venetian musical life. His published description of the memorial service for Cosimo II, Grand Duke of Tuscany, held in Venice on 25 May 1621, contains references to a requiem mass composed for the occasion by Monteverdi (the music is lost); in the 12th canto of his heroic poem *La Venetia edificata* (Venice, 2/1626) he praised several Venetian musicians, among them Monteverdi and Alessandro Grandi (i); and his *Le glorie della Signora Anna Renzi romana* (Venice, 1644) contains biographical information about, and a critical appreciation of, the famous soprano (*see* RENZI, ANNA).

Strozzi is best known, however, for his operatic librettos, which were set to music from the mid-1620s onwards. Little survives of the musical settings. His two earliest operatic collaborations were with Monteverdi. The five-act comic opera *La finta pazza Licori* (1627), developed from an existing dramatic dialogue in 1627 and intended for performance at Mantua, is known only from Monteverdi's letters. Monteverdi wrote with enthusiasm about Strozzi's text and about the problems of a musical depiction of madness. According to Tomlinson, however, he probably set no more than part of Act I before the project was abandoned.

Their second collaboration, *Proserpina rapita*, was commissioned by the Venetian patrician Girolamo Mocenigo for the wedding of his daughter, and was first performed on 16 April 1630 in a room above Mocenigo's apartments in the Palazzo Dandolo. The libretto survives, as does a brief description of the wedding banquet and performance (in *A-Wn*; see Zoppelli for a slightly varied description). A setting for three voices and continuo of a section of the text, 'Come dolce hoggi l'auretta', was published in a posthumous collection of Monteverdi's *Madrigali e canzonette* (Venice, 1651). (*Proserpina rapita* was not, as has previously been asserted, reset by Francesco Sacrati in 1644.)

Strozzi was one of the most original, important and influential members of the small group of librettists involved in the creation of Venetian opera. Badoaro and Busenello were his friends. The latter contributed a laudatory ode for the publication of *La Venetia edificata* and also dedicated several poems to Strozzi. Another librettist, Paolo Vendramin, was a member of the Accademia degli Unisoni. Several of Strozzi's librettos (all extant) were set for performance at the new public opera houses. His three-act *Delia, o sia La Sera sposa del Sole* (music by Francesco Manelli, now lost), conceived as a court opera, 1630–31, was first performed at the opening of the Teatro di SS Giovanni e Paolo in 1639. It has been described as 'the prototype of Venetian opera'. Even more important was *La finta pazza* (reprinted in Corte; not to be confused with *La finta pazza Licori*); it was first performed with music by Sacrati for the opening of the Teatro Novissimo on 14 January 1641 and was subsequently presented in several other Italian cities. A score of the opera used by the Febiarmonici, dating from no earlier than 1644, was discovered in the 1980s. The most notable revival of the opera took place in Paris in 1645, with stage designs by Giacomo Torelli and choreography by G.B. Balbi; for this, one of the earliest performances of Italian opera in Paris, some of the recitatives were replaced by spoken dialogue. *La finta pazza* was the first of a trilogy of librettos by Strozzi covering the period from the Trojan War to the founding of Rome. The other two were *La finta savia* and *Il Romolo e 'l Remo*. Of the music for *La finta savia* (Venice, Teatro di SS Giovanni e Paolo, 1643; music by Filiberto Laurenzi, Tarquinio Merula, Giovanni Battista Crivelli, Alessandro Leardini, Benedetto Ferrari and Vincenzo Tozzi), only the arias contributed by Laurenzi survive. The setting of *Il Romolo e 'l Remo* (Venice, Teatro SS di Giovanni e Paolo, 1645), attributed on uncertain grounds to Cavalli, is lost, but Cavalli's score for Strozzi's last libretto, *Veremonda* (performed Naples, 1652; Venice, probably 1653), survives. On the title-page of the libretto, which was a reworking of G.A. Cicognini's *Celio* (Florence, 1646), Strozzi's name appeared anagrammatically as Luigi Zorzisto.

A number of Strozzi's smaller-scale texts were also set by Venetian composers. Here again Monteverdi was first in the field. His setting (now lost) of the sonnets *I cinque fratelli* was written in 1628 for performance at a banquet given by the Venetian Republic to honour a visit by Grand Duke Ferdinando of Tuscany and his brother Carlo de' Medici. The earliest of Strozzi's texts to survive with music, however, is the large-scale pastoral dialogue *La Gelosia placata*, of which Giovanni Rovetta included a setting in his first book of madrigals (Venice, 1629). The text, adapted from Act 3 scene i of Strozzi's comedy *Il natal di Amore: anacronismo* (Venice, 4/1629), is cleverly constructed and is distinguished by its unusually energetic

language; the musical setting foreshadows stylistic features of early Venetian opera and employs the *genere concitato* (texts and music in Whenham). Continuing his association with composers working in Venice, Strozzi contributed the texts for Nicolò Fontei's first book of *Bizzarrie poetiche poste in musica* (Venice, 1635) and the majority of those for the second book (Venice, 1636). One of the texts set by Fontei in his 1635 book, *Gira il nemico insidioso*, was also set by Monteverdi and published in his eighth book of madrigals (Venice, 1638). The text of Laurenzi's serenata *Guerra non porta* (in his *Concerti et arie*, Venice, 1641) is by Strozzi, and he also wrote the texts for Barbara Strozzi's first book of madrigals (Venice, 1644). In her later volume, *Cantate, ariette e duetti* (Venice, 1651), she included her own settings of texts from the operas, *La finta pazza* and *Il Romolo e 'l Remo*.

JOHN WHENHAM

Strozzi, Gregorio (*b* S Severino Lucano, *c*1615; *d* probably Naples, after 1687). Italian composer and organist. He was a pupil of Giovanni Maria Sabino in Naples. He became second organist at SS Annunziata, Naples, in 1634 and was still in that position in 1643 despite a promise of promotion. In 1645 he became chaplain at the principal church in Amalfi, and he held a benefice there. Some time after 1655 he became a doctor of both canon and civil law at the University of Naples and also an apostolic notary.

Strozzi's output includes a collection of choral works for Holy Week and a set of two-part textless pieces for instructional purposes, *Elementorum musicae praxis*, but the *Capricci da sonare* is his most important volume. Intended for performance on harpsichord or organ (apparently in that order of preference), its 29 pieces cover almost every form found in keyboard music at the time: learned contrapuntal works (capriccios, ricercares, sonatas), virtuoso toccatas, dance pieces (gagliardas, correntes, ballettos), variations (on the romanesca and *eufonia*, and a *toccata de passagagli*) and an intabulated madrigal (based on Arcadelt's *Ancidetemi pur*). They are in the Neapolitan-Roman tradition of keyboard music typified by Macque, Mayone, Trabaci, Frescobaldi and Salvatore, and their style suggests that despite the late date of their publication they are early works. There are certain archaic features: it is one of the last Italian keyboard sources to be presented in open score; ecclesiastical tones are indicated; the opening capriccio, a long set of nine contrapuntal variations on the hexachord, may well be the last composition on this material; and similarly the romanesca variations may be the last Baroque work of its kind.

The ricercares are complex works in which two, three or four themes are treated simultaneously in the fashion of Salvatore's ricercares and Frescobaldi's fantasias. Several pieces, notably the toccatas, are in an elaborate fantasia style reminiscent of that of Macque and Frescobaldi but more exaggerated: it involves chromaticism, abrupt harmonic progressions and sharp dissonances, in the manner of the *consonanze stravaganti* and the *durezze e ligature* that Macque and Frescobaldi respectively used elsewhere. Figurations passing through the entire texture, and erratic, pointed rhythms, often of the Lombard variety, are two specially striking features which sometimes become so affected and passionate that supplementary performance directions are needed: *arpeggiando*,

accentando, *gruppeggiando* (very pointed Lombardic rhythm), *largo*, *stretto*, *a battuta*, *piano*, *forte*. The music is also profusely ornamented.

The first of the three sonatas bears the remark 'inappropriately called by others *Canzona francese*'. This points up very clearly the well-known relationship between the sonata and the older variation canzona of Frescobaldi. Strozzi's pieces have three or four contrasted movements, a few of them employing related material, and are the earliest known keyboard pieces called 'sonata' to be in more than one movement. The dance pieces seem to have been influenced by Trabaci's, though Strozzi's are more tonal. Only the outer parts of the last five correntes and the two ballettos are given; the harmonic filling is to be supplied from figures, which denote intervals below the soprano as well as above the bass.

BARTON HUDSON

Strozzi, Piero (*b* Florence, *c*1550; *d* Florence, after 1 Sept 1609). Italian amateur composer. He was a nobleman, who played an important intellectual role in fostering the 'new music' in Florence during the late 16th century. Giulio Strozzi was a younger member of his family. He was a member of the Camerata of Count Giovanni de' Bardi and a chief participant in its discussions on the reform of music. In apparent acknowledgment of his significance in the group, Vincenzo Galilei made him one of the two interlocutors (the other was Bardi) in his *Dialogo della musica antica e della moderna* (1581). He was also a member of the Camerata of Jacopo Corsi and was one of those before whom Peri (as he reported in the preface to *Euridice*) first demonstrated the new manner of singing, which Corsi's group encouraged. Strozzi was also supportive of Giulio Caccini. Later he was a principal member of Marco da Gagliano's Accademia degli Elevati, which flourished in Florence from 1607 to 1609. In 1579 he composed music for the *Carro della Notte* (text by Palla Rucellai) and the *Carro di Venere* (the younger G.B. Strozzi), both of which were presented in Florence on the occasion of the marriage of Grand Duke Francesco I de' Medici and Bianca Cappello. In 1596 his music was used in the *Mascherata degli accecati* (Rinuccini), and in 1600 he composed a chorus, the 'Coro di Amori', for Caccini's *Il rapimento di Cefalo* (Chiabrera), which was presented to mark the marriage of Henri IV of France and Maria de' Medici in Florence. All this music is lost. Only three compositions by him are extant: *Fuor dell'humido nido* (in *I-Fn*; ed. in Ghisi, 1940, Fortune and *PirrottaDO*), which Caccini sang 'over his own and many other viols' in the *Carro della Notte*, and two five-voice madrigals, *Vago augelletto che cantando vai*, in Luca Bati's second book of five-voice madrigals (RISM 1598[11]), and *Portate, aure del ciel*, in memory of Corsi, in Gagliano's second book of five-voice madrigals (1604[17]). The latter had been performed a year before at the obsequies for Jacopo Corsi held in the Compagnia dell'Arcangelo Raffaello on 21 February 1603. Domenico Torsi declared Strozzi to be a composer 'the equal to any who makes [music] his profession', and reported that his madrigal had been 'sung by five voices to the sound of five viols with such sweetness and with such an affecting manner that perhaps its like [had] never been heard'.

EDMOND STRAINCHAMPS

Strube, Gustav (*b* Ballenstedt, 3 March 1867; *d* Baltimore, 2 Feb 1953). American conductor, composer, violinist and teacher of German birth. After studying with Brodsky (violin) and Reinecke (harmony and composition) at the Leipzig Conservatory, he played in the Gewandhaus Orchestra under Reinecke and at the Leipzig opera under Nikisch. On emigrating to the USA, he became a violinist in the Boston SO (1890–1913) and conducted the Boston Pops Orchestra (1898, 1900–02, 1905–12). He taught theory and conducting at the Peabody Conservatory (1913–46), and served as the first conductor of the Baltimore SO (1916–30). His music is distinguished by skilful craftsmanship, melodic charm and a strong sense of tonality. He also wrote a book, *The Theory and Use of Chords* (Boston, 1928). An account of Strube and his work appeared in Musical Quarterly in 1942 (G. Klemm: 'Gustave Strube: the Man and the Musician', *MQ, xxviii* (1942), 288–301).

MICHAEL MECKNA

Struck, Paul (Friedrich) (*b* Stralsund, 6 Dec 1776; *d* Pressburg [now Bratislava], 14 May 1820). Swedish-German composer. After studying with Albrechtsberger in 1795 and with Haydn from 1796 to 1799 in Vienna, he travelled by way of Prague, Dresden, Berlin and Stralsund to Stockholm, on the recommendation of his friend Fredrik Samuel Silverstolpe, a Swedish diplomat residing in Vienna. During his stay in Stockholm (1800–01) he became a member of the Swedish Royal Academy of Music and took part in the first Swedish performance of Haydn's *The Creation* (3 April 1801), though he failed to be appointed court conductor of the Hovkapellet. Among the compositions written in Stockholm were a symphony in D (performed in February and March 1801) and a cantata dedicated to Queen Fredrika. In the autumn of 1801 Struck left Stockholm and went to Florence; returning to Vienna the following year, where he settled as a piano teacher. In 1809 he married, and he settled in Pressburg with his wife and children eight years later.

Struck's music hardly rises above the conventional. In a letter of 12 May 1801, Silverstolpe described him as unquestionably a genius, but vain, lacking and despising culture, and satisfied with studying only the technical aspects of composition. His Fourth Symphony was severely criticized in the *Allgemeine musikalische Zeitung* (1809, 1811), but his chamber music found more favour there (1807, 1819).

ANDERS LÖNN

Struckmann, Falk (*b* Heilbronn, 23 Jan 1958). German baritone. He studied at the Musikhochschule in Stuttgart, and was then engaged (1985–9) at the Kiel Opera, from where he graduated to the Basle Opera, achieving a particular success as Duke Bluebeard. At Antwerp as Scarpia (1991), at the Théâtre de la Monnaie, Brussels, as Donner (1991) and as the Dutchman at Munich (1992), he announced his arrival as a Heldenbariton of note. Barenboim's advocacy at the Berlin Staatsoper from 1992, when the conductor engaged him as Amfortas in a new staging of *Parsifal* (recorded for CD and video), helped his career to take wing. His further parts at Berlin under Barenboim have included Wotan/the Wanderer, Orestes (recorded), Wozzeck, Pizarro, Telramund (recorded) and eventually Hans Sachs (1998). Struckmann made his Bayreuth début with the same conductor, as Kurwenal, in 1993 (an interpretation preserved on video), and followed that with Donner, Gunther and Amfortas. His first Jochanaan was at Leipzig in a Lehnhoff staging in the 1994–5 season. He first appeared at La Scala as the Wanderer (1997), and made his début at the Metropolitan as Wozzeck in 1998. He possesses a voice of dramatic weight which he uses with vigour, not to say vehemence, to convey presence and character.

ALAN BLYTH

Structuralism, post-structuralism.

1. Theoretical basis. 2. Application to music. 3. Post-structuralism.

1. THEORETICAL BASIS. The foundations of structuralist thought were laid by the Swiss linguist Ferdinand de Saussure in lectures delivered during the early years of the 20th century and later published from student transcripts as *Course in General Linguistics* (Saussure, 1916; Benveniste, 1966–74). His primary aim was to place the study of language on a more scientific basis by breaking with traditional, historically-orientated or 'diachronic' approaches of the kind that had dominated 19th-century philology, his own earlier work included. Instead it should seek to conceptualize language as a system of contrastive or differential features 'without positive terms', since the relationship between signifier and signified (or word and concept) cannot be understood on a straightforward, one-to-one order of equivalence. Rather it consists in the complex stucture of inter-articulated differences which enables a mere handful of phonemes (minimal distinctive sound-units) to serve for a vast, potentially infinite range of meanings. At the semantic level, the precondition for language is its structural capacity to distinguish between concepts, and thereby impose an intelligible order on the world of knowledge and experience. So these two dimensions of language (sound and sense) should be treated from a structural-synchronic standpoint which acknowledges the 'arbitrary' link between signifier and signified, or the absence of any natural (non-conventional) tie that would bond them. This relationship is always caught up in a play of phonemic/semantic differences and contrasts that vary from one language to another, or from

one diachronic stage to the next in the development of a language.

Two further Saussurean distinctions are of crucial relevance to the structuralist programme and its pertinence to musical theory. One is the distinction between *langue* and *parole*, the former applying to language in its structural-synchronic aspect, the latter to the open-ended variety of speech-acts or particular (context-specific) items of utterance. Related to this is the 'syntagmatic'/'paradigmatic' dualism, where the one has to do with the temporal unfolding of a chain of linguistic events in accordance with certain linear-sequential rules of combination, while the other concerns the selection of lexical units from a paradigm-class of possible alternatives in context (synonyms, antonyms, variant expressions, metaphorical substitutes and so on), conceived as belonging to a 'vertical' dimension from point to point along the verbal chain. This distinction came to exert greatest influence on later developments in literary criticism, narrative poetics, anthropology, cultural studies and the human sciences at large; for it offers a means of analysing texts (in the broadest sense of that term, taken to include, say, lyric poems, novels, myths, kinship-systems, culinary codes, fashions in dress, cinematic conventions or musical styles and genres) on the basis of structural features involving the interplay or relative predominance of syntagmatic and paradigmatic elements.

The Czech linguist Roman Jakobson pioneered this approach with his analyses of various texts, using broad typological-generic distinctions along structuralist lines (Jakobson, 1985, 1987). On the one hand were texts that foregrounded metaphor (i.e. the substitution of figural for literal terms) with the effect of 'defamiliarizing' language or creating novel realignments of signifier and signified. On the other were texts whose workings were chiefly metonymic, typified by relations of contiguity or linear-associative linkage between details of a scene or narrative situation that required no such metaphoric 'leap' since they followed the normal sequence of perceptual grasp. This made it possible to draw a series of critically pertinent distinctions, as for instance between lyric poetry (where metaphor predominates as a structural principle) and other genres such as epic poetry, realist fiction or modes of socio-documentary writing where metonymy typically provides a strong sense of narrative verisimilitude. Moreover it then became possible to avoid the cleavage between formalist and historical approaches by reviewing the sequence of stylistic shifts or 'revolutions' in literary language that marked this alternating pattern of predominance (see especially Lodge, 1977). Thus the period of high 1920s literary modernism witnessed a strong bias towards metaphor not only as a matter of localized stylistic salience but also as a large-scale structuring principle. Conversely, the reaction against high modernism took the form of a pronounced swing during the 1930s towards down-to-earth, realist or socio-documentary modes of narrative and likewise the adoption of a metonymic style which eschewed metaphorical complexity in favour of a direct engagement with the social and political issues of the time.

2. Application to music. These developments in structuralist linguistics and literary theory have been taken up and variously applied by writers on music (see for instance Nattiez, 1975 and Ruwet, 1972). Thus patterns of melodic or longer-range harmonic progression can be treated, on the structuralist model, as unfolding through a musical 'syntagm', or chain of successive events, whose every stage can be heard to involve some element of choice between various paradigm-specific possibilities. These latter may constitute either the 'language' of music (its range of harmonic-structural resources at any given time) or the composer's more individual way of deploying those resources, that is, the set of background stylistic norms which make up his or her distinctive musical idiom. To this extent there is a certain ambiguity concerning the Saussurean distinction between *langue* and *parole* when transposed into musicological terms. Also, as with all such theoretical frameworks, any results thus achieved can only be as good or as musically convincing as the analyst's perceptiveness in matters of detail or powers of trained musical response. Thus a frequent criticism of the structuralist method is that it amounts to just a different, more complicated way of making points that could well have been arrived at by intuitive means and without all that clanking theoretical machinery. Nicholas Cook voices this doubt when he asks: 'how much of what matters about music is retained in the translation from sound experience to abstract categories such as "ascending conjunct line"?', or 'can we say anything important about the experience of a given line simply by classifying it as the opposite of lines which are descending or disjunct?' (Cook, 1987, p.181). There is always a danger that the structuralist fixation on such binary terms of analysis will become just a substitute for genuine engagement with the music, or else just a different way of formulating insights obtainable by more straightforward application of Schenkerian or other analytic techniques.

Nevertheless, its proponents would argue, a structuralist approach can help to sharpen those perceptions by providing a firmer grasp of the various orders of relationship that constitute both the musical work and its background repertory of tonal-harmonic conventions. Moreover, it helps to clarify our sense of the different genres and period styles that involve a range of shifting emphases as between the vertical (paradigmatic) and horizontal (syntagmatic) axes of musical development. In this way music critics and historians may hope to overcome the well-known problem of combining a work-based immanent mode of analysis with an interest in matters of cultural change and stylist evolution. Thus, for instance, a sufficiently acute and historically informed mode of analysis might seek to explain the transformative process by which the Classical style provoked an emergent Romanticism, or by which the organizational complexity of post-Schoenbergian modernism gave rise to a series of reactive trends towards melody and linear counterpoint. Still the main focus of structuralist theory – inevitably, given its linguistic sources and analogues – has been on those formal aspects of music that lend themselves to treatment in synchronic terms.

3. Post-structuralism. Post-structuralism shares this emphasis on language conceived (after Saussure) as a network of signifying contrasts and relationships 'without positive terms'. However, it rejects the structuralist idea that the workings of language and other such semiotic systems – music among them – can or should be subject to the kind of analysis that aspires to 'scientific' status in the structural-synchronic mode. Indeed, this approach is avowedly 'post'-structuralist in rejecting the drive for

system and method and insisting rather on the open-ended play of 'difference' which exceeds and subverts all efforts to contain it (Barthes, 1970, 1973; Harari, 1977; Johnson, 1981; Young, 1981). These ideas were first developed during that phase of heady intellectual activity in Paris during the late 1960s when thinkers from various disciplines, including the composer-theorist Pierre Boulez, formed a close interdisciplinary grouping around the avant-garde literary journal *Tel quel* (Boulez, 1961, 1966). What they chiefly shared was an outlook of uncompromising radicalism with regard to the heritage of 'bourgeois' art-forms or literary/musical conventions, and a desire to transform those conventions through the alliance of cutting-edge theory with selfconscious artistic experiment. Thus one finds all manner of allusive cross-reference between notions of 'the text' (or certain kinds of text) as a powerful destabilizing force exerted on the codes of 'bourgeois' literary realism, and notions of music – post-serial music – as likewise subverting the received tradition of linear or tonal-harmonic development (see especially Barthes, 1970; Sollers, 1968).

Post-structuralism also has close ties with psychoanalysis, in particular with Jacques Lacan's reading of Freud where the human subject is conceived as radically 'decentred', or as caught up in an endless slippage from one signifier to another along the metonymic chain which can never be brought to a halt since the signified, the ultimate object of desire, is forever beyond reach (Lacan, 1966–71). Such ideas have exerted their main influence in the field of feminist criticism where theorists argue for the musical equivalent of *écriture feminine*, that is to say, a distinctively female kind of writing (or compositional style) which avoids the typecast 'male' qualities of aggressive dynamics, strong rhythmic drive and self-willed control over every last detail of thematic development (McClary, 1991). Also influential are the late writings of Roland Barthes, who started out as a thinker in the high-structuralist mode but who later renounced the attractions of system and method in favour of an idiosyncratic approach which drew obliquely on a wide range of theories while avoiding any kind of orthodox doctrinal commitment. These writings include essays on music, especially on Schumann's piano works, where Barthes displays an extraordinary skill at weaving theoretical allusions into a mode of subtly displaced autobiographical discourse that somehow reveals the most intimate aspects of his own erotic or libidinal involvement as amateur performer-listener. Hence his distinction between *plaisir* and *jouissance*, the one a reassuringly familiar sort of pleasure that comes of reading or listening in accordance with established cultural codes, the other a sharply disconcerting (even perverse) enjoyment that results from the disruption of those same codes by some shock to one's normal, acculturated habits of response (Barthes, 1977, 1982).

Other critics have pursued a post-structuralist approach while avoiding Barthes's somewhat narcissistic appeal to this private 'image-repertoire' of memories, impressions and fetishized details. Mostly they have understood post-structuralism as a means of liberating musical analysis from its over-concern with 'structural listening' (Subotnik, 1996) or its excessive regard for matters of long-range thematic, harmonic and formal organization. In consequence, these critics argue, analytic techniques have tended to devalue other, less 'sophisticated' modes of listener response which inherently elude all the concepts and categories of mainstream music theory. This often goes along with deconstructionist arguments to the effect that certain academically sanctioned musical values (such as those of complexity, organic form, motivic-thematic development and so on) are ideological constructs imposed upon music – and also on the history of music – by a kind of illicit metaphorical transfer from the realm of natural phenomena (*see* DECONSTRUCTION). Thus musical works are assumed to 'develop' through a process of evolution from germinal motifs which assures both their formal (organic) integrity as self-contained works of art and also their appointed place in a history – a universally acknowledged Great Tradition – to which they stand as exemplars. Post-structuralism rejects this way of thinking in favour of a strongly revisionist or anti-canonical approach which views the ideology of organic form as a potent source of aesthetic mystification in the service of hegemonic interests and values (Bergeron and Bohlman, 1992; Goehr, 1992; Solie, 1980). It thus sets out to make room for other, less 'authorized' (hence more subversive) modes of music enjoyment as well as for resistance to 'structural listening' with its strongly inculcated system of codes and conventions.

There are further parallels between post-structuralism in its literary-critical and its 'new-musicological' forms. One is the desire to open a door to all the winds of historical change by attacking any notion of the work (or text) as an autonomous structure possessed of its own, uniquely 'aesthetic' value, and standing quite apart from the vicissitudes of short-term cultural taste. In this respect it differs crucially from the thinking of a critic like T.W. Adorno, one for whom the essential condition of a truly radical (counter-hegemonic) art was its power to hold out against the blandishments of mass culture, and to do so, moreover, by containing in itself all the conflicts, resistances and stubborn contradictions that marked its irreconcilable distance from the sphere of popular consumption (Adorno, 1949). In Subotnik's case there is a marked shift of outlook from her earlier work, much indebted to Adorno, to her later (more heavily post-structuralist influenced) writings where Adorno very often represents all the high-modernist values that she now seeks to deconstruct in the name of a democratic musical culture (Subotnik, 1996). Indeed, the chief difference between post-structuralism and critical theory in the Frankfurt School line of descent is the latter's steadfast insistence that musical and other artworks can be subject to a mode of immanent critique which respects their relative autonomy while discovering in them all the symptoms and signs of a false social 'reality'.

Elsewhere, post-structuralism has exerted a strong influence on sociologists of music, who reject any notion of autonomous form or of 'the work' as somehow existing quite apart from its various historically-changing conditions of production, reception and performance. Thus the so-called New Musicology has followed the New Historicist movement in literary studies by adopting a broadly contextualist or socio-cultural approach (Kramer, 1990; Shepherd, 1991; Treitler, 1989). That is to say, these critics make a programmatic point of annulling the prescriptive formalist line between structural features supposedly 'intrinsic' to the work and the kinds of 'extrinsic' (background-documentary) source material which analysts mostly consider irrelevant to their own

more specialized or purely 'musical' concern. Very often this approach goes along with a claim to dislodge the canon of great works from its position of hitherto unchallenged cultural eminence by revealing the mechanisms of canon formation for what they are; a set of taken-for-granted aesthetic values which in fact have more to do with dominant social interests. Where post-structuralism lends support to such arguments is by offering a generalized theory of language, discourse, subjectivity and ideology that effectively dissolves the musical work, like the literary text, into its various circumambient cultural codes or its relationship to other kinds of signifying practice.

However, there is an obvious problem with this theory when it comes to explaining how works (or indeed human agents) could muster resistance to prevalent, ideologically-conditioned habits of response. It is here that post-structuralism is most closely akin to postmodernist ideas about the current transformation of beliefs and values which – so it is argued – signals an end to the discourse of old-style 'enlightened' critical modernity. In musical terms, this tends to work out as a defence of passively pleasurable listening, and a rejection of anything that stretches the mind beyond such routine, acculturated modes of perception. In short, there is a certain elective affinity between post-structuralist–postmodernist theorizing and the kinds of present-day minimalist or neo-romantic music which are likewise regarded as marking a break with the elitist values of high modernist culture. Adorno wrote witheringly of the 'culture-industry' and the way that it encouraged 'regressive listening' through the ceaseless churning-out of a totally commodified (mass-market orientated) music which demanded nothing more than the passive registration of stereotyped melodic and harmonic formulas (Adorno 1991). While post-structuralism is not necessarily aligned with any such regressive tendency still one may suspect that its radical rhetoric conceals an absence of genuine critical-emancipatory force. At any rate, its claims are heavily compromised by a failure to envisage any role for music other than those of Barthesian hypercultivated pleasure on the one hand or subjection to a repertory of pre-established codes and conventions on the other.

Structural level. *See* LAYER.

Strumentato. *See* STROMENTATO.

Strumentini (It.). *See* WOODWIND INSTRUMENTS.

Strumento [istrumento, stromento] (It.). Instrument. *Strumenti a corde* are string instruments; *strumenti d'arco*, bowed instruments; *strumenti di legno*, woodwind instruments; *strumenti d'ottone* or *di metallo*, brass instruments; *strumenti di penna*, quilled keyboard instruments; *strumenti a percossa*, percussion instruments; *strumenti a fiato* or *di vento*, wind instruments; *strumenti da tasto*, keyboard instruments; and so on.

The *strumento d'acciaio* ('steel instrument') required by Mozart in *Die Zauberflöte* was probably not a BELL-LYRA but a keyboard instrument such as a keyboard glockenspiel (*see* GLOCKENSPIEL (i)).

□

Strungk [Strunck], **Delphin** (*b* 1600 or 1601; *d* Brunswick, bur. 12 Oct 1694). German composer and organist. He was organist at the Marienkirche in Wolfenbüttel from 1630, then at the court in Celle (1632–7), and finally he moved to Brunswick, where he was organist of the Marienkirche from May 1637 and where he remained until his death. He also was organist of other churches in Brunswick. In his *Kurtzer, doch ausführlicher Bericht von den Modis musicis* (Königsberg, 1652), Conrad Matthaei reported that Strungk was 'much admired' as an organist.

Very little of Strungk's music survives. An autograph manuscript of June 1671 (*D-W*) contains a work for five voices, nine instruments and continuo entitled *Musikalischer glückwünschender Zuruff*, the text beginning 'Kommet und sehet die Wercke des Herren'; and there are another five pieces of church music for voices and instruments (*D-Bsb*). A group of six chorale preludes and fantasias in an organ tablature (*D-Lr*) show that he was by no means a negligible composer (examples in Die Orgel, II/12, Lippstadt, 1960; K. Straube, ed.: *Alte Meister des Orgelspiels*, Leipzig, 1904; C.H. Trevor, ed.: *Seasonal Chorale Preludes with Pedals*, i, London, 1963, and CEKM, xxiii, 1973).

GWILYM BEECHEY

Strungk, Nicolaus Adam (bap. Brunswick, 15 Nov 1640; *d* Dresden, 23 Sept 1700). German composer. He received his musical education in Brunswick and Lübeck, and held posts from 1660 as first violinist and Konzertmeister of the Hofkapellen of Wolfenbüttel, Celle and Hanover. His first close contact with opera came in 1662 on a visit to Vienna, where he performed before the emperor. Working in Hanover, he encountered Cesti's *Orontea* and P.A. Ziani's *L'Antigona delusa da Alceste*, and he must certainly have known operas by Antonio Sartorio, who was then directing the Italian Kapelle there. He also met the theatre architect Girolamo Sartorio. In 1679 he became director of both city and cathedral music in Hamburg; he made his mark during the early days of the Hamburg Opera with his first operas, *Alceste*, *Esther* and *Doris*. In June 1682 he returned to Hanover as court composer. By now French had superseded Italian opera at the court. While living in Hanover Strungk continued to compose for Hamburg, where his operas *Floretto* and *Theseus* were produced in 1683. In 1685 and 1686 he stayed in Venice with Duke Ernst August, but returned to Germany without his permission and was dismissed from his post. However, his visits to Italy may have led to his appointment in 1688 as vice-Kapellmeister and chamber organist at the Dresden court, since Elector Johann Georg III and Carlo Pallavicino, director of the Dresden Opera, visited Venice during this period. He completed Pallavicino's opera *Antiope* for the elector after the composer's death, and in 1692 he became Kapellmeister.

On 13 June 1692 the Elector Johann Georg IV granted Strungk permission to present 'a German Singspiel at his own and his associates' expense' with 'foreign musicians' in Leipzig during the fair. Assisted by special licences granted by the elector, he succeeded in establishing an opera house on the Brühl; among his associates was Girolamo Sartorio, who built the theatre and then remained as director and as designer of scenery and stage effects. The theatre was opened on 8 May 1693 at the Easter Fair with Strungk's *Alceste*, performed in the presence of the elector. Strungk remained the principal composer of operas; *Nero* (1693) and *Syrinx* (1694) were particularly well received. His daughters, who appeared with the company as singers, continued running it with their mother Christine after his death, and it remained in existence until 1720. Singers from outside were also engaged, particularly students and even choristers from the Thomaskirche, giving rise to a complaint from the Kantor, Kuhnau. In 1697 Strungk lost his position in Dresden. His financial situation improved slightly in 1699, when he was appointed principal director of the Landmusik, but he left a heavy burden of debt to his family on his death.

Together with Johann Theile, J.W. Franck and J.P. Förtsch, Strungk was one of the first Germans to apply himself to the development of a national German opera, and he is particularly important for the founding and direction of his opera company in Leipzig. His dramatic works were performed on many German stages in his day. Nothing survives of their music except arias from the sacred opera *Esther*, the authorship of which was proved by H.C. Wolff (1957). Schering ascribed several other operas to him; his authorship of further works attributed by Berend and Schiedermair cannot be proved, as no music is extant. The arias from *Esther*, which have been preserved almost complete, were published without attribution (Hamburg, 1684) together with arias from *Semiramis*, an opera once also believed to be by Strungk but ascribed by Wolff (1957) on stylistic grounds to J.W. Franck. Strungk initially employed the Italian style in his Hamburg operas, at the same time adapting foreign forms. According to Wolff (1957), textual repetition and extended coloratura passages were first used for affective purposes at the Hamburg Opera in *Esther*, achieving an expressive power comparable to that of Schütz. Strungk used ostinato bass in the Venetian manner to link coloraturas and provide overall shape, and his symmetrical motivic patterns suggest the influence of Cavalli and Antonio Cesti. His arias represent an advance on those of Theile. Following the style of cantatas such as Buxtehude's, he attempted to develop German strophic song and compose different music for each stanza. In employing the variation principle and unexpected harmonic changes, he distanced himself from Italian models and gave his music personal and indeed national features. He also put counterpoint to the service of textual interpretation. The many ritornellos emphasize the concertante element, while the choruses (in two parts with continuo) are self-contained pieces. The libretto of *Esther* is not, as with most Hamburg operas of the period, a translation from Italian but an original German text. In completing Pallavicino's *Antiope*, Strungk adapted his style almost seamlessly to the Venetian composer's; most of Act 3 seems to be his. His Leipzig operas were based on Italian librettos. Pleasing melodic writing, with echoes of the convivial student songs of the time, may have been characteristic of his Leipzig opera *Alceste* (1693).

WORKS

Alceste (Spl, P. Quinault, trans. J.P. Förtsch), Hamburg, 1680

Die liebreiche, durch Tugend und Schönheit erhöhete Esther (Spl, J.M. Köler), Hamburg, 1680, 36 arias in Ein Hundert auserlesene Arien zweyer Hamburgischen Operen mit beygefügten Ritornellen (Hamburg, 1684)

Doris, oder Der königliche Sclave (Spl, trans. Förtsch), Hamburg, 1680

Floretto (after C. Weise: Die triumphirende Keuschheit), Hamburg, 1683

Theseus (Quinault, trans. L. von Bostel), Hamburg, 1683

Antiope (dramma per musica, S.B. Pallavicino), Dresden, Feb 1689, *D-Dl* [by C. Pallavicino, completed by Strungk]

Alceste (P. Thymich, after A. Aureli: L'Antigona delusa da Alceste), Leipzig, 8 May 1693

Nero (3, Thymich, after G.C. Corradi), Leipzig, 1693

Syrinx, Leipzig, 1694

Attrib. by Schering (all libs. by C.L. Boxberg): Phocas, Leipzig, 1696; Ixion (after Perisetti: L'Isione), Leipzig, 1697; Scipio und Hannibal, Leipzig, 1698; Agrippina, Leipzig, 1699; Erechtheus, Leipzig, 1700

DIETER HÄRTWIG

Strunk, (William) Oliver (*b* Ithaca, NY, 22 March 1901; *d* Grottaferrata, Italy, 24 Feb 1980). American musicologist. He attended Cornell University (1917–19), where his father was a professor of English, and after private studies in composition returned there as a musicology student of Kinkeldey (1926–7). After a year (1927–8) at Berlin University studying under Johannes Wolf, Blume, Sachs and Schering, he joined the staff of the Library of Congress (1928) and later succeeded Carl Engel as head of its music department (1934–7), concurrently lecturing at the Catholic University of America, Washington. In the years immediately preceding World War II he took a leading part in welcoming eminent refugee music scholars and finding places for them in the USA. From 1937 he taught at Princeton University, where he was appointed professor (1950); on his retirement (1966) he moved to Grottaferrata, near Rome.

Strunk was an original member of the American Musicological Society, the first editor of its journal (1948) and its president (1959–60); he also served on the editorial board of Monumenta Musicae Byzantinae (from 1958) and succeeded Carsten Høeg as director (1961–71). He was one of the founders of American musicology and one of its most influential and versatile practitioners. His published papers cover an exceptionally wide range of subjects, including the Italian Ars Nova, 15th-century English polyphony, the 16th-century motet, Palestrina's masses, the style and chronology of Haydn's works and the output of Verdi. His unpublished work includes substantial studies on aspects of the Ars Antiqua through Venetian opera and on to Beethoven and Wagner. His best-known work is *Source Readings in Music History* (1950), a critical anthology of translated writings on music from the Greeks to Wagner (the revised edition has been expanded into a multi-volume book). His own preferred subject, to which he contributed massively though often in little-known journals, was the liturgical chant of the Eastern and Western churches. He was responsible for establishing a sound theoretical basis for the transcription of the Byzantine round notation of the 12th and 13th centuries, and developed methods for transcribing the previously impenetrable paleo-Byzantine and paleo-Slavonic notations. He also uncovered important repertories of Byzantine and Slavonic melismatic chants that were previously ignored or poorly understood.

The breadth and solidity of Strunk's achievement reflect not only a vigorous intellect but also his felicitous encounter (in his twenties) with German musicological scholarship at its most impressive. He combined intellectual scepticism with a knowledge of the cultural context and an ingenuity in evolving and exploiting various methods of inquiry; he also liked to take apparently self-contained problems and develop far-reaching conclusions based on irrefutable facts. His teaching, like his writing, was influential beyond its immediate scope and was marked by an exceptional richness of ideas and information. His pupils include Robert Bailey, Charles Hamm, Joseph Kerman, Lewis Lockwood, Harold S. Powers, Don Randel, Charles Rosen and Leo Treitler.

KENNETH LEVY

Strutt, John William. *See* RAYLEIGH, JOHN WILLIAM STRUTT.

Strutz [Strutius], **Thomas** (*b* Stargard, *c*1621; *d* Danzig [now Gdańsk], bur. 5 Oct 1678). German composer and organist. There were several organists with the name Strutz in 17th-century Germany. An earlier Thomas Strutz, born in Rathenow, Brandenburg, was organist at Stargard about 1603. The subject of this article, who had a son, Thomas, who also died in 1678, became organist of Holy Trinity, Danzig, in 1642 and five years later a citizen of that city. In 1668 he succceded Paul Siefert as organist of the Marienkirche, Danzig. His duties at Holy Trinity and at the adjoining Gymnasium brought him into contact with Johannes Maukisch, an educationist who sought simple, direct means as the basis of instruction in school and church: he envisaged a thorough reform of the liturgy whereby folklike chorales, with vernacular texts and in settings immediately accessible to the congregation, would replace both the old traditional polyphonic motet and the new Italianate concerto. For two decades Strutz and Maukisch wrote a number of works that furthered the cause of religious education. Whereas his Danzig colleagues, Crato Bütner and Balthasar Erben excelled in the concerto calling for large forces, Strutz wrote smaller works of a more intimate nature – sacred songs, dialogues, small concertos and oratorio Passions – most of them to texts by Maukisch.

Lobsingende Hertzens-Andacht (1656) is typical of Strutz's sacred music. It contains 76 four- and five-part songs for all Sundays and church festivals in place of the usual motets, concertos and cantatas. They are very short, averaging 12–16 bars, and are either homophonic or freely imitative; the short points of imitation are drawn from the chorale-like melodies, composed by Strutz himself, which appear in the highest part. The songs were so popular that they were used at Holy Trinity until the first half of the 18th century. *Geistliche Singe- und Bet-Stunden* (1657) consists of 34 solo songs with continuo for use at home or school; they are good examples of the methods of Maukisch and Strutz. *Vierfache musicalische Dienstwilligkeit* (1655) contains similarly simple solo songs with singable melodies for use in the Gymnasium; all are strophic, even the dialogues, in which the verses are divided between the two singers.

The dramatic element of the dialogues is also seen in *Zweyfache christliche Auffmunterung* (1664), an oratorio Passion resembling Schütz's *Die sieben Worte ... Jesu Christi*. Instead of the usual forms of chorale Passion and motet Passion, the biblical text is replaced by a lyrical paraphrase sung by the various characters and choir and interspersed with familiar chorales sung by the congregation. Three works whose texts alone survive were in a similar form: a *St Matthew Passion* in which the sung material is divided among soloists, chorus and congregation, a Christmas dialogue in which lyrical sacred verses and chorale texts generally replace the biblical text, and a dialogue on the subject of Dives and Lazarus in which the text is divided between the two characters. Such treatments of scripture point to the influence of Martin Opitz and his circle and run parallel to developments in German sacred songs.

Stuart, Leslie [Barrett, Thomas Augustine] (*b* Southport, 15 March 1863; *d* Richmond, Surrey, 27 March 1928). English composer. At the age of 15 he was made organist at Salford Cathedral, and he held this post for seven years. Afterwards he was organist for a further seven years at the Church of the Holy Name, Manchester, supplementing his salary by teaching and composing church music. He also promoted and conducted popular orchestral concerts in the city. In 1895 he moved to London, his ballad *The Bandolero* having been successfully promoted by Signor Foli and a song *Lousiana Lou* having been accepted by George Edwardes for *The Shop Girl*. His song *Soldiers of the Queen* gained wide popularity, and he followed it with 'coon' songs including *Little Dolly Daydream* (1897) and *Lily of Laguna* (1898), which were written for Eugene Stratton and which have remained among the best known of music-hall songs. In 1899 a musical comedy *Florodora* was also a considerable success, not only in Britain but also in the USA and Europe, owing particularly to the double sextet 'Tell me, pretty maiden'. Stuart's range, however, was limited, and rhythmic mannerisms tended to recur, so that later stage works were less successful. In 1915 he appeared on the variety stage, accompanying his daughter May Leslie-Stuart in his own songs, and he later went to the USA. He returned to England in 1921 and again appeared on the variety stage playing his own compositions, most notably in a revue at the Palladium shortly before his death, at which time he had just signed a contract for the production of a new stage work, *Nina*.

ANDREW LAMB

Stuart-Coolidge [Coolidge; Stuart], **Peggy** (*b* Swampscott, MA, 19 July 1913; *d* Cushing, ME, 7 May 1981). American composer. Privately educated, she studied the piano with Gebhard and composition with Raymond Robinson and Quincy Porter. Coolidge's orchestral works were performed by the Boston Pops from the late 1930s; commissions included *American Mosaic* for the American Wind Symphony and *The Blue Planet* for the World Wildlife Fund. Her works were performed in Europe from 1963 and, on Khachaturian's invitation, a concert of her music was presented by the USSR Union of Composers in Moscow in 1970. Coolidge was the first American to be honoured thus, and at the same time she was awarded the medal of the Soviet Union of Workers in Art. Coolidge's music is skilfully orchestrated and accessible, with a distinctive style reminiscent of Gershwin and Copland. Her manuscripts and personal papers in the Schlesinger Library, Radcliffe Institute, Harvard University.

Chbr music, pf pieces, songs, music for children's stories: The Angel's Christmas (R. Lortz), Salisbury Seagull (J.R. Coolidge)

CATHERINE PARSONS SMITH

Stubbs, Simon (*fl c*1620). English composer. He contributed a setting of the tune 'Martyrs' to Thomas Ravenscroft's *The Whole Booke of Psalmes* (1621). Extant compositions include an Evening Service (*GB-Ob*), two verse anthems, *The Lord is my Shepherd* (*Ob*) and *Have mercy upon me, O God* (*Lbl*, Myriell's *Tristitiae remedium*) and a full anthem, *Father of Love* (*Lbl*, *Och*). A complete list can be found in R.T. Daniel and P. Le Huray: *The Sources of English Church Music, 1549–1660*, EECM, suppl.i (1972).

PETER LE HURAY/JOHN MOREHEN

Stuber [Stuberus, Stueber], **Conrad** (*b* Schwendi, nr Laupheim, Swabia, *c*1550; *d c*1605). German composer and theorist. He attended the University of Freiburg, probably from 1572, and in 1574 he was awarded the master's degree; in 1577–8 he was registered in the medical faculty. In 1587 he was a priest and choirman in the Kantorei at the court of Count Eitelfriedrich IV von Hohenzollern-Hechingen at Hechingen in Swabia. At the beginning of 1591 he was recommended for a benefice by Christoph Truchsess von Waldburg of Riedlingen an der Donau. At Freiburg he had studied with J.T. Freigius, a pupil of Glarean, who must have thought highly of him since he used Stuber's *De musica* (now lost) as the basis of the dialogue forming the fifth part, 'De musicae elementis primus', of his *Paedagogus* (Basle, 1582). Count Eitelfriedrich was an ardent advocate of the

Counter-Reformation, the spirit of which is evident in the texts, entirely sacred, set by Stuber in his few surviving compositions. Rubsamen (in *MGG1*) singled out *Veni, Sancte Spiritus* as an example of his mastery of imitative counterpoint, which nevertheless manages to convey meticulously the sense of the words, with, for example, syncopation at 'Qui per diversitatem linguarum' and a canonic duet at 'in unitate'.

ANTHONY F. CARVER

Stuchs [Stüchs, Stöchs], **Georg** (*b* ?Sulzbach, Upper Palatine; *d* Nuremberg, 1520). German printer. Although Stuchs himself gave Sulzbach as his place of birth in his publications, he may have been the son of the Nuremberg organ builder Friedrich Stuchs. He became a citizen of Nuremberg in 1484 and began printing in the same year. His last publication is dated 1517; after this he was active only as a bookseller, leaving the printing business in the hands of his son, Johann (*d* ?Nuremberg, after 1546), under whose name publications had been issued as early as 1509.

The elder Stuchs, whose known publications number 132, was famous above all as a printer of liturgical books, particularly missals. He served a large circle of clients from all parts of Europe, including, for example, the bishoprics of Regensburg, Salzburg, Prague, Kraków, Magdeburg and Linköping. In 1491 he introduced musical notes into his liturgical books, using the double-impression technique. Stuchs was known for the superior quality of his type forms, which he frequently sold to other printers, and for the woodcuts, often by prominent artists, with which he decorated his volumes. The younger Stuchs devoted himself in later years to the cause of the Reformation, printing many of the writings of Luther and his followers. His sole contribution to music consists of a reprint of Johannes Cochlaeus's treatise *Tetrachordum musices* in 1512.

MARIE LOUISE GÖLLNER

Stuchs [Stüchs], **Johann** (*d* ?Nuremberg, after 1546). German printer, son of GEORG STUCHS.

Stück (Ger.). *See* PIECE. In Bach's day, *Stück* could also mean the principal concerted piece in a church service, that is, the cantata.

Stuck [Stück], **Jean-Baptiste** ['M. Baptiste', Baptistin, Batistin] (*b* 1680; *d* Paris, 8 Dec 1755). Italian composer and cellist of German descent. He called himself 'Florentin', although Lesure gives Livorno as his birthplace. In the libretto of *Rodrigo in Algeri* (Naples, 1702), a reworking of Albinoni's *L'inganno innocente*, he was called 'virtuoso della Contessa di Lemos'. His appearance in Paris was marked by the publication of an aria in Ballard's *Recueil d'airs sérieux* of 1705. He lived well at the *hôtel* of his patron, the Prince of Carignan, until the prince's death in 1740. The title-pages of his four books of cantatas (1706–14) reveal that he was also favoured by the italophile Duke of Orléans and made an 'Ordinaire de la musique'. *La prise de Lérida*, from book 2, celebrates a military victory that may also have been the inspiration for his *Te Deum*, commissioned by the duchess and performed at the Palais Royal on 27 November 1707. In 1708 Stuck wrote an italian aria for a revival of Collasse's *Thétis et Pélée*. However, his first two French operas, *Méléagre* and *Manto la fée*, performed in 1709 and 1711, were not well received.

According to Loewenberg, Stuck left France to spend some time in the service of Elector Max Emanuel of Bavaria (*c*1714). His opera *Il cid* was performed at Livorno at Carnival 1715, and in the same year he married Bonne-Françoise Berain, daughter of Louis XIV's court painter. He was awarded a pension of 500 livres as *ordinaire de la musique du Roy* on 18 December 1718. His third French opera, *Polydore*, was presented in 1720 and revived in 1739, and his duet cantata *Démocrite et Héraclite* was performed at the Opéra in November 1722. The death of the librettist La Font in 1725 prevented him completing his opera *Orion*, but an arietta from it appeared in the *Mercure*. He was active at the Concert Spirituel: an aria, four cantatas and the divertissement *L'union de la musique italienne et françoise* were given 18 performances between 1727 and 1729; Stuck, the violinist Jean-Pierre Guignon and flautist Michel Blavet played a trio on 24 and 25 December 1728; and one of his motets was performed on 13 April 1738. Stuck, now 'M.L. Baptiste', became a French citizen in June 1733. The inventory made after his wife's death in 1741 and his will dated 12 September 1752 survive in the Archives Nationales.

Although Stuck was not, as La Borde stated, the first to play the cello at the Opéra, the success of his performances as a soloist hastened the decline in the bass viol's popularity. Ancelet and Maisonelle agreed that he was the first cellist to be admired in France, and Corrette wrote that the rise to prominence of the cello began with the arrival in Paris of Stuck and L'Abbé (Philippe Pierre de Saint-Sévin). His French cantatas are notable for their italianisms and the extent to which he used accompanying instruments. Of particular interest is *Démocrite et Héraclite*, which musically juxtaposes two allegorical figures,

Optimism and Pessimism. D'Aquin de Château-Lyon wrote that in the realm of the cantata Stuck was 'the rival of Clérambault'.

WORKS

printed works published in Paris unless otherwise stated

DRAMATIC

operas unless otherwise stated

Arias in Rodrigo in Algeri, Naples, S Bartolomeo, ?10 Dec 1702, music lost [rev. of T. Albinoni: L'inganno innocente (F. Silvani), Venice, 1701]

Air for rev. of P. Collasse: Thétis et Pélée (B. Fontenelle), Paris, Opéra, 16 April 1708, collab. A. Campra (1708)

Méléagre (F.A. Jolly), Paris, Opéra, 24 May 1709 (1709); prol as L'union de la musique italienne et françoise (divertissement), Paris, Opéra, Nov 1722, lost

Manto la fée (Mennesson), Paris, Opéra, 29 Jan 1711 (1711)

Il [gran] Cid (G.G. Alborghetti [L. Mereo]), Livorno, S Sebastiano, carn. 1715 (Massa, 1715)

Polydore (J.-L.-I. de La Serre), Paris, Opéra, 15 Feb 1720 (1720, 2/1739)

Orion (La Font), 1725, inc., 1 air pubd in *Mercure de France* (Feb 1725)

BARRY KERNFELD/JULIE ANNE SADIE

Stucken, Frank (Valentine) van der (*b* Fredericksburg, TX, 15 Oct 1858; *d* Hamburg, 16 Aug 1929). American conductor and composer. In 1865 his family moved to Antwerp, where he became a student of Peter Benoit. In 1876, after a visit to the Bayreuth Festival, he settled in Leipzig for two years' study with Reinecke, Langer and Grieg. His first professional engagement was at the municipal theatre, Breslau, in 1881; he composed incidental music for Shakespeare's *The Tempest* as part of his duties. In 1883, with the sponsorship of Liszt and the participation of, among others, Ziloti, he gave a successful concert of his own works at Weimar. The next year he returned to the USA, where he became conductor of the Arion Society, a male chorus in New York; he conducted the first American performances of Brahms's Symphony no.3, Chabrier's *España*, Berlioz's *Les Troyens* (concert performance) and a series of programmes of recent American music. He introduced much American music to Europe, his all-American concert at which MacDowell played his own D minor Piano Concerto at the Paris Exposition of 1889 being an especially notable event.

In 1895 van der Stucken became a central part of Cincinnati's musical life, as the first conductor of the Cincinnati SO (until 1907), as director of the college of music and later (1906–12, 1923–7) as director of the May Festival. From 1908 until 1917 he lived in Hanover and in the last two decades of his life he was generally more active in Europe than in the USA. His compositions include orchestral and choral works as well as many songs.

MICHAEL STEINBERG

Stuckenschmidt, Hans Heinz (*b* Strasbourg, 1 Nov 1901; *d* Berlin, 15 Aug 1988). German music critic and musicologist. After attending secondary schools in Berlin, Ulm and Magdeburg, he studied the violin, piano and composition under private teachers and was self-taught in music theory and music history. From 1920 he made a living as a freelance composer and writer on music in Bremen, Hamburg, Vienna, Paris and Berlin. In 1923–4, with Joseph Rufer, he organized the Hamburg Neue Musik concerts, and in 1927–8 he directed the concerts of the Berlin November-Gruppe; at the same time he worked for various periodicals (e.g. *Aufbruch*, *Auftakt*, *Melos* and *Modern Music*) and newspapers. In Prague (1928–9) he was chief music critic of the *Bohemia* and he then succeeded A. Weissmann (1929) as music critic of the *Berliner Zeitung am Mittag*. He attended Schoenberg's course on musical analysis as an observer (1931–3). Because of his support for modern music and for Jewish musicians he was forbidden in 1934 to participate in any journalistic activity in Germany. From 1937 he was in Prague again, initially on the *Prager Tageblatt* and (from 1939) on the *Neuer Tag* until he was forbidden to publish there as well. In 1942 he was conscripted into the armed forces as an interpreter. After his return from American captivity in 1946, he was given the directorship of the department of new music at RIAS, Berlin, was appointed music critic of the *Neue Zeitung* (1947) and with Rufer edited the periodical *Stimmen* (1947–9). Subsequently he became lecturer (1948), reader (1949) and professor (1953) in music history at the Technische Universität in Berlin where he remained until his retirement (1967). He was also Berlin music correspondent for the *Neue Zürcher Zeitung* (1946–57) and music critic for the *Frankfurter Allgemeine Zeitung* (1957–88). He was married to the soprano Margot Hinnenberg-Lefèbre, well known as an interpreter of Schoenberg. He was made a member of the Akademie der Künste, Berlin, and the Deutsche Akademie für Sprache und Dichtung Darmstadt, in 1974 and 1977 respectively.

As a music critic Stuckenschmidt was a sound judge and indefatigable supporter of contemporary music. He gave early recognition to the historical significance of Schoenberg and Stravinsky in particular. With the public recognition of new music, Stuckenschmidt emerged as a critic of international importance. Schoenberg has occupied the central position in his many books and essays on 20th-century music; his comprehensive biography of the composer is based on about 4000 source documents.

HANS HEINRICH EGGEBRECHT

Stucki, Hans [Johannes]. *See* TUGI, HANS.

Stucky, Steven (Edward) (*b* Hutchinson, KS, 7 Nov 1949). American composer. He studied with Richard Willis at Baylor University (BMus 1971) and with Robert Palmer, Burrill Phillips and Karel Husa at Cornell University (MFA 1973, DMA 1978). After teaching at Lawrence University (1978–80), he was appointed to the composition department at Cornell (1980–). He has also served as composer-in-residence (1988–92) and new music adviser (1992–) for the Los Angeles PO. His awards include a Guggenheim Fellowship (1986), an NEA fellowship (1986) and commissions from the Philadelphia (*Concerto for Orchestra*) and Minnesota (*Dreamwaltzes*) orchestras. His book *Lutosławski and his Music* (Cambridge, 1981) was awarded the ASCAP Deems Taylor award in 1982.

Stucky's style combines rigorous compositional techniques with direct, eloquent expression. This mixture results in colourful, variegated and attractive musical structures that exhibit clear formal patterns and carefully organized pitch arrangements. The influence of Bartók and Lutosławski lends an Eastern European character to works such as *Voyages* (1984) and the Double Concerto (1985). Several other works (*Boston Fancies*, 1985; *Concerto for Orchestra*, 1986–7; *Son et lumière*, 1988) refer to Stravinsky in their juxtaposition of blocks of material. In later works, Stucky's harmonic language develops from atonal aggregates like those of Berio and Lutosławski towards harmonic complexes that allude to triadic structures. A discussion with the composer appears in D. Crockett: 'Stucky, Hartke, Crockett: Conversations in Los Angeles', *CMR*, x (1994), 51–73.

JAMES P. CASSARO

Studer, Cheryl (*b* Midland, MI, 24 Oct 1955). American soprano. She studied at the Berkshire Music Center at Tanglewood before winning third prize at the Metropolitan Competition for Young Singers in 1978. After further study in Vienna she worked with Hans Hotter in Munich before joining the Staatsoper there in 1980, singing, among other roles, Mařenka (*The Bartered Bride*), Euryanthe, Daphne, Irene (*Rienzi*), Sieglinde and the Empress (*Die Frau ohne Schatten*). From 1982 to 1984 she was an ensemble member at the Deutsche Oper, Berlin, where she added Violetta and Desdemona to her repertory. In 1984 she made her American début in Chicago, as Micaëla, which was also the role of her first Metropolitan appearance in 1988. Studer made her Bayreuth début in 1985 as Elisabeth (*Tannhäuser*), immediately proclaiming her outstanding gifts as a lyric-dramatic soprano of the first rank, not least with her ringing high B at the end of Elisabeth's Greeting. She appeared again at Bayreuth, as Elsa, in 1987. She made her Covent Garden début as Elisabeth in 1987 and returned for Elsa in 1988, singing both roles to critical acclaim. At La Scala she sang Sieglinde and the Empress (1987), Mathilde in *Guillaume Tell* (1988), Odabella in *Attila* (1989) and Hélène in *Les vêpres siciliennes* (1989) to arresting effect. She made her Vienna Staatsoper début as Chrysothemis, another role she has recorded. Studer's repertory also includes Countess Almaviva, Mozart's Electra, Pamina, Donizetti's Lucia, Gilda and Aida; more recently she has undertaken the Marschallin (which she first sang at the Salzburg Festival in 1995), Ariadne and Senta, with which she returned to Bayreuth in 1998 and 1999. Her singing is distinguished by full, vibrant tone, controlled, warm phrasing and eloquent expression, heard to best advantage on her recordings of *Les vêpres siciliennes*, *La traviata*, *Die Walküre* (with Haitink), *Salome* (with Sinopoli) and, above all, *Die Frau ohne Schatten* (with Sawallisch). She has also sung with distinction in concert and song, her performances and recording of Strauss's *Vier letzte Lieder* being particularly admired.

ALAN BLYTH

Studio der frühen Musik [Early Music Quartet]. Ensemble, founded at Munich in 1960, directed by Thomas Binkley (*b* 26 Dec 1932; *d* 28 April 1995). Binkley, primarily a lutenist, and Sterling Jones, primarily a string player, had studied musicology at the University of Illinois in Urbana, where they had taken part in George Hunter's collegium musicum and performed on his important Machaut recording. In Munich they were joined by the Estonian singer Andrea von Ramm. The fourth member of the group was the tenor Nigel Rogers (1960–64), who was succeeded by Willard Cobb (1964–70) and then Richard Levitt. In 1972 the ensemble joined the staff of the Schola Cantorum Basiliensis. In 1979 the group disbanded. The Studio der frühen Musik toured throughout the world, first under the auspices of the Goethe-Institut, then

independently; it made over 40 recordings, many of them award-winning.

Although the group's recordings include music by Machaut, Landini, Ciconia, Du Fay and Dowland, their most important records are perhaps those that explore the earlier monophonic repertories. Beginning with records of songs from the *Carmina burana* (1964, 1967) and Minnesang (1966), they developed a performing style partly based on Andalusian music and employing a freedom of expression possible only with musicians who are performing regularly as an ensemble; their style became increasingly independent of folk origins and moved towards an appraisal of the characteristics of each of the different repertories concerned. The ensemble always performed from memory, with results that gained correspondingly in fluidity and freedom of expression as well as more direct communication.

Studley Royal Fragments. *See* SOURCES, MS, §VI, 3.

Study (Fr. *étude*; Ger. *Etüde*, *Studie*; It. *studio*). An instrumental piece, usually of some difficulty and most often for a stringed keyboard instrument, designed primarily to exploit and perfect a chosen facet of performing technique, but the better for having some musical interest. Although a study was at one time the same as an exercise (Fr. *exercice*; Ger. *Übung*; It. *essercizio*), the latter term now usually implies a short figure or passage to be repeated ad lib, whether unaltered, on different degrees of the scale or in various keys. The distinction is illustrated by Schumann's *Studien* op.3 (1832), which are preceded by short *Übungen* based on technical difficulties found in the studies themselves.

Before the 19th century both terms were used more loosely. Thus the 'studies' in Francesco Durante's *Sonate per cembalo divisi in studii e divertimenti* (1737) are contrapuntal movements unassociated with specific problems of keyboard technique, while Domenico Scarlatti's 30 *Essercizi per gravicembalo* (1738) are no different in scope and significance from his remaining 525 sonatas. The four parts of J.S. Bach's *Clavier-Übung* (1731–41) contain not only a wide variety of masterpieces for harpsichord (such as the Italian Concerto, French Overture, six partitas and the monumental Goldberg Variations) but also a number of large-scale works for organ.

Although the title 'study' rarely occurs in early keyboard music, much of the repertory was avowedly didactic in aim. Thus the many variously named pieces in instrumental treatises and instruction manuals may be considered studies, including the toccatas in Diruta's *Il transilvano* (1593), the lessons (i.e. dances and airs) in Locke's *Melothesia* (1673), the preludes in François Couperin's *L'art de toucher le clavecin* (1716), the *Probestücke* in C.P.E. Bach's *Versuch über die wahre Art das Clavier zu spielen* (1753) and the *Handstücke* in Türk's *Clavierschule* (1789). Other pieces intended at least partly for pedagogic use might be included, even if they were not necessarily aimed at the development of technical facility. For example, Frescobaldi's *Il primo libro di capricci, canzon francese, e recercari* (1626) opens with a preface addressed to 'gli studiosi dell'opera' (the students of the work), while 11 of the preludes of J.S. Bach's *Das wohltemperirte Clavier*, as well as early versions of all his keyboard inventions and sinfonias, were originally included in the *Clavier-Büchlein vor Wilhelm Friedemann Bach* (1720), a manuscript compiled expressly for the instruction of his young son.

From the early years of the 19th century the rapidly growing popularity of the piano brought a flood of teaching material aimed at the amateur and the budding professional, including innumerable volumes of graded studies whose technical usefulness generally outweighed their musical value. Typical of such publications are the studies brought out by J.B. Cramer between 1804 and 1810, the earlier parts of Clementi's *Gradus ad Parnassum* (1817–26), Moscheles's *Studien* op.70 (1825–6) and the many collections by Czerny. The later studies in the *Gradus* are of greater musical interest, some illustrating particular styles as well as technical problems (e.g. 'le style élégant' and 'le style sévère'), and Moscheles's *Charakteristische Studien* op.95 (1836–7) are clearly intended as much for performance as for instruction. The latter are, in fact, undemanding examples of a newly developed genre, the concert study.

The concert study attempts to combine the utility of a technical exercise with musical invention equivalent to that of other genres in the concert repertory. The consequent tension between these two aspects was not completely resolved until the studies of Chopin, whose 12 *Grandes études* op.10 (published in 1833) and 12 *Etudes*, op.25 (published in 1837) were the first to retain a firm position in the concert repertory. Although many of Chopin's studies concentrate on single technical problems after the manner of Czerny, Charles Mayer and Henri Bertini (for example extended arpeggios in op.10 no.1, or double 3rds in op.25 no.6), his greater harmonic sophistication allows a thorough working-out of the chosen figuration while avoiding the musical trivial. The novelty of Chopin's harmony, which forced sometimes commonplace figuration into distinctly unconventional hand positions, astonished older contemporaries such as Moscheles, who found many of the studies excessively difficult as a result. Indeed, by Chopin's own admission, the first performer to conquer their technical problems fully was Liszt, to whom op.10 is dedicated. Structurally, however, the studies are straightforward: most are in a short ternary form, although the lyrical op.25 no.7 is in something akin to a slow-movement sonata form.

Liszt's own concert studies are on a much larger scale than Chopin's. The genesis of his Transcendental Studies reflects the 19th-century development of the genre as a whole. They were based on 12 studies (published as *Etude en douze exercises* that he wrote in 1825–6), which have the modest didactic scope of the studies by his teacher Czerny. Liszt recomposed them in 1837 under the title *Grandes études*, transforming them effectively into character-pieces of hitherto unimagined difficulty. Three of the new pieces were in sonata form (the C minor, F minor and D♭ major), and others were structured with remarkable ingenuity. In 1852 a final revision was completed, with the title *Etudes d'exécution transcendante*. In this Liszt lightened some of the textures, in response partly to the increasing action-weight of pianos; he also tightened the structure of some of the more sprawling studies. Making the resemblance to the programmatic character-piece even closer, most of the studies were now given titles, such as *Feux follets* and *Harmonies du soir*, and the didactic element of the pieces (other than their pervasive technical difficulty) was almost completely lost. While it

is possible to use many of the individual studies of Chopin as practice pieces for specific technical challenges, the technical demands of most of Liszt's vary too much from section to section to provide a thorough working-out of any particular problem.

The same is true of the studies of Alkan, most of which were published in two sets: *Douze études dans les tons majeurs* op.35 (1848) and *Douze études dans les tons mineurs* op.39 (1857). Alkan's studies are on an even larger scale than Liszt's, and some, like *L'incendie du village voisin* (from op.35) are more explicitly – even naively – programmatic. For op.39, Alkan's inspiration seems to have been Bach's *Clavier-Übung* for the collection includes an overture, a set of variations, a four-movement symphony and a three-movement concerto; in the latter two, a separate study in a different key is used for each individual movement. Alkan's keyboard writing shows the imagination that one might expect from a pianist who was widely considered the only technical equal of Liszt. The first two of the formidable *Trois grandes études* (*c*1838) are among the earliest examples of entire works for the right or left hand alone, although the opening section of Liszt's G♭ minor study in the 1837 version is scored for solo left hand. This type of concert study was later rarely attempted; perhaps the best-known examples are by Skryabin and Felix Blumenfeld.

Although almost every 19th-century pianist-composer wrote studies, relatively few of these works have maintained a place in the repertory. Schumann's magisterial *Symphonische Etüden* op.13 (a set of variations with an extended finale) of 1834–7 is one of his most-performed works, while his Paganini studies (opp.3 and 10) are almost totally neglected, suffering as they do from comparison with Liszt's more brilliant examples (1839, rev. 1851) and Brahms's Variations on a theme by Paganini op.35 (1862–3). Brahms also composed five studies in the form of transcriptions of pieces by Bach, Weber and Chopin, including a version for left hand alone of the Chaconne from Bach's D minor Partita for violin BWV1004. Of the vast array of the later concert studies, the most significant are by Skryabin, Rachmaninoff (*Etudes-tableaux*, opp.33 and 39), Debussy, Bartók and Messiaen.

Studies for many other instruments have been written since the beginning of the 19th century. By far the greater number are more concerned with technical problems than with musical values, as can be seen from the collections for violin by Fiorillo, Rodolphe Kreutzer, Rode, Baillot and Bériot, and for cello by Dotzauer and Grützmacher. Altogether outstanding are Paganini's *24 Caprices* op.1 (published in 1820) for solo violin (see illustration); besides being concert studies of unmatched brilliance, they had sufficient musical interest to stimulate the piano transcriptions of Liszt and Schumann referred to above, and the theme of one, no.24 in A minor, is so concisely striking that it has inspired sets of variations from Brahms (op.35), Rachmaninoff (for piano and orchestra, 1934), Lutosławski (for two pianos, 1941), Boris Blacher (for orchestra, 1947) and others.

The French word *étude* (as well as the English 'study') was used as the title of a number of 20th-century works, some requiring unusually facile technique or exploiting particular aspects of the composer's craftsmanship. Examples include Stravinsky's *Quatre études pour orchestre* (1928–9), Henze's *Sinfonische Etüden* (1956) and Frank

Opening of Paganini's '24 Caprices' op.1 no.24 (Milan: Ricordi, 1820)

Martin's *Etudes pour orchestre à cordes* (1956), Rawsthorne's *Symphonic Studies* (1938) and Ligeti's three books of *Etudes* for piano (1985–95).

Studzińska-Marczewska, Wiktoria. *See* STUDZIŃSKI FAMILY, (2).

Studziński. Polish family of musicians.

(1) Wincenty (Szymon Wojciech) Studziński (*b* Kraków, 30 March 1815; *d* Kraków, 15 July 1854). Violinist, conductor and composer. He was the son and pupil of Marcin Studziński, violinist and member of a Jesuit ensemble and military band in Kraków. From 1833 to at least 1848 he was a member of the Wawel Cathedral ensemble, and in 1836 became solo violinist in a theatre orchestra (from 1838–43 also its conductor). He taught the violin at the music school of the Technical Institute in Kraków from 1845 and soon became its director, a post he held until his death. His teaching method was based on the textbooks of Spohr and Campagnoli. Regarded as the best violinist in Kraków of his time, he took an active

part in the city's concert life as a soloist and a performer of chamber music. Critics wrote of his artistic taste and perfect intonation, but criticized him for his overly sweet tone and weak right hand.

The most talented composer in his family, he adopted the stylistic formulae of the classics, but did not apply them in a hackneyed way; he introduced chromatic harmony and a variety of rhythmic structures. His considerable number of compositions, many of which were unpublished, include a string quartet in E op.28 (MS in the Institute of Musicology library, Jagiellonian University), three other string quartets, mazurkas for piano (published in Kraków, *c*1850), mazurs for piano (Kraków, *c*1855, and Warsaw, 1860), a choral piece *Taniec i śpiew szkieletów* ('Dance and Song of the Skeletons', published in 1884), other songs and instrumental and orchestral pieces. Several manuscripts of his and his brothers' works are held in *PL-Kj*, *Wn*, *Wtm*, the library in the music department of the Jagiellonian University, and *A-Wn*.

(2) **Wiktoria (Ewa Marianna Salomea) Studzińska-Marczewska** (*b* Kraków, 16 Nov 1816; *d* ?Kraków, after 1881). Soprano and actress, sister of (1) Wincenty Studziński. She studied singing with Gorączkiewicz and in 1832 made her début as a soloist in a Kraków theatre, later touring with it elsewhere in the country. She sang in the Grand Theatre in Warsaw (1842–4), and with a Kraków theatre again (1844–6). Her last stage appearance was in 1848, and she gave up her career upon marriage, although for a time she taught singing in Sandomierz.

Her voice, though not large, was pure, strong and clear in tone. A natural and charming actress, and a beauty, she was very popular on the stages of Kraków and Warsaw. Her greatest artistic triumph was as Marie in Donizetti's *La fille du régiment*; she also sang the title and main roles in operas by Auber, Bellini, Rossini, Weber and Kurpiński.

(3) **Piotr (Łukasz) Studziński** (*b* Kraków, 16 Oct 1826; *d* Kraków, 20 April 1869). Organist, pedagogue, conductor and composer, brother of (1) Wincenty Studziński. Around 1841 he studied the organ with Gorączkiewicz (*c*1841); he also played the horn in a military band, and later in a Kraków theatre orchestra, which he conducted from 1851 to 1853. In 1846–57 he taught the brass instruments class at his old school; his pupils included Adam Wroński, called the 'Polish Strauss'. Upon Gorączkiewicz's death in 1858, he became organist and conductor at Wawel Cathedral, where he contributed to the popularization of some of the masterpieces of sacred music. The apt musical characterization, and use of melodies in folk-national style popular in Poland in the 19th century (in the comic opera tradition of J. Steffani) contributed to the success of his one-act vaudevilles, especially *Łobzowianie* [The Lobzovians], to a libretto by W.L. Anczyc (Kraków, 31 Dec 1854). He also composed small sacred and secular choral works, and piano mazurs.

(4) **Karol Studziński** (*b* Kraków, 24 Jan 1828; *d* Warsaw, 15 March 1883). Violinist, viola player and composer, brother of (1) Wincenty Studziński. A pupil of Gorączkiewicz, from 1843 he played the violin in a Kraków theatre orchestra, touring with them to Kalisz and Radom. In Warsaw he played first violin in the Grand Theatre orchestra and viola in Apolinary Kątski's highly regarded string quartet; he also gave private music lessons. In 1856 he created and led, until about 1868, the first male double vocal quartet in Poland; the quartet was famous for its performances of the instrumental works of Mozart, Schubert, Mendelssohn and Chopin, also of Studziński's arrangements of songs by Polish composers such as Moniuszko. He taught music theory and solfeggio at the Music Institute (1863–4); from 1865 he was deputy to Moniuszko in the choral class, succeeding him as professor in 1870. A few of Studziński's instrumental compositions are unoriginal, even primitive, but his choral works, especially the masses, are noted for their free use of polyphony and their formal construction. He published several small vocal works for children and a number of textbooks, including *Zasady muzyki* ('Principles of music'; Warsaw, 1869/*R*) and *Studia odnoszące się do sposobów śpiewu* ('Studies in singing methods'; Warsaw, 1878), and also articles on music. His primary contribution, however, lay in instrumental and choral chamber music where he overcame Poland's lack of tradition of group music-making to enrich Warsaw's musical culture.

(5) **Kajetan Studziński** (*b* Kraków, 1832; *d* Warsaw, 11 July 1855). Composer, brother of (1) Wincenty Studziński. A member of the orchestra of the Grand Theatre in Warsaw, he wrote dances, including mazurs, that were played in Warsaw's Saxon Gardens. He also wrote songs.

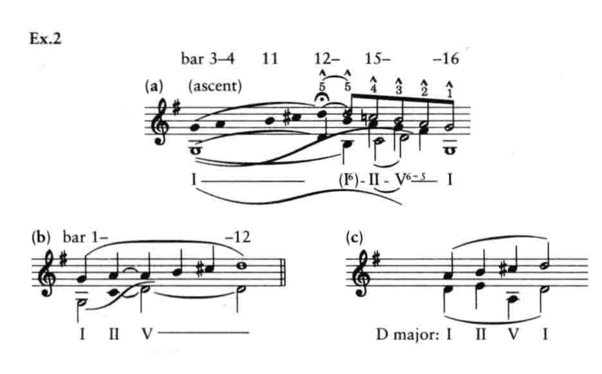
BARBARA CHMARA-ŻACZKIEWICZ



Stueber, Conrad. *See* STUBER, CONRAD.

Stufe (Ger.: 'degree'). In Schenkerian analysis (*see* ANALYSIS, §II, 4), a harmony of structural significance; the DEGREE or scale-step on which that harmony is based. The term appeared in Schenker's *Harmonielehre* (1906), where it was used for basic harmonic occurrences as opposed to chords of secondary significance. In the ritornello of the aria 'Buss und Reu' from Bach's *St Matthew Passion* (ex.1, after Schenker, 1906, fig.153), a complete C♯ major triad appears at the point marked with an asterisk. In Schenker's terms, the listener is prevented from hearing this triad as a 'fifth *Stufe*' (V) by the harmonic rhythm of the preceding passage, where there is consistently one change of *Stufe* per bar (I–IV–VII–III–VI). It would be superfluous, moreover, to accept a fifth *Stufe* at this point since one arrives in the very next bar; all three notes in the triad can in any case be explained in linear terms. The triad is therefore merely a passing configuration of the three parts and does not have the importance of a *Stufe*.

In the subsequent development of Schenker's theories *Stufe*, like all other musical phenomena, was understood in terms of structural levels (*see* LAYER). In his analyses from the mid-1920s on he described the basic harmonic structure of a piece as a progression of *Stufen* entirely within a single tonality (*Tonalität*). At later levels in the analysis these would be expanded into harmonic regions, or keys, in their own right (*Stufen der Tonalität als Tonarten*); for an illustration, *see* ANALYSIS, figs. 18–19.

This view of tonality and modulation need not be applied only to large stretches of music: in a song or self-contained theme the harmonies can also be interpreted differently at different structural levels. Schenker illustrated this in his analysis of the 'Emperor Hymn' from Haydn's String Quartet op.76 no.3 in *Der freie Satz* (1935, fig.39/3; see ex.2):

The *Stufen* at levels a), b) and c) can be distinguished very precisely. In a) they govern the entire song: in b) they serve the entire intitial ascent from g′ to d″; in c) they serve only a part of that ascent, from a′ to d″. Thus the D major resulting from this last elaboration is only an illusory key (*Scheintonart*).

The term *Stufe* has been rendered in English – not wholly adequately – as 'scale-step', 'harmonic degree' or simply 'degree'.

WILLIAM DRABKIN

Štuhec, Igor (*b* Slovenskih Goricah, Maribor, Slovenia, 15 Dec 1932). Slovene composer. At the Academy of Music, Ljubljana, he studied composition under Lucijan Marija Škerjanc and Matija Bravničar; he continued his studies at the Vienna Academy of Music and Dramatic Art under Jelinek, and also at Darmstadt. After some early neo-classical orchestral works that show his mastery of traditional techniques, Štuhec gradually moved towards the adoption of new techniques in the early 1960s. Although in 1955 he had produced a *musique concrète* composition in *Biological Transformation*, the radical change came with the chamber pieces *Situacija* (1963) and *Silhuete* (1964) and the orchestral *Differentiations* (1964), all of which exhibit his assimilation of 12-note and aleatory procedures. Štuhec's skill is particularly evident in miniatures such as the *Minikoncert*, where his writing is at its most delicate and the textures are almost always crystal clear. A later group of orchestral works extending his textural techniques, notably the concertos and the three *Entuziazmi* pieces, display a vivid imagination and a strong rhythmic momentum.

NIALL O'LOUGHLIN

Stumm. German family of organ builders. They came from Rhaunen-Sulzbach in the Hunsrück district of the Rhineland-Palatinate, and were active for six generations in the Mannheim–Saarbrücken–Koblenz–Frankfurt region. The most important members of the family are its founder, Johann Michael (*b* Sulzbach, 10 April 1683; *d* Sulzbach, 22 April 1747), and his sons, Johann Philipp (*b* Sulzbach, 24 Aug 1705; *d* Sulzbach, 27 June 1776) and Johann Heinrich (*d* Sulzbach, 23 Aug 1788). Johann Michael was originally a 'very famous goldsmith' (his brother Nikolaus

founded a well-known Saarland dynasty of smelters); he built organs for the parish church at Münstermaifeld (1721), St Kastor, Karden (1728, extant), St Laurenz, Leutesdorf (*c*1735, extant), the Hofkirche at Mühlheim an der Eis (*c*1735), and elsewhere. The surviving organ in the former Schlosskirche at Kirchheimbolanden is attributable to him, to his sons, or to both. Johann Philipp and Johann Heinrich, the 'Gebrüder Stumm', built organs for St Stephan, Simmern (Hunsrück) (extant), the Liebfrauenkirche, Koblenz (1751), the Ludwigskirche, Saarbrücken (1762), and the Schlosskirche, Meisenheim (1764, extant). Both brothers signed the contract in 1774 for the organ in the abbey church at Amorbach, completed in 1782 (three manuals, 46 stops; the case and parts of the pipework survive). Johann Heinrich was the only signatory for an instrument for the Katharinenkirche in Frankfurt (1778–89); his sons Franz and Michael built one for the Dreikönigskirche in Frankfurt (1781–3).

The typical Stumm organ was developed during Johann Michael's career and was not substantially modified by his descendants. The *Positiv* was originally laid out as a *Rückpositiv*; when it later became an *Unterpositiv*, the console of the organ was placed to one side. The full Stumm Principal choruses on *Hauptwerk*, *Positiv*, Echo and Pedal consist of 8′ 4′ 2⅔′ 2′ 1⅗′ Mixtur IV 1′ (with repetitions on *g* and *g′*); 4′ 2′ 1⅓′ Mixtur III 1′ (with repetitions on *c′* and *c″*); 2′ 1⅓′ (from *c′* 2⅔′); 16′ 8′ 5⅓′ 4′ Mixtur. The Gedeckt group comprises 16′ 8′ 4′; 8′ 4′; 8′ 4′; 16′. The group of narrow-scale flues is represented by Viola da gamba 8′ Quintaden 8′ Salizett 4′; Flauto traverso 8′ treble Salizional 2′ (from *c′* 4′); Flauto traverso 8′ treble Salizional 2′ (from *c′* 4′); Violone 16′. The reed group consists of Trompete 8′ Clarine 4′ bass Vox angelica 2′ Bass; Krummhorn 8′ Vox humana 8′; Krummhorn 8′ bass Trompete 8′ treble Vox humana 8′; Posaune 16′ Trompete 8′ Clarine 4′ Kornett 2′. There is also a Kornett V on the *Hauptwerk*. The type clearly involves a synthesis of influences from Lorraine and Luxembourg on the one hand and from southern Germany and Austria on the other. The most prominent difference between a Stumm instrument and one by J. A. Silbermann, for example, is the narrow-scaled stops of the Stumm. Other differences are that the Nasard, Tierce and Larigot are not wide in scale but like Principals, that there are two Principal ranks in the Echo instead of a Kornett, and that in the Pedal the Posaune 16′ is preferred to the Trompete 8′. The superior technical and tonal qualities of the Stumm organ have contributed to the survival of some 140 examples, out of some 370 documented original instruments.

HANS KLOTZ

Stump. An English plucked instrument of the early 17th century. It is known only by name and by one surviving piece of music (*GB-Och* Mus.532), headed 'Alman R. Johnson to the stump by F.P.' (ed. A. Sundermann, *Robert Johnson: Complete Works for Solo Lute*, London, 1972). This is written in six-line French tablature and shows that the stump had seven fingered string courses tuned like a Renaissance lute, with eight extra bass diapasons. The left-hand stretches indicate a maximum string length of not more than 60 cm, so it cannot have been a bass instrument like the PENORCON, as has sometimes been suggested. Assuming a top string at *a′*, the tuning would be *F′–G′–A′–B♭′–C–D–F/G–A–d–g–b–e′–a′*; the piece would then be in G minor. As with the POLIPHANT, the invention of the stump was attributed by John Playford to Daniel Farrant. Talbot (see Gill), though he did not mention the stump by name, remarked that some orpharions 'like the English Theorbo carrie 5 double 8ve ranks on 5 Nutts on long Head beside those (7) on the Plate [fingerboard]'. Two more diapasons or 'double 8ve ranks' would make this an exact description of the stump required for the one and only piece.

IAN HARWOOD

Stumpf, (Friedrich) Carl (*b* Wiesentheid, 21 April 1848; *d* Berlin, 25 Dec 1936). German acoustician and musicologist. Both his parents were musical, and at his various schools he learnt to play six instruments, teaching himself harmony and counterpoint. From 1865 he studied philosophy (with Brentano) and theology at Würzburg University, and philosophy and natural sciences at Göttingen University, where he took the doctorate and in 1870 completed the *Habilitation* in philosophy. He was professor of philosophy at the universities of Würzburg (1873), Prague (1879), Halle (1884), Munich (1889) and Berlin (1893–1928), where he founded (1893) and directed the Psychologisches Institut and the Berlin Phonogrammarchiv (1900). His many well-known pupils included Hornbostel and Abraham, with whom he founded and directed the Phonogrammarchiv, Sachs, Lachmann, Schünemann and the writer Robert Musil. He founded and edited the journal *Beiträge zur Akustik und Musikwissenschaft* (1898–1924) and, with Hornbostel, the series Sammelbände für vergleichende Musikwissenschaft (Munich, 1922–3). In 1928 he received the Bundesverdienstorden, and he was a member of the Berlin Academy of Sciences.

Stumpf is best known as a founder of comparative musicology ('vergleichende Musikwissenschaft'), an important forerunner of the modern discipline of ethnomusicology; however, his contributions in this area grew out of his earlier pioneering work in music perception. He began work on 'Tonpsychologie' in Würzburg and his book of 1883 was the first systematic treatment of this subject. Although intended as a study in acoustics, the work shows the influence of Brentano's phenomenology through its insistence that the physical reaction of the ear to sound ('Perzeption') and the listener's judging of the sound ('Aperzeption') take place simultaneously. Arguing against Helmholtz's theories, Stumpf later proposed a theory of sound 'fusion' ('Verschmelzungstheorie'), according to which consonance was based not on the coincidence of overtone frequencies but on the likelihood

of two tones sounding as one when played at the same time. Stumpf revised this theory to incorporate Riemann's research on triads, coining the term 'concordance' to describe the effect of major and minor triads and their inversions and 'discordance' for the effect of all other chords (1910, 1911). Despite the elementalism on which Stumpf's theories are based and the opposition they later aroused (even from his pupils), his writings on this subject were seminal.

Stumpf looked to non-Western music to prove the universality of his 'scientific' theories of acoustic phenomena, as did A.J. Ellis, whose work influenced Stumpf. Together with a review of Ellis's findings on non-Western musical scales, Stumpf published his landmark study 'Lieder der Bellakula Indianer' (1886), a work which some scholars regard as marking the birth of ethnomusicology in Germany. This article concentrated for the first time on the repertory of an individual group, offering a detailed analysis of musical elements, transcriptions into Western notation and a discussion of the cultural context. Another pioneering article by Stumpf was 'Phonographierte Indianermelodien' (1892): in this evaluation of Gilman's transcriptions, Stumpf provided a detailed descriptions of the methods of notation and argued for the founding of sound archives. Acting on this conviction, he founded the Phonogrammarchiv at the university; its holdings were based on Stumpf's own recordings made that year of a Siamese theatre group visiting Berlin and recordings donated from the USA. Through his commitment to the Psychologisches Institut, in which physics, psychology, ethnology, natural science, philosophy and aesthetics were combined with systematic musicology, Stumpf secured the recognition of comparative musicology as an independent discipline; he also defied the anti-Semitic climate in German universities and succeeded in appointing Sachs and Hornbostel, the only Jewish musicologists to hold academic positions on the eve of the Third Reich.

ALBERT WELLEK, BERTHOLD FREUDENBERGER/R

Stumpf, Johann Christian (*b c*1740; *d* ?Frankfurt, ?1801). German composer. The birth and death dates commonly given for him may actually be those of another musician with the same surname. Historians have referred to the death entry of 11 April 1801 in the Frankfurt Catholic parish records ('D. Ludovicus Stumpf Mogonus, Musicus Exercitu Reipublicae Gallicae, aetatis 38 annorum'), yet works by Johann Christian appear in catalogues of Parisian publishers as early as 1762, and none of his works bears the name 'Ludovicus' or its cognates. In a concert of 17 May 1778 at the Frankfurt Comic Theatre, a 'Mr. Stumpf' played the bassoon in the same programme as the violinist Georg Benda. Stumpf lived in Paris around 1785. After playing the bassoon with the Altona Orchestra in Germany until 1798, he worked under Christian Cannabich as choral coach at the Frankfurt Opera.

A review of Stumpf's 12 divertissements for two flutes in the *Allgemeine musikalische Zeitung* (14 November 1806) describes him as 'understanding the instrument and the *galant* style' and writing music that is 'flowing, melodious'. As examples of his most significant area of work, Stumpf's symphonies op.2 for strings, horns and oboes or flutes are all written in four movements, with a minuet and trio as third movement. Characteristic of many symphonies written after about 1765, these works show symmetrical phrase repetitions, slow harmonic rhythm and clear differentiation between primary and secondary themes.

WORKS

published in Paris unless otherwise stated

Ballet music: Die Geburt des Harlequin (ballet, 3), arr. kbd, *D-Bsb*; 4 vols. of entr'actes, orch (Offenbach, n.d.), vol.3 collab. P. Winter
Orch: Simphonie périodique, no.29 (1762/3); 6 syms., op.2 (1767); Syms. à 4, op.10 (1768), ?lost; Syms. à 6, op.11 (1768); Simphonie périodique, no.31 (?1770); Syms., op.9 (?1772); 6 syms. à 8, op.3 (1779); Bn Conc. (1780); 2 syms. concertantes (1781); Fl Conc., op.15 (Augsburg, n.d.); 6 syms. à 4, 2 hn ad lib (n.d); 4 bn concs. (Bonn, n.d.); Fl Conc., op.6 [cf *AMZ*, x (1807–8), Intelligenz-Blatt]
Chbr: 6 quatuor concertants, str qt, op.5 (?1775); Qt, bn, vn, va, vc (Bonn, n.d.); 6 Trios, fl, vn, b, op.1 (1762); 6 Trios à 3 ou grand orchestre, op.2 (n.d.); Trios, vns, op.4 (?1768); 6 trio d'airs connus et dialogués (1786); 6 Vn Duos, op.1 (n.d.); 6 Duos, vn, vn/vc, op.2 (1765); 6 Duos, (2 vc)/(va, vc)/(2 bn), op.6 (1772); 6 Va Duos, op.15 (1782); 6 Vc Duos, op.16 (1783); Cl Duos, op.18 (1788); 12 [24] duos amusants, 2 fl (Mainz, n.d.); 12 divertissements, 2 fl (Hamburg, n.d.); 6 Fl Duos, op.1 (London, n.d); 6 Fl Duos, op.17 (London, n.d.)
Numerous arrs. of Harmoniemusik and opera excerpts

SUZANNE FORSBERG

Stumpff, Carolus (*fl* early 18th century). German composer. He wrote church music for the court of Baden, performed when it was visiting its secondary residence at Schlakenwerth (now Ostrov, near Karlovy Vary), as it did for varying periods between 1690 and 1721. Stumpff is not mentioned in the list of musicians appointed to serve at Rastatt (near Karlsruhe) when the court restablished itself there in 1713 after the War of the Spanish Succession.

Stumpff's sacred output, all for four voices and orchestra, is typical of the less elaborate liturgical music written by Viennese composers in the early 18th century. Though his masses are cantata-like, each section being divided into many movements, he wrote few extended arias, and made much use of a mixed ensemble of solo and tutti voices, in which the tutti is the more important part and vocal coloratura is used sparingly. His violin writing is unusually simple, often doubling the upper voices or maintaining an accompaniment figure. Only in *Opus musicum* did he write in a more elaborate and Italianate style, which makes considerable technical demands on solo singers and instrumentalists.

WORKS

all for 4 voices and orchestra, in D-KA

Missa S Georgii; Missa S Ludovici; Missa pastoritia
2 lits; TeD; 2 Alma redemptoris mater; 2 Salve regina; 2 Ave regina; 2 Regina coeli; Opus musicum pro sacro sepulcro; Quatuor versiculi pro fugas deducti pro festo Corporis Christi; pastoral cants.

ELIZABETH ROCHE

Stuntz, Joseph Hartmann (*b* Arlesheim, nr Basle, probably 23 July 1793; *d* Munich, 18 June 1859). Swiss composer of German origin. The son of a painter, he first studied with Peter von Winter in Munich (1808–12), then with Salieri in Vienna (1813–16) and then became conductor of the Italian Opera in Munich. His first opera, *La*

rappresaglia, written during his first stay in Italy (1818–20), was received with warm applause on both sides of the Alps; it was produced successively in Munich, Vienna, Stuttgart and Berlin in a German translation as *Das Schloss Lowinsky*. This success, however, was not achieved by his next operas, and Stuntz decided to settle at Munich, where in 1825 he was appointed Winter's successor as first conductor of the Hofoper. Owing to his methods as a conductor (he tended to slow tempos, and preferred the new way of leading the orchestra from the piano rather than as first violinist) he was replaced by Franz Lachner, but retained the post as a conductor of the court orchestra until his death.

While his Italian operas are written in the neo-Neapolitan style, both his two German dramatic works written for Munich, the Singspiel *Heinrich IV zu Givry* (1820, libretto adapted from Voltaire's *Charlot*) and the tragic opera *Maria Rosa*, fail as attempts at 'deutsche Oper'. *Garibaldi der Agilolfinger* (1824), arranged for King Maximilian's 25th jubilee, is a rather odd adaptation of Mozart's *La clemenza di Tito*; only the introduction and the second finale are original, the rest being taken over from Mozart's music. Stuntz also wrote a large number of ballets, cantatas, masses and other works for official occasions. He was the founder of the male choir tradition in Munich, and his songs and choruses became popular in southern Germany.

F.R. BOSONNET

Stupan von Ehrenstein, Johann Jakob (*b* 1664; *d* Vienna, 17 Jan 1739). Austrian composer and court official. He is first heard of on 31 July 1709, when the Jesuit drama *Martis exilium, e pacis reditus* was performed with his music in Vienna before the emperor and empress. He worked for the imperial court in Vienna from 1710, when he was appointed high steward; in the same year he also became secretary in Vienna to Prince Maximilian Wilhelm of Brunswick-Lüneburg, who was the empress's cousin. His final appointment was as councillor to the Dowager Empress Amalie. All his known music dates from between 1702 and 1711, before his busy years as a successful courtier. He wrote the music for three Jesuit dramas, the above-mentioned *Martis exilium* (1709) and *Radimirus ex reo rex* (1710), both of which are lost, and *Nundinae deorum* (1711; MS in *A-Wn*), which according to Kramer played an important role in the development of Jesuit drama and suggests that he was a gifted composer. With its 'bravura arias firmly in the Neapolitan style and accompanied by various instrumental combinations ... brief, unassuming secco recitatives [and] extended, well-wrought arias', it shows that the genre had shed the features that characterized it up to about 1700. Stupan is otherwise known as a composer of instrumental music: two collections of three-part music – *Rosetum musicum in 6 divisum arcolas, vulgo partittas* (Ulm, 1702) and *Armonica compendiosa* (Ulm, 1703) – survive (both ed. in DTÖ, cxxxvii, 1984): a collection for solo violin – *Horae p[r]omeridianae harmonicae, seu Symphoniae XII* (Ulm, 1710) – is lost.

WALTER PASS

Stupel, Petar (*b* Sofia, 23 April 1923; *d* Sofia, 30 Nov 1997). Bulgarian composer and pianist. He studied the piano with Andrey Stoyanov at the Bulgarian State Academy, graduating in 1947, and then for the next two years he attended the Liszt Academy in Budapest where his teachers were Pál Kadosa and Leó Weiner. By that time he had become known as a composer of particularly popular children's songs. He was active as a pianist, both as soloist and with the violinist Brian Lechev. He also worked as a composer for the Song and Dance Ensemble of the Bulgarian army, as an editor in the children's department of Sofia Radio and Balkanton, and as chief music editor of Bulgarian national television (1966–71). He subsequently directed the festival Sofia Music Weeks which, under his guidance, developed into an important international event.

WORKS
(*selective list*)

Stage: Prodavachat na nadezhda [The Hope Salesman] (TV musical); Slamenata shapka [The Straw Hat] (operetta); Taynata sila na mechoka Pepo [The Secret Strength of Pepo the Bear] (radio musical); Tsarstvoto na bukvite [The Kingdom of Letters] (children's operetta); Vartelezhkata [The Merry-Go-Round] (musical); Zelenata slancheva pateka [The Green Sunny Path] (TV musical); Zlatnata ryapa [The Golden Turnip] (musical); Zlatnoto momiche [The Golden Girl] (children's ballet)

Over 100 film and TV scores incl.: Basha mi boyadzhiyata [My Father, the House-Painter]; Kapitan Petko voyvoda [Captain Petko, the Leader]; Kliment pee i risuva [Clement Sings and Draws]; Kotarakat v chizmi [Puss-in-Boots]; Na vseki kilometar [For Every Kilometre]; S pagonite na dyavola [With the Devil's Shoulders]; Taralezhite se razhdat bez bodli [Hedgehogs are Born without Spikes]

Other works: over 20 incid music scores, radio scores, *c*20 musical stories; children's orats and over 500 children's songs

ANDA PALIEVA

Stuppner, Hubert (*b* Trodena, nr Bolzano, 19 Jan 1944). Italian composer. He studied the piano and composition at the Bolzano Conservatory and musicology at the University of Padua, where he gained the doctorate in 1965. He was first brought to international attention in 1970 when he won the Gaudeamus competition. From 1970 to 1974 he attended the Darmstadt summer courses, where he studied with Stockhausen, Ligeti and Xenakis, among others. In 1975 he founded the International Festival of Contemporary Music in Bolzano. He was appointed director of the Bolzano Conservatory in 1981.

Until 1975 Stuppner's compositions were strongly influenced by the Darmstadt school. Subsequently, however, he turned away from serialism. Proceeding from the thesis that musical development was at an end, he developed a postmodern style based on works of the past. The chamber opera *Totentanz* (1978) ironically paraphrases elements from Verdi's *La traviata*. Other compositions employ similar techniques, many marked by black humour. In search of musical archetypes by which to understand primal psychological modes of musical perception, he went on to create a neo-neo-classical 'music about music' based on the historical repertory, but without literal quotation. *Quasi una sinfonia* (1981) tackles the form of the Classical symphony, the First Symphony

(1985) takes on Mahler's Sixth, *Salomes Tanz* (1988) refers to Richard Strauss and Alban Berg, *KV 1991* (1989–90) relates to Mozart and *Extasis & Nirwana* (1989) invokes Wagner's *Tristan* chord.

WORKS
(*selective list*)

Stage: Totentanz (chbr op), 1978, Warsaw, 1978; Variété liberty (Stuppner and C.P. Baudelaire), 1983, Ferrara, 1983; Pierrot und Pierrette (ballet, after A. Schnitzler), 1984, unperf.; Café Eros (revue, Baudelaire, F.G. Lorca, L. Salomé and Stuppner), 1986, Stuttgart, 1986; Salome (scenes, S. Mallarmé and E. Corbière), S, pf, 1986, unperf.; Extasis & Nirwana (ballet), 1989, Bolzano, 1989; Hiob (scenic orat, Bible), Bar, chorus, ens, 1991, Bressanone, 1992

REINHARD KAGER

Sturgeon, N. [?Nicholas] (*d* between 31 May and 8 June 1454). English composer. The unusual name allows some (if not complete) confidence that a single person is involved in this exceptionally well-documented career. Details are given in A.B. Emden: *A Biographical Register of the University of Oxford to A.D. 1500* (Oxford, 1957). Numerous references appear in the Close, Patent and Norman rolls of the period. At various times he held canonries at Exeter, Wells, St Stephen's, Westminster, Hastings and Kirkby Castles, Windsor (from 1440) and St Paul's Cathedral (from 1440, precentor from 1442). In 1442 the Privy Council commissioned him to select six English singers for the imperial chapel of Friedrich III. Sturgeon was a member of the Royal Household Chapel (continuously between 1413 to 1452, including the expedition to Harfleur in 1415 and a designation as sub-dean in 1428). The earlier part of this period was contemporaneous with the royal chaplaincies of Damett and Burell, though neither his canonries at Windsor nor those at St Paul's coincide with the dates of Damett's tenure of prebends at these institutions. Detailed payments to Sturgeon are recorded in the Windsor archives between 1441 and 1451, during which period he held office variously as treasurer and steward. By a will of 4 May 1430, Thomas Salmon, formerly esquire to the Earl of Arundel, named Nicholas Sturgeon, *clericum*, as executor and legatee. Salmon was to have a grand burial and a perpetual chantry in the Lady Chapel at Arundel College. This could mean that Sturgeon was associated with Arundel, later renowned for its music (D. Skinner: *Musical Life in Late Medieval Arundel*, Oxford, forthcoming). His name appears as a founder member of the Gild of Parish Clerks in 1449, whose Bede roll (*GB-Lgc* 4889/Pc) records him as a deceased member in 1455, varying his designation between *Dominus* and *Magister*. His will, written in English, is dated 31 May 1454, when he was alive, and was proved on 8 June of the same year, by which time he was presumably dead. It is printed in Furnivall: *The Fifty Earliest English Wills* (London, 1882), pp.131ff, and supplies several names of relatives, none of whom (where identifiable) advances our knowledge of Sturgeon himself. There is however a Richard Sturgeon whose will of 1456 shows him to have been living, as did Nicholas in 1440–02, in the precinct of St Bartholomew's Hospital (close to St Paul's but outside the walls). Although it refers extensively to other benefices and allegiances, there is no reference to music.

His seven surviving compositions are known exclusively from the second layer of the Old Hall Manuscript, and may possibly be autograph. No personal features of style emerge sufficiently strongly to permit the ascription of further, anonymous, works to him. No use of plainchant has been traced except for the tenor of his only motet, which continues the Sanctus chant used by Damett for his motet. This compositional relationship can only be deliberate, and it has been suggested that both motets marked the triumphal return to London of Henry V after the Agincourt victory. Bukofzer (*Studies in Medieval and Renaissance Music*, New York, 1950, pp.67–70) has proposed that both motets can be seen as elaborately troped settings of the Sanctus, a view supported by their position in the manuscript, the opening syllable of both of Sturgeon's texts and one of Damett's, as well as the use of a Sanctus plainchant melody. *Salve mater* is a felicitous and very English work that wears the ingenious sophistries of its isorhythm unobtrusively.

All of Sturgeon's compositions make considerable use of coloration, often with slight syncopation. All except a Gloria (no.15) and a Credo (no.69) have at least one change of mensuration. The pieces written in score (Gloria, no.9; Credo, no.64; Sanctus, no.114) are not sharply distinct in style from those in separate parts, though the latter tend to have relatively more movement in the topmost part. The Sanctus and two of the Glorias (nos.40 and 64) have extensive duet writing, and in nos.40 and 114 the contratenor crosses above the discantus as well as below the tenor. The melodic style is smooth and shapely; harmonic and rhythmic roughnesses are minimal.

WORKS

Edition: *The Old Hall Manuscript*, ed. A. Hughes and M. Bent, CMM, xlvi (1969–73) [OH]

Gloria, 3vv, OH no.9 (in score)
Gloria, 3vv, OH no.15
Gloria, 3vv, OH no.40
Credo, 3vv, OH no.64 (in score)
Credo, ?3vv, OH no.69 (only discantus survives)
Sanctus, 3vv, OH no.114 (in score)
Salve mater Domini/Salve templum gratie/-it in nomine Domini, 3vv, OH no.113 (Sarum Sanctus 3 in T continuing the T of Damett's motet, OH no.111, but untransposed)

MARGARET BENT

Sturges. *See* TURGES, EDMUND.

Sturm, Kaspar (*b* Schneeberg; *d* after 1 Feb 1605). German organ builder. He became a citizen of Regensburg on 8 January 1565 and organist of the Neupfarrkirche there in 1565. In 1568 he entered the court chapel in Munich, directed at that time by Lassus. He became a citizen of Ulm on 15 January 1580, made a journey to Italy in 1586, and renewed his citizenship of Regensburg on 7 January 1594. Sturm built two organs for the Munich court (1568 and 1574) and organs for Schloss Isareck bei Moosburg (1574) and the monasteries at Rottenbuch, Indersdorf, Blaubeuren and Scheyern in or before 1575. He built the large organ in Ulm Minster in 1576–8 (tried out by Bernhard Schmid, among others), as well as other instruments for Vienna, Regensburg, Linz, Graz, Abensberg and, in 1591, for the Neupfarrkirche in Regensburg.

Like Jörg Ebert, Balthazar Mygel of Altenmygelburg, Eusebius Amerbach and Martin Ruck, the south German conservatives of the period, Sturm set greatest store by the Principal chorus: the *Hauptwerk* of his instrument, for example, had 8′ 4′ $2\frac{2}{3}$′ 2′ Mixtur V–VIII (4′) Zimbel II, Gedeckt 16′ 8′; the *Rückpositiv* had 4′ 2′ $1\frac{1}{3}$′ Mixtur V–VII (2′), Gedeckt 8′; the *Brustwerk* had 2′ Zimbel II, Gedeckt 4′, Posaune 8′ and Regal 4′; and the Pedal had 16′ Mixtur VI–VII (8′), Posaune 8′. Sturm was also one of the few masters known to have equipped their manual mixtures with a relatively large number of octave ranks, but with very few ranks of 5ths (and those very high). This had been recommended by Arnolt Schlick in 1511; Praetorius gave an example of it in 1619, and it is found in the instrument of 1585 in St Vaast, Arras, by Jean Barbaise and Pieter Isoore. The Mixtur on the *Hauptwerk* of Sturm's Ulm instrument was as follows: from C, 4′ 2′ 1′ $\frac{1}{2}$′ $\frac{1}{3}$′; from *c*, 4′ 2′ $\frac{2}{3}$′ $\frac{1}{2}$′ $\frac{1}{2}$′; from *c*′, 4′ 4′ 2′ 2′ $1\frac{1}{3}$′ 1′ 1′; and from *c*″ 4′ 4′ 4′ $2\frac{2}{3}$′ $2\frac{2}{3}$′ 2′ 2′ 2′. The *Rückpositiv* Mixtur was equipped with: 2′ 1′ $\frac{1}{2}$′ $\frac{1}{4}$′ $\frac{1}{6}$′; 2′ 1′ $\frac{1}{2}$′ $\frac{1}{2}$′ $\frac{1}{3}$′; 2′ 2′ 1′ 1′ $\frac{2}{3}$′ $\frac{2}{3}$′; and 2′ 2′ 2′ 2′ $1\frac{1}{3}$′ $1\frac{1}{3}$′ $1\frac{1}{3}$′.

HANS KLOTZ/RAIMUND STERL

Stürmer, Bruno (*b* Freiburg, 9 Sept 1892; *d* Bad Homburg, 19 May 1958). German composer, conductor and teacher. He studied at Heidelberg University (with Wolfrum) and at Munich University (musicology with Sandberger, Kroyer and Eugen Schmitz; fine arts with Wölfflin, and German literature with Muncker). During the 1920s he worked as a music teacher and critic in Heidelberg and opera conductor in Remscheid and Essen. In 1925 he became a choral conductor in Duisburg and two years later founded a music school across the Rhine at Homberg. In the 1930s he moved to Kassel where he divided his time among composing, conducting and performing as a member of the Stürmer Trio. From 1945 he worked as a composer, critic and teacher in the Frankfurt area, and was also director of the Darmstadt orchestral school for a time.

Stürmer rose to prominence during the final years of the Weimar Republic with his futuristic choral work *Die Messe des Maschinenmenschen*. But he soon retreated from this position to embrace a simpler, tonal style which found particular favour during the Third Reich. His prolific output included several cantatas with a political agenda and national male choruses composed specifically to celebrate Nazi holidays.

WORKS

More than 100 choral works incl. Wanderers Nachtlied (J.W. von Goethe), male chorus, 1918; Die Messe des Maschinenmenschen, Bar, male chorus, orch, 1931; Das Ludwigsburger Tedeum, boys' chorus, male chorus, brass band, 1954; also orchestral works for orch

Sturmer, Leonardo. Lute maker. He was active in Bologna in the late 15th century and early 16th. *See under* MALER.

Sturmmarsch (Ger.). Double-quick march. *See* MARCH, §1.

Sturm und Drang (Ger.: 'storm and stress'). A movement in German letters, reflected in the other arts, that reached its highpoint in the 1770s. It is most easily defined by its artistic aims: to frighten, to stun, to overcome with emotion. In line with these aims was an extreme emphasis on an anti-rational, subjective approach to all art. Although almost accidental in origin, the term 'Sturm und Drang' reflected ancient Stoic concepts of *tempestas* and *affectus*, according to Heckscher (1966–7), now positively rather than negatively valorized with regard to artistic creation. The young Goethe was the leading figure, with his play *Götz von Berlichingen* (1773) on a medieval German subject.

The movement had been prepared by various creative spirits of the mid-century, who were still half part of the fashionable appeal to sentimentality of the time, so-called 'Empfindsamkeit'. On an international level it is necessary to give credit to Edward Young's *Night Thoughts* (1742; Ger. trans., 1751). Also prefiguring the movement was Rousseau's rediscovery of nature at its most awesome, from Alpine peaks to ocean depths. A special kinship may also be established with Diderot because of his frequent and influential calls for sombre, savage and grandiose qualities in painting, poetry and music. Mercier worked these precepts into a treatise on drama that found a wide response among German writers, partly because of its social aspects, with emphasis on class struggle. No less important was the widespread revival of Shakespeare's tragedies, which had the effect of liberating dramatists from subservience to the style and the rules of classicistic drama and giving them a sense of historicism. The expression 'Sturm und Drang' comes from the title of a play about the American Revolution, written in 1776 by Friedrich Maximilian Klinger. With Schiller's play *Die Räuber* (1780–81) the movement is generally accounted to have reached its zenith, after which both Schiller and

Goethe gradually returned to more generally accepted standards.

There were parallel movements in the other arts. The fashion for storms and shipwrecks in painting, associated particularly with Joseph Vernet and Philippe de Loutherbourg, capitalized on the delight in conveying fear and terror. Painters who specialized in nightmarish visions fall into the same category. Goethe wrote to a friend in 1779: 'I have got hold of some paintings and sketches by Fuseli, which will give you all a good fright'. Blake proved a worthy disciple of Fuseli. The vogue of Piranesi's *Carceri* from mid-century on bespeaks another aspect of the revelling in gloom and tortured feelings, as well as the appeal of a remote and more romantic past. Gothic dungeons à la Piranesi afforded some of the strongest statements in visual terms upon the operatic stages of the time. A related phenomenon was the strongly anti-rational appeal of 'Gothic novels', which began with Horace Walpole's *Castle of Otranto* (1764). At the same time James MacPherson published his primitivistic *Ballads of Ossian*, passing them off as translations from the Gaelic (1762–3).

A musical parallel is best approached in the theatre, where all the arts meet. Stimulating strong emotional responses was a prime aim of the operatic reform about 1760. What was experienced at the time as a most potent weapon for passionate, unbridled expression was obbligato (or orchestrally accompanied) recitative. In the hands of Italian masters like Jommelli and Traetta, this language of orchestral commentary was pushed to unheard-of lengths of tone-painting. A related territory, by virtue of its freedom of action and fluid, transitional techniques, was the dramatic ballet, where music painted various pantomimic gestures. The choreographers Noverre (*Lettres sur la danse*, 1760) and Angiolini were both significant in advancing towards the pantomime ballet; the latter devised the stage action in Gluck's *Don Juan* (1761) and wrote a programme note that clearly proclaimed 'Sturm und Drang' ideals: '[Gluck] a saisi parfaitement le terrible de l'Action. Il a taché d'exprimer les passions qui y jouent, et l'épouvante qui règne dans la catastrophe'. The ferocious intensity of the D minor finale was indeed well calculated to evoke terror – Mozart's *Don Giovanni*, 25 years later, was still beholden to it. From here it was but a step to the scene with the furies in Gluck's *Orfeo ed Euridice* (1762), also choreographed by Angiolini. The resources of obbligato recitative and the dramatic ballet gave composers a ready-made arsenal with which to fashion the continuous web of pictorial music necessary to accompany *mélodrame* (spoken drama supported by orchestral mood music). Rousseau pioneered this genre with his *Pygmalion* (1770). It was quickly taken up by Goethe and other literary figures. Georg Benda's music for *Ariadne* and *Medea* (1774–5) achieved the greatest successes for the genre. Mozart first came into contact with them in 1777–8 at Mannheim, where one of the German companies specializing in Shakespeare put on *Medea*. His pleasantly astonished reaction led to experiments with the technique in *Zaide* (1779) and in his revisions of the stage music for *König Thamos*. He also planned to write a fully-fledged *mélodrame*, on the subject of Semiramide, on which Gluck had written the most radically innovatory of his dramatic ballets (1765). Obbligato recitative was pushed to its utmost expressive consequences in *Idomeneo* (1780–81), a product of his Mannheim and Paris experiences. His utterances about this opera betray a typical 'Sturm und Drang' attitude towards dramatic realism ('Man muss glauben es sey wircklich so!', written in connection with the oracular pronouncement accompanied by trombones in Act 3), and with regard to evoking fear and terror from the audience (e.g. the storm scenes in C minor and F minor, the D minor flight chorus, described in the libretto as a pantomime of 'Angst und Schrecken'). Mozart's power in expressing the macabre and the terrible also sometimes came to the fore in his earlier stage works, notably in the tomb scene of *Lucio Silla* (1772) and in parts of *La finta giardiniera* (1774).

Other composers have been linked with the 'Sturm und Drang' movement with more or less appropriateness. In north Germany, Rolle went far beyond the merely sentimental in works such as his *Tod Abels* (published 1771), *Abraham* (1777), *Lazarus* (1779) and *Thirza* (1781), which may be compared with Benda's *mélodrames* in terms of tragic grandeur, dramatic fluidity, use of unifying motifs, and large-scale tonal planning. The second Berlin school of lied composers, although they went beyond the first school's insistence upon being pleasing at all times, never produced such stark and uncompromising music as did Rolle at his best. Bücken assessed the operas of Schweitzer on texts of Wieland (*Alceste*, 1773; *Rosamunde*, 1777) as falling between 'Sturm und Drang' and 'galant Empfindsamkeit', with the composer leaning towards the former and the poet towards the latter. In south Germany the main centres were Stuttgart (with Jommelli pupils like Zumsteeg) and Mannheim (Schobert and Eckhard have been singled out as pioneers of a robust piano style that imitated the famed orchestral fireworks of the Mannheim band). Even Mozart admired the fiery music in Holzbauer's *Günther von Schwarzburg* (1778 – another medieval German subject). Among the Mannheim composers, Vogler was the foremost 'Stürmer' with his frankly sensational programme overtures (*Hamlet*, 1778), his ballets and other stage works. Of the storm in his *mélodrame*, *Lampedo* (1778), he wrote: 'the orchestra cannot be distinguished from the thunder ram above the timber-work of the theatre, the rain machine, and the lightning that pierces the darkness on stage; all work together to contribute to the dramatic realism by which a horrible tempest is conjured up for the eyes and ears'. Gradations of lighting in the theatre accompanied these storms and other incidences of nature in upheaval, an important visual counterpart to the dramatic fluidity sought through music (Loutherbourg was a pioneer here). Vogler's significance in establishing a new, more 'romantic' approach to the lyric stage emerges from his *Betrachtungen der Mannheimer Tonschule* (1778–81) no less than from his music. As the respected teacher of a younger generation including Winter, Weber and Meyerbeer, he may be considered one of the seminal figures linking the 'Sturm und Drang' variety of 'romanticism' with that of the early 19th century.

A persuasive case has been made (Brook, 1970) for considering Haydn's phase of passionate works in the minor mode, characteristic of the years round 1770, along with similar works of other Austrian symphonists, as a 'Sturm und Drang' phenomenon. Their vocabulary of syncopations, wild leaps and tremolo passages is much the same as in slightly earlier musical depictions of furies

in Viennese stage works; Sisman (1990) has likewise identified close links between Haydn's symphonic and theatrical music during this period. (The symphony 'La casa del diavolo', 1771, composed by the former Burgtheater cellist Luigi Boccherini in imitation of Gluck's ballet *Don Juan*, is another notable example of such direct theatrical-symphonic interchange.) Brook compared Haydn's turn towards more Olympian ideals in the following decades with the turn of events in German letters, and with Goethe in particular. Although parallel movements to the musical 'Sturm und Drang' can be discerned in other countries, it seems unwise to apply this term, because of its very nature, beyond the German-speaking lands, except in cases of direct imitation – as with Gaetano Pugnani's orchestral suite or *Melodram* (*c*1790) based on Goethe's 1774 novel *Die Leiden des jungen Werthers*. Even within German-speaking lands the appeal of 'Sturm und Drang' was limited; Johann Pezzl (*Skizze von Wien*, 1786–90) noted that this 'paroxysm ... was never able to take root in Vienna, or in any large city where one possessed knowledge of the world and its manners [*Weltkennt-nis und Lebensart*]'. C.P.E. Bach has been held up as an archetypal representative in music of the 'Sturm und Drang' movement. While such a case can be made, his age and his reluctance to participate directly in musical theatre make it more appropriate to view him as a particularly powerful creator within the preceding and related aesthetic sphere of Empfindsamkeit.

DANIEL HEARTZ/BRUCE ALAN BROWN

Sturt [Sterte, Stirte], **John** (bur. Holborn, London, 14 Jan 1625). English lutenist and composer. In December 1610 he was appointed, at a salary of £40, musician to Prince Henry, whose funeral he attended in 1612. Sturt was paid £2 for playing in Chapman's masque, *Middle Temple and Lincoln's Inn* on 15 February 1613. On 25 August the same year he replaced John Robson as one of the six regular London waits. He was appointed musician to Charles, Prince of Wales, from 5 November 1617 at £40 a year, his last two quarters' salary being collected by his widow Elizabeth.

Sturt's seven extant lute solos were written for a ten-course lute in 'old' tuning with the lowest course lowered to B♭ for two of the pieces. Their style is close to that of Robert Johnson, the dances in tuneful two-part writing. The manuscript *GB-Lbl* 38539 has frequently been referred to as the Sturt lutebook, without any surviving evidence. Another 'John Sturt servant to Mr Robert Johnson' who was buried at St Mary's, Acton, Middlesex, on 15 April 1625 may have been a relative, possibly a son serving as an apprentice to Johnson.

ROBERT SPENCER

Sturton [Stourton] (*fl* early 16th century). English composer. He was perhaps the William Sturton who was Gentleman of the Chapel Royal in 1503 and 1509–10 (see *BDECM*), but it must be noted that in the Eton Choirbook the forename 'Edmundus' has been added in a mid-sixteenth-century hand. His six-voice *Gaude virgo mater Christi* in this manuscript (ed. in MB, x, 2/1967, no.8) contains an unusual progression to a D♭ chord in bar 168, the only use of this accidental in the choirbook. *Ave Maria, ancilla Trinitatis*, also for six voices, on the cantus firmus *Gloria tibi Trinitas* (in *GB-Llp*) has frequent false relations. (*HarrisonMMB*)

MAGNUS WILLIAMSON

Stürtzing. *See* STERTZING family.

Stutschewsky, Joachim [Yehoyachin] (*b* Romny, Ukraine, 7 Feb 1891; *d* Tel-Aviv, 1981). Israeli cellist, composer and scholar. His father was a *klezmer* musician. Stutschewsky studied the cello at the Leipzig Conservatory (1909–12). After returning to Russia, he was soon

smuggled to the border to avoid forced conscription. A difficult period as an impoverished cellist in Paris and Jena followed. In 1914 he moved to Zürich where he met Joel Engel and became active performing Jewish music. He settled in 1924 in Vienna, where he became for a time the cellist in the celebrated Kolisch Quartet, which gave first performances of works by Schoenberg, Berg and Webern. He published articles in Jewish periodicals, mostly *Die Stimme*, corresponded with colleagues in Jerusalem and was involved with the founding of the World Centre for Jewish Music in 1937. A dedicated pedagogue, he also wrote a treatise on cello playing.

In 1938, immediately after the Nazi Anschluss, Stutschewsky and his wife Julia, a soprano, emigrated to Palestine. He was appointed inspector for Jewish music by the general council that ran the Jewish autonomy under British mandate. Despite the dismal economic situation, he organized concerts of Jewish folk and art music in Tel-Aviv, which he funded himself. He also presented lecture-recitals throughout the country, using his travels to collect and transcribe Hassidic tunes. He founded a string quartet with Kaminsky, leader of the Palestine Orchestra, and performed piano trios with Taube.

As a composer Stutschewsky preferred small forms, dominated by the idiom of Jewish prayer modes ('Prayer' from *Israeli Suite*, 1977). His deep commitment to Schoenberg and his circle was also expressed in a few works (*Composition for Violoncello*, 1970). As a scholar he published transcriptions and studies of Hassidic music and biographies of great *klezmer* musicians. His many periodical and newspaper articles express his total dedication to the struggle for the recognition and dissemination of Jewish music.

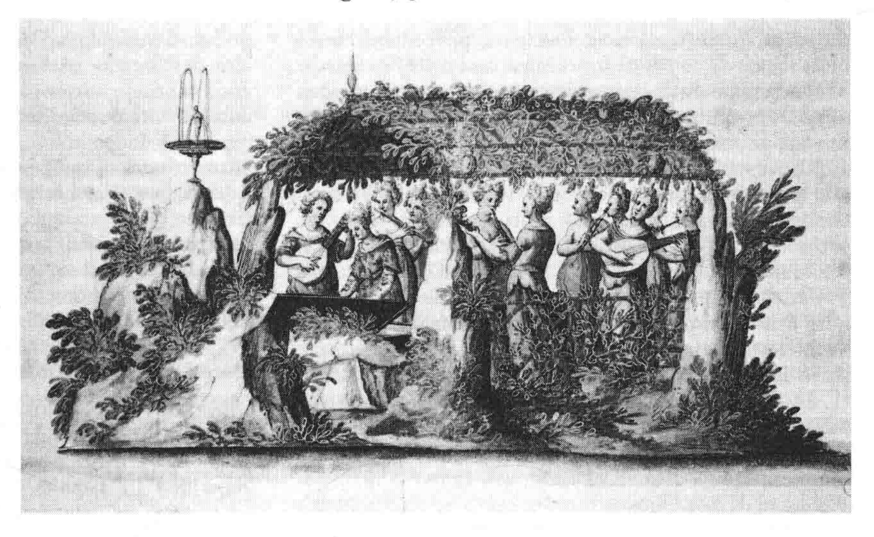
JEHOASH HIRSHBERG



Stuttgart. City in Germany, the capital of Baden-Württemberg. It is one of south-west Germany's most important cultural centres, and has a rich musical history.

1. To 1600. The Stuttgart Hofkapelle and a boys' choir at the Chorherrenstift of the collegiate church had been founded by the 15th century, but Stuttgart's musical life reached its first peak under Duke Ulrich (1503–50), who keenly supported music. The Hofkapelle acquired the services of such outstanding musicians as Heinrich Finck, Virdung, Brack and Siess and won widespread recognition as a centre of vocal and instrumental music. Apart from sacred music, the cantus firmus lied was the most important genre cultivated at Ulrich's court. From 1510 to 1514 Finck was Hofkapellmeister; his *Missa in summis* was probably performed at the marriage of Duke Ulrich and Sabina of Bavaria in 1511. In 1519 the duke was overthrown by the Swabian Alliance, and the Hofkapelle was disbanded, but following his victorious return in 1534 it was restored to its former brilliance, particularly through the arrival of Hans Hickas, Utz Steigleder and Sigmund Hemmel, all outstanding composers.

Duke Ulrich acknowledged the Reformation, and the Hofkapelle became an important centre of Protestant sacred music. It retained its ecclesiastical functions during the reign of Duke Christoph (1550–68), who occasionally transferred the Hofkapelle to his other residence in Tübingen. Christoph was closely associated with Johann Walter (ii) and Lassus, both of whom dedicated works to him.

The Stuttgart Hofkapelle flourished once more under dukes Ludwig (1568–93) and Friedrich (1593–1608). Outstanding Hofkapellmeister were the composers Ludwig Daser (1572–89) and Balduin Hoyoul (1589–94), a pupil of Lassus. By the end of the 16th century the Hofkapelle had grown to over 50 members, and increasingly performed secular as well as sacred music. Leonhard Lechner became a member of the Hofkapelle in 1585, and from 1594 to 1606 was a highly respected Hofkapellmeister. The larger part of his works were composed in Stuttgart, including the 15-part motet *Laudate dominum, quia bonus est*, composed for the marriage of Württemberg's Princess Sibylle Elisabeth in Dresden. Among the more distinguished organists at the court and the collegiate church were Johann Ulrich and Adam Steigleder and Simon Lohet, all of whose works display the characteristics of the south German organ style. Lucas Osiander, minister at the church, was the composer of the *Fünfftzig geistlichen Lieder und Psalmen* in four-voice cantional settings (1586), which laid the foundations for Lutheran congregational song.

2. 17th and 18th centuries. A separate body of chamber musicians was added to the ducal Hofkapelle by the end of the 16th century. Between 1609 and 1628 it included an *engelländische compagnia*, including the cornettist John Price and lutenists George Vichet, David and John Morrell and John Dixon. Basilius Froberger directed the Hofkapelle through the many reversals of the Thirty Years War (1618–48) until his death in 1637; his son, Johann Jacob Froberger, may have received his

1. Part of a pageant held at Stuttgart, 6 November 1609, to celebrate the marriage the previous day of Duke Johann Friedrich of Württemberg, to Barbara Sophia, daughter of the Elector of Brandenburg; watercolour (Victoria and Albert Museum, London)

formative musical impressions during his youth in Stuttgart. He probably studied with Johann Ulrich Steigleder and possibly met Scheidt during the latter's visit to Stuttgart in 1627.

Polyphonic music at the collegiate church was the responsibility of the preceptors and Pädagogium students. In 1618 a Stiftsmusik consisting of a master and five apprentices was founded to support polyphonic and congregational singing. Its first director was Joachim Böddecker, father of the important composer and collegiate organist Philipp Friedrich Böddecker. A later organist and Kantor at the collegiate church, J.G.C. Störl, was a student of Pachelbel; he published a hymn book in Stuttgart in 1710. From 1690 to 1692 Pachelbel was organist to the dowager Duchess Magdalena Sibylla in Stetten, near Stuttgart.

After the defeat of Nördlingen in 1634 the Hofkapelle was disbanded, and only reorganized in 1657 through the efforts of Samuel Capricornus, Hofkapellmeister until 1665. The Lusthaus, which had been the main centre of

2. Court pleasure garden, Stuttgart, showing the building (right) later used as the Komödienhaus: engraving by Matthäus Merian after Pierre Aubry, c1620

theatrical performances in Stuttgart, proved unable to meet the city's demands for theatre, and in 1674 the new Komödienhaus was opened in the court pleasure garden (fig.2). The Stuttgart Opera began its greatest period with the appointment of J.S. Kusser as Hofkapellmeister in 1700. Kusser brought high standards to the Hofkapelle and performed, besides his own works, operas by such composers as Steffani and, probably, Lully. He was succeeded by J.C. Pez and, from 1716 to 1755, by G.A. Brescianello.

Under Duke Eberhard Ludwig the castle of Ludwigsburg was constructed 15 km north of Stuttgart as the new ducal residence; the entire Hofkapelle was transferred there in 1728. In 1744 the young Duke Carl Eugen (1728–93), who had grown up at the court of Frederick the Great in Potsdam and received tuition from C.P.E. Bach, began his reign, and Stuttgart became one of the most important centres of European music and opera. The duke devoted himself to raising his opera, orchestra and ballet to the highest artistic level and used every means to attain that goal. He assured for Stuttgart an international reputation in opera and concerts with the appointment of Jommelli and in ballet with that of Noverre. A successful opera composer and producer, Jommelli engaged such leading musicians as Nardini and Lotti and such outstanding singers as the soprano Cuzzoni. Complementing Jommelli's newly instituted opera, Noverre was able to bring his ideal of *ballet en action* to full realization. The Konzertmeister F.J. Deller and the horn virtuoso J.J. Rudolph, among others, composed music for the ballets, which were used as intermezzos in Jommelli's operas. Leopold Mozart stayed in Ludwigsburg with both his children from 9 to 12 July 1763. The family was not received by the duke, but was introduced to Jommelli, on whom young Wolfgang made a lasting impression.

Opposition by the provinces forced the duke in 1767 to limit his expenditure. As a result Noverre was dismissed, Jommelli retired, and the orchestra, opera and ballet were drastically reduced. From 1780 Duke Carl Eugen turned his attention entirely to the Hohe Carls-Schule, which he himself had founded. The music department of this school became, under the duke's supervision, the place of instruction for young prospective musicians for the opera and orchestra. Among the graduates of the school were Schiller, Schubart and, most important, J.R. Zumsteeg. Zumsteeg directed court music from 1793 to 1804; his ballads, the most significant of his time, served as models for Schubert. During this period Dittersdorf's *Doktor und Apotheker* (1788) and Mozart's *Le nozze di Figaro* (1790), *Die Zauberflöte* (1795) and *Don Giovanni* (1796) were performed for the first time in Stuttgart.

3. After 1800. With the death of Duke Carl Eugen the court theatre found itself in severe financial straits. The resulting artistic poverty in opera and drama was described by Goethe, who visited Stuttgart in 1797. Zumsteeg was succeeded as Hofkapellmeister by J.F. Kranz of Weimar and Franz Danzi, previously Kapellmeister to the Munich court. Weber lived in Stuttgart and Ludwigsburg from 1807 to 1810 as secretary to Duke Ludwig, during which time he composed *Silvana*, the music for *Turandot*, some piano and chamber works and the opera *Abu Hassan* (to a libretto by the court councillor Franz Karl Hiemer), which was performed in 1811 under the direction of Danzi. Two new directors brought renewed importance to the Stuttgart Opera: Conradin Kreutzer, composer of the opera *Ein Nachtlager in Granada* and of numerous lieder inspired by his contact with Ludwig Uhland and the Swabian Dichterkreis; and Hummel, who produced Beethoven's *Fidelio* in Stuttgart as early as 1817. Both, however, left Stuttgart after a few years. From 1819 to 1856 Lindpaintner, a conductor praised by Mendelssohn and Berlioz, once again brought considerable esteem to the Opera by engaging outstanding vocalists, leading painstaking rehearsals and constantly

widening the Opera's repertory. He also directed regular subscription concerts, with performances by such virtuosos as Liszt, Paganini and Henry Vieuxtemps, in addition to local musicians. Meyerbeer conducted his *L'étoile du Nord* (1854) and *Dinorah* (1859) with great success, and *Tannhäuser* (1859) was the first of Wagner's operas to be performed there. The Hofkapellmeister and composer J.J. Abert brought high standards to the symphony concerts and directed numerous choral works, including a performance of Brahms's *German Requiem* in 1871 in the presence of the composer. F.P. Lachner, Carl Reinecke, Bruch (who conducted *Fritjof* in 1872) and Saint-Saëns were among Stuttgart's guest conductors. Clara Schumann gave frequent concerts in Stuttgart from 1834, and in 1881 Brahms conducted a concert of his own works.

With the appointment of Max von Schillings in 1908 the Stuttgart Opera was again among the most important centres of German stage production. The Hoftheater was destroyed by fire in 1902, and in 1912 the new Grosses und Kleines Haus was opened. In the same year Richard Strauss conducted the première of *Ariadne auf Naxos* there, with Max Reinhardt supervising the production (fig.3), and Schillings produced his own opera *Mona Lisa* in 1915. In 1918 Fritz Busch took charge of the Opera and symphony concerts, and under his direction contemporary works, including Schreker's *Der Schatzgräber* and short operas by Hindemith, received world premières. Carl Leonhardt, general music director from 1922 to 1937, performed the complete operas of Weber in 1926, the centenary of the composer's death, and the complete works of Wagner on the 50th anniversary of his death (1933). He was succeeded by Herbert Albert and Philipp Wüst.

Stuttgart's musical life resumed after World War II with the first performance in Germany of Hindemith's *Mathis der Maler* in 1946 under Bertil Wetzelsberger, who also conducted the première of Orff's *Die Bernauerin* in 1947. In this year Ferdinand Leitner was appointed the city's Generalmusikdirektor. From 1949 to 1972, under Intendant Walter Erich Schäfer, the Württembergisches Staatstheater developed an international reputation in opera, ballet and theatre. Under Leitner's direction Stuttgart gave the first German performance of Stravinsky's *The Rake's Progress* in 1951. In 1954 he directed a production of *Fidelio*, influenced by the renewal of music drama in Bayreuth; Wieland Wagner was in charge of the production. Leitner gave the premières of Orff's *Comoedia de Christi resurrectione* (1957), *Oedipus der Tyrann* (1959), *Ludus de nato Infante mirificus* (1960) and *Prometheus* (1968). In 1969 Václav Neumann became Generalmusikdirektor and was succeeded by Silvio Varviso in 1972. On Varviso's appointment to the Paris Opéra the Stuttgart position was taken by Dennis Russell Davies (1980–87), who was in turn succeeded by Garcia Navarro (1987–91) and Gabriele Ferro (1991–). The Stuttgart Opera Ballet achieved a high standard under the direction (1961–73) of John Cranko. After Cranko's sudden death the tradition he created was maintained by Glen Tetley (1974–6) and Marcia Haydée (1976–).

The Stuttgart Musikschule was founded in 1857; in 1865 it became the Konservatorium für Musik and in 1921 was renamed the Württembergische Hochschule für Musik. Its directors since 1907 have included Carl Wendling, Max Pauer, Kempff, Erpf, Hermann Keller and Hermann Reutter. A Staatliche Hochschule für Musik und Darstellende Kunst was founded in 1973. Its directors have been Wolfgang Gönnenwein, Martin Gümbel, Konrad Richter and Rolf Hempel.

Stuttgart's outstanding choral societies are the Stuttgarter Liederkranz (1824), the Stuttgarter Oratorienchor (1847), the Philharmonia Chor, the Gächinger Kantorei, the Schwäbischer Singkreis, the Hymnus-Knaben-Chor, the Süddeutscher Madrigal-Chor, the chorus of the Süddeutscher Rundfunk in Stuttgart and the Schola Cantorum. In 1981 Helmuth Ritling founded the Internationale Bach-Akademie Stuttgart with the Gächinger Kantorei and a specialist chamber orchestra, the Bach-Collegium Stuttgart. Another internationally renowned ensemble is the Kammerchor Stuttgart, whose director, Frieder Bernius, organizes the annual Internationale Festtage Alter Musik.

In addition to the Württembergisches Staatsorchester, regular symphonic concerts are presented by the Stuttgart RSO (directed since 1948 by Hans Müller-Kray, Michael Gielen, Sergiu Celibidache, Neville Marriner and Gianluigi Gelmetti), and the Stuttgart PO, mostly in the Konzerthaus Stuttgarter Liederhalle (1956; three halls, enlarged to accommodate a fourth hall in 1994). The Stuttgart Chamber Orchestra, founded in 1945 under Karl Münchinger, has won worldwide acclaim. In 1966 Münchinger formed the Stuttgart Klassische Philharmonie by supplementing the nucleus of the chamber orchestra.

Stuttgart's instrument builders have achieved recognition through the work of several violin builders and the piano factories of Schiedmayer und Söhne, Schiedmayer, Carl Matthaes and Carl Pfeiffer. The music division of the Stuttgart Landesbibliothek possesses a valuable collection of music manuscripts and first editions.

EBERHARD STIEFEL

Stutzmann, Natalie (*b* Suresne, 6 May 1965). French contralto. She studied at the Nantes Conservatoire and then at the Ecole Nationale in Paris (1983–7) with Michel

Sénéchal and Lou Bruder. She made her concert début in 1985 in Bach's *Magnificat* at the Salle Pleyel in Paris and her recital début at Nantes in 1986. She sang in Barraud's opera *Tête d'or* in Paris (1985) and in Magnard's *Guercoeur* with Plasson (1986, Toulouse), which was also her first major recording. In 1989 her recording of the title role in Handel's *Amadigi*, with Minkowski, was praised for its incisiveness and dramatic commitment. She has become an accomplished recitalist, and both in lieder and in *mélodies* her dark-grained, expressive singing, with its true contralto depth and richness, has provoked wide admiration. Stutzmann has also sung, in firm, unaffected manner, the alto solos in many performances and recordings of Baroque repertory.

ALAN BLYTH

Style. A term denoting manner of discourse, mode of expression; more particularly the manner in which a work of art is executed. In the discussion of music, which is orientated towards relationships rather than meanings, the term raises special difficulties; it may be used to denote music characteristic of an individual composer, of a period, of a geographical area or centre, or of a society or social function.

1. Definition. 2. Import of style. 3. Phenomena of style. 4. Conditioners and dynamics of stylistic differences. 5. Stylistic awareness.

1. DEFINITION. Style is manner, mode of expression, type of presentation. For the aesthetician style concerns surface or appearance, though in music appearance and essence are ultimately inseparable. For the historian a style is a distinguishing and ordering concept, both consistent of and denoting generalities; he or she groups examples of music according to similarities between them. A style may be seen as a synthesis of other styles; obvious cases are J.S. Bach's keyboard style or Mozart's operatic style (both comprise distinctive textural styles, distinctive harmonic styles, distinctive melodic styles, etc., and both are fusions of various stylistic traditions). A style also represents a range or series of possibilities defined by a group of particular examples, as in such notions as 'homophonic style' and 'chromatic style'.

Style, a style or styles (or all three) may be seen in any conceptual unit in the realm of music, from the largest to the smallest; music itself is a style of art, and a single note may have stylistic implications according to its instrumentation, pitch and duration. Style, a style or styles may be seen as present in a chord, phrase, section, movement, work, group of works, genre, life's work, period (of any size) and culture. Style manifests itself in characteristic usages of form, texture, harmony, melody, rhythm and ethos; and it is presented by creative personalities, conditioned by historical, social and geographical factors, performing resources and conventions.

2. IMPORT OF STYLE. 'Style' derives from the word for a Greek and Roman writing implement (Lat. *stilus*), a tool of communication, the shaper and conditioner of the outward form of a message. While the antithesis of appearance and essence, or style and import, is clear in this original graphical usage, the relationship is more complex than simple antithesis where art is concerned. It is widely accepted (e.g. by Sachs, 1946, and Lippman, *MGG1*) that in speaking of the style of an epoch or culture one is treating of import, a substantive communication from a society, which is a significant embodiment of the aspirations and inner life of its people. The same is true of smaller units of artistic endeavour; genres speak of the men who created them and the people who readily received them, and a personal style speaks of the artist's view of life. But in the individual art work other, more intentional messages are also present.

These are not of course messages in the verbal sense. But by the act of creative will a composer asserts something; he makes a statement of some kind. He inherits a usable past and acts by intuitive vision. The product of his vision builds on a stylistic heritage, has a style and import of its own and bequeaths an altered heritage. The stylistic heritage may be seen as general procedures which condition the composer's intuitive choice and invention, the general which limits the particular, the relevant available resource, the essential context of creation. Such notions are embodied in Schoenberg's opposition of style and idea, though this is an opposition which, sadly, Schoenberg took on trust in his book, as in the essay from which its title derives.

The idea works through style. Thus the opening of the *thema regium* in Bach's *Musical Offering* is a stately, measured, disjunct, minor, monophonic melody suitable for fugal treatment, rather than simply five minims C, E♭, G, A♭, B♮. An important part of the significance of this theme is the concatenation of qualities enumerated above, and to some extent the particular idea acts as the medium of style and the play of successive and coincident styles as the substance of the music. But the particular articulation of the stylistic concatenation is also part of the significance; five minims C, E♭, F, G, B♮ would fit this albeit crude stylistic analysis, but Bach's (or Frederick the Great's) creation is specifically not that. In music the particular and the general embodied therein and articulated thereby together form meaning or significance. They do so because music is stylized. There is no consistent natural meaning in music by relation to natural events, and there is no specific arbitrary meaning as in language. The meaning in music comes from arbitrary order evolved into inherited logic and developed dynamically. A good listener hears both style and utterance, and savours meaning through history. Style is thus the general which surrounds the particular and gives it significance.

3. PHENOMENA OF STYLE. Brossard, Apel, Bukofzer and Lippman regard style and form as opposed. Style in this sense may be used to describe the shape of details, and form the shape of the whole. The whole, however, is made up of its parts and their relationships, and form may be regarded as a phenomenon of style. Each piece has its own unique form, which controls, relates and comprehends all its details. This form belongs to a class of forms, and classes of forms by characteristic procedures which concentrate on particular parts of musical technique generate and carry distinctive stylistic details. Fugal style and sonata style are familiar terms; variation style and ternary style are also meaningful and important, though not often used as concepts. Forms may also be viewed as taking their beginnings from stylistic details; it was certain features in the details of musical language around 1750 that promoted the evolution and prominence of sonata form. Forms suggest, incorporate, belong to and grow out of specific styles.

In different periods characteristic forms have depended on different elements of musical material in different emphases. Thus in the Ars Nova, for instance, texture was an important formal determinant, whereas in the

Classical and Romantic periods forms largely depended on long-range thematic and harmonic thinking. Whatever parameter is used as the chief presenter of form, two general formal principles may be postulated. Forms can be based on continuity or on discontinuity (evolution or contrast, flow or disjunction). The two principles never exist in isolation, and specific forms have characteristic mixtures of them. A basically continuous form like a Bach fugue shows points of articulation and changes of material, but the overriding impulse is customarily one of evolution and growth rather than contrast and comparison. Discontinuous forms, such as the sectional *formes fixes* of 14th- and 15th-century secular polyphony, have continuity within sections, and no form can avoid temporal sequence. In the 19th century continuous forms, among which sonata form was prime, were complicated by greater contrast elements, and disjunctive forms such as the multi-movement structure of sonata, quartet and symphony, and such as ternary and rondo forms, were complicated by incorporating thematic similarities to bridge the points of articulation. This bridging of articulations in contrast forms had happened before (e.g. in the 15th-century cyclic mass). Repetition is a type of contrast, and varied repetition is, perhaps paradoxically, formally more evolutionary; this may be understood by comparing strophic and variation forms.

Texture is the disposition of the elements of musical argument on the chosen forces; it is sonority, and is conditioned by tone-colour, idiom and compositional technique. The term applies both to simultaneous and to consecutive sounds. As with form, texture is a means of presenting style, and indeed textural features have given rise to stylistic names: monodic style, homophonic style, polyphonic style (stratified or imitative), keyboard style, etc. A good composer will use textural possibilities to shape and enhance his musical statement, and textures will both generate and be generated by the musical material. Texture is sometimes of formal significance, as in the motet (of any period) or the fugue.

The opposing principles of texture are homogeneity and heterogeneity. This begins with the selection of musical forces, which may be, in the terms of the late Renaissance, either a 'whole consort' or a 'broken consort'. A whole consort is a selection of instruments or resources of the same family but different pitches, and a broken consort is a mixture of different instruments or resources. Voices alone are thus a whole consort, but they readily mix with instruments even from earliest polyphonic times to form a broken consort. The texture of a composition may likewise depend on similar constituents (voices or parts which do similar things) or stratified constituents. Stratified texture is a feature of the Franconian motet, whereas homogeneous texture occurs in the 16th-century motet. The opposite principles, as with those of form, are not mutually exclusive: heterogeneous textures blend in the ear and homogeneous textures consist of different parts. Idiomatic usages will link broken consorts and heterogeneous texture, and whole consorts are apt for homogeneous texture.

Harmony as a vehicle for style is mostly an indicator of historical position; it is part of idiom, and its procedures must be regarded in the light of changing conventions. It may be modal, diatonic, chromatic or atonal. Some composers however have stretched and enriched the harmonic resource of their times for expressive purposes (Gesualdo, Wagner and Debussy), and opera composers have often deliberately juxtaposed different harmonic styles for such reasons (*Parsifal* is merely a great example among many that use chromaticism as a symbol for evil, magic or sensuality and diatonicism for goodness, naturalness and innocence). Besides being rhetorical or expressive, or both, harmony also has opposite principles related to these – principles resulting from part-writing or resulting from sonorous imagination. Harmony resulting primarily from part-writing is a characteristic of successive composition, such as occurred in pre- and early Renaissance times, and can well be seen in Machaut's Mass; harmony resulting from sonorous imagination may be seen in some Wagner and Impressionist styles. Again the two principles never exist in isolation. Successively composed parts were written with some awareness of how they would fit; Wagner's harmonic expression is often through chord juxtapositions, and *Tristan* shows harmonic sensuousness expressed through counterpoint.

Melody is of great importance as a musical feature; it is possible to regard it as the essential condition of music, which is guided by form, supported by harmony and articulated by texture and rhythm. While that is somewhat metaphysical, there is no doubt that the ethos of the generative themes for a tonal piece represents a very large part of the musical statement and impact, or that the characteristic convolutions of an early Renaissance line are a beguiling, immediate and forceful experience. Melody should not be underrated as an element of form; it is not a by-product or necessary evil which the musical accept as a means to higher kinds of statement, nor is it something to be separated from the total form as something better than that. Melody is a prime connective feature in the continuum of audible time, and as such is an important and form-carrying stylistic phenomenon. It consists of a single line of related pitches, but arpeggio-based melodies (especially of the Baroque period) can imply more than one line (or at least strongly suggest their own harmony), contrapuntal forms combine melodies simultaneously, and modern music can exist as a textural sequence (as in Penderecki's *Polymorphia*); in such cases the horizontal expands into and blends with the vertical. Melodic styles may be regular or irregular, flowing or spasmodic, motivic or additive, presentational or developmental, conjunct or disjunct, vocal or instrumental, ornamental or structural, decorated or simple.

Rhythm is the very life-blood of music; it is the term for ordered change, however complex. It is an integral part of formal, textural, harmonic and melodic considerations. Musical rhythm may be viewed as a combination of objective temporal segments (pulse) and emotional sequence (the ebb and flow created by, for instance, discord and resolution, cadence, differentiated melodic and harmonic note values, melodic shape, agogic accents, syncopation). Such a felt experience of time gains significance from its enforced comparison with pulse. Pulses may be more or less strongly grouped in metres, each with its own stylistic suggestions, and the ebb and flow of feeling more or less strongly organized in phrases, periods or sections. Irregularity of metre or phrase structure has a natural tendency to contrast with regularity. Rhythmic styles may favour an even progression, as in much pre-Renaissance and dance music, or the excitement of growth to and recession from points of climax or animation, as in much 19th-century music. On

the small scale undifferentiated or disjunct rhythmic styles offer much scope for distinctive utterance. In the rhythmic aspect of style the art forms of music and dance are closest, and the influence of dance on music is an important area of criticism.

These aspects of musical language which present style are united in unique blends by unique expressive purposes. The addition of factors does not explain their relationship, and the factors assume new significance in new relationships and contexts. The expressive purpose may be related to social function, or to a more or less detailed programme (as in the symphonic poem, and any setting of words), or may be more abstract – an expressive purpose to be seen and savoured in purely musical terms. Expressive purposes may also have style names, both general (sacred style, secular style) or more specific (heroic style, reflective style, everyday style, pastoral style); and character descriptions like 'sad', 'desolate', 'happy', 'ebullient', carry stylistic implications.

4. CONDITIONERS AND DYNAMICS OF STYLISTIC DIFFERENCES. Personal style is one of the commonest units for discussion in modern music criticism. As a differentiating factor in style it is of variable importance, partly because of the differing attitudes of societies and composers. It is not an important feature in many non-Western musical cultures, in plainchant or in Western folk musics; such repertories may depend for their formation on individuals and their idiosyncratic performing styles, but in this formation the individual is subordinate to a communal artistic purpose. Personal style may be more important to objective analysis than to the society in which the artist worked, as in German Baroque music, or personal differences may be encouraged by social attitudes so that personal styles become more distinctive, as in the 19th century. The relative importance of personal style is a significant and to some extent distinguishing feature of the Western tradition, and it may be seen with notation as part of the process of comparatively fast development of musical idiom in the West.

Stylistic change is inherent in meaningful creation, at least within the Western tradition, and the personal styles of great composers are hardly ever static; such a composer learns from himself and is constantly adding to his usable past. The amount of change over a lifetime varies according to its length, according to personality and intellectual development, and according to outward cultural and economic circumstances. Normal processes of apprenticeship, maturity and refinement may be largely undisturbed (Palestrina and Brahms), or have imposed on them more dramatic changes affecting style and deriving from a change of ideals (Liszt, Wagner) or changes in external requirements (Bach and Handel).

Styles of composers working at the same time may be compared, like those of Haydn and Mozart or Bruckner and Mahler, and when similarities are drawn questions of epochal style may arise. Such a concept denotes a general range of resource and usage available at any one time; like personal style, epochal style is therefore in a constant state of flux. It is possible however to use the concept stretched over large periods of time because this flux shows differing types of change; some changes have been much more radical or dramatic, or both, than others. Historians from Adler onwards have divided Western musical style at about 1000 and 1600. The change from the monophonic era to the polyphonic was gradual, with polyphony improvised at least as early as the 9th century and plainsong composed even after the 14th. But the development of monophony into polyphony by way of parallelism (a differentiation of texture) to melodic and rhythmic independence of parts, and the evolution of polyphony from an improvised semi-automatic elaboration into a written and composed phenomenon form a fundamental change in the means of expression – a change that justifies grouping in major style areas the music before and after it. Similarly the developments of modality into tonality and of linear into harmonic thought which reached a crux around 1600 are also both gradual and fundamental changes in technique. A further change of this type and magnitude, away from tonality, may be seen around 1900.

In more recent historiography, writers (e.g. Reese, Bukofzer, Blume) have further divided music since 1000 and the epochal styles of Ars Antiqua, Ars Nova, Renaissance, Baroque, Classical and Romantic have become familiar concepts. Blume has convincingly argued the inner coherence of Classic and Romantic as one stylistic period, and these epochs then depend on significant and radical stylistic change at intervals of about 150 years (though a detailed chronology of stylistic developments in the 12th century is a matter for conjecture). New styles grow out of suggestions inherent in the old, and any example of a style will have relics of its predecessors and premonitions of its successors.

The changes in the 12th century and in about 1300, 1450, 1600, 1750 and 1900 show consistently new treatments of rhythm; in most cases formal, textural, harmonic and melodic characteristics change too, but rhythmic change is a strong and dramatic initial factor in the formation of these epochal styles. The 12th century saw the adoption of modal rhythm as a central feature; the beginning of the Ars Nova depends on increased importance of duple rhythm and syncopation, and that of the Renaissance on the homogenization of the rhythmic constituents of polyphonic texture and an awareness of the rhythm of growth. The Baroque begins with the new affective rhythm of monody, the continuo madrigal and Frescobaldi's toccatas; the Classical period begins with a new interest in phrase structure and a greater diversity of note values within melodies; and the modern period begins with the rhythmic revitalizations of Bartók and Stravinsky.

The epochal styles are however not always best characterized in rhythmic terms; the Baroque for instance is primarily the age of the continuo, the Classic and Romantic period the age of tonality as a large-scale structural force, the modern era the age of alternatives to tonality and triadic harmony. The aphoristic characterization of each period however is always problematic, for periods themselves include much change; styles begin, grow and die. Initially, new techniques of expression are explored and adjusted to by composers learning, like children, the possibilities. These techniques are incorporated into suitable forms which become established in a phase of consolidation, which may be seen in terms of a balance between controlled development of style and newness of import. Consolidation leads to refinement and complication, and the styles of composers at the end of epochs, such as Bach, Brahms and Wagner, are nothing if not complex; sometimes this phase includes what are after

regarded as overripe modes of expression, like the elaborations of Petrus da Cruce, Gesualdo and Reger.

Style is greatly conditioned by the expectations and requirements of an audience or other patrons of composers, especially in matters of genre and ethos. The genres of mass, opera and chamber music become popular with composers partly because of popular demand, and they carry their own stylistic characteristics. Associated ethos, such as the expression of religious emotions in church, of theatrical emotions in opera and of refinement in the chamber are also the result of social expectations and taste. Sometimes more than acceptability and expectation is involved; there is a functional role and demand for military music, and the requirements of Soviet realism have a quasi-legal force. Stylistic crossovers, such as Mahler's use of military music in a symphony or Strauss's use of chamber music in an opera (*Capriccio*), have denotive value.

Geographical location is a strong conditioner of style, and can involve particular social pressures which exist only in certain places: examples are the birth of opera in Italy, the requirements of the 17th-century French court, and Russian realism of both the 19th and 20th centuries. Geographical differences are important in cultural development because of difficulties of communication, and local styles may grow up in a city (such as Mannheim or Vienna), a region (as with the various German organ schools of the middle Baroque), a country or a continent. The folk culture of a country often has strong influences on style (especially in the 19th century), and these influences may be consciously enhanced by composers as a means of national assertion. Language also has a decisive effect on national styles, as Abraham has shown in his fascinating comparison of Italian and Czech styles (1974, chap.4). A preference of southern races for melody and of northern races for the greater technical intricacies of counterpoint has been remarked, and is attributed to interactions of climate, religion, personality and language. Sometimes styles become international, as with late Renaissance Netherlandish style, Baroque Italian opera, or early 19th-century Germanic style. The interaction of styles born in distinct localities is an absorbing study. The mutual influence of Du Fay and Dunstaple and the ways in which Dunstaple differs from English composers working in England show some of the intricacy of the issues. Historical accidents of communication can have far-reaching consequences for the evolution of musical style; Agincourt, spreading the English style on the Continent at a time when Renaissance style was in embryo, and the marriage of Philip II of Spain, bringing the Iberian keyboard variation to England in time for the English virginalists to develop, have artistic as well as political significance.

The resources of performance are important formative influences on style, and Parry (1911) used the relationship between resources and utterance as the starting-point for and main feature of a definition of style. Characteristic sounds are a direct element of style, while the techniques of performing on specific resources, with attendant idiomatic proclivities and possibilities, influence melody, rhythm and texture. Conventions in the grouping of resources and in performing practice underlie various distinctive personal, epochal, social and geographic styles. Each resource has its own especially suitable forms of expression. Voices are good at sustained, conjunct music, while instruments are suited to agility and disjunction. The violin has a capacity for wide-ranging melody, as Corelli exploited, and very high tessitura, as Romantic composers found; the organ pedals particularly require figures involving the use of alternate feet, giving rise to patterns that became a feature of late Baroque German organ music.

Instruments come, develop and go, and the techniques of playing them develop (usually in the direction of greater facility and complication, but not always, as may be seen from horn and trumpet technique in the 18th century); such changes are integral in determining style. Idioms from one instrument pass into other usages, as did the vocal ornaments of the late Renaissance into the violin repertory and the lute style of the early Baroque into keyboard resource.

For further discussion of the factors governing epochal styles, *see* ARS ANTIQUA; ARS NOVA; ARS SUBTILIOR; MEDIEVAL; RENAISSANCE; BAROQUE; ROCOCO; GALANT; EMPFINDSAMKEIT; CLASSICAL; BIEDERMEIER; and ROMANTICISM; *see also* HISTORIOGRAPHY and MUSICOLOGY, §II, 1. Geographical and instrumental styles are discussed in entries of the countries and instruments concerned.

5. STYLISTIC AWARENESS. Composers have always been aware of stylistic differences, as may easily be seen from any cursory examination of Western music and its supporting body of theoretical literature. That is why plainchant composers produced alleluia melodies different from settings of the Agnus Dei, why Du Fay wrote chansons in treble-dominated style and discant-tenor style, and why Liszt wrote differently for the piano and for the orchestra. Theorists and critics too have been aware of stylistic distinctions. Musical style in Greece was a subject for philosophers because of the ethic and educative powers of different styles; Johannes de Garlandia (13th century) distinguished between discant, copula and organum, and Johannes de Grocheo (*c*1300) between *musica vulgaris*, *musica composita* or *mensurata* and *musica ecclesiastica*. It was however in the late Renaissance and early Baroque that theoretical discussion of style became an important area of literary production; indeed the word 'style' enters the vocabulary of music commentary at this time.

Monteverdi (like Philippe de Vitry before him and C.P.E. Bach after him) was one of the great composers who was also an important theorist. He drew distinctions between *prima pratica* (really late Renaissance styles) and *seconda pratica* (the new affective styles of the early Baroque), and between *stile concitato*, *molle* and *temperato* (in the preface to the eighth book of madrigals, 1638); he divided secular music into *teatrale*, *da camera* and *da ballo*. The distinction between the two practices continued in Doni (*Compendio*, 1635), who spoke of *stile antico* and *stile moderno*, and in Christoph Bernhard (*Tractatus compositionis augmentatus*, *c*1657), who spoke of *contrapunctus gravis* or *stylus antiquus* and *contrapunctus luxurians* or *stylus modernus*. Bernhard also introduced the concepts of 'Figurenlehre' and 'Affektenlehre', which combine stylistic details and expressive purposes and which are so important for the high Baroque aesthetic. Kircher (*Musurgia universalis*, 1650) synthesized a stylistic system that found much popularity and acceptance, based on differences of musical purpose, genre, personality, location and mood. Style dependent on personality and temperament Kircher called *stylus impressus*, style dependent on technique and 'Affekt' *stylus expressus*;

further he distinguished *stylus ecclesiasticus*, *canonicus*, *motecticus*, *phantasticus*, *madrigalescus*, *melismaticus*, *choriacus sive theatralis* and *symphoniacus*. Brossard (1703) and J.G. Walther (1732) followed him. The important basic stylistic classification of the late Baroque period however was *stylus ecclesiasticus*, *stylus cubicularis* and *stylus scenicus*. This appeared first in Marco Scacchi (*Breve discorso sopra la musica moderna*, 1649) and was continued by Berardi (*Ragionamenti musicali*, 1681) and Mattheson (*Das beschützte Orchestre*, 1717; *Der vollkommene Capellmeister*, 1739; *Grundlage einer Ehren-Pforte*, 1740). Mattheson also spoke of national styles ('welschen und frantzösischen') to which Scheibe (*Critische Musikus*, 1745) added performing practice as a stylistic phenomenon; they followed Bach, Telemann, Rameau and others who composed music in specific, and specified, national or local styles. The differences between and the relative merits of the French and Italian styles of composition and performance, in particular, were an important part of 18th-century musical consciousness.

In the Classical and Romantic periods the fashion for stylistic theory abated, but by the end of the 19th century the fundamental concerns of modern musicology as a discipline of cultural history were well established. Adler (1855–1941) described music history as the history of style, and the theory of style as an epochal concept was subsequently treated of by Bücken, Mies, Riemann, Handschin, Gurlitt and Schering. Epochal names were taken from art history and from literature. Major modern achievements in epochal historiography are the Oxford History of Music and the Norton series including work by Reese, Bukofzer and Einstein. Studies of personal styles, beginning with work by Baini and Winterfeld in the early 19th century, were continued in the 20th by such as Jeppesen's study of Palestrina (1922) and Rosen's of Haydn, Mozart and Beethoven (1971). The study of folk cultures was an important aspect of 19th-century musicology and was expanded in the 20th century by the discipline of ethnomusicology. Analysis of the style of examples of music is basic to all these branches of musicology; such analysis has become more justified in its own right since the work of Schenker and Tovey. (For a discussion of style analysis, *see* ANALYSIS, §II, 5.) Stylistic criticism is the means of both cultural history and the human response to an art work. It distinguishes the blend and origin of styles as they are presented in the individual art work, which is a fixing or crisis of tradition. A work cannot properly be appreciated or studied in isolation; neither can stylistic evolution and trends be distinguished without a thorough understanding of individual examples. By the application of stylistic questions one may arrive at a deeper view of musical utterance, an intellectual interpretation of music which enriches the response to it.

ROBERT PASCALL

Style brisé (Fr.: 'broken style'). A term used to denote the use of a broken, arpeggiated texture in music for plucked stringed instruments, particularly the lute, keyboard, or viol. Although the term is most commonly applied to 17th-century French music, its usage in French is of modern origin and cannot be traced further back than La

Laurencie (1928), who wrote of 'ce qu'on a appelé le "style brisé" des Gaultier'. It may well have been borrowed from German, since the cognate German term has been used in exactly this sense at least since the early 18th century. The title-page of Daniel Vetter's *Musicalische Kirch- und Hauss-Ergötzlichkeit* (Leipzig, 1709) describes its contents as chorales, with first a plain harmonization for organ, 'nachgehends eine gebrochene *Variation* auff dem *Spinett* oder *Clavicordio*'. The contemporary French term is 'luthé', used by François Couperin (see, for example, *Les charmes* from his ninth *ordre*) and others. Based on historical usage, this term has much to recommend it since it refers in a special sense to the transference of idiomatic lute figurations to the harpsichord. This is a marked feature of French music of the mid-17th century, being found, for example, in the harpsichord music of Louis Couperin and J.H. D'Anglebert. The unmeasured preludes of French harpsichordists of this period provide telling examples of the wholesale adoption of such lute techniques to the keyboard.

The style originated as one of a number of division techniques in lute music of the late 16th century, and is used as such by Anthoine Francisque in his *Le tresor d'Orphée* (Paris, 1600). Its primary leading characteristic is the irregular and unpredictable breaking up of chordal progressions, and it is therefore to be distinguished from the regular patterning of broken chords in, for example, the arpeggiated toccatas of Kapsperger (Rome, 1604). The 'style brisé' was first used as a thoroughgoing principle by Robert Ballard (ii) in the varied repeats (*doubles*) of courantes in his lute books of 1611 and 1614, and it subsequently became the distinctive French lute texture. Its aim is twofold: to give subtlety of expression to what would otherwise be an ordinary harmonic progression, and to provide a continuum of sound which the player can mould for expressive ends. In the case of the harpsichord, the placing of notes in relation to one another temporally is one of very few expressive resources available. This is emphasized by one of the most expressive ornaments of the French harpsichord school – the *suspension* (a term coined by François Couperin in his *Pieces de clavecin . . . premier livre*, 1713) where the melody note is momentarily delayed.

During the 17th century the expressive moulding of a continuum of sound became a fundamental part of the keyboard idiom, equal in importance to the shaping of individual contrapuntal lines. These competing compositional priorities were ultimately, but straightforwardly, reconciled in the opening prelude of J.S. Bach's *Das wohltemperirte Clavier* BWV846, or with more subtlety in the Allemande of the C minor French Suite BWV813. The 'style brisé' remained a standard expressive resource into the era of the pianoforte, with such notable examples as the first movement of Beethoven's Piano Sonata op.27 no.2 ('Moonlight'), and the Études op.10 no.1 and op.25 no.1 of Chopin.

DAVID LEDBETTER

Style galant (Fr.). *See* GALANT.

Style hongrois (Fr.: 'Hungarian style'). A term applied to the evocation of *romungro* (Hungarian gypsy) music-making in west European art music from the mid-18th century to the early 20th. Despite the proximity of Vienna (the principal site of the *style hongrois*) and Hungary, *romungro* music was conceived and represented by Austro-German composers as exotic – that is, as existing outside familiar musical, aesthetic and social boundaries (see for example Liszt, *Des Bohémiens et de leur musique en Hongrie*).

Distinctive features of the *style hongrois* are evident in the earliest printed *ungaresche* (*see* UNGARESCA), from the late 16th century, and occasional representations of gypsy fiddle playing are found in such late 17th-century sources as Alessandro Poglietti's *Rossignolo* and an anonymous *Sonata jucunda* (*CZ-KRa*). But it was the employment of Austro-German composers like Dittersdorf and the brothers Haydn at Hungarian courts, and the enthusiastically received performances of itinerant *romungro* musicians in Vienna, that helped to stimulate the vogue for the *style hongrois* in the last decades of the 18th century. (The *romungro* bands, whose repertory included the VERBUNKOS, were subjected in their turn to Western influence in their instrumentation – two violins, cimbalom and double bass – and their harmonic and melodic styles.) In the works of the Viennese Classicists the *style hongrois* is more often a brief allusion than a formal and stylistic determinant of an entire movement; more fully developed examples are, however, found in the episodes of rondo finales, including those of Haydn's String Quartet op.33 no.3 and keyboard concerto H XVIII:11, and, most colourfully, in the Rondo alla zingarese from his Piano Trio H XV:25 with its tonic drone, double mordents, pizzicato, double stops and wide leaps in the violin, along with *alla zoppa* syncopation and repeated 'stamping' triads in the keyboard. Mozart used similar techniques in the last movement of his String Quartet K590. The *style hongrois* was sometimes blended with other exotic and national styles: the Turkish in Mozart's Violin Concerto K219, a polonaise in Haydn's Piano Trio H XV:20 and a central European folksong in his Symphony no.103.

In the 19th century the *style hongrois* was cultivated on a grander scale in the instrumental music of Weber, Schubert, Liszt, Joachim and Brahms, and occasionally in lieder and opera (*Muth* from *Winterreise*; Gypsy March from Act 1 of Weber's *Preciosa* and Caspar's aria 'Hier im ird'schen Jammerthal' from *Der Freischütz*: see Bellmann, 1993). Schubert's *Divertissement à l'hongrois*, D818 exhibits many of the elements characteristic of *romungro* music. Formally, the *style hongrois* in the 19th century appears to borrow from the multi-sectional *verbunkos* literature, but such works as Brahms's Hungarian Dances and Liszt's Hungarian Rhapsodies owe much to contemporary styles of western European improvisation and are ultimately indebted to the 18th-century free fantasia.

From the late 18th century the *style hongrois* amounted to an oblique recognition by the dominant Viennese culture of Hungarian nationalism as a socio-political

movement; but the style engaged only superficially with Hungarian nationalism, as is evident in *Die Fledermaus* (1874) in which a song of exile exhibiting the mannerisms of the *style hongrois* appears in the contexts of light opera, of masquerade and the society party. With the dissolution of the Austro-Hungarian empire in 1918, the relations of power between Vienna and Hungary that had sustained the style also dissolved. Despite Bartók's early use of its mannerisms in his unfinished Symphony and the Violin Sonata, his later rejection of them in favour of idioms inspired by folksong was a significant rhetorical gesture in early 20th-century Hungarian nationalist music. Unfortunately, however, that rhetoric involved a critique of *romungro* music (rather than of its Western imitations) that dealt the death-blow to the *style hongrois* and aesthetically denigrated the music that had inspired it. Only occasional instances of the *style hongrois* are met in the 20th-century art music (Ravel's *Tzigane*, 1924), the style appearing sporadically in operetta, café music and cabaret.

MATTHEW HEAD

Style luthé. *See* STYLE BRISÉ.

Styne, Jule [Stein, Julius Kerwin] (*b* London, 31 Dec 1905; *d* New York, 20 Sept 1994). American composer of British birth. Styne's family came to America when he was eight, settling in Chicago, where he quickly proved to be a child prodigy. He was soon giving recitals with the Chicago and Detroit symphony orchestras and, by the age of 13, was studying classical music at the Chicago Musical College. He favoured popular music, however, and led his own jazz band in 1931. An expert vocal arranger, Styne took a job in Hollywood in the mid-1930s working as a vocal coach for, among others, Shirley Temple and Alice Faye. His first compositions for film were heard in *Follow that Co-Ed* (1938), and soon he was writing for musical films, often with Frank Loesser or Sammy Cahn as his lyricist, scoring over 50 films before 1948. Styne left Hollywood when his score for the Broadway musical *High Button Shoes* (1947) found favour. He remained in New York where he wrote over two dozen Broadway scores over the next 45 years, often with lyricists Betty Comden and Adolph Green. His finest stage score was for *Gypsy* (1959), with lyrics by Stephen Sondheim. Styne was also a successful producer (the 1952 revival of *Pal Joey*), and occasionally contributed songs for Tin Pan Alley (several hits for Frank Sinatra), television (*Mister Magoo's Christmas Carol* in 1962), and Hollywood (the song *Three Coins in the Fountain*, which won an Academy Award in 1954). His last Broadway show was the ill-fated *The Red Shoes* in 1993.

Styne's music can best be characterized as theatrical or in the pure show business idiom, often with a confident flair, although he was capable of the tender ballad or the wistful character song. He usually wrote traditional songs in the melodic style of Irving Berlin, often striving for hit songs that would travel to radio and successful recordings: he and Cahn wrote some two dozen songs for Frank Sinatra to preserve on disc. However in his most ambitious efforts, such as *Gypsy*, Styne was musically inventive and unique. His throbbing rhythms, unrelenting harmonies and insistent musical lines in that score all combine to push musical comedy into an almost psychotic revelation about show business and its sometimes self-destructive drive. Spurred on by Sondheim's lyrics and Arthur Laurents's gritty libretto, *Gypsy* is a case of a master craftsman of a composer moving into areas of startling music drama.

WORKS

(*selective list*)

names of lyricists given in parentheses

STAGE

all musicals; dates are those of the first New York performance

High Button Shoes (S. Cahn), New Century, 9 October 1947 [incl. I still get jealous, Papa, won't you dance with me?]

Gentlemen Prefer Blondes (L. Robin), Ziegfeld, 8 Dec 1949 [incl. A Little Girl from Little Rock, Diamonds are a girl's best friend; film, 1953]

Two on the Aisle (B. Comden and A. Green), 19 July 1951

Hazel Flagg (B. Hilliard), Mark Hellinger, 11 Feb 1953 [incl. Every street's a boulevard in old New York]

Peter Pan (Comden and Green), Winter Garden, 20 Oct 1954 [incl. Never Never Land]; television, 1955 and 1960

Bells are Ringing (Comden and Green), Shubert, 29 Nov 1956 [incl. The party's over, Just in Time; film, 1960]

Gypsy (S. Sondheim), Broadway, 21 May 1959 [incl. Some People, Small World, Everything's coming up roses, Let me entertain you, Together, wherever we go; film, 1963]

Do Re Mi (Comden and Green), St James, 26 Dec 1960 [incl. Make someone happy]

Subways are for Sleeping (Comden and Green), St James, 27 Dec 1961 [incl. Comes Once in a Lifetime, Be a Santa]

Funny Girl (B. Merrill), Winter Garden, 26 March 1964 [incl. People, Don't rain on my parade; film, 1968]

Fade Out – Fade In (Comden and Green), Mark Hellinger, 26 May 1964 [incl. You mustn't be discouraged]

Hallelujah, Baby! (Comden and Green), Martin Beck, 26 April 1967 [incl. My Own Morning, Now's the time]

Darling of the Day (E.Y. Harburg), George Abbott, 27 Jan 1968 [incl. Sunset Tree]

Sugar (Merrill), Majestic, 9 April 1972

The Red Shoes (M. Norman and P. Stryker [Merrill]), Gershwin, 16 Dec 1993

FILMS

Hit Parade of 1941 (W. Bullock), 1941 [incl. Who am I?]; Sweater Girl (F. Loesser), 1942 [incl. I don't want to walk without you]; Youth on Parade (Cahn), 1942 [incl. I've heard that song before]; Follow the Boys (Cahn), 1944 [incl. I'll walk alone]; Step Lively (Cahn), 1944 [incl. As Long as there's Music, Come out come out wherever you are]; Anchors Aweigh (Cahn), 1945 [incl. I fall in love too easily]; Romance on the High Seas (Cahn), 1948 [incl. It's magic]; Living It Up (Bob Hilliard), 1954 [incl. How do you speak to an angel?]

Suabe Flöte (Ger.). *See under* ORGAN STOP (*Suavial*).

Suard, Jean Baptiste Antoine (*b* Besançon, 15 Jan 1735; *d* Paris, 20 July 1817). French man of letters. Suard went to Paris in 1750 after a turbulent youth and was introduced into literary circles by Marmontel. In his multifarious activity in philosophy, literature and politics, he was a dramatic censor from 1777 and an administrator of the Opéra from 1781; elected to the Académie Française in 1772, he became its secretary in 1803. He collaborated with La Harpe on the *Journal de politique et de littérature* (1778–81) and with Arnaud in various journals and the miscellany *Variétés littéraires*. Suard had a special interest in English literature and philosophy; among his friends were Hume and Walpole, and he translated Richardson's *Clarissa*. He began editing the musical part of the *Encyclopédie méthodique*, published by his brother-in-law Pancoucke; pressure of other interests forced him to relinquish the work to N.E. Framery.

An eager controversialist, Suard is said to have taken music lessons the better to defend Gluck, who appealed to him for support; thus equipped he refuted La Harpe's criticisms ably and in detail in a series of letters to the *Journal de Paris* and *Mercure de France*. He also made the most effective reply to Coquéau's *Entretiens sur l'état actuel de l'Opéra*. A friend of Gluck's opponents, Suard disguised himself by a pseudonym, 'L'anonyme de Vaugirard'. Some of these letters were reproduced in Leblond's *Mémoires pour servir à l'histoire de la révolution opérée dans la musique par M. Le Chevalier Gluck* (1781), and in Suard's own five-volume *Mélanges de littérature* (Paris, 1803–4). Other writings on music and translations appear in the *Variétés littéraires* (1768–9), the supplement to La Borde's *Essai sur la musique*, the *Encyclopédie méthodique* and the *Nouveau choix de pièces tirées des anciens Mercures et des autres journeaux* (1758–65).

JULIAN RUSHTON

Suavial. *See under* ORGAN STOP.

Sub-Bass (Ger.). *See under* ORGAN STOP.

Subbulakshmi, M(adurai) S(hanmukhavadivu) (*b* Madurai, Tamil Nadu, 16 Sept 1916). South Indian singer. One of the greatest singers of Karnatak music of the 20th century, she is the daughter of the *vīṇā* player and singer Shanmukhavadivu, who was her first teacher. She subsequently studied with Semmangudi Srinvasa Iyer and K.S. Narayanaswamy. Before the age of ten she was performing at recitals given by her mother and she soon became known as a soloist, giving her first performance for The Music Academy, Madras, at the age of 17. National fame quickly followed, particularly due to her appearance in the Tamil film *Meera* (1944, released in Hindi in 1947), in which she played the 16th-century singer-saint Mīrabai. Her singing of Hindi *bhajan* attributed to Mīrabai enthused northern audiences traditionally indifferent to

Madurai Shanmukhavadivu Subbulakshmi

Karnatak musicians. Her pan-Indian appeal has been maintained since then, in part by her continuing performance of devotional songs.

She married T.S. Sadisivam in 1940 and he became her manager. She has travelled and performed abroad extensively appearing at the Edinburgh Festival (1963), at the General Assembly of the UN (1966) and at the Festivals of India in the UK (1982) and USSR (1987). M.S. Subbalakshmi's numerous awards include the Padma Vibhushan (1975); she was the first woman to be named Sangita Kalanidhi by The Music Academy, Madras (1968). She has also been granted honorary doctorates by, among others, Sri Venkateswara University, Tirupati, Benares Hindu University and Visva-Bharati University, Santiniketan. Much of the wealth she has gained from her performances and recordings has been channelled into charitable foundations, including the setting up of the Subbalakshmi-Sadasivam Music and Dance Resources Institute in Madras in 1999.

RECORDINGS

Meera Bhajans, perf. M.S. Subbulakshmi, V.V. Subramaniam and T.K. Murthy, Odeon EALP 1297 EMI (1965)

M.S. Subbulakshmi: Live at Carnegie Hall, perf. M.S. Subbulakshmi, Radha Viswanathan, A.K.S. Alagiriswami and Guruvayur Dorai, rec. 1977, EMI India CDNF 147808–9 (n.d.)

NARAYANA MENON/R

Subdominant. The fourth DEGREE of the major or minor scale, so called because it lies as much below the tonic as the dominant lies above the tonic, namely a 5th.

Subdupla (Lat.). In the system of PROPORTIONAL NOTATION of the late Middle Ages and Renaissance, *proportio subdupla* (1/2) indicates an augmentation of the relative value of each note shape in the ratio 1:2. It was most frequently used to cancel the effect of a previous diminution of note values.

Subfinal (Lat. *subfinalis*). In Gregorian chant theory, the degree below the FINAL of an authentic MODE. In the Dorian, Phrygian and Mixolydian modes the subfinal, which lies a tone below the final, is the same as the subtonium and came to be the theoretical lower limit for the mode. The Lydian mode, however, whose lower limit was the final F itself, had no subfinal.

HAROLD S. POWERS

Subirá (Puig), José (*b* Barcelona, 20 Aug 1882; *d* Madrid, 7 Jan 1980). Spanish musicologist. He occasionally used the pseudonym Jesús A. Ribó. He studied the piano and composition at the Madrid Conservatory, where he won prizes for the piano (1900), harmony (1901) and composition (1904). His failure to win the 1905 Prix de Rome with his lyrical legend *Rayo de luna* made him give up composition completely, even though the composer Tomás Bretón, director of the conservatory and president of the jury, encouraged him to continue; he dedicated himself instead to musicography.

Subirá's immense musicological output is particularly remarkable in that, unlike any other Spanish musicologist, he never held any remunerative musical post. After failing to acquire the professorship in music history at the Madrid Conservatory (1921) he never again applied for an appointment in music, but lived with rigorous economy as an employee of the Madrid City Council and similar organizations. His musicological work was prompted solely by his passionate enthusiasm, and was carried out in his spare time. From 1896 he lived in Madrid, except during a few absences caused by his administrative career (for instance as secretary to the Argentine consulate in Amberes, 1908–10). He was a member of numerous academies and societies in Spain and abroad; in 1952 he was elected a member of the Real Academia de Bellas Artes de S Fernando in Madrid, and from 1950 until his retirement he was head of the Madrid section of the Spanish Musicological Institute.

Subirá was one of the finest 20th-century Spanish musicologists. His work is distinguished by its remarkable diversity and by the originality that he brought to every subject he treated. This is particularly evident in his articles, which probably represent his best work, being moreover astonishingly erudite and well documented, with new information drawn from primary sources and arranged concisely. They are written in the fluid, elegant and attractive style which characterizes all his work and was often the result of spontaneity: he never made rough drafts of articles, but typed the final text directly. His chief interest was theatrical music in Spain, especially Madrid. His books can be divided into two groups: those involving research (e.g. *La música en la Casa de Alba, La tonadilla escénica, Historia y anecdotario del Teatro Real, El compositor Iriarte*), which are based on solid documentary evidence and present some new and sometimes extremely important information; and the 'histories', translations, adaptations and biographies in which Subirá simply synthesized the research of others, though with his customary erudition and elegance.

JOSÉ LÓPEZ-CALO

Subito (It.: 'suddenly', 'immediately'). A word found in musical scores in such contexts as *subito piano* ('suddenly quiet'), *volti subito* ('turn [the page] quickly').

□

Subject. A theme (or group of themes) on which a composition is based. One of the first to apply the word 'subject' to music was Zarlino, who in *Le istitutioni harmoniche* (1558) defined it, using the Italian cognate SOGGETTO, as any pre-existing material that formed the musical basis for the piece, including either a chosen theme or a borrowed cantus firmus. In modern English usage the term appears in two principal guises, in fugue and sonata form.

In fugue, 'subject' may refer either to the theme of the fugue or, more specifically, to the original version of the theme, that is, the version heard first. When used in the latter sense, the word is paired with ANSWER, the transposed version of the theme (*see* FUGUE, §1). German terminology is clearer: the word *Thema* is used for the theme of the fugue and *dux* and *comes* (*see* DUX, COMES) for the subject and answer forms, respectively. Proper nomenclature for two or more themes in a fugue is not without ambiguity. Sometimes all are referred to as subjects, whereas in other cases all but the first are considered less important and are called countersubjects (*see* COUNTERSUBJECT. There is general agreement, however, that where only two themes are present, if the first seems to be more important than the second, and if the two are introduced in regular fashion such that the second always follows the first in each voice and accompanies the next entrance of theme 1, then theme 1 is properly designated 'subject' and theme 2 'countersubject'. Musicians have generally insisted that the subject be constructed in such a way that it gives a clear indication of the fugue's key or mode.

In sonata form, the term 'subject' is often used for each of the two principal thematic ideas that in the theoretical model are the chief features of the exposition. In practice each 'subject' may be a group of themes (hence the expression 'subject group' or simply 'group') or the material may be non-thematic (*see* SONATA FORM, §3(i)).

PAUL WALKER

Subject group. A term, coined by Tovey, often used for the sections that make up the exposition of a movement in SONATA FORM. It may have its origin in J.C. Lobe's use of the terms *Themagruppe* ('theme group', or first subject group), *Gesanggruppe* ('song group', or second subject group) and *Schlussgruppe* ('closing group'); the modern German expressions for first and second subject groups, however, are *Hauptsatz* and *Nebensatz*. The term 'subject group' may be preferred to simply 'subject' (or 'theme') in that it implies that the section may be made up of a multiplicity of themes or other material, defined by their function (and, usually, their tonality) rather than by melodic characteristics alone.

JULIAN RUSHTON

Submediant. The sixth DEGREE of the major or minor scale, so called because it lies as much below the tonic as the mediant lies above the tonic, namely a 3rd. The submediant of any major scale is brought into prominence chiefly as the tonic of its relative minor.

□

Subono, Blacius (*b* Klaten, Java, 3 Feb 1954). Indonesian composer. The son of the *dhalang* (shadow puppet master) Yusuf Kiyatdiharjo, his music studies began at the age of six. In 1966 Subono began to perform as a *dhalang*; at the high school conservatory in Surakarta he helped to create *wayang kancil*, a new form of puppet theatre featuring animal characters and new musical arrangements. After encouragement by S.D. Humardani, the director of the Indonesian Academy for the Performing Arts in Surakarta, he composed several new works and created another new form, *wayang sandosa* (widescreen shadow puppet theatre). In 1983 he was invited to the national composers' festival in Jakarta. Subono often performs the nine-hour *wayang kulit* (shadow puppet theatre). He has taught at many institutions including Simon Fraser University in Vancouver in 1990. In the late 1990s he began to concentrate on training other *dhalang* as part of his teaching work at the Indonesian Academy for the Performing Arts. He has received many awards and commissions; his writings mainly concern the musical accompaniment for the new style of *wayang kulit*. All his numerous compositions are for gamelan. His output ranges from popular songs with gamelan accompaniment to experimental works, which include *Griting Rasa* (1989), for an ensemble of high pitched intruments, and *Swara Pencon* (1983–6), for a wide range of knobbed gongs. The greater part of his music of the 1990s is for *wayang kulit*.

JODY DIAMOND

Subotnick, Morton (*b* Los Angeles, 14 April 1933). American composer and teacher. He attended the University of Denver (BA 1958) and Mills College (MA 1960), where he studied composition with Milhaud and Kirchner. He was in the US Army from 1955 to 1957. In 1959 and 1960 he was a Fellow of the Institute for Advanced Musical Studies, Princeton University. He founded and directed the San Francisco Tape Music Center (1961–6),

and performed extensively as a clarinettist and conductor. His teaching career includes positions at Mills College (1959–66), New York University (1966–9) and the California Institute of the Arts since 1969, where he directs the Center for Experiments in Art, Information and Technology (CEAIT). He has won numerous awards, including the Guggenheim Fellowship, Rockefeller Grants, Meet the Composer grants, Deutscher Akademischer Austauschdienst Kunsterprogramm (DAAD) grant and the 1998 SEAMUS award for work in electro-acoustic music.

Subotnick is recognized as one of the leading composers of electronic music and works involving instruments with other media, including film, video and interactive computer music systems. In 1967, using the Buchla synthesizer, he created *Silver Apples of the Moon*, the first electronic work commissioned by a recording company (Nonesuch). This work became the first in a series of tape pieces intended for home listening rather than the concert platform. Consequently, the music was designed to take into account the strengths and weaknesses of a home stereo system as well as the duration of each side of an LP. *Silver Apples* brought Subotnick a great deal of recognition early in his career. His interest in timbre and rhythm is especially apparent in the subsequent compositions *Touch*, *Four Butterflies*, *The Wild Bull* and *Sidewinder*. In 1977 he began a series of works for 'ghost' score whereby a customized electronic device (a 'ghost box') varies the live sounds of a performer. The ghost box consisted of pitch and envelope followers for a live signal, along with an amplifier, a frequency shifter and a ring modulator. The ghost process began when a live performer was pre-recorded on to a tape (or computer). Although these sounds were not audible to audience members, the audio signal was fed into the ghost box which used the pre-recorded material as control voltages for frequency shifting, ring modulation and amplification of the live instrumentalist. Significant compositions involving 'ghost' scores include *Two Life Histories* (1977), *Liquid Strata* (1977), *Parallel Lines* (1978), *The Wild Beasts* (1978), *The Last Dream of the Beast* (1979), *A Fluttering of Wings* (1981) and *Axolotl* (1981). In 1985 Subotnick began exclusively using MIDI synthesizers to create electronic sounds. His three 'imaginary ballets' – *The Key to Songs*, *Return* and *All my Hummingbirds Have Alibis* – employ a specially designed software program, Interactor, which enabled him to develop further the interaction among performers and live electronics.

Subotnick's music is characterized by driving rhythmic sequences, live signal processing of acoustic sounds and careful fashioning of electronic timbres. His music is highly contrapuntal, and its many layers are marked by pulsating, repeated rhythmic patterns and lush timbres. His melodies are clear and coherent and his harmonies are primarily diatonic. In addition to electro-acoustic music, Subotnick has composed for orchestra, chamber ensemble, string quartet and solo instruments with and without tape. His acoustic compositions often make use of theatrical elements such as film or video. He has worked with such visual artists as Steina and Woody Vasulka and Irving Petlin. In addition to composing, he has undertaken extensive research into didactic multimedia. He is the author of a developmental CD-ROM series, the first of which are *Making Music* (1996) and *Making More Music* (1998).

He is married to the composer and vocalist JOAN LA BARBARA.

KRISTINE H. BURNS

Subotnik, Rose Rosengard (*b* Boston, 3 Dec 1942). American musicologist. She graduated from Wellesley College (BA 1963), then studied with Edward Lippman, Paul Henry Lang, and Jacques Barzun at Columbia

University (MA 1965, PhD 1973). She began her teaching career as an assistant professor at the University of Chicago (1973–80). She was visiting associate professor of music at the Graduate Center, CUNY (1986–7), then joined the faculty of Brown University (1990); she was appointed professor of music in 1993. She has received fellowships from the American Council of Learned Societies (1977), the Guggenhein Foundation (1977) and the Howard Foundation (1996).

Subotnik's academic interests include American and British musical theatre and critical theory. She has written extensively on Adorno, structuralism, poststructuralism and postmodernism, applying her theoretical insights to music from the Classical period to the present day and examining music with regard to its place in society.

PAULA MORGAN

Subsemitonium (modi) (Lat.). The note that lies a semitone below the final of an authentic Mode (*e* below *f* in the Lydian, *B* below *c* in the Ionian), or that rises by a semitone to establish a linear cadence at the interval of an octave or unison. In late medieval and Renaissance Counterpoint theory, if one of the parts in this cadence falls by a tone, the other must rise by a semitone. In ex.1

Ex.1 Linear cadences in two parts on D

the subsemitonium *c♯′* is produced by chromatic alteration of the seventh degree of the Dorian mode. *See also* Musica ficta.

FRANS WIERING

Subsesquialtera (Lat.). In the system of Proportional notation of the late Middle Ages and Renaissance, *proportio subsesquialtera* indicates an augmentation of the relative value of each note shape in the ratio 2:3, as does *proportio subsesquitertia* in the ratio 3:4. They were used to cancel the effect of a previous diminution of values.

PETER WRIGHT

Subsesquitertia (Lat.). In early music theory, the ratio 3:4. *See* Subsesquialtera.

Substitute chord (Ger. *Stellvertreter*). A chord that can take the place of another and fulfil the same harmonic function. Often the common interval of a 3rd is sufficient for one chord to substitute for another; for instance, the chord of the supertonic (II) can be used in place of a subdominant (IV). Substitute chords are often used in jazz, where they may be more or less complex: 'improvisatory substitutions' may be used freely by the rhythm section during an improvised solo, while more far-reaching 'arranged substitutions' disrupt the original harmonic plan to such an extent that the improvisor needs to be informed in advance.

JULIAN RUSHTON

Subtonic. The seventh scale Degree in a harmonic context; in a melodic context this degree is called the Leading note if it lies a semitone below the tonic, whereas 'subtonic' may also refer to a diatonic pitch a whole tone below the tonic (e.g. B♭ in C minor). 'Subtonic' is sometimes used as an English equivalent for Subtonium.

□

Subtonium (Lat.). The note that lies a tone below the octave range by which a church mode is identified. The subtonium of the Dorian mode is *c*, of the Hypodorian *G*, of the Phrygian *d* and so on. Neither the Lydian nor the Hypolydian mode has a subtonium since the note below the characteristic octave of each mode lies a semitone, not a tone, below the lowest note in that octave. The subtonium of an Authentic mode is also called its Subfinal.

JULIAN RUSHTON

Subtripla (Lat.). In the system of Proportional notation of the late Middle Ages and Renaissance, *proportio subtripla* (1/3) indicates an augmention of the relative value of each note shape in the ratio 1:3. It was most frequently used to cancel the effect of a previous diminution of note values.

PETER WRIGHT

Succentor. A member of the Anglican Church clergy. *See* Anglican and episcopal church music.

Sucher, Josef (*b* Döbör, Hungary, 23 Nov 1843; *d* Berlin, 4 April 1908). Austrian conductor and composer. As a boy he sang in the choir of the Vienna Hofkapelle. He studied with Simon Sechter and became a répétiteur at the Vienna Hofoper in 1870 and assistant conductor in 1873. The following year he was appointed conductor at the Komische Oper and from 1876 to 1878 he conducted in Leipzig. Travelling through north Germany in search of singers, at Danzig he discovered the soprano Rosa Hasselbeck whom he engaged for the Leipzig company, and whom he married the following year. He conducted the first complete *Ring* cycle at Leipzig (1878), then moved to Hamburg, where he conducted the first local performance of *Tristan und Isolde* (November 1882). From 1888 to 1899 he was chief conductor at the Berlin Hofoper and was responsible for many fine performances of Wagner operas, including a complete cycle of the works

from *Rienzi* to *Götterdämmerung* given in June 1889. He composed a number of vocal works.

ELIZABETH FORBES

Sucher [née Hasselbeck], **Rosa** (*b* Velburg, 23 Feb 1849; *d* Eschweiler, 16 April 1927). German soprano. At the age of 14 she sang solos in the church at Velburg where her father was choirmaster. In 1871 she was engaged at the Hofoper, Munich, for small roles such as Waltraute in *Die Walküre*. After singing in Trier and Königsberg, in 1875 she appeared as Agathe in *Der Freischütz* at the Kroll Oper, Berlin. The following year she sang at Danzig and in 1877 at Leipzig, where she married the conductor, Josef Sucher. She sang Sieglinde in the first complete *Ring* cycle at Leipzig in 1878, and later that year she and her husband were engaged by the Hamburg Opera. She made her London début in May 1882 as Elsa in *Lohengrin* at Drury Lane; during that season she also sang Senta in *Der fliegende Holländer*, Elisabeth in *Tannhäuser*, Eva in the first London *Die Meistersinger* (30 May) and Isolde in the first London *Tristan und Isolde* (20 June). She also sang Isolde at Hamburg (1882), Bayreuth (1886) and Munich (1893). Her other roles at Bayreuth were Kundry (1886), Eva (1888), Venus (1891) and Sieglinde (1896). Her Wagner performances, particularly of Elsa, Sieglinde and Isolde, were marked by a warmth and intensity seldom matched by any other soprano, and she was also, in a statuesque and dignified manner, a compelling actress. She made guest appearances in Vienna, singing in *Der Freischütz*, *Euryanthe* and *Oberon* during 1886, the Weber centenary year. From 1888 to 1898 she was engaged at the Court Opera, Berlin, where she sang Leonore at the performance of *Fidelio* that marked the retirement of the tenor Albert Niemann (1888), and Brünnhilde in *Götterdämmerung* (1888). In 1892 she appeared at Covent Garden, singing Brünnhilde in *Siegfried* and Isolde. She made her New York début as Isolde with the Damrosch Opera Company at the Metropolitan in 1895. She retired in 1903 after a final performance of Sieglinde in Berlin. On her husband's death in 1908 she moved to Vienna, where she taught singing. Her autobiography was published in 1914.

ELIZABETH FORBES

Suchoň, Eugen (*b* Pezinok, Slovakia, 25 Sept 1908; *d* Bratislava, 5 Aug 1993). Slovak composer. The son of a teacher, choirmaster and organist and of a singer and pianist, as a child he played the piano, organ and violin. While attending the Bratislava gymnasium (1919–23) he studied the piano with Kafenda and with Ernest Križan (from 1922) at the Slovak Music School. Suchoň began his career in 1923 as a performer and improviser, partly for silent films. From 1927 to 1931 he attended the Bratislava Academy of Music and Drama (the renamed Music School), where his teachers included Libuše Adamcová-Svobodová (piano), Kafenda (composition) and Jozef Vincourek (conducting). For the next three years he studied composition with Novák at the Prague Conservatory.

After returning to Bratislava in 1933 Suchoň taught the piano and theory at the Academy of Music and Drama and at the music school in Pezinok, which he founded. In 1941 he became a teacher at the State Conservatory (the renamed Academy of Music) and began work on his first opera, *Krútňava* ('The Whirlpool', known in German-speaking countries as *Katrena*). First performed in 1949, *Krútňava* was the first nationalist Slovak opera. Suchoň held professorships at the pedagogical faculty of Comenius University (1948–50), at the Pedagogical Institute (1950–60) and at the University's philosophical faculty (1960–74). He received several state and civic awards, including the title National Artist (1958), an honorary doctorate of Comenius University (1969) and the Herder Prize of the Vienna University (1981). He became a member of the Akademie der Künste Ost Berlin in 1975, and from 1966 to 1969 was president of CISAC.

Suchoň's career can be divided into five stages. The first, a self-taught period from 1923 to 1928, produced about 50 works; among them the unstaged ballet *Angelika*, the Piano Suite no.1 and the symphonic poem *Noc čarodejníc* ('The Night of the Witches'), all of which were affected by mainstream European musical traditions and Impressionism in particular. The composer later denied authorship of nearly all his early works, and only agreed to their publication after 1976.

In the second period (1929–33) his development took two parallel courses: one marked by his study with Kafenda, whose teaching was biassed towards late Romanticism, and European modernity in the form of Hindemith, Bartók and Schoenberg (reflected, for example, in Suchoň's Sonata in A♭, op.1, for violin and piano and the Second String Quartet); and the other inspired by the Czech school of Novák, Suk and Křička, responding to the publicly proclaimed need to create a Slovak national style in the wake of Alexander Moyzes, the first Slovak follower of the Prague school. The latter course, examples of which are the song cycle *Nox et solitudo* op.4 and the Serenade op.5 for wind quintet, led Suchoň towards simplifying his musical language. Although familiar with Schoenberg's dodecaphonic technique and the progressive trends in European music (thanks to Kafenda), Suchoň rose to the challenge of creating a Slovak national music founded on extended tonality, modality and specific characteristics of Slovak folklore.

The third period (1934–55) was dominated by the folk music's diatonicism and modality (i.e. the Lydian, Dorian, Mixolydian, Aeolian and Locrian modes and combinations of tetrachords). Works from this period include the *Baladická suita* op.9 for orchestra (1935) and the cantata *Žalm zeme Podkarpatskej* ('Psalm of the Sub-Carpathian Land') op.12 (1938). At this point Suchoň began to use motifs found typically in later works: two augmented 4ths a tone apart – B–F, A–D♯ – which in its chordal shape B–D♯–F–A develops the diminished chord B–D–F–A♭; and an application of the Aeolian-Locrian and Lydian-Mixolydian modes, from which he created his own half- and whole-tone scales. His opera *Krútňava* is based on the tragic folktale of Ondrej and Ján, who are both in love with the same girl. The former eventually kills his rival and is left free to marry his beloved Katrena. The dramatic psychological portrayals of Ondrej, Katrena

and Ján's father, the heroes in the conflict, are effectively enforced by music which is skilfully crafted; in this the opera surpasses by far all previous Slovak experiments in the genre. Paradoxically enough, its first performance was given during the period of political upheaval that ushered in communism and the prescription of socialist realism. As a consequence, Suchoň was forced to remove the allegorical characters of the poet and his alter ego (a representation of the composer's own dilemma concerning art and its function) and to rewrite the finale, in which Štelina, in accordance with Christian ethics, forgives his son's murderer; at odds with the new socialist morality, this had to be changed so that the murderer was seen to be punished. The opera became immediately popular in Slovakia and went on to enjoy considerable success on the world stage.

The fourth period (1955–68) was marked by a return to chromaticism and complex harmony, though in effect it involved a new approach to discovering relationships between dodecaphonism, serialism, modality and tonality. The opera of this period, *Svätopluk* (1952–9), is very different from *Krútňava*. Celebrating the history of the Great Moravian Empire (whose demise in 906 marked the beginning of Slovak suppression), this later work is more monumental and contains leitmotivic characterization. Around the time of its composition Suchoň experienced a profound personal crisis, which manifested itself in doubts concerning all his earlier works. Subsequently he tried to incorporate generally prevailing serialist and post-serialist trends into his own work and to combine three differing worlds of harmonic expression: modality, tonality and dodecaphony. For example in The Pagan Scene of Act 2 of *Svätopluk* an ancient Slovak melody is developed into a three-part contrapuntal texture employing all 12 notes of the chromatic scale. Likewise the song cycle *Ad astra* op.16 reflects Suchoň's predilection towards three- to 12-note chords based on superpositions of 3rds, while *Šesť kusov* ('Six Pieces') for string orchestra op.19 assimilates dodecaphonism by combining altered scales which are modally or tonally related.

The last period, beginning in the 1970s, witnessed a synthesis and simplification of Suchoň's compositional language – a process typical also of the development of postmodernism in music. Although *Symfonická fantázia na B–A–C–H* op.21 marks a definite departure from dodecaphonic technique, the 12-note scale continues to form the basis of his chord structures. The synthesis of earlier features also manifests itself in quotations of motifs from previous works. The Concertino for clarinet and orchestra (1977), a typical example of all the above-mentioned traits of Suchoň's final period, contains, in addition, reminiscences of Wagner's *Tristan*, while *Tri piesne* ('Three Songs') for bass and orchestra (1985) represent this period's greatest achievement.

ZUZANA MARTINÁKOVÁ

Suchý, František (*b* Libina u Šumperka, 9 April 1902; *d* Brno, 12 July 1977). Czech composer, oboist and teacher.

He studied the oboe with M. Wagner and composition with Kvapil at the Brno Conservatory, graduating in 1927; his studies were continued in Novák's masterclasses at the Prague Conservatory until 1937. From 1927 to 1947 he was first oboist in the Brno Radio Orchestra; in 1947 he became professor of oboe and theory at the academy, then professor of oboe at the Brno Conservatory (1951–68). In addition he appeared as a soloist and chamber musician, notably in the Moravian Wind Quintet, of which he was a founder-member in 1928. As a composer he consistently followed the neo-classical style of the 1920s, though he developed greater expansiveness of form. Suchý also published theoretical works and edited old Czech music: in 1946 he prepared a reconstruction of František Adam Míča's Symphony in D.

WORKS

JAN TROJAN

S Uciredor. *See* RODERICUS.

Suck, Charles J. (*fl* 1781–9). English oboist and composer, perhaps of central European descent. He is described as a 'scholar' of J.C. Fischer, in the notice of Fischer's benefit on 16 May 1781. He and Fischer shared several concerts, though in 1784 Suck was playing a double concerto with Friedrich Ramm. He is also listed as playing the oboe in the Handel Commemoration at Westminster Abbey and the Pantheon in May and June 1784. On 18 May 1789 a concert at the Hanover Square Rooms was to have included an overture by Suck, but apparently he was indisposed, having fractured his right arm at a gentleman's musical party (*Public Advertiser*, 2 and 18 May). Whether this accident affected his subsequent career, or whether he moved away from London is not known, but no further appearances have been traced. The *European Magazine* described him as proficient on both the oboe and the German flute. He published a set of six trios (London, 1784), two each for oboe, flute and violin, with violin and cello. The list of subscribers included the Prince of Wales, Fischer and Mr Papendick (*sic*). The trios are melodious and well suited to the chosen instruments.

PETER PLATT/RICHARD PLATT

Su Cong (*b* Tianjin, 23 Jan 1957). Chinese composer. He started his career under the guidance of his father Su Xia, a composer of revolutionary music in Beijing, and developed an interest in composition during his student years with Du Mingxin at the Central Conservatory in Beijing. In 1982 Su went to the Free University in Berlin as a doctoral student of ethnomusicology, remaining in Germany as a composer of film music. Among his many international prizes is an Oscar for his score for Bertolucci's *The Last Emperor* (1988). This work also earned him a supervisory post at the newly-founded Film Academy of Bäden-Wurttemberg, Ludwigsburg, the first academy in Germany to offer film music as a main topic of study. Visits to Donaueschingen and Darmstadt brought Su into contact with Stockhausen and Henze, though his subsequent encounters with film composers such as Maurice Jarre, Ernest Gold and Giorgio Moroder had a much deeper impact. He has written music for a wide variety of stage and television plays and films in Europe, Asia and Canada. He has also produced many chamber works including three string quartets. His successful chamber opera *Wenn die Sonne aufgeht ...* (1997) is based on the story of the Dutch businessman Johannes van Damme, accused of heroin smuggling and executed in Singapore in 1994. The opera portrays this event in the wider framework of long-lived cultural and political tensions between Asia and the West. In his music, Su skilfully combines elements of Asian traditional music with Western avant-garde and Romantic music. Further commentary is given in Su Xia: 'Xianhua Su Cong' [Jottings on Su], *Renmin yinyue* (1998), no.4, pp.2–8.

FRANK KOUWENHOVEN

Süda, Peeter (*b* Lümanda, Saaremaa, 30 Jan 1883; *d* Tallinn, 3 Aug 1920). Estonian composer and organist. He studied at the St Petersburg Conservatory (graduated 1911), where his teachers included Louis Homilius and Jacques Handschin (organ), and Anatoly Lyadov, Aleksandr Glazunov and Nikolay Solov'yov (composition). In 1912 he returned to Tallinn, where he gave private lessons and organ recitals. He was appointed to a post at the newly founded Tallinn Conservatory in 1919.

Süda shared the nationalism of Mart Saar and Cyrillus Kreek; his works, most of which are for the organ, reflect the influence of the Estonian folk music he collected over six summers (1905–11). His interest in polyphony produced a style that synthesized rich counterpoint and complex, colourful harmonies. His best organ works, such as the Prelude and Fugue in G minor and *Ave Maria*, display a masterful command of musical form and a telling familiarity with the instrument. His most famous choral song, *Linakatkuja* ('A Flax Reaper', 1913) is a large-scale polyphonic composition based on a folksong theme. The Music Museum (now the Theatre and Music Museum) in Tallinn, founded in his memory (1934), holds a collection of his manuscripts that has grown into the primary archive for Estonian music.

URVE LIPPUS

Suda, Stanislav (*b* Starý Plzenec, Bohemia, 30 April 1865; *d* Plzeň, 1 Sept 1931). Czech composer. Suda represents a unique figure in Czech music. Blind from the age of six months, he composed all his works (including symphonies and operas) by dictating them to friends. He studied the violin, flute and piano at the Prague Institute for the Blind (1874–81), and composition with Skuherský at the Prague Organ School. The most important part of his output are the orchestral works, in particular the symphonic poems *Život ve tmách* ('A Life in Darkness', 1919–23) and *Slepcova píseň* ('The Blind Man's Song', 1929). His works for the stage, beginning with the musically successful but perhaps dramatically static opera *U božích muk* ('At the Wayside Cross', 1896), contain compositional structures typical of the period. In his mature years his pronounced musical talent gave rise to audacious works marked by harmonic originality and strength of musical thought. Other operas include *Lešetínsky kovář* ('The Lešetín Blacksmith', 1902), *Bar Kochba* (1905) and *Il divino Boemo* (1912). (*ČSHS*)

JIŘÍ MACEK

Sudan, Republic of (Arab. Jamhuryat es-Sudan). Country in north-east Africa. The largest country on the continent, it has an area of 2,505,813 km² and a population of 29.82 million (2000 estimate). Approximately 70% of Sudanese are Sudan Arabs, 10% are Nubian, and 20% are Southerners belonging to numerous Nilotic and Bantu ethnic groups such as the Dinka, Shilluk (Colo), Nuer and Azande (Zande). These southern ethnic groups practise traditional religions or Christianity, while most other Sudanese are Sunni Muslim.

1. MUSIC OF THE MUSLIM PEOPLES.

(i) Islamic religious song and music. Popular Islamic customs and orders include song and music as an integral component of religious life and ceremonies. A distinctive musical practice has evolved out of local traditions over the centuries, resulting in solo songs such as *qaṣīda* and *madīḥ*, and in collective performances such as *ḏikr*. The motivating force of this development was Sufism. The *ḏikr* is a part of a larger ceremonial in the northern Sudan called *lailiya* (evening session, the meeting on Thursday evening), *mūlid* (birth festival of the Prophet) or *karāma* (honouring a person, pilgrim or deceased person). In other parts of the Sudan, it is also called *noba*, which can be accompanied by several percussion instruments (Simon, 1980).

Madīḥ means praise, praise poem, glorification and, in this context, praise hymn in honour of Allah and the Prophet Muhammad. One of the most famous *madīḥ*

1. Maidub Mohammed Hajj El-Mahi and Ali Ahmed El-Hajj of the famous madhi traditions playing ṭar (frame drums), northern Sudan

traditions in northern Sudan can be traced back to its founder Hajj El-Mahi, who lived in Kassinger near Kareima from *c*1780 to 1870. He is said to have composed about 330 religious poems that continue to be sung with an accompaniment of two *ṭar*. His descendants still cultivate this tradition (fig.1). The song texts often reveal rapturous religiosity or moral intent. Their performance is part of private celebrations or public festivities, and can also be heard in the streets of the markets.

In addition to Sufi ceremonies strictly reserved for men, there are other group ceremonies of supraregional distribution such as *zār* and *tambura* that belong to the domain of women. The apparent purpose for these ceremonies is spirit possession. It stands as a vehicle for a complex system of beliefs, social restrictions, social psychological and mental disturbances, the curing of even organic diseases, group therapy, and group amusement for the female participants. For case studies and details of the ceremonial procedure see Simon, 1983, pp.290–92; Ibrahim, 1979, p.171; Zenkovsky, 1950, and Kennedy, 1967. The pantheon of *zār*-spirits consists of Muslim, Christian and Ethiopian spirits. Each of them is invoked by its special tune. These simple antiphonal songs are begun by a designated female principal singer and responded to by other participants who accompany themselves with hand-clapping. The principal singer accompanies the singing by beating a clay drum called *daluka* (fig.2) or a drum substitution such as a portion of a fuel drum or a kerosene tin. The latter produces such a degree of sound that the singing is barely audible. This intensive, but monotonous hammering of percussion rhythm, sometimes intensified by increasing tempo, and the ostinato type of singing are the musical tools for inducing possessing trance.

While a *zār* ceremony may take place anywhere, the *tambura* ceremony is performed only at its sacred residence. The main object of the cultic requisites is the *tambura* or *rababa*, a large lyre with six strings generally, which must be played by a man. Other instruments

are two or three drums (*noggaara*), calabash rattles played by women, and a rattle belt (*mangūr*).

(ii) Music of the Nubians. Musical instruments in Nubia include the lyre, called *kisir* in Nubian and *ṭanbūr* or *ṭanbūra* in Sudan-Arabic; the frame drum *taar*; and the single-headed clay drum, *dalūka*, or the smaller drum, *shatam*.

Nubians usually celebrate only the wedding ceremony (*balee*) on a large scale with music and dance, while other life-cycle ceremonies are modestly accompanied with a few relevant songs.

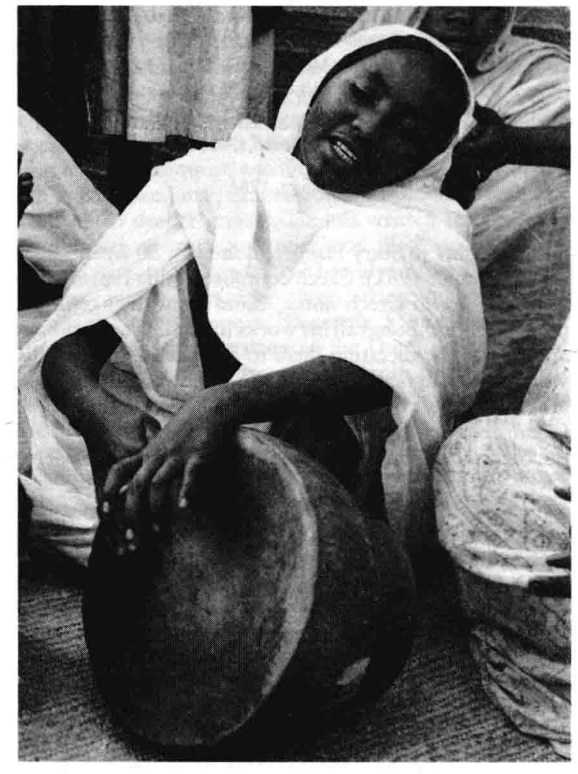
Nubia's traditional musical life can be summarized as follows:

Male Sphere

(1) Dance songs with instrumental accompaniment (*kisir* or *taar*), especially at weddings
(2) Dance songs or dances without instrumental accompaniment, especially at weddings
(3) Dance music without singing, with *kisir* or *taar*, hand-clapping and foot-stamping, especially at weddings
(4) Songs with instrumental accompaniment for entertainment at weddings and other festivities or social occasions
(5) Songs for entertainment in a small group of men: songs while drinking date wine (*kalakiya*), other occasions, or personal enjoyment
(6) Work songs, for example at the bucket water wheel (*eskalee*) and during work in the fields
(7) Religious songs
(8) School songs, using a part of repertory from no.1, some of modern character

Female Sphere

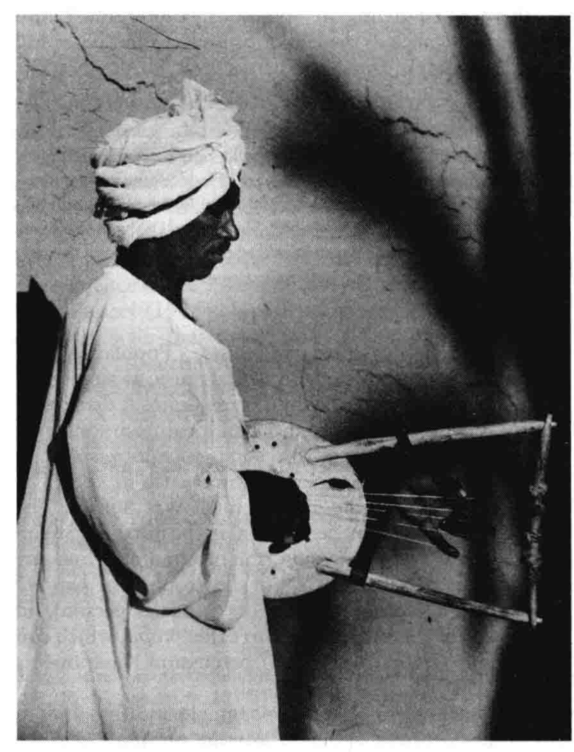
(1) Songs during domestic work with religious or narrative content
(2) Songs for weddings and excisions
(3) Lullabies
(4) Dirges, songs at death
(5) Songs for taking leave of and for welcoming returning Mecca pilgrims
(6) School songs for girls
(7) *Zār* songs



There are also several regional musical styles.

(1) Wadi Halfa and New Halfa Region. Typical for this region is the alternation between one or two solo singers and a choral group, accompanied by two different-sized frame drums, *taar*. A special feature of the Halfa style is *ollin aragiid* (hand-clapping and dancing). In this dance the dancers accompany themselves with complicated clapping patterns, a style also found among the Kenuzi Nubians in Egypt (Hickmann, 1958; RECORDINGS: *Ḍikr und Madīḥ*, 1980).

(2) Sukkot and Mahas. The *kisir* is the dominant instrument. An important element in this musical style is the rhythmical accompaniment of hand-clapping and foot-stamping to song and lyre-playing, carried out by a group of at least four young men who may also function as group singers who alternate with the soloist.



(3) Dongola Region. The lyre is here, too, the predominant instrument. The musical style is less uniform than in the other regions and more arabized.

The tuning of the invariably five-string *kisir* (fig.3) in Nubia is anhemitonic pentatonic. The typical tuning may be outlined with the following European notes: *e1–g–a–c1–d1*. The *kisir* is played with a plectrum, and if the plectrum strikes all five muted strings at once, a pentatonic sound cluster occurs. Melodic playing results from the strings vibrating freely, one after another, by the player lifting the appropriate finger from the string. A finger-plucked technique is used especially for small figures

2. *Daluka (goblet drum)*

inserted between the main beats of a rhythm, acting as melodic fillers (Plumley, 1976, RECORDINGS: *Musik der Nubier*, 1998).

3. *Kisir (lyre) played by the Nubian Hassan Fagir, 1973*

(iii) Music of the Hadendowa in the eastern Sudan. The Hadendowa (Hadendoa) belong to the Beja (Bedawi) group (Ababda, Bisharin, Amarar, Hadendowa and Beni-Amer). The most important musical instrument is the lyre with five strings called *bāsān-kōb* (*basamkub*) (Emsheimer and Schneider, 1986). The playing technique is the same as in northern Sudan. In former times, chiefs of the Beja possessed large kettledrums, *naqqāra* or *nahas* as a symbol of power. These were played only at important ceremonial occasions such as the enthronement or death of a chief, or during periods of war.

(iv) Kordofan and Darfur. The Arab peoples have a rich oral tradition of memorizing genealogies with special songs. Among the Baggāra there is a special type of praise or satirical songs or songs of censure called *gardagi*. When performed in small gatherings they are accompanied on a one-string fiddle (*umkiki*).

The string is tuned to give only one tone, but the player who is at the same time the singer, called locally *al-hadday*, produces extra notes by stopping the string in different positions and hence creating a hemitonic pentatonic pattern of scale (Al-Daw, 1985, p.51).

A harp with five strings, called *kurbi* (Al-Daw, 1985, p.63) or *al-bakurbo* (*Grove6*), may be played instead of the *umkiki*. The Baggāra have a strong tradition of female *hakamma* poets and bards. These *hakamma* are considered among the most respected individuals within the society. As in other parts of arabized Sudan, the ruling families of the Baggāra own copper kettledrums called *nihas* that are a symbol of power and tribal sovereignty and are played at exceptional occasions only. Hadramaut in Yemen is often claimed to be the region of origin for *nihas*.

Most Kordofan and Darfur songs are associated with dances. This is also the case among the Fur and Nuba. According to Carlisle (1973), the Fur have a small instrumental ensemble, *kolokua*, that plays at harvesting and circumcision festivities. It consists of two drums, an end-blown flute and two side-blown antelope horns. Some names of the instruments, such as *gangan* for the cylindrical drum and *tumble* for the bowl-shaped drum, indicate relations with Chad and northern Nigeria.

Many ethnic groups of the Nuba mountain area are strongly Islamicized (e.g. the Miri near Kadugli). Traditional music and dances, however, are still practised as important elements of ethnic identity. Each of the 50 language groups has characteristic songs and dances. The favourite instrument, played by young men for musical entertainment and song accompaniment, is the lyre with five strings. It has different names, such as *fedefede* (Tumtum Nuba), *benebene* or *beriberi* (Masakin or Ngile), *kazandik* (Miri), among others. The generally small-sized instrument is played with the plectrum technique used in other parts of the Sudan. Among the Masakin, the women play a variation of a frame zither or musical bow with a separate calabash serving as resonator. A string is tied four times within a rounded bough so that four sections of a string with different pitches are produced (Wegner, 1984).

Two kinds of drums are generally played, a cylindrical dance drum with two skins (*umval*/Miri; *bamba*/Masakin; *bajé*/ Tumtum) and a ceremonial drum played only at special festivals and death ceremonies. Among the Miri, it is an earthen pot drum, *kola*, played at the rain-making *kola*-festival (Baumann, 1987). Sometimes a *bukhsa* (gourd pot) struck with a thin piece of wood replaces the dance drum when played together with a lyre. A set of four to six small gourd trumpets is also called *bukhsa* or *kanga*. End-blown horns made of wood or side-blown horns of the kudu antelope are played at special events such as wrestling tournaments, signalling their beginning or merely producing a particular sound atmosphere before the fighting starts. During nights with full moons in the dry season, unmarried youth meet at particular dancing places for so-called 'moonlight dances'. These are the principal occasions for entertainment, flirtation and courtship (Baumann, 1987). More frequently, traditional dancing is replaced by so-called *daluka* songs with Arabic texts from northern Sudan.

In the Nuba mountains the major music and dance events are the three to four seasonal festivals that usually take place in the dry season. One of the outstanding dances in the western hills was the *kambala* dance (Corkill, 1939). It continues even today to be performed during the rainy season among the Miri (Baumann, 1987). At harvest festivals (October–December) ensembles of gourd trumpets (*lela ma sorek*) play to accompany special dances.

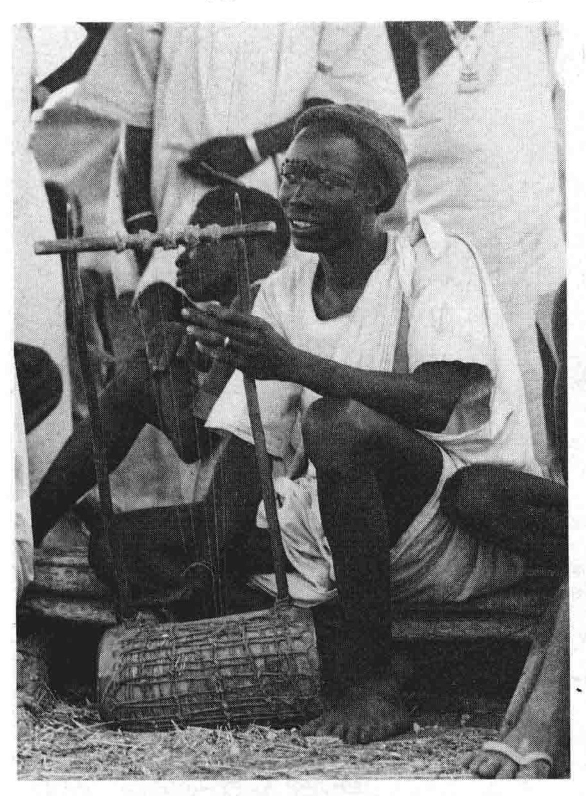
Each oracle night is concluded by the performance of the dance *Sorek*. . . . The music for *Sorek* is played by adult men forming an ensemble of at least five, and up to twelve, slim tubular gourd trumpets, called *Lela ma sorek* ('children of the gourd'). Each of them is tuned to a different pitch. Their joint musical performance creates an instrumental transformation of the men's bawdy songs *Tazu ma sorek* ('songs of the gourd') by using the hocket technique: each player contributes one pitch or one short pattern of a continuous musical phrase which results from the well-timed and most subtle interlocking of single phrases. The *Tazu ma sorek* songs, short couplets of a content considered bawdy or often obscene, are the most popular songs of married men, and their performance, as well as ideally knowledge of their words, are reserved for males in informal company. (Baumann, 1987, p.85)

(v) Blue Nile: Ingassana, Gumuz and Berta. The most characteristic music of the Ingassana (Gaam) is *bal* music played at wedding ceremonies and harvesting festivals as an accompaniment of the *bal* dance. A *bal* ensemble generally consists of five *bal*, vertical stopped bamboo flutes without finger-holes, a gourd trumpet *singar*, and a gourd rattle, played by one of the *bal* players (Kubik, 1982). Additional *bal* might be added in the lower octave. All players are boys or men, while women, together with other men, form a group of singers and dancers. The patterns played on the one-pitched *bal* interlock in a cross-rhythmical manner that produces the melody sung by the dancers or outlines its melodic contour by playing the main tones. The low pitch of the *singar* provides a rhythmical counter-pattern to the melodic process (RECORDINGS: *Sudan II*, 1986).

The lyre, played with the plectrum technique, is called *jangar* or *jaŋar* and *sangwe* by the Gumuz. The songs with lyre may be accompanied by three or four gourds called *pina* (*penah*), each with a hole at the end of the gourd. The player blows or hums into that hole. Mahi Ismail mentions such an ensemble used as the accompaniment for the exorcism dance, *moshembe da*, 'performed to free a sick person or a house from evil spirits' (1980, p.328).

Another ensemble, played by women, is the *ba tum-tum*. The women beat on a variety of kitchen utensils made of gourds while singing to it; others are clapping hands. Music for light recreation together with singing and dancing is played by the *kome-m'dinga* ensemble consisting of ten end-blown vertical flutes *kome* and a large barrel drum *m'dinga*,

4. One section of the waza (gourd trumpet) ensemble of the Berta, Blue Nile Province, 1982



played on both sides with the hands. The *kome-m'dinga* is one of the one-pitch wind instruments ensembles typical throughout the region. An additional signal instrument is a trumpet called *trumba*, made of animal's horn or aluminium. Another important genre of Gumuz music is *gaya* ('song'), performed by villagers at special occasions such as death, or during epidemics and war (RECORDINGS: *Sudan I*, 1986).

The Berta live in the southern most part of the Blue Nile Province. The main categories of traditional music among the Berta are: songs with the *abangarang* lyre (*abaŋgaraŋ*); music of the *waza* trumpet ensemble; *bolo shuru*, the music of the *bolo* flute ensemble; *bal naggaro*, music of the *bal* flutes and the *naggaro* drum; and dancing songs for the *hokke* harvest festival (Simon, 1989). The *waza* trumpet ensemble (fig.4) is considered the most distinguished instrumental music of the Berta with groups consisting of 10–12 trumpets. Today the *waza* is played at public or communal events and family festivities that are celebrated on a larger scale. The *waza* instruments are cone-shaped trumpets that vary from 50 to 180 cm in length. They are made of conical segments of calabashs that fit into each other. A complete set of *wazas* must consist of ten trumpets which are divided into two groups (trumpets 1–5, and 6–10). One or two additional higher instruments may be added. The trumpets are accompanied by percussion sticks, wooden crotches carried over the right shoulder and beaten with a cowhorn. The trumpet is held with the left hand and the horn with the right hand. Another instrument is a calabash rattle called *asɛzaghu* or *asoso* played by trumpet no.7. Some of the women who participate as group singers and dancers wear leg rattles made of dried tree fruits called *atitish*. These sticks and rattles provide the basic beats or pulses. A performance of a *waza* composition generally begins with a woman singing a tune once or twice, which the entire group will then play. The trumpet players then try to find their starting points. In order for this ensemble of one-pitched instruments to produce a single melody, players must have alternating starting points to create a pattern. The *wazalu* player begins by beating the elementary pulses on his *bali*, and then plays his part, generally starting at the beginning of the time-line pattern. Trumpet no.2 then begins to play a cross-rhythmic pattern against the *wazalu*, and so on.

2. MUSIC OF THE NILOTIC PEOPLES: SHILLUK AND DINKA IN THE WHITE NILE AREA. The White Nile area is inhabited by so-called Nilotic peoples: the Shilluk (or Colo), the Dinka and the Nuer. Information on songs, music and dance of the Colo was first published by the missionary Hofmayr (1925), and A.N. Tucker (1932, 1933). Dinka music and song texts were later recorded and published by F.M. Deng (1973, RECORDINGS: *Music of the Sudan*, 1976).

One of the important Nilotic peoples are the Shilluk, or Colo, as they refer to themselves. Leading the Colo is a *Reth* or king, who traces his genealogy back to Nyikang, the god-like first king of the people. In numerous songs, Nyikang's deeds or one of the historically proved kings are praised. The instrument accompanying these songs is again a lyre, called *tom* (fig.5). As in the north, it has five strings. In contrast with the plectrum technique of the north, the *tom* strings are plucked individually with the fingers in the African style.

Following the old Colo religion, there is a strong ceremonial life accompanied by music, songs and dances.

5. *Tom (lyre) played by a Colo or Shilluk from the White Nile area, 1980*

They distinguish three kinds of dance ceremonies: *tom*, the pleading- or rain-dances, *bul*, the festival dances and *ywok*, the funeral or memorial dances for a deceased, performed at *koje* feasts. The *bul* dances are performed mainly for the entertainment of the youth. Many of the young men dance with characteristic wooden dancing clubs. There are generally young female principal singers who sing along with the chorus. The *bul* is a long conical drum played on both ends. A smaller cylindrical or conical drum is called *bul* as well. Also among the royal drums are two small kettledrums called *leleng*.

One of the most important and creative institutions of Colo society is the bard, a poet-composer-singer-*tom* player called *ček* or *wau*. The most esteemed compositions are those praising the *Reth* and his predecessors.

The Dinka distinguished several song categories: ox-songs; 'cathartic songs' (a type of complaining song); age-specific insult songs; initiation songs; war songs owned by a warring unit; women's songs; songs from bedtime stories; children's play songs; religious hymns addressed to God, spirits or ancestors; and school songs (Deng, 1973). The importance of the ox as a symbol of wealth is also demonstrated in certain war dances, where a dancing man faces a woman and forms the horns of a bull with his arms. War dances are accompanied by a large drum, called *loor*, and a small one known as *leng*.

3. Music of the Bantu-speaking peoples: the Bongo, Azande and Ndogo in the south. An exceptional instrument of the Bongo is the *mandjindji*, a large wooden trumpet most often anthropomorphically shaped with a carved head on its top (W. and A. Kronenberg, 1981).

6. *Rongo (xylophones) of the Ndogo*

7. *Abdel Gadir Salim with the group 'Sudan City Folk' at their first concert in Berlin, 1986*

The dances of the Bongo are usually accompanied by three drums and two of these trumpets.

The *kundi* harp is the most exceptional instrument of the Azande, carved as an anthropomorphic figure. Today, older pieces demand a fairly high price in the international art market. Zande harp music has been analysed by Kubik (1964, 1983) and Giorgetti (1965). The tuning of the *kundi* according to Kubik is approximately anhemitonic pentatonic. The log xylophone, *kpáníngbá* (*kpaningbo*, *kpäningbä*), with generally 12–14 keys, is tuned in the same way. Quite different from this xylophone is the *rongo* (fig.6), of the Ndogo, with long gourds serving as resonators. Other instruments of the Azande are the *kondi* lamellophone and the *gugu* slit-drum.

4. Modern developments. During the first half of the 20th century a new urban music emerged in Khartoum and Omdurman, known as Sudan city music. It was an amalgamation of traditional Sudanese, Egyptian-Arabic and European elements. More recent influences include international popular music (e.g. reggae music). A basic musical structure, melodic conception, rhythm, phrasing and vocal intonation form the basis of this Sudanese popular style. Ensemble playing, and particular musical instruments such as the Arab lute, drums and the violin, are the principal Egyptian contributions, while other instruments such as the accordion, guitar (electric and acoustic), electric bass, transverse flute, saxophone, electric keyboard, synthesizer and others were imported from Europe and other industrialized countries.

The first musicians propagating a new urban popular style were singers who accompanied themselves with wooden sticks, which were soon replaced by the Egyptian Riqq.

In the 1920s another source of urban music occurred in the private circles of poets and music lovers. At that time the *ramyah*, a kind of free rhythmic vocal introduction, was very popular. The best-known singer of this tradition was Serror, who worked together with the poet Ibrahim al-Abadi. A central personality of the new music was Khalil Farah, whose friends, Al-Amin Burhan and others, made his compositions popular.

Records, record players and the new instruments have been sold in Khartoum since 1925. In 1931 recordings were produced in Cairo for Serror and Khalil Farah, the latter accompanied by lute, piano and violin. These recordings quickly became popular in coffee shops in Khartoum. This popularity encouraged businessmen to produce more records with Sudanese singers, including Ibrahim Abdul Jalil, An-Naim Mohammed Nur, Karoma, Al-Amin Burhan, Ali Shaigui, and the female singers Mary Sharif, Asha Falatiya and Mahla al-Abadiya. They were accompanied by lute, accordion, piano, violin, flute, *riqq*, *ṭabla* and, later, bongos. Other famous artists of that epoque were Zingar, Ismail Abdel Mu'ain, Hassan Atya and Awonda. The first city music concert took place in 1938. On 9 April 1940 Radio Omdurman began its broadcast service, which included a weekly radio programme with city music played on records.

After World War II, development of the modern instrumental ensemble occurred with the inclusion of electric guitars, basses and organs. The lute, however, remained the most prominent instrument.

Several musicians have a personal style of lute playing, such as Mohammed El Amin, whose lute playing has influenced many younger musicians. He is the prominent representative of the 'great songs' tradition, called *al-aġānī al-kabīra* (Simon, 1991, pp.178, 180). The Institute for Music and Drama was opened in 1969 under the direction of Mahi Ismail. Most professional musicians studied at this institute, among them artists such as Abdel Aziz El Mubarak and Abdel Gadir Salim (fig.7) and, above all, the musicians of their ensembles (RECORDINGS: *Sounds of Sudan I*, 1987; *Sounds of Sudan II*, 1987).

Most of the songs are love songs, although many of their texts suggest critical underlying meanings. 'Nura', one of the famous songs of Mohamed Gubara (RECORDINGS: *Sounds of Sudan III*, 1989), is a political song with text by Mohamed Al Hassan Salim. 'Nura' is the name of a girl, but in reality the Sudan is invoked.

A. SIMON

Suder, Joseph (*b* Mainz, 12 Dec 1892; *d* Munich, 13 Sept 1980). German composer. Son of the architect Franz Joseph Suder (1864–1905), he studied at the Munich Academy of Music, where his teachers included Friedrich Klose (composition), Karl Roesger (piano) and Heinrich Kiefer (cello). During the same period, he attended Sandberger's musicology lectures at Munich University. In 1914 he settled in the Munich suburb of Pasing, then an artist's quarter, deliberately keeping his distance from the metropolitan music scene. He worked as a freelance composer and private music teacher, and taught at the Oskar von Müller Polytechnic (1951–60) and the Munich Fachhochschule. The Joseph Suder Gesellschaft was founded in Munich in 1967.

Suder's compositional style is marked by complex formal designs, contrapuntal facility and tonal cohesion within the context of harmonic exploration. An emphasis on thematic synthesis became an identifying characteristic of his music from the Chamber Symphony (1925) onwards. His most important vocal works include the *Festival Mass 'Dona nobis pacem'* (1947) and an opera, *Kleider machen Leute* (1934). Although the opera's first performance (Coburg, 1964) was a great success, its 19th-century subject matter and debt to tonality led to its subsequent neglect. He is the subject of S. Gmeinwieser, F.-P. Messmer, H.-M. Palm and H. Rosendorfer: *Joseph Suder* (Tutzing, 1987).

JÖRG RIEDLBAUER

Suderburg, Robert (*b* Spencer, IA, 28 Jan 1936). American composer, conductor and pianist. He studied composition

with Paul Fetler at the University of Minnesota (BA 1957), with Richard Donovan at Yale University (MM 1960) and with Rochberg at the University of Pennsylvania (PhD 1966). He began his teaching career in Philadelphia, then took a position at the University of Washington where he helped found and co-directed the UW Contemporary Group (1966–74). From 1974 to 1984 he was chancellor of the North Carolina School of the Arts, and in 1985 was appointed chair of the music department at Williams College in Williamstown. He has received numerous honours including commissions from the Philadelphia Orchestra, the Seattle SO and Houston SO, a Rockefeller Foundation grant (1967) and two Guggenheim fellowships (1968, 1974).

Suderburg's early works were serial, but he abandoned 12-note procedures in the late 1960s in favour of a highly personal, lyrical and fundamentally Romantic style, Mahlerian in its rhapsodic expressivity and sweep. His musical vocabulary became primarily modal, characterized especially by Phrygian and Lydian inflections, and at times strongly reminiscent of more exotic scales such as those of Japanese koto music. Certain motives recur in many pieces, including the rising major 7th and minor 9th, and harmonies derived from the tetrachords E–C–F–A and E–C–F–B. The underlying pulse is generally moderate to slow, in many passages suggesting a solemn procession or stately dance, but the surface rhythms are animated and flexible, evolving freely as if improvised. His compositions are rooted firmly in his activities as a performer, and in his deep knowledge of the musical personalities of his dedicatees; most prominent among these is his wife, the soprano Elizabeth Suderburg, a renowned interpreter of a wide range of contemporary music, including works written for her by Crumb, Rochberg and Ginastera. As a pianist or as conductor he has participated in the premières and recordings of many of his works from the series entitled Chamber Music. His considerable stage presence informs his compositions as well as his performances. Behind everything he does is a deep belief that music should never lose touch with its origins in song, dance and ritual.

PHILIP CARLSEN

Sudharnoto (*b* Kendal, Java, 24 Oct 1925). Indonesian composer. Having studied gamelan music and *wayang kulit* (Javanese shadow puppet theatre) from an early age, the gift of a gramophone sparked his interest in a wide range of Western music, from European classical and American film music to Hawaiian steel guitar music and *kroncong*, a popular Indonesian music originating from Portuguese song. Between 1936 and 1939 Sudharnoto played the guitar in a number of popular Hawaiian groups; he was also studying the piano and classical music and playing gamelan. After a year of medical studies at the University of Indonesia in Jakarta, he left his course to become a musician at Radio Republik Indonesia, where he was able to study composition and orchestration with Amir Pasaribu and R.A.J. Sudjasmin and with Dutch professional classical musicians. Promoted to head of music at Radio Republik Indonesia, he strongly encouraged development in all forms of music in Indonesia. He became involved with the People's Cultural Institute (affiliated with the Indonesian Communist Party), a political stance which enabled him to broaden his musical outlook through visits to Eastern Europe and Russia in the 1960s. His many small-scale compositions of the time were written in a tonal idiom influenced by classical and Romantic music. Sudharnoto became a political prisoner in 1966, when the Sukarno regime collapsed. On his release from prison he became active in writing music for films. His scores for the films *Kabut Sutra Ungu* and *R.A. Kartini* won the Citra Prize in the Indonesian Film Festival. Occupying a unique position in Indonesia's political life, Sudharnoto has made an inestimable contribution to the development of Indonesian music.

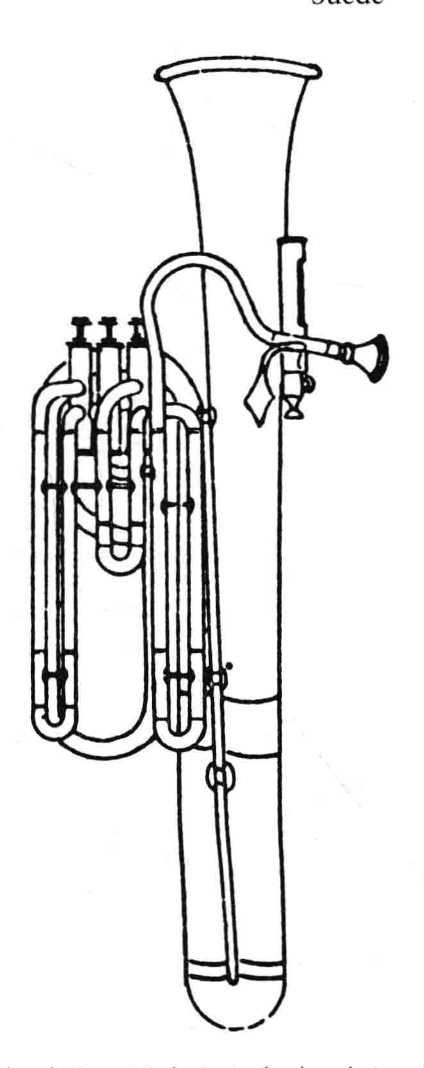
FRANKI RADEN

Sudre, Jean-François (*b* Albi, 15 Aug 1787; *d* Paris, 2/3 Oct 1862). French violinist, composer and inventor. He entered the Paris Conservatoire in 1808, studying the violin in Habeneck's class and harmony with Catel. In 1818 he moved to Sorèze and then Toulouse, where he opened a school for musical education. He returned to Paris in 1822 and opened a shop, distributing his own music, which consisted mainly of *romances*, nocturnes for two, three or four voices, patriotic songs (*La Colonne* and *Le champ d'asile*) and *airs variés* for violin with piano or orchestra. During the 1830 Revolution he wrote the cantata *Appel aux Français* sung by the tenor Ponchard at the Opéra-Comique; he composed another cantata in 1848, *Le Banquet de la Liberté* (given at the Opéra, with the mezzo-soprano Elisa Masson and the tenor Barbot, and revived at the Conservatoire with the tenor Louis Gueymard). These works were praised by Le Sueur and Cherubini.

In 1817 Sudre had begun work on a system of signs based on instrumental sounds with the purpose of

establishing a method of long-distance communication. On 26 January 1828 he and his pupil E. Deldevez (then 11 years old) presented the invention to a committee of the Institut de France including Fourier, Raoul Rochette, Cherubini, Le Sueur, Berton, Catel, Prony, Arago and Boieldieu; it examined the results of the 'Langue musicale' and concluded that the inventor had 'achieved the end he set himself, of creating a true musical language'. Experiments to ascertain its military utility took place on the Champ de Mars, by order of the Minister for War, and in the presence of several generals; it was found that orders could be transmitted by bugle over a long distance within a reduced time, about 15 seconds. The Naval Ministry introduced the system for its Mediterranean fleet in 1841. Sudre called his invention *telephonie*. From 1833 Sudre held public demonstrations of its capacity to produce an instant translation of dictated phrases by means of three notes on a cornet or bugle, using pitch, tempo and rhythm. He collected various reports and press opinions on his invention under the title *Rapports sur la langue musicale inventée par M.F. Sudre, approuvé par l'Institut royal de France, et opinion de la presse française, belge et anglaise, sur les différentes applications de cette science* (Paris, 1838).

Convinced that all ideas and facts could be instantly communicated by rhythmic touching of the hands, Sudre continued his research with a view to eliminating pitch from his system so that it could be used by the blind, deaf and dumb. In 1855 the jury of the World Exhibition in Paris made him an award of 10,000 francs, and in 1862 the Exhibition in London awarded him a medal of honour. At the age of 75, he 'undertook an ideological dictionary of the musical language, with its translation into 14 dialects' (E. Pouget, *L'opinion nationale*). After his death, his widow published a work containing the Sudre system under the title *Langue universelle par le moyen de laquelle, après seulement trois mois d'étude, tous les différents peuples de la terre, les aveugles, les sourds et les muets peuvent se comprendre réciproquement; langue à la fois parlée, écrite, occulte et muette* (Paris, 1867).



GÉRARD STRELETSKI

Sudrophone. A group of valved brass instruments, soprano to contrabass, invented by the Parisian maker François Sudre and patented in Paris on 18 February 1892. Although the principal length of tubing was folded back on itself as in the OPHICLEIDE, and the valve assemblies bracketed out at one side, the proportions of the air column and acoustic characteristics were similar to those of the SAXHORN.

The unique feature of sudrophones was a device which permitted the player to modify the tone at will, and it was even claimed that reed or string timbre could be simulated. A brass cylinder attached to the bell communicated with both the air column and the external air through two opposed slots. An inner cylinder carried an adjustable stretched membrane of silk. By turning the inner cylinder to the left or right, the slot in the bell was either closed off or occupied by the membrane, whose vibrations modified the timbre after the principle of the EUNUCH-FLUTE. (*See also* MIRLITON.)

PHILIP BATE

Südwestfunk [SWF]. Radio network of south-west Germany; since 1946 it has had its own orchestra and since the 1950s a studio for electronic music, both based in BADEN-BADEN.

Sudrophone by François Sudre, Paris, after the maker's catalogue of 1905

Suede. English rock group. They were formed in Haywards Heath, London, in 1989 by Brett Anderson (vocals), Bernard Butler (electric guitar and piano), Mat Osman (bass guitar) and Simon Gilbert (drums). Part of the tradition of suburbanite, arty English bands, they successfully merged guitar-based indie minimalism with 1970s glam artifice. They first achieved recognition in 1992 at the outset of the media hype surrounding the Britpop phenomenon. Their first single, *The Drowners*, showed the influence of David Bowie, particularly Anderson's instantly recognizable vocals: a Bowie-Bolan hybrid with a touch of the 1970s star Steve Harley. Their début album, *Suede* (Nude, 1993), whose songs reflected the mood of ennui and uncertain sexual identity of many in their twenties, was both a commercial and critical success, reaching number one in the UK charts and winning the Mercury Music Award in 1993. *Dog Man Star* (Nude, 1994) was not as commercially successful, but remains their most fully realized work, its decorous style exemplified by the 11-minute track *The Asphalt World* and epic, cinematic ballads such as *Still Life* and *The Wild Ones*. Anderson is a sporadically excellent lyricist and seen by many as the natural successor to Morrissey. The guitarist

Richard Oakes replaced Butler in 1994, and in 1996 Suede (now a five-piece band after the addition of the keyboard player Neil Codling) released the album *Coming Up*, a collection of more up-tempo pop songs. In 1999, the band released *Head Music*, more obviously indebted to electronic influences and critically acclaimed.

DAVID BUCKLEY

Suesse, (Nadine) Dana (*b* Kansas City, MO, 3 Dec 1909; *d* New York, 16 Oct 1987). American pianist and composer. A child prodigy, Suesse studied with Liszt pupil Alexander Ziloti (1927) and composer Rubin Goldmark, and later Nadia Boulanger (1947–50). Her first hit, *Syncopated Love Song*, was recorded in 1929. She was nicknamed 'Girl Gershwin' because of her popular and classical compositions and her pianistic ability. Paul Whiteman featured her *Concerto in Three Rhythms* at Carnegie Hall in 1932, subsequently introducing her *Eight Waltzes for Piano and Orchestra* at the Metropolitan Opera House in 1933, and in 1934 Suesse appeared on Gershwin's radio show. During the 1930s she was a staff writer at various times for Harms, Famous Music Corporation and Robbins Music. She also composed some significant orchestral music. Several American orchestras played her works and recorded a few compositions from 1929 to 1942; some works have been revived during the last decade. She wrote the music for Billy Rose's revues, *The Casa Mañana Show*, the *Aquacade* at the World's Fair of 1939, the *Diamond Horseshoe Revues* (1943–6), musical comedies and plays. A concert of her works was presented at Carnegie Hall in 1974. She is best known for her popular songs, especially 'You oughta be in pictures', composed with lyricist Edward Heyman for the 1934 film *New York Town*. She also worked with the lyricists E.Y. Harburg and Billy Rose. Her talent, experiments with jazz and formative classical studies led to associations with many of the influential figures of her time and a life of extraordinary musical diversity. Jazz influences and the unusual melodic contours of her songs establish her work as highly individual and memorable. An unpublished biography of Suesse has been written by Peter Mintun.

Sugár, Miklós (*b* Budapest, 2 July 1952). Hungarian composer. At the Liszt Academy of Music he studied conducting with Kórodi (1974–8) and composition with Petrovics (1975–80), and took part in masterclasses in conducting with Markevich and Kurt Masur. Between 1978 and 1991 he was assistant lecturer at the Academy of Dramatic and Film Arts, conductor of the Hungarian Army Art Ensemble SO (1978–84) and of the Békécsaba SO (1984–8), and an editor at Hungarian Radio (1988–90). In 1991 he founded the EAR (Electro-acoustic Research) Chamber Ensemble, the first group in Hungary to give equal prominence to acoustic and electronic instruments. In the same year he was appointed conductor and artistic director of the Alba Regia SO.

As a composer he was influenced by the Polish school, principally Lutosławski and Krauze. From the beginning of the 1980s, however, he became influenced by repetitive music, while by the end of the decade electronic works had assumed pre-eminence in his output. Next to repetitive and electronic techniques, the third formative strand and source of inspiration in his music became Hungarian instrumental folk music. Since 1989 he has received several scholarships to travel to Paris, where he has worked at the UPIC studio; his work there gave rise to compositions for his own live electro-acoustic music group. In 1985 he won third prize with *Felhő variációk* ('Cloud Variations') and in 1989 his work *Gloria* received a special prize at the Arezzo Choir Composers' Competition. He was recipient of the Erkel Prize in 1992.

GOMBOS LÁSZLÓ

Sugár, Rezső (*b* Budapest, 9 Oct 1919; *d* Budapest, 22 Sept 1988). Hungarian composer. He studied composition with Kodály at the Lizst Academy of Music (1937–42) and concurrently attended courses in philosophy at the university. After teaching at a Budapest secondary school (1943–6) and at the Municipal High School for Music (1946–9), he was appointed to teach composition at the Budapest Conservatory, where he remained until 1968 when he was made professor of composition at the Lizst Academy of Music; he remained at the academy until 1979. Sugár received the Erkel Prize (1953) and the Kossuth Prize (1954) and was made an Artist of Merit in 1976.

Until around 1950 he wrote mostly chamber music. There followed the oratorio *Hősi ének* ('Heroic Song'), the cantata *Kőmíves Kelemen* ('Kelemen the Mason') and, later, oratorios *Paraszti háború* ('Peasant War') and *Savonarola*, all of which may be compared with the oratorios of Honegger. Drawing on Hungarian history and folklore, Sugár developed an individual style with nationalist and neo-classical affinities; the orchestral works of the 1960s show the influence of Bartókian form. In his last compositions his style arrived at the avant-garde musical language of the age, but in essence he remained loyal to the legacy of Bartók's music.

MELINDA BERLÁSZ

Suggia, Guilhermina (*b* Oporto, 27 June 1888; *d* Oporto, 31 July 1950). Portuguese cellist. After lessons with her father, she was playing publicly at the age of seven, leading the cellos in the Orpheon Portuense at 12. A royal scholarship took her to Leipzig in 1904 for study with Julius Klengel; in 1905 she joined the Gewandhaus Orchestra and appeared as a soloist under Nikisch. She worked and lived with Casals, 1906–12, and was billed on some programmes as 'Mme P. Casals-Suggia', but they were never married. She later moved to England, where her performances were highly admired for many years and where she recorded Haydn's D major Concerto with Barbirolli and Saint-Saëns's A minor Concerto under Collingwood. In 1923 her portrait (*see* VIOLONCELLO, fig.13) was painted by Augustus John, who gave dramatic expression to her grace, style and magnetism as a performer. She came out of retirement in Portugal to appear at the 1949 Edinburgh Festival, and she left her Stradivari to the RAM, London.

ROBERT ANDERSON

Suh, Kyungsun (*b* Seoul, 8 Nov 1942). Korean composer. She studied at Seoul National University (BA 1964, MA 1968), presenting a concert of her first works in 1966, and later continued her studies at the University of Massachusetts at Amherst (1970–2). In 1974 she became a lecturer at Hanyang University. She joined a music theatre project with Mauricio Kagel in Cologne (1981), and served as president of the Korean Society of Women Composers (1993–7). Her works have been performed in North America, Asia, Australasia and Europe.

Favouring small ensembles, her representative early works include *An Illusion* (1977) for three flutes, harp and percussion and *Phenomenon I* (1982) for two pianos. In the latter work, bar lines are replaced by squares of one second duration, within which single notes and chord clusters are interspersed with flurries of ornamentation. Monody coupled to elaborate serial techniques features in later works, notably the solo violin piece *Pentastisch* (1987). Commissioned as a 'Korean' piece, with ornaments derived from traditional court music, this is written as a five-section arch in which distinct pitch areas appear. The initially divergent and contrasting materials, with blocks of low *col legno* or pizzicato notes set against high legato melodies, converge as the piece progresses. In *At the Soo-Kook* (1991), the piano provides rhythm and chord clusters while the melodic line is split between percussion and horn. *Poem* (1992) is less rhythmically fixed, with each square lasting four seconds. Serial rows are embedded within this framework, and melodic flow is disguised by timbral explorations on the harp, tone clusters and arpeggios described in the score as 'whistling', 'thunder effect', 'timpanic', 'xylophonic' and 'aeolian tremolo'. Metric regularity reappears in Suh's later orchestral works, the *Poem* for orchestra (1994) and Concerto grosso (1996).

KEITH HOWARD

Suhl, Johann Matthias (*fl* mid-18th century). German harpsichordist and composer. He was a keyboard player in the Duke of Mecklenburg-Schwerin's court orchestra about the middle of the 18th century; the date of his arrival at the Schwerin court has not been traced, but in 1752 he was succeeded by E.G. Müthel. His name appears as Sühl on his manuscripts in the Schwerin Landesbibliothek, which include seven sonatas for violin and continuo and a concerto for solo violin and string orchestra. The anonymous violin solo with continuo in Schwerin (Mus.MS 508) is probably also by him, while a violin concerto in C which was formerly there has been lost; his symphonies and oboe and bassoon concertos mentioned in Breitkopf catalogues have not been traced either.

Suhl's works in the Schwerin manuscripts show an autonomous musical personality influenced by the stylistic changes of his century. They follow the Baroque motivic principles but approach the early *Sturm und Drang* style of C.P.E. Bach in emotionally charged melodic figures and leaps. The sieve-bowl of an early Meissen set of tea and coffee cups dating from 1740 by Johann Friedrich Metzsch of Bayreuth, now kept in the Focke Museum in Bremen, provides an interesting source example of performing practice in the first half of the 18th century: it depicts a five-piece chamber ensemble playing around a table, the violins seated and the wind standing. The instrumental parts clearly show the opening bars of the first movement of an oboe concerto in B♭ by Suhl, as identified by Cari Johansson.

DIETER HÄRTWIG

Suilamo, Harri (*b* Salo, 22 March 1954). Finnish composer. He studied musicology at the University of Turku (MA 1982) and from 1982 to 1987 he studied composition with Heininen at the Sibelius Academy in Helsinki. He is a composer of short pieces for one or a few instruments in a condensed post-serial style. In some works there is an extraordinary integration of the instrument and the player; this can be seen in *YELL* (1987) for bass clarinet, in which clapping the instrument, whispering into it, inhaling through it, multiphonics and circular breathing are examples of the expressive means of the 'man-instrument'; the moods of the piece vary from aggressive eruptions to meditative lyricism. His chamber music for diverse instrumental ensembles feasts upon a kaleidoscopic variety of colour within a carefully balanced dramaturgy that never exceeds the tolerance of the material, the average duration of his pieces being less than seven minutes. Suilamo has also contributed valuable writings on contemporary music.

ILKKA ORAMO

SUISA [Société Suisse des Auteurs et Editeurs]. *See* COPYRIGHT, §VI (under Switzerland).

Suisse. Probably the common form from which the names of four Renaissance organ builders, who may have been related to each other, originally derived. Liebing (also Lieven, Levinus) Sweys (also Zwits), sometimes given the cognomen 'von Köln', was active in Oppenheim around 1438, became a citizen of Frankfurt in 1439–40 and subsequently worked in Frankfurt, Cologne, Koblenz, Brussels, Cleve, Delft, Utrecht and Antwerp, the latest recorded date being 1469; thus he clearly enjoyed a more than local reputation. Sebastian Zwysen, also known as 'Sebastian van Diest alias Moukens', was working as an organ builder in Hasselt and Diest from 1523 to 1527; Joos Swijssen worked at St Jacobskerk in Antwerp in 1561–2.

The name Hans Suys (*d* Amsterdam, between 1542 and 1544), occurs in a number of variants, including Suest, Suess, Zuess and also 'Hans Blangz' – the last evidently a translation of the form 'Hans Zwits', but based on a misinterpretation of the surname as 'White'. He is also sometimes given the cognomens 'von Nürnberg' (1498 and 1509) or 'von Köln' (1500, 1506–7 and 1511 onwards). He worked in Frankfurt Cathedral in 1498, in St Michel, Liège, in 1500 and 1513, in Strasbourg Cathedral in 1506–7, 1511–12 and 1516, in Antwerp Cathedral, in 1509–14, in St Nikolai, Kalkar, in 1515–16, in Xanten Cathedral in 1518, and in the Oude Kerk in Amsterdam from 1539 onwards (with Heinrich Niehoff, then his partner) on an organ with three manuals and 25 stops, and elsewhere at various times. Hans Suys was one of the greatest masters in the history of organ building, certainly one of the most sought-after of his day. He was a leader both in his preservation of tradition (his Principal choruses continued to be praised long after his death and probably provided the model for Niehoff's equally acclaimed Principal choruses) and in his adoption

of innovations, notably the families of stops that first appeared in organs in the decades around 1500 in south-west Germany, having reeds with full-length resonators, Horn mixtures including tierce ranks, and narrow-scale flues. No other instrument of the period has so great a number of any of these features as Hans von Köln's Antwerp instrument of 1509–14; this organ was a fascinating prototype that sparked off the brilliant development of organ building in the Low Countries. His Amsterdam organ, which – owing to the contributions of Jan van Covelens and Heinrich Niehoff – also manifested the best qualities of the art of organ building in the Rhineland below Cologne, was later played by Sweelinck, and remained the standard model for the north Brabantine school for the next century.

It remains an open question whether Hans Suys is to be identified with Jan van Zwanenbroeck (in Delft, 1501), Jannes Zwaneberch van Cölen (Diest, 1502) and Magister Hans (Besançon, 1512 and 1517). Jasper Johannsen, Heinrich Niehoff's partner after Hans Suys's death, was a son of Johann (Brouckmann) of Münster, not of Hans Suys.

Suite. In a general sense, any ordered set of instrumental pieces meant to be performed at a single sitting; during the Baroque period, an instrumental genre consisting of several movements in the same key, some or all of which were based on the forms and styles of dance music; then and later, a group of pieces extracted from a larger work, especially an opera or ballet, such as *Carmen Suite* or *Nutcracker Suite*. The term (from the French, meaning 'those that follow' or 'succession') did not come into common use until the last quarter of the 17th century, but the kinds of set to which it was eventually applied had a long history, and pairing of dances may be found as early as the 14th century. The suite served not only as a form for newly composed pieces, but also as a convenient way to arrange existing pieces in groups for publication and especially performance. After about 1750 the 'classical' form of the Baroque suite, which included allemande, courante, sarabande and gigue, became obsolete along with the term. The idea of the suite, however, taken in its more general sense, continued to flourish under various guises, and the term itself has since been revived. This article is concerned primarily with the history and content of suites and similar sets in Western music, regardless of what they were called; for a comprehensive account of the uses of the term itself, especially in Germany after 1750, see Schipperges (1992), and for discussion of suite-like formations in non-Western musics see *MGG1* ('Suite', §B; H. Hickmann). *See also* SOURCES OF KEYBOARD MUSIC TO 1660, §2.

1. TERMINOLOGY. 'Suite' entered the terminology of music in 1557 as a designation for a group of branles (see §3 below), and continued with that meaning until such groups ceased to be danced. From then until the 18th century, however, it was also used to mean 'the following pieces' or 'one of the following pieces', and usage often shifted freely between these various meanings, as is suggested in a contract for music lessons in 1631: the *valet de chambre* of the Marquise de Maulny was to be taught to play 'les Branles de Belleville et suittes d'iceux, avecq les diminutions, les ballets de Monsieur avecq touttes leurs suittes' on his violin. The broadening application of the term and the uncertainty whether it meant 'group' or 'succeeding pieces' are also apparent in a letter written by Constantijn Huygens to Du Mont in 1655: 'ie vous ay faict copier toute la suite de ceste mesme Alemande'. The first writer to describe the suite (or 'suit') as a composite musical form with a conventional order of pieces resembling that of the 'classical' suite (see §5 below) was the Englishman Thomas Mace, according to whom it consisted of an improvised prelude followed by an allemande, ayre, courante, sarabande and toy 'or what you please', all linked by a common tonic and 'some kind of Resemblance in their Conceits, Natures, or Humours' (*Music's Monument*, 1676, p.120). Mace's introduction of the French-derived term is evidence that 'suite' as a term for groupings of allemandes, courantes and sarabandes had already been long established among lutenists in France, whence it probably came to England along with French tuning and musical styles. Four years before Mace, the term 'suite' first appeared in print as the heading for groups of diverse dances (i.e. not branles) in Adam Drese's *Erster Theil etlicher Allemanden, Couranten, Sarabanden, Balletten, Intraden und andern Arien* (1672). It was first used in the title of a collection in 1674, in Dietrich Becker's *Erster Theil zweystimmiger Sonaten und Suiten*, however, as late as Walther's *Lexicon* (1732), where the allemande is likened to a rhetorical 'Proposition, woraus die übrigen Suiten, als die Courante, Sarabande, und Gique, als Partes fliessen'.

'Sett' was used by Mace as a synonym for suite, and was so used from time to time up to the 20th century (e.g. Henry Symonds, 1733; Henry Cowell, 1957). In *The Musicall Grammarian* (1728) Roger North also spoke of 'setts of musick w[hi]ch were called fancys', in which a fantasia is followed by dance movements (*see* FANTASIA-SUITE). But 'set' more often meant a number of works of the same type, and except for sets of variations, it does not normally imply performance at a single sitting. During the 1750s, when the English keyboard suite was being replaced by the sonata, the meanings of 'set', 'sonata' and 'lesson' became confusingly tangled. Barnabas Gunn (1750) used 'Six Setts of Lessons' as the title of a print consisting of six multi-movement works headed 'lesson', not 'sett'. J.-C. Gillier (1757) did the same, while William Felton (1750 and 1758) and J.C. Smith (1755) put 'suits of lessons' in their titles and used 'lesson' to head what are in effect sonatas. Finally, both 'set' and 'suit' were dropped from Gillier's *Eight Sonatas or Lessons* (1759). Another careless use of 'suite' is to be found in Roseingrave's edition of 42 Scarlatti sonatas, which are, of

course, single pieces: *XLII suites de pièces* (1739), translated later as *Forty-two Suits of Lessons* (1754–6).

Both 'sonata' and 'sinfonia' have from time to time been applied to suites, even when the contents seem entirely removed from the influence of the Italian SONATA DA CAMERA, as in Silvius Weiss's *Sechs Sonaten* for lute (in manuscript). The interrelations of suite and *sonata da camera* are intricate, especially when the latter designation was used by non-Italians. Johann Rosenmüller seems to have been the first German to call a collection of suites *Sonate da camera* (1667, reprinted three years later), but he had been living in Venice for at least seven years, and the term 'sonata' had in any case been thoroughly naturalized in Germany long before. Rosenmüller's *sonate da camera* are ensemble suites of the type he had been composing since 1645 with added introductory sinfonias. A wavering between sonata and suite may be seen in violin music at the beginning of the 18th century, particularly as the influence of Corelli was felt. François Duval (1704) used 'sonata' and 'suite' interchangeably to designate sonatas, while J.C. Pez entitled a collection *Sonate da camera or Chamber-musick consisting of Several Suites of Overtures and Airs* (?1710).

Other terms that were used in the sense of suite include PARTITA (*Parthie*, *Partia* etc.), OVERTURE and, rarely, ORDRE. The use of 'ouverture' as a designation for suites beginning with an overture was typically German and can be traced to Kusser (1682) and Erlebach (1693); then, beginning in 1697, to the publications of 'Ouvertures avec tous les airs' from Lully's operas by Estienne Roger of Amsterdam, who had a wide German distribution (see Schneider, 1989, and §7 below). The Germans also had a great affection for collective titles that indicated the social attitudes and intentions behind their vast production of suites. They may be roughly classified as 'pleasure' (J.C. Pezel, *Delitiae musicales*; Esaias Reusner (ii), *Musicalische Gesellschafts-Ergetzung*; Andreas Werckmeister, *Musicalische Privatlust*), 'garden' (J.A. Reincken, *Hortus musicus*; J.C.F. Fischer, *Musicalisches Blumen-Büschlein*), 'table' (Schein, *Banchetto musicale*; Biber, *Mensa sonora*; and a variety of *Früchte*) and 'deprecatory' (David Kellner, *Handvol kurzweiliger Zeitvertreib*; Matthias Kelz (ii), *Joco-seria harmonia sacro-profana*). These titles were usually followed by a listing of each type of piece in the collection; the division into suites, at least in collections before about 1675, can only be deduced from an examination of the contents.

France was the last country in the 18th century to abandon 'suite' as a living musical term. In 1767 C.-F. Clément finally dropped it as a designation for the groups of arrangements from favourite operas in his *Journal de clavecin*; at the same time (without introducing the term 'sonata') he put the middle 'movements' of his groups in contrasting keys. N.-J. Hüllmandel's *Six divertissements ou IIe suite de petits airs* (1783), Joseph Pouteau's *Potpourri, ou Suite d'airs* (1782), or *Deux suites* in Michel Corrette's hurdy-gurdy method (1785) show in what surroundings the suite fell into disuse. For the next half-century and more, the suite was memorialized in music dictionaries as an obsolete genre and term, with the exception of music for military band, especially French, around 1800 (for example G.-F. Fuchs's *Suite militaire*; see the articles on 'Suite' in the dictionaries of Castil-Blaze and Lichtenthal). Schumann, in his review of William Sterndale Bennett's *Suite de pièces* op.24 (1842) – one of the first serious examples of the form in the 19th century – called it a 'good old word'. Gradually, 'suite' worked its way back into the normal terminology and practice of music and by the latter part of the century it was again used by composers and arrangers. In dictionaries, however, it continued to be treated as a historical term whose meaning had crystallized roughly along the lines of Bach's 'English Suites'.

2. THEORY. Nearly all attempts to discover principles of the suite have suffered from an excessively restricted view of the repertory, most writers confining themselves to music with direct relevance to Bach. Underlying this approach has been the Darwinian notion of an organic form, the issue of a single act of composition, evolving from the *Tanz-Nachtanz* pair via the sturdy craftsmanship of Peuerl and Schein and the genius of Froberger to the supreme artistry of Bach, through a process of continual annexation of foreign elements and their integration into an ever higher governing plan. This conception can be found expressed over a century ago in ludicrously chauvinistic terms by Spitta (Eng. trans., ii, 84ff) and later more judiciously by Beck (Mw, Eng. trans., 1966, p.52). It was inevitable that Bach's suites should have tempted scholars to discover in them a constructive principle which, once identified, could be taken as the essence of the suite idea and traced back through this evolution, serving as a basis for comparative analysis. By shutting out the period of the Thirty Years War in Germany and most French and English instrumental music of the first 60 years of the 17th century, it is just possible to discern a historical process (painted in *trompe l'oeil*) wherein a suite principle might be concealed. Some of the principles that have been proposed are decreasing stylization (Besseler, Pearl), the alternation of stepping and leaping dances (Norlind, Seiffert, Riemann, Nef and others), the alternation of company and couple dances (Klenz, in connection with the *sonata da camera*), and the alternation or pairing of tempos and degrees of tension (Reimann and others). From such principles it is also possible to proceed to theories of 'open' and 'closed' forms (Reimann) and to systems of classification, like *Kunstsuite* versus *Gebrauchssuite* (Blume).

In all this theorizing and in similar unitary views of the suite there is the palpable implication of an analogy between suite and sonata. Marpurg was one of the first to imply it when he said that 'a series of three or more keyboard pieces that are related to one another and so made that they cannot be separated but must remain together and be played one after the other ... is sometimes called a suite ... and sometimes a sonata' (*Clavierstücke*, i, 1762, p.5). A remarkable amount of the speculation about principles of ordering is based on fixed ideas of the character of the dances, which in fact changed greatly during the course of the 17th century. The sarabande, for example, was sometimes fast and sometimes slow, and it is by no means always possible to tell from appearances what the speed is supposed to be. The gigue, especially, existed in radically varying guises, and one cannot be sure of the correct way of playing the many examples in 2/2 or 4/4 time. Far more important is the fact that the majority of suites, taken over the whole history of the genre, are simply too diverse to support a unified theory. Furthermore, for a large number of them, including some very influential ones like those from Lully and Handel's 'Eight Great' harpsichord suites, the composition of the pieces

and their arrangement in order were two separate acts, sometimes carried out by two different people. Often it cannot be known how a suite came to be in its existing form. Finally, one cannot even be sure that many series of pieces (especially French ones) were meant to be played one after another at a single sitting. In practice, French lute and harpsichord pieces were more often than not played out of context, especially at home and in informal settings.

If the search for a principle of the suite is futile, there may be, nevertheless, one characteristic that always distinguishes suites from other multi-movement works. The quality of an aggregate – the character of a pastiche – seems never to be wholly absent. Unlike a sonata, a suite normally consists of individual pieces whose identity derives partly from the outside, even when one piece is generated from another by rhythmic transformation, as in a variation suite. Usually the pieces are based on the pre-existing forms and styles of dances, but they may also have programmatic associations indicated by titles, or they may actually have been assembled from some pre-existing work like a ballet. The suite character of Berg's *Lyric Suite*, to choose an example apparently far removed from a pastiche, is suggested by the tempo markings: Allegretto gioviale, Andante amoroso, Largo desolato, etc.; each piece seems to be devoted to an explicit affection – as we now know, the work follows a secret programme.

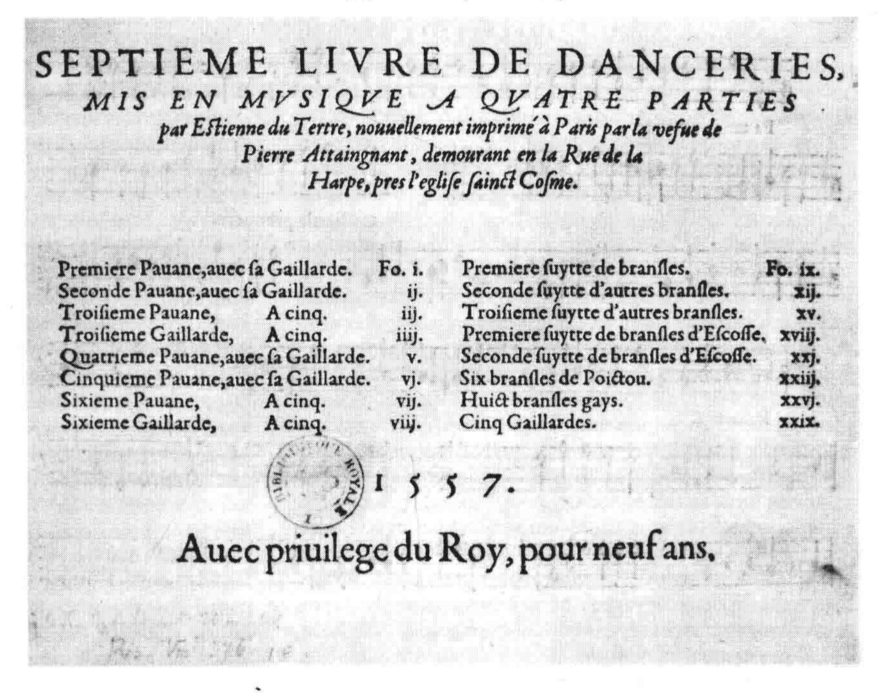
In the late Baroque period, when the interaction of sonata and suite was complex, tonality became a useful test of whether a piece should be called one or the other, and it was so recognized by 18th-century writers. The principle that all the pieces of a suite are in the same key became a part of dictionary definitions up to the present (a principle abandoned after 1800 by composers, needless to say). A rationale for key unity was invented; it was said that suites do not change key because of the difficulty of retuning one's lute (only the basses needed retuning), as if this slight difficulty should determine the tonal plan of suites for all media, but not of sonatas. Given the nature of the suite as a gathering-together of pieces, it was only natural that one of the oldest classification systems of Western music should govern the grouping: that of mode or key. Until tonality was explicitly recognized as a structural resource it would not have occurred to musicians to juxtapose whole pieces in different keys for tonal contrast (the odd exception by Marini or Jenkins notwithstanding). The tonal variety in the sonata was a result of its ancestry in single, multi-sectional pieces like the canzona, in which cadences in various keys succeeded one another. When composers finally recognized the suite as a genre in its own right, the tradition of key unity was already strong enough to have acquired the momentum to carry it well into the 18th century. This tradition did not prevent composers from contrasting the major and minor modes, however, a practice that was especially common in paired, alternating dances from the last quarter of the 17th century.

The unification of the suite by other than tonal means has been an intermittent concern of composers throughout its history. The true variation suite is the most obvious manifestation of this concern, but much more common is a linking of two or three (rarely all) pieces by thematic similarities that are sometimes unequivocal but perhaps more often vague enough to make it difficult to decide whether they are intentional, the result of chance, or the

workings of the subconscious mind. In Handel's suite no.6 from the 1733 collection, for example, the courante is hardly more than a triple-metre version of the allemande (ex.1). A courante by Hardel (*F-Pn* Vm⁷Rés.674, f.35*v*), a pupil of Chambonnières, is also unmistakably based on the allemande (f.34*r*), but it is freer in its details (ex.2). In J.S. Bach's first cello suite, however, the thematic relationship is much more subtle, and only the emphasis on the *b–c′–b* at the top of the figuration suggests that it was not unintentional (ex.3).

The English fantasia-suites of the 17th century were often terminated with 'conclusions', outside the tempo and form of the final piece, which must be interpreted as a way of rounding off the whole work, and thus conferring a sort of unity on it. The same device was also used by Hieronymus Gradenthaler (1676), Pezel (1678) and Biber (1680). Preludes or introductions can produce the same effect; the longer they are, the more the following dances are felt as appendages, thereby seeming to depend upon

the opening movement and to form a whole with it. Large-scale symmetries or balance within suites suggest the effort to construct a composite whole (see below in connection with D'Anglebert and Christophe Moyreau). Finally, the movements may be connected by half-cadences or they may be continuous with one another, as often happens in the 19th and 20th centuries (in Tchaikovsky's *Nutcracker Suite*, for example). In later suites, tonal contrast of the inner movements produces the unity of an arch form.



3. Early history to about 1600. The earliest instrumental dances to have survived come from the early and late 14th century in two manuscripts of French and Italian provenance respectively (*F-Pn* fr.844 and *GB-Lbl* Add.29987). Each contains eight *estampies*, numbered from one to eight in the earlier source and provided with titles in the later. In neither case is it a question of sequential performance, however, and hence of a 'suite'; the length and complexity of the individual pieces, as well as the fact that they are in different keys, make this unlikely. But two other much shorter pieces in the Italian source, entitled *Lamento di Tristano* and *La Manfredina*, are each paired with a faster-moving piece using the same thematic material condensed and speeded up, called 'La Rotta'. Here, among the earliest examples of notated dance music, is evidence of what was probably an ancient tradition that carried forward to form one of the many evolutionary threads of Renaissance and Baroque suite composition: the *Tanz* and *Nachtanz*, a pair of dances of which the first was danced with low or gliding steps and the second with high or leaping ones, and whose most familiar English manifestation was the pavan and galliard.

The surviving dance music of the 15th century is contained chiefly in dance manuals and collections of basse danse tenors. The dance manuals, notably those of Domenico da Piacenza (or da Ferrara; 1445), Antonio Cornazano (1455), Guglielmo Ebreo da Pesaro (*c*1463, also published under the name Giovanni Ambrosio as he was later known), supply evidence that confirms and illuminates what is adumbrated in *La Manfredina* and *Lamento di Tristano*, namely a practice widespread in Italy and extending to Germany of creating pairs and sometimes larger groups of dances out of the same material. In the case of the archetypal bassadanza–saltarello pair, the material was a *tenore* (cantus firmus) which served as the basis for improvised polyphony. It could be danced in four mensurations, corresponding to four dance types: the grave bassadanza, the moderate quadernaria, the livelier saltarello and the quick piva. Three and even four of these were used in the pantomimic balli, though the norm for ordinary dancing was the pair (*see* Basse danse).

The French equivalent of the bassadanza–saltarello, known principally through the dance treatise of Michel de Toulouse (1480s) and the magnificent manuscript *B-Br* 9085, was the basse danse and *pas de Brabant*, though the evidence for coupling the latter to the former is indirect. The combination was called *basse danse majeure*, and the freer ballo, *basse danse mineure*. An internationally popular example of the latter, *Rôti bouilli joyeux*, in the version in the Brussels manuscript (facs. in J.L. Jackman, ed.: *Fifteenth-Century Basse Dances*, Wellesley, MA, 1964) shows certain features linking it to the suite idea (see Heartz, 'A 15th-Century Ballo', 1966). Three dance tenors in three different kinds of rhythm succeed one another: 'Roti boully ioyeulx en pas de breban'; 'Lomme et la famme ensemble doibvent faire cecy deux fois. Et puis sensuit la basse danse'; and the basse danse itself with choreographic directions. Evidently the order of basse danse–*pas de Brabant* was reversed for the *basse danse mineure*. The order was determined by choreographic rather than musical considerations, but to the ear the result would have been a set of three rhythmically contrasting pieces unified by the melodic similarity of the tenors of the first and last and enlivened by the improvised accompaniments of the other instruments.

Although no written part-music clearly intended for dancing has survived from the 15th century, an idea of the probable character of these accompaniments can be formed from a four-voice dance pair discovered and published by Heartz ('Hoftanz', 1966); a 16th-century source (*D-Bsb* 1516) also offers evidence of the penetration of the basse danse into Germany under the name of 'Hoftanz', albeit with rhythmic modifications. In this case, the afterdance, called 'Tripl' (another term, 'Hoppertanz', suggests saltarello), is based on a different tenor from that of its companion, whose tune, *Le petit Rouen*, appears in basse danse sources of the preceding century.

Some time in the later 15th century, a new kind of basse danse appeared, called 'commune' (the older type being then called 'incommune'). The first polyphonic examples

1557.

Auec priuilege du Roy, pour neuf ans.

1. Title-page of Estienne du Tertre's 'Septième livre de danceries' (Paris: Attaingnant, 1557)

now known, those in Attaingnant's lute and ensemble collections of 1530, were based not on the old tenors but mainly on the newly fashionable *chansons musicales*, adapted to fit the two sections of 20 and 12 steps into which the variable 15th-century choreography had crystallized. The second section, called by Attaingnant *recoupe*, by Arbeau *retour*, and more generally *moitié*, was often followed by a third piece, of independent lineage, called 'tourdion'; and the three, unified by key, though not necessarily by musical material or even mode, were recognized as a typical set as late as 1589 by Arbeau (Heartz, 1964).

Another grouping of three dances, descended from the second, third and fourth mensural transformations of the bassadanza, made its appearance in the fourth book of Petrucci's *Intabolatura de lauto* (1508). Here the arranger, J.A. Dalza, called attention to what he must have felt was an important feature of his collection: 'Nota che tutte le pauane hanno el suo saltarello e piua'. In 1546, Dalza's grouping of pieces was used (rhythmically, if not in the choice of terms for the dances) in a tablature by Antonio Rotta, and, with the second and third pieces reversed, in another by Domenico Bianchini of the same year. This new order, in Bianchini's terminology, *Pass'e mezzo, La sua padoana, Il suo saltarello*, was taken up in the four collections of 1561–79 by Giacomo Gorzanis and in Matthäus Waissel's tablature of 1573. The Italians continued in general to base all the dances of a group on the same thematic material, using techniques involving variation on a ground, parody and paraphrase. P.P. Borrono (1536, 1546 and 1548) was an exception with his sets, which consisted of a pavan followed by three saltarellos, of which only the first was derived from the pavan. The second of these collections contains a remark indicative, like Dalza's, of a concern for the overall form of his groups in performance: where the last two saltarellos are missing, one should borrow them from other groups. Here an Italian was recommending explicitly what others had tacitly practised, namely the occasional compilation of suites from independent sources.

The first known groups of pieces bearing the name 'suite' were the *suyttes de bransles* in Estienne du Tertre's *Septième livre de danceries* of 1557 (fig.1). Arbeau (*Orchesographie*, 1588) described many sequences of branles, a common one being *branle double, branle simple* (these two sedate ones for the elderly at a ball), *branle gay* (for the young marrieds), and *branles de Champagne* or *de Bourgogne* (for the youngest and most agile). For Arbeau, the gavotte was a 'miscellany of double branles, selected by musicians and arranged in a sequence' (Eng. trans., 175); here and elsewhere (pp.129, 137) he made it clear that it was normally the musicians at a dance who assembled the branles into suites, drawing on their memory or on tablatures in which the branles were classified by type, if at all, and ordering them according to the demands of the dancers or current fashion. Thus, with rare exceptions, the printed 'suites' of branles constituted the raw material for practical use, and not the finished products themselves; for the groups as played, there could be no question of musical unification beyond similarity of key.

The vast majority of dance groups from the 1540s to the end of the century are pairs; and of this majority, the overwhelming majority again are pairs of which the first dance is either a pavan or a passamezzo and the second either a galliard or a saltarello. Since the two dances in each position are rhythmically and historically related, the actual variety of pairs drawn from these four dances is smaller than the names might suggest. Normally, the dances of a pair are based on the same material – one of the passamezzo progressions, perhaps with a tune as well, a vocal piece, an earlier version of one of the dances and so on.

Here, not less than in larger dance groups (branles excepted), the tangential relation to variation sets is obvious, and with the expansion of the individual dances of a group into subsets of variations, either written or

improvised, to meet the requirements of the ballroom or to amuse the amateur player, variation and suite became increasingly interwoven. Two ambitious complexes by Giorgio Mainerio (first printed in *Il primo libro de balli*, 1578) are essentially expanded passamezzo-saltarello pairs in which both dances are followed by a *ripresa* (which carries on with the rhythm and certain motifs of the parent dance but abandons its phraseology and passamezzo progression). The first three of the resulting four sections are presented in three to five 'modi', or variations. Each complex has a total of 13 strains, all more or less related thematically. Such complexes became very common in German lute music.

In Italy, France and England towards the end of the century the development of entertainments involving both theatrical and social dancing (mascheratas, balli, *ballets de cour* and masques) brought further initiatives with consequences for the suite. Successions beginning with an entrée or intrada and continuing with varied dances were either chosen from among current social types or specially composed to accompany mimed action. On the evidence of the music that has survived from these early, quasi-theatrical festivities – most of it known in early 17th-century arrangements for lute (Robert Ballard, 1611 and 1614) or ensemble (Praetorius, 1612) or through the schematic renderings of André Philidor (1680–1700), or through dance manuals (Fabritio Caroso, 1581, Cesare Negri, 1602) – groups of pieces were unified by key and sometimes by subtle thematic connections, though not usually by variation procedures. Contrast was achieved through rhythm, shifts of mode, occasional harmonic surprises (Ballard, ballets *Des esclaves* and *Des chevaux*), and, if Ballard's versions reflect anything of the originals, sharply distinctive textures.

4. Early 17th century. The two decades preceding the Thirty Years War saw an extraordinary burst of creativity in European instrumental music, accompanied by and perhaps partly resulting from a lively exchange of musicians among all countries and a growing consciousness of national styles. The English presence throughout northern Europe was especially prominent during this period owing to the travels of the musicians themselves and to extensive German publication of their works. Italy continued to be a magnet and a training-ground, and the traffic between England and France was intense because of royal connections. France exported dancing-masters and lutenists, and German anthologists made a special place for Polish dances in their collections. The Low Countries were a crossroads and haven for exiles; the Italians took up the Spanish guitar and its music with enthusiasm. All this mobility left its mark on the suite, though it is not always possible to tell in what direction the influences were moving because of the lack of dates to establish precedence.

The usual groupings of dances of the late Renaissance persisted until after 1600, though the popularity of the ensemble canzona in Italy apparently diverted further development of the large passamezzo complexes from ensemble to keyboard (e.g. a 30-page *Pass'e mezzo antico di sei parti* and *Saltarello* in Giovanni Picchi's *Intavolatura di balli*, 1621, for harpsichord). The favourite dance in Italy was the galliard without pavan, which was rare in Italy at this period (G.F. Anerio and Salamone Rossi, 1607; also G.M. Trabaci, 1615, with nine galliards in a row).

It was mainly in the field of practical dance music that the Italians produced suites during this period. Antonio Brunelli published a 'balletto' 'danced by the noble ladies of Pisa' in a version for five voices with text and an ornamented intabulation for chitarrone 'per sonare solo senza cantare' (*Scherzi … libro terzo*, 1616). It consisted of a *ballo grave*, a *seconda parte in gagliarda*, and a *terza parte in corrente* all related thematically (Nettl, 1921). Two years later, Lorenzo Allegri brought out a collection of eight balli, each with a note giving the occasion of its performance (*Il primo libro delle musiche*, 1618). The first (printed in Beck, 1964) has the same scheme as Brunelli's. Others have four or more pieces, including two *brandi*, a *canario* and a *gavotta*. In both Brunelli and Allegri, the dances are derived from the first of the group by rhythmic transformation. In Monteverdi's *Scherzi musicali* of 1607, there is an *entrata* followed by seven texted dances in contrasting rhythms. The dances have but one strain and several are connected by half-cadences (the composer may be Monteverdi's brother, Giulio Cesare).

One of the liveliest figures in Germany at the turn of the century was Valentin Haussmann, who gathered Polish and East Prussian dances for his collections and also included English pavans and galliards in a publication of 1604. Like Brunelli's balletto, Haussmann's many dance pairs show the overlap between vocal and instrumental music at the time. His *Neue liebliche Melodien* (five editions, 1598–1606) have German texts but are 'mehrern theils zum Tantze zu gebrauchen', and some of his *Neue artige und liebliche Täntze* (six editions between the same years) are texted, some not. In the preface to *Venusgarten* (1602), Haussmann confirmed what common sense suggests: that after-dances could be improvised where needed; at the same time, he made a puzzling distinction: as an alternative to extemporization, the players might follow 'Polish usage' (unexplained). Other composers or anthologists of ensemble dance music in the first decade of the 17th century were Coler, J.C. Demantius, Melchior Franck, Balthasar Fritsch, Johann Groh, H.L. Hassler, Georg Hasz, Mathias Mercker, Johann Staden and Johann Staricius. Christian Hildebrand of Hamburg brought out two important collections containing much English music in 1607 (with Zacharias Füllsack) and 1609. The younger Bernhard Schmid's keyboard tablature of 1607 ends with 12 galliards. A few passamezzo complexes for lute are in the Gresse manuscript (*NL-Uim*) and the tablature of J. Arpinus. In general, groupings in all this production are confined to *Tanz–Nachtanz* pairs, with other dances distributed at random in the sources or else (especially in the case of galliards) arranged by type.

With the exception of the lute tablatures of Anthoine Francisque (*Le trésor d'Orphée*, 1600) and the expatriate J.-B. Besard (*Thesaurus harmonicus*, 1603), and an anonymous collection of *Airs nouveaux et chansons à dancer … bransles, voltes, courantes, ballets & autres* (1608), there is a remarkable lack of dated sources for French dance music from these years. But the evidence of what remains and of slightly later sources like Robert Ballard's lute tablature of 1611 makes it clear that the typical suites were sets of airs from ballets or the traditional sets of branles. Other dances were classified by type – Besard devoted whole volumes to a single type. Within these volumes, pieces with the same tonic (but

sometimes with different tunings of the bass strings) were grouped together. The French were not interested in dance pairs of the German type, though the varied repeats in Ballard's pieces exhibit a richly developed technique based perhaps on English models but emphasizing broken textures rather than 'divisions'.

Across the Channel, the pavan–galliard complexes continued, reaching their limit of expansion perhaps in Scotland with William Kinloch's 'lang' pavan and galliard for keyboard from Duncan Burnett's music book (*GB-En*, *c*1615). This set, which runs to no fewer than 243 long bars, has the usual varied repeats in the pavan, and the resulting complex is again varied. But what is not so common is that the galliard is entirely based on the pavan and duplicates its pattern of variations (Caldwell, 1973).

The impulse towards new suite-like groupings seems to have emanated from England, the chief agents being William Brade and John Coprario. But there is no evidence to prove that the former did not find the stimulus for his ideas in Germany, or the latter for his in Italy; nor is it possible to say anything more precise about Coprario's fantasia-suites than that they must have been written before his death in 1626. Nothing is known of Brade before his appearance as an established musician on the Continent in 1594; his suites *a*5, consisting of paduana, galliard and either 'allmand' or 'coranta', cannot be completely explained by reference to either English or German practice, though his coupling in certain instances of a canzona (i.e. a free contrapuntal piece) with dance movements suggests a possible link with Coprario. In any case, the first publication anywhere to consist of suite-like groupings as a series of uniformly constituted composite works was Peuerl's *Newe Padouan, Intrada, Däntz und Galliarda* of 1611. The individual dances were simply numbered consecutively, as was to be the practice for the next 75 years, but the tenfold recurrence of four dances in the order indicated by the title, the key unity, and above all the similarity of thematic material make clear the composer's intention to compose integrated 'suites'.

The climax of this brief evolution, Schein's *Banchetto musicale* (1617), contains 20 sequences of paduana, *gagliarda*, *courente*, *allmande* and tripla. Here, the principle of decreasing stylization cited above (§2) can be seen at its clearest: the richly polyphonic five-part pavanes in the English manner resolve gradually to the less complicated textures of the popular allemande (the German *Tantz*) and tripla, the simplicity of these last two reflected in the reduction of the number of parts from five to four. The dances of each suite were so ordered 'dass sie beydes in *Tono* und *inventione* einander fein *respondiren*' (composer's preface); and indeed the thematic correspondence among the more stylized dances is varied, elaborate and often subtle. The tripla, on the other hand, is merely the allemande (itself a kind of reduction of the preceding dances to thematic essentials) transformed metrically, in the manner of an extemporized *Nachtanz*.

A year later, Isaac Posch (like Peuerl, an Austrian) published his *Musicalische Ehrenfreudt*, with some *Balletten* and 15 sets of three thematically related dances of which the second, a *Tantz*, corresponds to Schein's *allmande* and is similarly followed by its tripla. The first dance is either a galliard or a courante. Posch's title and foreword supply precious information about the way this music was used. As one might imagine, it was played at dinner, banquets, weddings, as well as 'andern erlichen Conviviis' in distinguished households; but the composer wrote that the *Balletten* were most suitable for the table, while the suites could be used either at table or afterwards for dancing. On the extemporizing of *Nachtänze* (he used the term 'Proportion'), he complained that the practice by 'most composers' of omitting the *Nachtanz* allows each musician to play it as he likes, leading to great disorder. A correct *Proportion*, such as the 'most distinguished present-day dancers' are accustomed to, is therefore provided for each *Tantz*.

Deeply rooted as it was in the Tanz-Nachtanz tradition, the variation suite occupied but a tiny corner of published German dance music of the first 20 years of the 17th century – four collections out of more than 50, all appearing between 1609 and 1618. Its importance was a matter of high musical quality rather than of representative or seminal force. Brade, Peuerl and Posch all went on to publish later collections, but none continued with the suite idea, reverting to the more usual pairs and miscellanies. It was nearly 20 years before another set of uniformly constituted suites, Vierdanck's *Erster Theil newer Pavanen, Gagliarden, Balletten und Correnten* (1637), appeared in Germany. The 11 suites of this collection also marked what may have been the first appearance in Germany of works for two violins and continuo. Vierdanck's pavans and galliards were related; nevertheless, the vitality had gone out of the variation suite, and although suites of thematically related dances continued to be written throughout the 17th century and into the 18th, as described above (§2), and although courantes were fairly often related thematically to the allemandes that preceded them, the only systematic collection of variation suites to be published was the *Hortus musicus* (1688) by Reincken, who also left eight variation suites for keyboard in manuscript (Hill, 1987). According to Niedt (pt ii, 1706, 2/1721), the composition of different suite dances on the same bass appears to have been cultivated as a pedagogical exercise around the time of Bach.

The *Terpsichore* of Michael Praetorius (1612) belongs to the history of French rather than German dance music. Praetorius said in his preface that most of the more than 400 tunes were given him by Antoine Emeraud, dancing-master to the Duke of Brunswick; those, Praetorius himself harmonized. Others had been composed by P.F. Caroubel, and of still others Praetorius had the treble and bass and supplied the inner parts. The melodies, if not all the settings, may safely be taken as representative of the repertory of the French court violinists under Henri IV. Somewhat less than half the collection is taken up with ballets and suites of branles. To what extent the former are complete or the latter were assembled by Praetorius himself is not clear. Neither the suites of branles nor the ballets always stay in the same key. The second set of branles, called 'Branle simple de Novelle', has its first six tunes (the same as the first six in the *Ballet des cornemuses*, Robert Ballard, 1614) transposed from D to C because players might find the key of D 'sehr schwehr und gar zu frembd'! There follow four tunes in D minor or D major and two more in C, after which one is to finish the suite with nine tunes from the preceding set, which is in G major and minor. Nothing is said about transposing to bring all these dances into the same key, though a general remark giving licence to transpose occurs in the preface. Transposition is not indicated for the ballets, however,

which sometimes drift through several keys (*Ballet de Monseigneur le prince de Brunsweig; Ballet de Monsieur de Vendosme faict a Fontainebleau*). The dances of the ballets are not thematically related. Some of the branle groups, however, are subtly unified through a similarity of the melodic curve (II) or of motifs (XIV).

5. THE CLASSICAL SUITE BEFORE THE ADDITION OF THE GIGUE. The 'classical' suite (the inverted commas are a reminder that the meaning is not 'the suite of the Classical period') is understood here to be the sequence allemande, courante, sarabande (hereafter identified as A–C–S) with or without a gigue (G) and with or without additional pieces. Reduplication of the dances, especially courantes, the addition of *doubles* (variations), the interpolation of pieces among the basic four dances, and the presence of introductory movements do not affect the 'classical' status so long as the basic condition is met that the suite should be of reasonable length for playing in a single sitting.

The development of the classical suite took place in two stages, marked off by the introduction of the gigue in the years around 1650. The gigue was never very firmly attached, however, and suites with an A–C–S core continued to be written in great numbers. Suites lacking one or two of these dances may be said at least to bow in the direction of 'classicism' if the remaining ones come at the beginning or just after the introduction. The beginning of this development can be located quite accurately in the decade 1620–30 and on the London–Paris axis; but at what point on the axis it occurred, or on the initiative of which composers, is not yet known.

Allemandes and courantes – though not as A–C pairs – are found in considerable numbers in Dutch and Flemish publications beginning around 1570, and when the two dances are listed in titles, the allemandes are usually mentioned before the courantes. This conventional order (with or without interpolated dances) persists in titles and is reflected in collections throughout the history of the two dances. It is so ubiquitous, in fact, that one must remind oneself that A–C pairs are extremely rare and can in no sense be considered an ancestor of the classical suite. The two dances are first found in regular juxtaposition only in connection with the sarabande, whose introduction seems to have had a catalytic effect on the formation of the suite. The first musical examples of the sarabande do not predate 1595, and the French type, the one incorporated into the classical suite, is much later (Devoto, 1966). The initiative for the A–C–S group must have lain in one of three places: with the dancing-masters of the French court, with composers of English consort and masque music, especially William Lawes, or with the Parisian lutenists. Buch (1993) noted instances from 1608 to 1617 of French court ballet groups beginning with a dance in duple time and ending with a sarabande. Lefkowitz (1960) claimed for Lawes a version of his *Royall Consort* dating back to the 1620s, which would put him among the first to combine A–C–S in one suite. Yet the first such groups that can be firmly dated occur in the *Tablature de mandore de la composition du Sieur Chancy* (Paris, 1629). This little-known publication, perhaps the most important single milestone in the history of the suite, contains six 'pre-classical' suites and a suite of branles whose contents deserve to be listed in full: *Recherche* (an unmeasured prelude) A–3C–S–*passemaise*–chanson–*volte* (*Ie veux mourir au cabaret*); *recherche*–A–2C–S; *recherche*–A–2C–S; *recherche*–A–3C–S; 7 branles; *recherche*–A–2C–S–*Les Rocantins*; *recherche*–A–2C–*volte pour Dardon*–S. It is not likely that a completely new kind of suite was invented for such a modest instrument as the mandora; furthermore, there is nothing tentative about the arrangement of these suites: the A–C–S core is unvarying.

The appearance of A–C–S groups coincides with two other developments in lute music: the introduction of new tunings and a thoroughgoing transformation of the style of the allemande from the square-phrased, popular Renaissance type to the stylized, quasi-contrapuntal, irregularly phrased type of the 17th century. In 1623 Robert Ballard had issued a collection entitled *Tablature de luth de differents auteurs sur l'accord ordinaire et extraordinaire*, in which some of the pieces evidently required modifications of the traditional Renaissance tuning (the *vieil ton*: G–D–F–A–D–G); unfortunately nothing remains but the title-page. In 1631 the same publisher put out a collection in which the *vieil ton* was abandoned altogether in favour of two new ones: G–C–F–A♭–C–E♭ and G–C–F–A–C–E. Here, for the first time, tunings may be observed influencing suite groupings. In Ballard's anthology, a dozen pieces by François de Chancy are divided into two groups of entrée (another term for an unmeasured prelude)–A–3C–S, the first in A♭ using tuning no.1 and the second in C using the other tuning. Later in the same collection, two A–2C–S groups by Chevalier are similarly differentiated, though the suite in tuning no.2 is in D minor instead of C. A looser and perhaps more typical group is that by Dufaut, all in one key and one tuning, and consisting of P–4A–5C–2S.

In 1625 Charles I married Henrietta Maria, sister of Louis XIII, and with the new queen came a new wave of French musical influence, which was felt especially as it impinged on the court masque. The sarabande, rare in masques before 1632, appeared suddenly after that date in 'hundreds' of examples at the end of A/Ayre–C–S suites (Lefkowitz, 1970, p.19). At the same time, manuscript copies of Lawes's *Royall Consort* began to proliferate (but see Lefkowitz's claim, cited above, of a version from the 1620s) in which the number and order of the particular pieces is never the same, but the scheme A/Ayre+–C+–S (+ means one or more), sometimes introduced by a pavan or a fantasia, frequently recurs in key groups as simple as A–C–A–C–S or as extended as Ayre–A–C–Echo–C–S–Pavan–3Ayres–C–2S–2Ayres–2C–A–C–S. His 'Harpe Consorts' are much more uniform; but in neither series are the suite groups marked with any headings.

There can be no doubt that the initiative for A–C–S formations lay elsewhere than in keyboard music. There is but one keyboard source containing allemandes, courantes and sarabandes even part of which can be dated with any certainty in the 1620s; this is a German keyboard tablature originating possibly in Rostock and bearing against one piece in the first section the date 1626 (*DK-Kk* kgl.saml.376). The allemandes, courantes, and sarabandes in this part cannot possibly be connected in groups, however (as has been claimed); the only plausible groups in the manuscript are much later and are in any case under the heavy influence of French lute music. The compilation of an important Sweelinck source (*D-Bsb* Lynar A1), though it may have begun as early as 1615 (Breig, 1967, Gustafson, 1976), extended over decades. There is but one A–C–S group and it comes at the very end. With the fantasia that precedes it, it is set off by

peculiarities which, while reinforcing the impression that a suite is intended, suggest that it was added well after the rest of the manuscript was complete. Not far back are eight courantes, most or all arranged from French lute pieces, showing that the compiler could not have written down his suite in ignorance of the Parisian repertory.

There is no evidence in French sources for a keyboard equivalent of the first lute suites; indeed, before 1650 there are no French keyboard sources of any kind that contain the classical suite dances, much less suites. Evidently French harpsichordists improvised diminutions on fashionable *airs* during this period, as Mersenne illustrated with Pierre de La Barre (iii)'s fragmentary variations on *O beau soleil* (1636), but the sudden appearance of all the suite dances and a few suites in numbers of keyboard manuscripts immediately after 1650 provides circumstantial evidence of a development of the genre extending back several years.

Although French orchestral music for ballets and social dancing before 1629 (some of it preserved in the late 17th-century manuscripts of André Philidor) might have suggested the formation of groups of dances beginning with a piece in duple time and ending with a sarabande (Buch, 1993), the surviving sources do not contain any A–C–S sets that could have supplied a model for the mandora suites by Chancy (see above), in spite of the fact that among the earliest sources of this music are transcriptions for lute (Robert Ballard, 1611 and 1614). A–C–S sequences must have been established in the repertory of French orchestral music well before 1650, however, since these formations had spread to Germany and Sweden by that time. The Kassel manuscript of orchestral dances, written between approximately 1650 and 1668 (Echorcheville 1906), contains, in addition to sets of branles, half a dozen A–C+–S sequences, incorporated in larger groups; a contemporary Swedish source (*S-Uu* 409) with concordances to Kassel has 35 varied suites reflecting French practice, most of them with an A–C–S framework (Mráček, 1976). The background to these groupings can only be surmised; the music is French, but the setting was German, and by the time the manuscripts were begun the Germans had already started publishing ensemble suites using allemande, courante and sarabande.

Italy's contribution to the classical suite can be briefly summarized. In ensemble music, the Italians kept the old Renaissance classification of dances by genre until well after the mid-century. The various groupings characteristic of the mature *sonata da camera* became general usage only in the 1660s and 1670s (Klenz, 1962). Torelli's *Concerti da camera* (1686), 12 three-movement suites for two violins and bass, begins with a single A–C–S; all the other groups are different. Groupings of two and occasionally three pieces, both dance and non-dance, were more common in Italian keyboard sources of the second and third quarters of the 17th century than modern editions would suggest (Silbiger, 1980), but although correntes are found in quantity, A–C–S groups were rare or non-existent. In 1650, Bernardo Gianoncelli ('Il Bernardello') published a theorbo tablature containing original little groups of 'tasteggiata', 'gagliarda' and 'spezzata' – the first being a prelude and the last a *double* of the second. Late in the century suite groups are found in the works of B. Pasquini, but these were based not on the classical model but on the *sonata da camera* (*ApelG*). Only the guitarists seemed to care for A–C–S groups, the most influential figures being A.M. Bartolotti (1640) and Francesco Corbetta (1643) (Pinnell, 1980). The French influence is clear, and one agent of transmission may well have been Pierre Gautier 'Orleanois', whose lute book, published in Rome in 1638, consisted overwhelmingly of allemandes, courantes and sarabandes loosely arranged in key groups.

In Germany, allemandes, courantes and sarabandes for instrumental ensemble after French models were published as early as the 1630s, but as in *DK-Kk*kgl.saml.376, and in the keyboard tablature of Regina Clara Imhoff of Nuremberg (*A-Wn* Hs.18491), compiled probably between about 1630 and 1645 for home use, they were not arranged in A–C–S keygroups but entered apparently without any plan. The titles of Andreas Hammerschmidt's *Paduanen,* [*Canzonen,*] *Galliarden, Balleten, Mascharaden, françoischen Arien, Courenten und Sarabanden* (1636, 1639) seem to acknowledge both the classical grouping and its origin, but the *Arien* turn out to be very different from allemandes, and there is only one keygroup with more than two dances. Kindermann's *Deliciae studiosorum* (1640–43) has some suites containing all three of the core dances, but in differing orders. A single A–C–S suite by Johann Schop (1640), set for three parts and included with some wedding music, (*MGG1*) appears to be the first German example and the first such suite to have been published outside France. Of about 550 ensemble suites published in Germany from then until 1700, a little over half consisted of the A–C–S core, with or without a gigue (see §6 below) or other additional pieces up to a total that averged around six and rarely exceeded ten (Whitehead, 1996). The main composers who contributed to the repertory without gigues were Johann Rosenmüller (1645, 1654, 1667), Nikolaus Hasse (1656), Werner Fabricius (1656), J.C. Horn (1663), J.H. Beck (1666, 1670) and Adam Drese (1672).

6. The classical suite after the addition of the gigue.

(i) England. The addition of the gigue to suite formations occurred in the decade surrounding 1650, apparently everywhere at once: Although there are no documents to prove it, it is likely that the gigue (or jig) was incorporated into the French lute repertory in the 1640s by lutenists who had visited or worked in England, such as Jacques Gautier. (While for convenience the French gigue is treated here as a single dance genre, in practice it varied from a duple-metre piece, indistinguishable on paper though probably not in performance from the allemande, with which it was often confused in the sources of French lute music, through a richly-textured, more or less homophonic piece in compound metre, like some by Louis Couperin and D'Anglebert, to an imitative type sometimes indistinguishable from the *canarie* – these last two in a variety of triple rhythms and, apparently, tempos.) There are no gigues in Ballard's large engraved tablature of 1638 nor any by Mesangeau, who died that year. On the other hand, there are several by Ennemond Gaultier, who died in 1651. Gigues by Denis Gaultier and Germain Pinel are found in sources that date from around 1650. From France the gigue appears to have spread rapidly through German-speaking lands along with the French lute repertory. Its incorporation into the classical suite, however, was irregular, occurring differently in different

places and repertories, and A–C–S–G never achieved the ubiquity of A–C–S.

England was the first country to print full classical suites with gigues. Playford's *Court Ayres* (1655) contains among its 245 pieces eight A–C–S–G groups by William Lawes (apparently), Sandley, John Cobb, George Hudson, John Carwarden, William Gregory and (?Valentine) Oldis. One is preceded by a praeludium, one by a pavan-almaine, and one only is incorporated in a larger series; otherwise, all are set off by a change of key or composer, so that they are clearly recognizable as suites. Yet there is evidence that the jigs (gigues) themselves were not considered a regular part of the suite: the ones attached to the two suites by Lawes were put there by the publisher; moreover, Playford's *Masquing Ayres* (1662) seems to repudiate the innovation. Of the 100 pieces from 1655, to which 200 new ones were added, there are but four A–C–S–G suites. Five of the above composers and their suites were omitted, the jig was dropped from one of Lawes's suites and another jig was transferred from one suite to a different one.

At this same period, the suite entered English keyboard music in the form of A–C–S groups by Locke (*US-NYp* Drexel 5611, *c*1650) and Thomas Strengthfeild (*GB-Lbl* Add.10337, 1656/7: see Caldwell, 1973, p.153-4), and of A–C–S–G groups (in *GB-Llp* 1040 and others: see Harley, 1995) by Benjamin Rogers (*GB-Och* 1236) and Sandley (*Musick's Hand-Maide*, 1663; the same one that was dropped from *Court Ayres*). The allemande by Locke ostentatiously mimics the French *style brisé*, in spite of Locke's recorded contempt for everything French except the occasional courante. His anthology, *Melothesia* (1673), has a Prelude–A–C–S–G by Locke himself and another with a 'rant' in place of the gigue; there is also an A–C–S–G set by Moss. There are other A–C–S–G suites in English sources of the later 17th century by Albertus Bryne (Cooper, *MT*, 1972), Blow, Francis Forcer and Purcell. Not only was the classical suite with gigue the exception rather than the rule, however, but those that did exist were no more immune from the loss or substitution of members than were the compilations in *Court Ayres* (see especially Caldwell, 1973, pp.183ff). Babell's collection (*GB-Lbl* Add.39569; facs. in Gustafson, 1977) consists entirely of suites compiled from the most diverse authors – English, French, Flemish, German. The lute suites in Mace's *Musick's Monument* (1676) end with a 'Tattle de Moy' instead of a gigue; otherwise they are more or less classical. In general, A–C–S, not A–C–S–G, continued to be the most common starting-point for the English suite, but a perusal of the tables of contents of several 17th- and early 18th-century keyboard collections (Caldwell, pp.182ff, 212ff) suggests that suite writing was a distinctly secondary concern of English musicians in the late Baroque period.

(ii) Germany. In a magnificent presentation manuscript prepared in Vienna in 1649, along with five A–C–S suites, Froberger included a single A–C–S–G suite, the first that can be dated (for illustration *see* FROBERGER). Froberger's suite style was manifestly based on that of French lute music, and his knowledge of Chambonnières' harpsichord pieces before 1649 is documented, but whether either was the source of his idea of attaching the gigue to A–C–S is unclear. Between 1649 and 1656, when he prepared a second manuscript similar to the first and containing six suites, Froberger spent three years in Brussels, with visits to Paris and London. His acquaintance with the art of the French lutenists and *clavecinistes* had broadened through personal contacts; his decision to make the gigue a regular part of his suites (five out of six in the new collection) and to move it from last to second place, just after the allemande, had some slight precedent in French music, and his duple-metre gigue notation was normal in French lute music. Still, his music is of a complexity and expressive intensity quite beyond anything French that he could have known, and his cultivation of the suite as a compact, closed unit, often knit more tightly by thematic links among the pieces, was characteristically German, not French.

The A–G–C–S order was remarked on by his contemporary, Matthias Weckmann: 'NB ... Undt so Setzt er Nun fast alle seine Sachen in Solcher Ordnung. NB' (*US-NH* Ma.21.H.59; after Riedel, 1960, p.97). It was found unacceptable and changed to A–C–S–G by Froberger's first publishers, Mortier and Roger, in 1697–8 and by Guido Adler 200 years later in DTÖ. Such revisions of the music of a great composer by editors in two different ages are striking proof of the stubborn hold of the classical suite on musical thinking. They serve also as a warning always to view with scepticism the arrangement of suites in sources known to have been prepared outside the control of the composer.

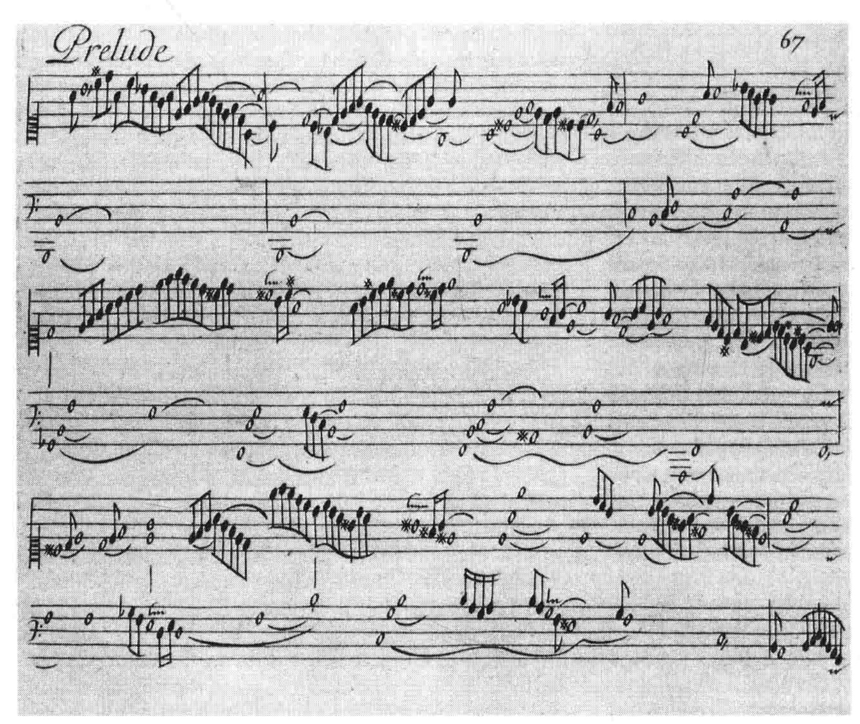
Weckmann wrote two keyboard suites in the A–G–C–S order and two with the gigue at the end, probably in the 1660s (Rampe, 1991). The title of a lost ensemble collection by the Alsatian P.C. Beck (1654) suggests an A–G–C–S core with interpolations and additions, and a surviving one by another Alsatian, J.E. Rieck (1658), has one A–G–C–S–gavotte and two A–C–S–G sequences (one with a gavotte before the gigue), apparently the first German ensemble suites with this order (Whitehead, 1996). During Froberger's lifetime (to 1667), the little keyboard suite writing that there was by composers other than him and Weckmann (e.g. by Kindermann) was on the A–C–S model. The lute collection *Delitiae testudinis*, published in the year of Froberger's death by Esaias Reusner (ii), consisted mainly of suites with the A–C–S–G core. From then until the end of the century almost every year saw at least one publication of suites built on the classical core for lute, keyboard, ensemble, gamba or violin (not to mention the many manuscripts of uncertain date). By the 1670s ensemble suites with A–C–S–G (usually including added pieces) were outnumbering suites based on A–C–S in this repertory (Whitehead). Chief among the 20 or so composers were J.H. Beck (1666, 1670), Reusner (1668, 1670), J.C. Pezel (1669, 1685), C.H. Abel (1674, 1675, 1677) and Jakob Scheiffelhut (1684, 1685). Unless the A–C–S–G suites of Alessandro Poglietti, J.A. Reincken or others known only in late sources have precedence, the first examples for keyboard and the first keyboard suites of any kind to be printed in Germany were the eight in Benedict Schultheiss's *Muth- und Geist-ermunternde Clavierlust* (1679–80). Other 'firsts' of which only the titles are known are J.P. von Westhoff's collection of A–S–C–G (the middle dances reversed) for solo violin without bass (1683) and prelude–A–C–S–G suites for gamba by Peter Zachau (1683).

The history of the German classical keyboard suite, so vital to an understanding of Bach, is beset with problems of dating and authenticity. Almost all of Pachelbel's suites have now been relegated to anonymity (Riedel, 1960);

two by Buxtehude are really Lebègue's; those of Kerll, Buxtehude, Reincken and Böhm resist dating. Almost the only important milestone after Schultheiss that can be precisely dated is Kuhnau's *Neuer Clavier-Übung*, 14 *Partien* that appeared in 1689 and 1692, whose planning and style must have deeply influenced Bach. Johann Krieger's *Sechs musicalische Partien* (1697) were 'practically unknown to his contemporaries' (Riedel). J.C.F. Fischer's *Pièces de clavessin* (1696) were outside the classical canon, having been inspired by the new Lullian orchestral suites. From the points of view of quantity and consistency of design, the suites of Kuhnau, Buxtehude and Böhm, along with the first publications of Froberger 'en meilleur ordre', may be said to have set the classical norm. The departures from the strict sequence of A–C–S–G may be quickly dealt with. Kuhnau's all begin with a prelude or other introduction and some of them close with a substitute for the gigue. In one case the sarabande is replaced by an aria, in one a gavotte is inserted before the gigue, and in several cases dances are provided with *doubles*. In the case of Buxtehude, three missing gigues and a missing sarabande may be copyist's omissions. The provision of an extra sarabande in four of the suites is unusual. Böhm has but one prelude; there is a gigue missing from one suite and replaced in another. (One of Böhm's suites is in the manner of Fischer.) The total number of almost strictly classical suites by these three composers is about 40, to which the ten engraved ones by Froberger should be added. One may assume that Bach knew most of them. In possibly over half of these suites (it is difficult to be sure in many cases) there is some degree of thematic similarity among the pieces, most often between the allemande and courante, but sometimes extending to the others. It is no wonder that these coherent, disciplined works have lured generations of musicologists into misleading theories about the nature of the suite. The German lutenists after Reusner, J.G. Peyer (*c*1672), Jacques Bittner (1682), S.L. Weiss (contemporary with Bach) and possibly others (e.g. J.G. Gumprecht) all adhered to the classical suite, as did Konrad Höffler, in 12 suites for gamba and bass (1695).

(iii) France. Although the French Baroque suite had its richest development in harpsichord music, the historical importance of that repertory for the development of the suite before 1670 is impossible to assess by any means other than conjecture, because of the lack of earlier dates and of sources in which the pieces are arranged in patterns resembling a suite. It was only two years before his death in 1672 that Chambonnières finally published a selection of 60 of his pieces, arranging them in groups apparently meant as suites, though not so headed. Most are based on the A–C–S core, and two end with a gigue. Many of these pieces must have been composed in the 1640s at the latest, and there is plenty of evidence of their wide and early influence. What is completely unknown, however, is whether they were originally conceived as members of suites, or even whether they ever circulated as such. A slightly more informative situation exists for the works of Chambonnières' brilliant putative pupil Louis Couperin, whose untimely death in 1661 provides a *terminus ad quem* for his approximately 135 pieces that is earlier than that of his master. Among them is a unique A–2C–S group that may be in his own hand (G. Oldham's private collection, London) and two further suites (one with gigue) that appear intact in two different late 17th-century sources.

Most of the subsequent harpsichord repertory, beginning with Lebègue's *Pièces de clavessin* in 1677, was printed (the principal exception being the 237 pieces by J.-N. Geoffroy), and nearly all of it up to the appearance of François Couperin's first book in 1713 was arranged in more or less 'classical' suites of greatly varying length and composition. Lebègue's two books furnish a clue to the late acceptance of the term 'suite', at least in French publications: in 1677 his suites succeeded one another with no collective headings, while in 1687 – 15 years after Drese's collection – designations such as '*Suitte En de la ré*' appear to have been added in any available space after the pieces were engraved. Lebègue's suites (whose notoriety, especially in Germany, exceeded their modest musical interest) – established a kind of loose norm for the French harpsichord suite that lasted until the appearance of François Couperin's first books. An unmeasured prelude – when not supplied, perhaps improvised – was followed by an allemande, usually more than one courante, and a sarabande. Occasionally an extra allemande or sarabande is found, and any of the pieces could be followed by a *double*. What set the French harpsichord suite apart from the German, besides the multiplication of courantes, was the closing group. instead of finishing their suites with a gigue, sometimes preceded by one or two *galanterien*, French composers chose three, four or more dances from a list at the top of which stood the gavotte, minuet and gigue, followed by the bourrée, canary, chaconne and others. Gavottes, minuets and sometimes other 'popular' dances often came in pairs, and the second of the pair was sometimes in the opposite mode or, rarely, in a different key. A return to the first dance of a pair after the second is occasionally indicated, but there are cases, even when the second piece is in a different mode or key, where a return seems to be ruled out. This pairing of dances, though probably derived from ballroom practice, does not appear before Lebègue, who may thus have been the first to introduce key contrast into the suite. The order within the closing group as well as its size appears to have been arbitrary, and it probably served occasionally as a bin for old pieces; but the last piece, more often than not, was a minuet. German scholars, including Reimann (1940, pp.44–5), have been baffled by the casual French attitude toward the suite, as witness Spitta, complaining about a suite by Marchand consisting of prelude–A–2C–S–G–chaconne–gavotte–minuet: 'The true idea of concluding with a gigue is either misunderstood or ignored' (*Johann Sebastian Bach*, Eng. trans., ii, 86).



This type of suite dominated in the works of Jacquet de La Guerre (1687 and 1707), Geoffroy (manuscript copied after 1694), Louis Marchand (1699 and 1702), Dandrieu (1704–5), Le Roux (1705), Rameau (1706) and Siret (1707/11 and 1719). It also served as a basis for the four published suites of D'Anglebert (1689), whose music constitutes one of the pinnacles of 17th-century keyboard music. In all his suites, D'Anglebert introduced his own transcriptions of other composers' music (see K. Gilbert's edn, Le pupitre, liv, 1975, where D'Anglebert's original music is separated from the transcriptions), and it is impossible to know whether these vast structures, covering from 20 to more than 30 pages in the original edition, were meant for performance at one sitting. The second

suite, the longest, is composed as follows: prelude–A–2C–C (Lully)–*double*–S–S (Lully, *Dieu des enfers* from *La naissance de Venus*)–G–G (Lully)–galliard–*passacaille*–minuet (Lully, *La jeune Iris* from *Trois pour le coucher de roi*)–2 gavottes (on traditional airs, *Où estes vous allé* and *Le beau berger Tirsis*)–vaudeville (*La bergère Anette*)–Lully, Overture to *La mascarade* (*Le carnaval*)–Lully, *Les sourdines* from *Armide*–Lully, *Les songes agréables* from *Atys*–Lully, *Entrée d'Apollon* from *Le triomphe de l'amour*–Menuet de Poitou–Lully, *passacaille* from *Armide*. All of these pieces, including the second gavotte are in G minor. A large manuscript from about 1680 in D'Anglebert's hand (*F-Pn* Rés.89ter) contains four considerably looser suites in which D'Anglebert's own pieces are outnumbered by the music of other composers, especially arrangements of Ennemond Gaultier's lute pieces. Composite suites like D'Anglebert's are by no means unknown in other French keyboard manuscripts of the period; for example, almost all the 29 suites in Babell's manuscript (see §6(i) above) are made up of pieces by more than one composer. In addition, two lute collections containing pieces by Denis and Ennemond Gaultier were engraved. All these doubtless reflected practical performance traditions.

Although French lutenists played an important role in the dissemination of the A–C–S core, they seem to have been indifferent to the further consolidation of the suite. The two books by Charles Mouton, undated but published probably between 1675 and 1680, consist of keygroups introduced by preludes, but the choice and order of pieces within the groups gives only the barest nod to the classical suite. An engraved book of pieces by Jacques Gallot (*c*1684) has two similarly loose keygroups of 15 and 16 pieces introduced by preludes. Nearly all the pieces by both composers are the traditional dances, but most of Mouton's and all of Gallot's also bear titles. This practice, rare earlier in French instrumental music, became almost universal in French harpsichord music in the 18th century (Fuller, 1997).

There were two striking (and unexplained) exceptions to the general *désinvolture* with which the French approached the suite. The first was offered by the earliest collections for the bass viol, for which instrument was compiled (in manuscript) the first dated prelude–A–C–S–G group after Playford's for any medium, and one of the very few French collections all of whose suites were of uniform composition (Du Buisson, 1666, *US-Wc* M2.1/Book.T2 17C). In 1685, Machy continued with eight suites of prelude–A–C–S–G–gavotte–minuet (the fourth prelude was a chaconne), which were the first printed pieces for the seven-string gamba. After him came Louis Heudelinne with three suites of prelude–A–C–S–G–gavotte (1701). This repertory, long ignored in writings on the suite, was surveyed by Schwendowius (1970). (The most prolific composer for the bass viol, Marin Marais, however, greatly padded and distorted the classical grouping after his first book of 1686.) The second exception was a book of six harpsichord suites of almost identical composition by Dieupart (1701), each beginning with an overture instead of a prelude, and each ending with a gigue preceded by a gavotte and minuet (in one case the minuet was replaced by a passepied). This collection, composed possibly under German influence and published in Amsterdam, was issued simultaneously in a version for flute and violin or figured bass.

(iv) Low Countries. The development of the suite in the Low Countries was not unlike that in the surrounding countries, so far as may be seen from the very slim repertory. The ensemble publications of Paulus Matthysz in the 1640s may have inspired Playford's slightly later ones; their contents were similar to contemporary German collections. The Gresse manuscript (last quarter of the 17th century) has Sandley's A–C–S–G from *Musick's Hand-Maide* and an anonymous Prelude–A–C–S–G

2. The opening of the prelude to the third suite from D'Anglebert's 'Pièces de clavecin', i (Paris, 1689)

whose pieces are related by head motifs. Bustijn's nine suites (between 1710 and 1716) are more German classical than French, though they do not always end with the gigue. The most significant activity with respect to the suite in the Netherlands was that of the Amsterdam presses, which made possible the wide dissemination of an international repertory for all instruments.

7. NON-CLASSICAL SUITES OF THE HIGH BAROQUE. Except for mid-17th-century French-influenced court dancing and entertainments, the classical suite was primarily a vehicle for solo or chamber music (in the modern sense) during a period of about 125 years beginning in the 1620s. The limitless repertory of suites lying outside the classical canon and fading off to merge with other categories can, paradoxically, be dealt with much more summarily, because the categories and types were a function of application, and their history and morphology were determined by external circumstances. The formation and disappearance of suite types responded to practical, dramatic and musical needs that were (and are) a part of other histories than that of the suite: dancing, ballet and theatre; court and civil entertainment; concert programmes; neo-classicism; and so forth. There can be no question of 'development' of the suite across these boundaries, only of bodily transfer, obvious to the observer and needing no discussion. It is a curious fact that with the exception of the classical suite and the suite of branles, no conventional order of pieces ever emerged, even within a single category, so that one can hardly speak even of sub-developments of the non-classical suite as such.

The alternative to an interminable list of particulars is some kind of classification, but this should be regarded as a mere convenience and not as a comprehensive taxonomy. Standing on a middle ground between classical and non-classical suites are those of the French lutenists, which are made of preludes, allemandes, courantes, sarabandes, gigues and other pieces, but in arbitrary and ever-changing sequence. Most of the rest of the middle Baroque non-classical suite repertory is derived in one way or another from ballet. There is a very large category, divisible along national lines, consisting of the instrumental music from actual ballets and related entertainments.

This survives almost entirely in manuscript, and very little of it has appeared in modern editions. Praetorius's *Terpsichore*, the Philidor collections for France and those of the Schmelzers in Vienna (*A-Wn* 16583 and 16588) are three of the largest groups of such sources. The Schmelzers, who supplied ballet music for Italian opera in Vienna and for the famous equestrian ballets, often began with an intrada and closed with a retirada, but the dances between varied. Another category (all these are closely related) is made up of collections of instrumental pieces from diverse sources, but especially the operas and ballets of Lully, arranged in arbitrary suites whose pieces were drawn from different works. When such suites begin with an overture, one may speak of a third category; and when new suites were composed expressly in imitation of these, there is another very important category, the 'overture-suite', a speciality of the Germans from J.S. Kusser to Telemann. All of this could be and was used as *Tafelmusik*, but throughout the Baroque period ensemble collections were also expressly designated as music for dining, especially by the Germans, and such collections constitute still another category. Any of these ensemble types could be transferred to the keyboard, either directly, as transcriptions, or indirectly, as new compositions in the same manner. Finally, key groups of pieces with titles and no clear identity as dances could form suites, especially for solo instruments. Often such suites began with an allemande, or even an allemande and a courante, as a kind of gesture to tradition, but continued with character-pieces inspired by the moment.

These classifications are far from mutually exclusive. Biber's *Harmonia artificiosa-ariosa* (posth.) and *Mensa sonora* (1680), both collections for entertainment or the table, contain suites whose variety may serve to exemplify many in the latter part of the 17th century. They range from a near-classical arrangement of Sonata–A–C–S–Gavotte–G–Sonatina (a seven-bar 'conclusion'), and a Viennese ballet type with Intrada–Balletto–Trezza–G–Gavotte–G–Retirada, to a French-inspired Prelude–A–Amener (i.e. *branle à mener*)–Balletto–G–Ciacona.

Behind much of the kaleidoscopic non-classical suite production of the middle and late Baroque stood the giant figure of Lully. Though Lully himself wrote almost no suites as such (the arbitrary successions of *Trois pour le coucher de Roi* make no sense as sets), pieces from his stage works were used almost everywhere for the making of suites. It was for Louis XIV himself that the greatest number of these pastiches were assembled, and their remains are in such manuscripts as *Suite des symphonies des vieux ballets de M. de Lully ... qui se joüent ordinairement entre les actes des comédies chez le roy* (1703; *F-Pn*), containing 22 sets, each beginning with an overture (in spite of the singular form of 'suite'), and *Suite des symphonies et trio de M. de Lully ... pour les petits concerts qui se font les soirs devant sa majesté* (1713; *F-Pc* Rés.F 670), containing 66 suites, the titles of which indicate two of the uses to which such suites were put. The works of other composers were used for similar collections (as in *F-V* Mus.1134–8, which contains no fewer than 835 pieces in 83 suites drawn from André Philidor, one of the Marchands, Lalande, Campra and Charpentier). Lalande's *Sinfonies pour les soupez du roy* (*F-Pc* Rés.581) were on the same model; a note to the table of contents explains that all the *airs* were taken from Lalande's ballets and divertissements. There are 12 'suites', so called, each of which consists of at least two keygroups. The fifth, for example, has Overture–2 *airs*–Chaconne in B♭; 3 *airs*–2S–*Grande pièce ou Caprice* in G; and *Grand air*–Loure–*Trio de haubois*–*Dernier air* in D.

The first original suites along these lines seem to have come out of Germany, with J.C. Horn's five grand ballets 'nach der lustigen Französischen Manier' (1664), Georg Bleyer's *Lust-Music* (1670), again 'nach jetziger Französischer Manier', and most important, the *Composition de musique suivant la méthode françoise contenant six ouvertures de théâtre accompagnées de plusieurs airs* (1682) by J.S. Kusser, who had lived for six years 'in intimate friendship' with Lully. One of the most bizarre figures in the history of the suite requires mention in this context: Gerhard Diessener, who, in works that must have been written between about 1660 and 1673, embodies English, French, German and Italian characteristics in motley profusion. He worked at Kassel during the period when the French musical establishment flourished and the Kassel manuscript was written. An undated

English print contains ten suites by him, many beginning with overtures (complete contents in *MGG1*).

Both Frenchmen and Germans followed these initiatives, including Marais (from 1692), Montéclair and J.-C. Gillier le Fils (1697), Joseph Marchand (1707), L.-A. Dornel (1709) and J.D. Mayer (1682 and 1692), P.H. Erlebach (1693), J.C.F. Fischer and B.A. Aufschnaiter (1695), J.A. Schmierer (1698), Georg Muffat (1695, 8), Kusser again (1700), Johann Fischer (1702–6), Jakob Scheiffelhut (1707). By 1718 Telemann claimed to have composed no fewer than 200 orchestral suites (autobiography), and he had a good deal to say about the origin of these works: he was stimulated by his youthful acquaintance with Handel; he studied the works of Lully and Campra in Sorau, Polish music in Pless, and more of the French style with Pantaleon Hebenstreit in Eisenach. All these ingredients went into the suites, for which his princely employers seem to have had an insatiable appetite.

8. Couperin and the 18th-century French suite. The ensemble suites of François Couperin may be divided into three categories: *Les nations*, which are *ordres* in Couperin's terminology, combine Italian *sonate da chiesa* with classical suites *à la française*, that is, with (in three cases) pieces after the gigue; 12 of the 14 *Concerts royaux* begin with a prelude, but otherwise vary from classical to quite free (as in no.10, with Prelude–*Air tendre–Plainte–La tromba*); the remaining two *Concerts*, nos.8 and 9, and the *Apothéoses* are theatrical or programme suites. If Couperin had not revealed the history of *Les nations* (three of the sonatas were written early in his career and the suites added much later), one would suspect a connection with the many German examples of the combination by Rosenmüller, Pezel and others; in fact, they were another of Couperin's exercises in the reconciliation of Italian and French styles.

The ensemble suites were clearly meant to be performed at a single sitting: the *Nations* at 'académies de musique' and 'concerts particuliers', with the sonatas serving as 'introductions' to the suites, and at least some of the *Concerts* at chamber concerts for the king during the years 1713–15. The programmes of the two *Apothéoses* would also have demanded their performance in full. The evidence with regard to the harpsichord music is conflicting, however. On the one hand there is Couperin's statement in the preface to the first book that 'different occasions' supplied the ideas for the various pieces, as reflected in the titles. He spoke of 'pieces' in his preface, never 'suites' or *ordres*. All the pieces in the first book and most in the second had been written long before the publication of the first book in 1713; six from the first, second and fifth *ordres* had already been published in an anthology in 1707. In the second book, the ninth *ordre* begins with an allemande for two harpsichords and continues with nine pieces for a single player, which would seem rather uneconomical planning and it suggests that some *ordres* were never meant to be played from beginning to end.

On the other hand, Couperin referred in the preface to the fourth book to 'My original plan, in beginning the 25th *ordre*', which may mean that at least this one *ordre* was conceived as a unit. There is further confirmation of a concern for the *ordre* as a form in a change of plan that occurred to the composer after he had written the first piece, in C minor. He decided to put the second in E♭, then return to the tonic. This experiment went awry when the two C minor pieces were lost, so that the *ordre* as engraved begins out of the main key.

There are but five more or less classical suites in the 27 *ordres* (in nos.1, 2, 3, 5 and 8, consisting of five to ten pieces each). They are set off from the rest of the *ordre* by terminology; the dividing line is the end of the dance group and the beginning of the titled pieces. The first *ordre*, for example, has A–2C–S–Gavotte–G–Minuet and 11 titled pieces in a new style bearing no relation to the traditional dance (on titles and character-pieces, see Fuller, 1997). The fact that the sarabande and gigue bear supplementary titles does not alter the case. Another nine *ordres* begin with allemandes (sometimes so labelled, sometimes not; some are a special type, apparently invented by Couperin, which begin on the half-bar rather than on the first beat). For at least the first two books, one must assume a prelude as well, chosen from *L'art de toucher le clavecin* (1716). It is a curiosity of these works that except for the token initial allemandes, there is no middle ground between the *ordres* with classical suites and those without; no gradual peeling away of the courante, sarabande and gigue. An original feature of four of the free *ordres* is the programmatic set-within-a-suite: *Les petits âges* (7), *Les fastes de la grande et anciénne Mxnxstrxndxsx* (11), *Les folies françoises* (13), and a group of bird pieces (14). In addition, there are several programmatically linked pairs or groups of three. An exhaustive analysis of the *ordres* as suites was undertaken by Reimann (1940), who, in effect, gave up on the attempt to make sense of them. The free *ordres* are original, personal, and inexplicable: the savour is there, but the recipes have been thrown away.

During the 20 years between Couperin's first book and his death, only four Frenchmen published harpsichord collections, but this number was increased to 30 during the following 20 years. Couperin's impact on the traditional suite is nowhere more clearly shown than in the case of Dandrieu, who, after having published two small books (each with one classical suite) and a third (with four non-classical suites of simple teaching pieces) between about 1705 and 1710, began again in 1724, after Couperin's third book had appeared, with a *Premier livre* (so designated only for its second edition) followed by a *Second livre* in 1728, both in imitation of Couperin. None of the earlier pieces had titles; all the later ones did, and most were character-pieces in Couperin's new manner with no resemblance to the old dances. Though labelled 'suite', almost nothing but a few crypto-sarabandes remained to suggest the classical core. In the first two suites of the *Troisième livre*, however, an A–C–S beginning is concealed behind the character-title. Both continue with updated versions of pieces from Dandrieu's earliest two books, again with the dance labels suppressed and titles supplied. The remaining six suites consist entirely of ingenious transcriptions of string sonatas in the manner of Corelli composed by Dandrieu in 1705 and 1710, each movement bearing a newly fashionable title. (Unlike Couperin, however, for whom the titles were the generating ideas of the pieces, Dandrieu intended his titles to suggest a style and tempo appropriate to their character.) Rameau's two collections (1724 and *c*1728) contain four suites in all. Each book begins with a traditional group: A–C–G (actually a pair of rondeaux) and A–C–S respectively; these suites continue with four or five pieces, the

second ending with a brilliant set of variations on a gavotte. The ending groups of each book are free sequences showing little sign of planning. The impact of Rameau's collections was as great as that of Couperin's, but his influence was felt in matters of style rather than suite formations.

The history of French harpsichord music after 1730 is usually presented as one of decline, but inventiveness in suite design went on longer in this repertory than in any other, and it was here that the last collection of Baroque suites was published, apparently in 1772, by Dufour (first name unknown). The idea of Couperin's sets-within-suites was expanded by Dandrieu to include what he called 'divertissements' inspired by the theatre; these became very fashionable. Pierre Février (1734) began two of his suites with fugues, the first and last Frenchman to do so. Charles Demars (1735) began some of his with sweeping preludes in a quite un-Gallic manner; in both cases, a Handelian influence probably operated. In 1753, Christophe Moyreau published six vast suites, two in one book, the last four with a book to themselves, suggesting the same architectural approach seen in D'Anglebert. Each suite opens with an overture and two to five of the traditional dances, followed by up to 14 character-pieces, sometimes including a divertissement. Each suite then continues with a second overture, followed by a complete sonata, a concerto, or both. The sonatas were modelled after the Corellian *sonata da chiesa* and the concertos after late Baroque Italian examples. Key unity was again challenged by Simon Simon (1761): 'Instead of issuing solo harpsichord suites in the usual way in a single key (which would have caused me to fall into a kind of uniformity and dryness which is better avoided), I thought I ought to compose some with violin accompaniment'. This apparent non sequitur shows that tonal contrast was associated with the accompanied sonata (dating back to Mondonville in 1734), but it does not prepare the reader to find solo suites with key changes, especially a choice such as E♭ minor–G minor–E♭ major. The preference for three-movement groups in this collection, even when the pieces are labelled as dances, is also reminiscent of the accompanied sonata.

The last harpsichord suites, Dufour's, would seem from their contents to be 50 years behind the times: a prelude, a courante, and two each of A–S–G, though not in that order, and the by then usual character-pieces interspersed with minuets. The suites have three to seven pieces, all with the same tonic; and only a pair of 'concertos' (which do not change key) at the end seem at all up to date. What is extraordinary, however, is the style – one of the sarabandes, for instance, seems totally devoid of metrical pulse. The French, who probably invented this kind of suite, kept their originality to the end.

9. Handel and the English suite. Except for the Water Music and Music for the Royal Fireworks, and such multi-movement overtures as the one to *Rodrigo*, Handel's suite writing seems to have been confined to the keyboard. There are about 22 surviving keyboard suites, the exact number depending on the admission of borderline cases. For example, one would be inclined to exclude the second of the 'Eight Great', as it is a sonata in everything but name. Another five may have existed at one time in a Swiss collection. Handel has acquired the reputation of a 'free thinker' in suite composition. The 'great' suites of 1720, all of which are different, only one being classical (no.4), are seen as an inspired synthesis of Italian and German elements in ever-varying balance. Their perfection is said to lie at polar distance from that of Bach (Beck, Eng. trans., 1966, p.64). This view needs revision, though there is space here only for conclusions (for evidence, see the writings of Abraham, 1935, Dale, 1954, Smith, 1954, and Best, 1971).

In fact, Handel seems to have taken little interest in the suite as a form. Basically, his conception was conventional throughout his life. The two suites he wrote for Princess Louise (*c*1736, Smith; or *c*1739, Best) are purely classical (A–C–S–G), though their styles are sharply differentiated: he evidently wanted to provide the girl with examples of Italian style versus a second style that he may have thought of as German, French or English. A–C–S–G suites are in a majority among his works, and most of the non-classical ones are pastiches explainable in a variety of ways, but rarely, if ever, as an attempt to manipulate form. It is not paradoxical but logical that Handel should be the great composer whose suites are most often unified by thematic means: his technique verged on laziness, and Dale (1954 p.240) was right to point out the risks of monotony he ran in taking the materials of his allemandes into his courantes in so obvious a manner.

The only suite composed almost entirely for the 1720 collection is no.3 in D minor, and it is one of Handel's best. The allemande and courante are related, but masterfully, the most inspired touch being the courante's forthright correction of the 'soft' C♮ in the first bar of the allemande. The air is second-hand, but the new finale was based on its first bar, giving two thematically related pairs. In general, the 1720 collection seems to have been put together from the best pieces, not suites, which already existed; the new additions (with the exception of no.3) were all introductory movements 'to make the Work more useful', that is, to give weight and scale to small groups.

The direct influence of Handel's suites on English keyboard music was slight, though it can be traced in Thomas Chilcot's suites of 1734 (Caldwell, 1973) and those of J.C. Smith. There were other influences as well: one of Dieupart's suites, without its overture, was published by Walsh in 1705; the others were probably also known through the composer's teaching activities in England. G.B. Draghi's *Six Select Sutes* (sic) appeared in 1707, a suite by Alexander Maasmann, about 1715, and about the same time a set of six by J.B. Loeillet which perhaps reflected Dieupart's influence, since all have A–C–S–aria/gavotte–minuet–G. Henry Symonds was more varied but equally systematic in his *Six Sets of Lessons* (1733), which contained four A–C–S–gavotte–minuet–G, two with preludes, and two 'sonatas'. The influence of the Italian *sonata da camera* was felt more and more strongly in English harpsichord music beginning, perhaps, with Richard Jones (1732) and continuing with James Nares, Barnabas Gunn and John Jones. (The final victory of the sonata in England is described briefly in §1 above.)

10. Bach and the Germans. Bach wrote about 45 suites, setting in them such a standard as to compel all others to be measured against it. They may be surveyed quickly in order of diminishing 'classicism'. At the top are the six cello suites, prelude–A–C–S–X–G, where X is a pair of minuets in the first two, a pair of bourrées in the second two and a pair of gavottes in the last two. Unification among the pieces, obvious in no.3, moves

from subtlety to concealment (or non-existence) in no.5, whose allemande and gigue, however, quote the F♯ minor Suite of Gaspard Le Roux, one of the French composers whose music Bach possessed. The next set in the hierarchy, the English suites, begins with another, more extensive quotation from Le Roux, this time the gigue from his A major suite. Dannreuther (*Musical Ornamentation*, 1893–5) discovered a resemblance between Bach's prelude and a Dieupart gigue, but the resemblance to Le Roux is even closer. Again the scheme is prelude–A–C–S–X–G, but the variations are slightly less mechanical: Suite no.1 has a second courante with two *doubles*, nos.2, 3 and 6 have *doubles* for the sarabandes, and although the X's are still all pairs, the repertory is enlarged to include the passepied. The opening bars of A, C, S and G of no.5 in E minor are characterized by a descending scale motif; whether there was a conscious intent to relate the pieces is impossible to say. Except for this, unification is not a feature of the set.

The French suites have no preludes and a varying number of pieces between the sarabande and gigue (one in no.1 and four in no.6). There are no obvious thematic links between the pieces, though Beck (p.59) showed motivic resemblances in no.1, and Pearl (1957, p.265) in no.3. For as long as discussion of Bach's suites goes on, there will be new proposals to explain why these two sets are called 'English' and 'French'. It is possible that whoever attached the labels (it was not Bach) had something definite in mind, but it is certainly not evident in the styles or forms of either collection, unless it is the borrowing from Le Roux, which would make the English suites French. Forkel said the English suites were written for an Englishman; J.C. Bach's copy had 'fait pour les anglois' at the head of Suite no.1. Possibly the other set was called French simply to distinguish it from the English suites.

The climax of Bach's mastery of the suite was reached in the six harpsichord partitas. The forms introduce modest liberties by comparison with the French suites: the fourth and sixth have an aria and an air respectively before the sarabande: the second ends with a capriccio instead of a gigue; and the repertory of inserted pieces further expands to include a burlesca, a scherzo and a rondeau. The sarabande of the Sixth Partita recalls the opening toccata, but in general, thematic connections among the pieces are far from obvious. Pearl claimed intricate but very subtle interrelationships within the partitas in C minor and G major, but such connections are much stronger among the pieces of the solo violin partitas in B minor and D minor. There they are a matter of similar harmonic progressions, similar melodic contours (when stripped of ornament), and similar emphasized scale degrees, all in the first few bars of each piece, where the effect of recall is the most powerful. Each of the three violin partitas is intentionally different: the first has a bourrée instead of a gigue and brilliant *doubles* to each dance; in the second, the A–C–S–G are hardly more than a composite prelude to the gigantic chaconne; and the last is a piece of *Tafelmusik* (Preludio–Loure–*Gavotte en rondeau*–a pair of minuets–Bourrée–Gigue).

The qualities that set Bach's suites apart from all others have nothing to do, strictly speaking, with the history of the suite. The choice of pieces, their order and any techniques of unification all have their precedents and counterparts. What is unique is Bach's use of the suite as a building-block in a larger structure, not the same thing as Machy's or Dieupart's stringing together six nearly identical suites. It is a matter of arranging each suite to do something different – or the same thing in a different way – so that the set as a whole becomes a kind of thesaurus of the suite for that particular medium. This encyclopedic approach is clearest in the varied introductions to the keyboard partitas and is essentially didactic. Another quality is Bach's tendency to mask the identity of a genre with writing that is texturally complex and technically demanding. The sarabande of the Partita in E minor, for example, challenges the player's ability to project the underlying melody and pulse. A third is the tendency to make exercises out of pieces. Thus one suspects, though there is no real evidence, that at least the last three pieces of the Sixth Partita are exercises in notational problems: sheer complexity in the sarabande; the assimilation of duple notation to triple movement in the gavotte; and the proper rhythmic interpretation of a gigue in binary rhythm.

The four orchestral suites were not conceived as a set and were written more for public entertainment than for personal edification. They take their place among the vast repertory of non-classical suites produced in Germany during the first half of the 18th century. A manuscript in the library of the Thomasschule, Leipzig, contains two dozen overture suites by J.F. Fasch, C.H. Förster, Schneider, Hasse, J.G. Wiedner, J.N. Tischer and Fuchs (?Fux). Other composers in this generation are J. Ludwig Bach, J. Bernhard Bach, probably Pantaleon Hebenstreit (though the authenticity of a collection of suites attributed to him has been questioned), Heinichen, Kuntzen, Johann Pfeiffer and J.D. Zelenka. The most prolific were Graupner, with 87 surviving orchestral suites, and again Telemann, whose total output in this form is put at something approaching 1000 by Büttner; 135 have survived (Hoffmann, 1969). This extraordinary fecundity in a foreign form was, of course, a perfect example of the effect of the fragmentation of the Empire on art: the ordinary demands of court music were multiplied by tens and hundreds.

Classical suites were written by the keyboard composers J.M. Leffloth and Vincent Lübeck (1728), Gottlieb Muffat and J.P. Kellner (1739), Krebs (1745), and especially Graupner, whose 57 *Partien* span the years from 1718 to about 1740. Freer keyboard suites, influenced by the orchestra suite or (occasionally) the *sonata da camera*, and sometimes called *Galanterien-Partien*, came from F.A. Maichelbeck and J.C.F. Fischer (1736), F.A. Hugl (1738). J.N. Tischer, Isfrid Kayser and Trippenbach (1746) and J.P. Kellner (1752).

The German lutenists were among the last to relinquish the suite, Silvius Weiss, J.M. Conradi, David Kellner, Adam Falckenhagen and others continuing to write them until mid-century. One of the last uses of the suite in Germany, as in France (see §1 above), was in anthologies, as a convenience in arranging the contents, and probably as a suggestion to the player how to make little programmes. Marpurg's *Raccolta delle più nuove compositioni* (1756) was the first of a projected yearly anthology whose purpose was 'to please everyone', and to this end mingled French, Italian and German pieces in all forms, both vocal and instrumental. The contents of each volume were divided into 12 suites, called *Partita*. For example, no.7 of 1756 had a gavotte in A major

(Seyffarth), a pair of minuets in A minor and a rondeau in A minor (C.P.E. Bach).

11. 1750–1900. The disappearance of the suite in the second half of the 18th century was a matter of several quite independent processes. It was the sonata, symphony and concerto that ultimately filled the functions vacated by the suite; and where composers had been writing both suites and the newer types, making a clear distinction, they simply stopped writing suites and went on with the others. More commonly, however, the suite itself began to undergo modifications and experiments. If the number of pieces was reduced to three, say, A–S–G, and the first two provided with Italian tempo marks instead of the dance titles, the resemblance to a sonata was close – still closer if the sarabande was in a contrasting key. This happened in certain cases – for example, the music of Simon – and it may be seen in the three-movement layout associated with the accompanied sonatas in Jacques Duphly's third harpsichord book (1756), where accompanied 'sonatas' (unlabelled) form part of larger suites. Under the influence of the *sonata da camera*, abstract movements began to appear in suites in positions other than that of the first piece; another way of putting it would be to say that *sonate da camera* began to appear masquerading as suites, as in Handel's second 'great' suite. In orchestral music, the overture, sinfonia and suite overlapped in internal arrangement and terminology, producing an anarchic situation from which the symphony emerged the victor. In England the process was curiously incomplete: the music changed, but the old term, 'overture', persisted.

In Vienna the transition from suite to sonata took place behind the screen of the various terms for entertainment music: divertimento, serenade, cassation, partita and notturno (Webster, 1974; Finscher, 1988). The term 'divertimento', which was the preferred one for any non-orchestral ensemble piece, light or serious, between 1750 and 1780, overlapped with 'partita', which was a similarly general designation up to about 1760. Both could be used for keyboard music as well; 'divertimento' carried no implication regarding the number or order of movements or the key-scheme (see Finscher for a qualified view). In the earlier part of the century the usual influences had been felt in the *Parthien*: those of the French lutenists in the *Lauthenkonzert* (Jacques de Saint-Luc, J.B. Weichenberger, Hinterleithner and others), and that of Lully in the Muffats. But the old suite was never a favourite vehicle in Austria, and the quantity necessary for statistical observations seems not to have been produced.

The Viennese were much more interested in a genre which has been arbitrarily excluded from consideration here: the sets of ballroom dances which Haydn, Mozart, Beethoven, Schubert, Dittersdorf, Hummel and many others wrote for the annual fancy-dress balls to benefit the Pensionsgesellschaft Bildender Künstler, and for other occasions. Many of these sets of six or 12 dances were organized on symmetrical key-schemes and some had codas. A remote connection with the suite was suggested by Schindler, who referred to Beethoven's *Mödlinger Tänze* as 'einige Partien Walzer'. The Strauss waltz cycles are the offspring of these sets.

Although the suite survived after 1800 in ballet, incidental music, periodical anthologies, potpourris and military music, the word itself had acquired strong classical (A–C–S–G) associations, so that in dictionaries and ordinary musical thinking of the period the entire concept was regarded as something that belonged to the past. This did not prevent the proliferation of sets of pieces meant to be performed at a sitting; it simply released them from a generic term and from the conventions associated with it. To write a 'suite' then became an exercise in an archaic form, as it was with Mozart's K399/385*i*, inspired by the Bach and Handel concerts at Baron van Swieten's home in 1782. The introduction, which is a prelude and fugue foreshadowing the great fantasia for automatic organ K608, runs into the allemande without a break. The work remained a torso, and the experiment seems not to have been repeated for half a century.

Freed from *a priori* conceptions of what the form ought to be, at least one composer, Schumann, appears to have seized the idea of the suite as a way of combining a number of small romantic gestures into a larger whole, with no inherited restrictions inhibiting their more subjective interrelations. To a greater degree than in any other composite form, the resulting structures were determined and generated by the materials themselves, and the suites made out of them differed utterly from one another. Possibly such a set as Beethoven's op.126 *Bagatelles* served Schumann as a model, but more likely is the example of the song cycle, in which the ultimate unifying force is the poetic idea, and the freedom to invent musical interrelations is absolute. *Papillons, Kreisleriana, Carnaval, Faschingsschwank aus Wien* and the others (not all the Schumann piano sets are units, however) are too varied and too few to furnish the basis for any classification system. None of them is called a suite, but one can perhaps guess at Schumann's reaction to being told they were suites from his remark in the review of William Sterndale Bennett's *Suite de pièces* op.24 (1842) quoted in §1 above. Sterndale Bennett's work (the English seem to have been pioneers of the suite in the 19th century as well as the 17th) is in six movements with Italian tempo headings (in MB, xxxvii, 1972).

A curious link between the suite and the song cycle is afforded by Joachim Raff's *Die schöne Müllerin*, a work for string quartet in six movements whose four-hand piano arrangement is called 'suite'. The same work provides a link with a third genre through its sub-title, *Cyklische Tondichtung*; in fact, the historical continuum between the orchestral programme suite and the programme symphony, via the symphonic poem in several titled movements, admits no division into separate genres except on the basis of the composers' terminology. The first and only systematic attempts to revive the suite as an alternative to the sonata and symphony were made between about 1857 and 1880, by Franz Lachner and Raff. If Raff's *Italian Suite* in E minor was written 'during his time at Weimar', that is, before 1856 (Riemann, *Geschichte der Musik seit Beethoven*, 1901, p.429), this would make it among the earliest. Raff's suites, which number over a dozen, were written for a wide variety of media: piano, orchestra, piano and orchestra, violin and piano, violin and orchestra, and quartet; at least nine of these were also arranged for piano duet. They have four to seven titled movements in a variety of key-schemes, and all the usual Baroque types appear interspersed with more up-to-date pieces such as *moto perpetuo, Rhapsodie* and *Romanze*. Occasionally a suite is nothing but a sonata under another name (e.g. op.162 for piano, 1870–71,

whose movements are Elegie in Sonatenform, Volkslied mit Variationen, Ländler, Märchen).

Close to the time when Raff wrote his first suite Woldemar Bargiel brought out his Piano Suite op.7, as well as a number of sets of character-pieces undesignated as suites. Another group were the eight orchestral suites by Lachner (1861–81). Here also, the movements were titled and each suite had its sarabande, gigue, minuet and so on; but the distinction between suite and symphony was sometimes arbitrary. Suite no.1, op.113 (1861), for example, has Praeludium, Menuet, Variationen und Marsch (there are 23 variations) and Introduction und Fuge, which is suite-like enough until one discovers that the first movement is in full sonata form with a repeated exposition. Another Praeludium is a sonata-form piece in French overture style. Among the few suites by J.G. Rheinberger is one for the unusual combination of organ, violin and cello (Con moto, Thema mit Veränderungen Saraband-trio, Finale).

Saint-Saëns seems to have been one of the first to follow Sterndale Bennett with a suite (1866), so designated, which was free from dances or other echoes of the 18th century. It is a big virtuoso work for cello and piano, consisting of a perpetual-motion prelude (D minor), serenade (G minor), scherzo (E♭ major), romance (E major) and finale (D major). Op.49 (1877) for orchestra and op.90 (1892) for piano both introduce two or three of the old dances, while op.60 (1881), the *Suite algérienne*, is a programme suite with Prélude, Rhapsodie mauresque, Rêverie du soir and Marche militaire française. By 1880 the suite was no longer a curiosity in France, and Massenet had begun his series of nine orchestral suites, most of them programmatic and the last two with singers and a speaker. During the last decades of the century, composers of peripheral countries (especially northern ones) found the suite a congenial form for music of an exotic or nationalistic flavour (Grieg, Asger Hamerik, N.V. Gade, Sibelius, Nielsen, Tchaikovsky, Rimsky-Korsakov, Glazunov and MacDowell).

The suite of extracts had since the 17th century always been a major ingredient of the concert repertory; it continued thus throughout the 19th century (e.g. Schumann's *Manfred, poème dramatique: fragments disposés en suite d'orchestre*) and remains so in the 20th. Such suites are extracted by the composer himself or by anyone who can secure the right to do so. The pieces, if suitable (as may happen with a ballet), can simply be selected and reproduced without alteration. If there are voice parts these can be removed or worked into the instrumental texture. The keys may be changed, the medium changed (as with a piano reduction, for example), the pieces shortened, run together or provided with bridges between them, introductions and conclusions added – in effect the whole thing may be rewritten. A familiar example is Stravinsky's *Pulcinella*, in which a subtle stylistic transformation takes place in addition to the other liberties.

12. 20TH CENTURY. The factors which led to the re-emergence of the suite as a major form in the 20th century had all appeared by the end of the 19th: the historicism, the nationalism, the urge to experiment, the academic associations of sonata and symphony, and, in the case of extract suites, the expediency. But after the turn of the century, every one of these factors intensified. Musicology began to bring to light some of the vast forgotten suite literature of the Baroque period, and the winds of neo-classicism (which more often meant neo-Baroque style) began to blow away the Wagnerian mists. The breakdown of the tonal system in certain circles discouraged sonata writing, and the search for new styles and forms became ever more conscious and systematic. Finally, the 'market' for music increased exponentially for well-known reasons.

For a time the suite *à l'antique* enjoyed a considerable vogue among composers, including Hindemith (after Gervaise), Strauss (after Couperin), Egk (after Rameau), Stravinsky (after pseudo-Pergolesi), Schoenberg, Debussy and Respighi, to name only a few. At the other end of the stylistic spectrum were the 'characteristic' suites, which continued the late 19th-century tradition of nationalistic and 'geographical' suites. These programme suites are most often for orchestra and range in tone from serious (e.g. Holst's *The Planets*) to the frankly popular (e.g. Grofé's *Grand Canyon Suite*). They have a function analogous to that of extract suites, and one type merges into the other. The satirical and parodic 'divertimento' for flute, violin, percussion and piano by Donald Martino, *From the Other Side* (1988), is a late manifestation of the characteristic suite. Its movements are Introduction and Slow Dance, Tango dei Grulli, Dance of the Reluctant Flamapoo, Ballad for Blue Bill, and Das magische Kabarett des Doktor Schönberg.

But it was neither the antique suite, the characteristic suite, nor the extract suite which became the vehicle for the most advanced and original contributions of the 20th century. These three types were recognizable as suites and were often even entitled suites. As such they had associations unattractive to a composer determined (as many in the 20th century have been) not to be derivative. It was the suite idea, unrecognized (or differently named) and consequently free, that underlay the originality of, for example, Lawes, Couperin and Schumann and that has served and continues to serve composers whose ideas result in sets of pieces meant to be performed at a sitting. As Beck remarked in the case of Schumann: 'What are these if they are not suites?'. One of the first in the 20th century to make the set of pieces his own was Satie; *Chapitres tournés en tous sens* (1913) will have to serve as one example for many. But throughout the first 75 years of the 20th century the suite has served composers in many ways and for many reasons: Schoenberg's Five Orchestral Pieces (1909) at one end of the period and David Felder's *Three Pieces for Orchestra* (1995) at the other frame a multitude of works in which the relationship of the parts to the whole is newly worked out in each. Ample scope remains for the investigation of this repertory from the standpoint of the history of musical sets.

In contrast to the postmodern, playful mixing of styles and cultures evident in Martino's work, Helmut Lachenmann's *Tanzsuite mit Deutschlandlied* (1979–80) might be interpreted as a 'dying ember of the modernist project': the work is entirely serious and there is little that is playful in the way the suite comes into full collision with Lachenmann's withering critical intent. In this work Lachenmann, who viewed the suite along with much of classical music as an empty husk in the service of a repressive political and social system, 'deconstructed' the old form in order to materialize – or perhaps better, dramatize – the contradictions contained within it (J. Stadelman). Hans Zeller's notes to a recording of Lachenmann's piece suggest that the work is the composer's

critical compositional reaction to the 'politics of form' as it pertains to the suite, and they provide a fitting conclusion to the genre's late 20th-century history: 'The term "dance suite" stands not only for the centuries-old tradition of suite-composers but for the familiar *per se*, for dance gestures and forms of music making ... which embody a sense of collective security and provide a haven for bourgeois thought and sensibility as well as their fetishes: native land, religious bonds, national holidays, traditions, yearning for childhood'.

DAVID FULLER

Suitner, Otmar (*b* Innsbruck, 16 May 1922). Austrian conductor. He studied the piano under Weidlich at the conservatory in Innsbruck, and under Ledwinka at the Salzburg Mozarteum, 1940–42, as well as conducting under Clemens Krauss, whom he acknowledges as his model. After performing chiefly as a pianist and occasional conductor for some years, he became musical director of the Rhineland-Pfalz State PO in 1957, and then secured more frequent guest engagements at Berlin, Hamburg, Munich, Vienna and elsewhere. The turning-point of his career was in 1960 when he was appointed chief conductor of the Dresden Staatsoper and Staatskapelle, with which he toured in east Europe and the USSR. In 1964 he was appointed general music director of the Deutsche Staatsoper, Berlin, a post he held until 1990. He conducted the premières there of Dessau's *Puntila* (1966), *Einstein* (1974) and *Leonce und Lena* (1979), and toured with the Berlin company to Cairo, Lausanne, Paris and Warsaw. His Berlin performances of Mozart, Wagner and Strauss were much praised, and he was also widely admired in the Italian repertory (his mother was Italian). He conducted at Bayreuth each season from 1965 to 1967. Suitner's interpretations were marked by freshness of expression and wide dynamic range, and he brought an impressive directness and authority to the Wagner and Strauss operas. He undertook guest engagements in various European countries, in the USA (San Francisco Opera, regularly from 1969) and in Japan, where he was made honorary conductor of the Tokyo NHK SO in 1973. His many recordings include Mozart's late symphonies and several of his operas, among them a stylish, spirited *Die Zauberflöte*, Beethoven's symphonies, *Hänsel und Gretel* and Dessau's *Einstein*.

□

Suivez (Fr.: 'follow'; imperative of *suivre*). (1) A direction in musical scores indicating that the next movement or section is to follow immediately, like the Italian words 'attacca' or 'segue'.

(2) A direction for the accompanying parts to follow a voice or solo instrument which happens for the moment to move independently of the prescribed rhythm or tempo, as in the Italian *colla voce* or *colla parte*.

□

Suk, Josef (i) (*b* Křečovice, 4 Jan 1874; *d* Benešov, nr Prague, 29 May 1935). Czech composer and violinist.

1. Life. 2. Works. 3. Style.

1. LIFE. He learnt the piano, the violin and the organ from his father, Josef Suk (1827–1913), schoolmaster and choirmaster in the Bohemian village of Křečovice. In 1885 he entered the Prague Conservatory, where he studied the violin with Bennewitz, theory with Foerster, Knittl and Stecker, and from 1888 chamber music with Wihan. He began composing seriously in his third year at the conservatory and in 1891 graduated with his Piano Quartet op.1. He remained an extra year at the conservatory for special tuition in chamber music with Wihan and composition with Dvořák, who had joined the teaching staff in January 1891. Under Wihan, Suk played second violin in the group which in 1892 became known as the Czech Quartet; its first concert in Vienna (1893) won the approval of Brahms and Hanslick and inaugurated a distinguished international career during which it gave more than 4000 concerts until Suk's retirement in 1933. Under Dvořák, Suk graduated from the conservatory in 1892 with his *Dramatická ouvertura* op.4. He was Dvořák's favourite pupil and in 1898 married his daughter Otilie (Otilka). Simrock had published his Serenade for strings op.6 (1892) in 1896 on Brahms's recommendation and by the turn of the century Suk was regarded, with Novák, as the leading composer of the modern Czech school. In 1922 he was appointed professor of composition for the advanced classes of the Prague Conservatory, where he trained 35 composers, including Bořkovec, Ježek, Hlobil, Martinů, Reiner, Vačkář and several Slovenes, Croats, Serbs and Poles. During his four terms as rector (1924–6, 1933–5) he worked energetically to raise the standards of the conservatory. He was an extraordinary (1901) and ordinary (1913) member of the Czech Academy of Sciences and in 1933 was awarded an honorary doctorate by Brno University.

2. WORKS. Suk won early success as a composer, writing some of his best-known pieces (the Serenade for strings and the *Píseň lásky*, 'Love Song', from his op.7 piano pieces, 1891–3) before he was 20, and was soon regarded as Dvořák's natural successor. Despite opportunities through his constant travels as a performer to hear the latest European novelties he was subject to no other strong musical influences; his virtuoso orchestral technique and subtle control of sound show his awareness of Strauss and the French Impressionists, but he followed his own path in a steady, organic development from lyrical Romanticism towards a complex polytonal musical language.

Like his teacher Dvořák he was most at home with instrumental music. His early mass (1888–90) was his only venture into liturgical music; he wrote almost no songs; and the three choral sets of 1899–1900, opp.15, 18 and 19, though well made and effective, are essentially explorations of a genre to which he returned only once more with his male-voice choruses op.32 (1911–12). He wrote no operas but the second of the two plays for which he supplied incidental music, *Pod jabloní* ('Beneath the Apple Tree', op.20, 1900–01), includes sustained choral scenes which give the suite (1912) arranged from it an almost oratorio-like character. As in the earlier score *Radúz a Mahulena* ('Radúz and Mahulena', 1897–8), there are, in addition to the instrumental pieces, a few short songs and some melodrama passages for important scenes.

It is surprising that as a professional quartet player Suk wrote so little chamber music. Much of it originated from his student days as he tried out various combinations (the String Quartet in D minor, 1888; Piano Trio op.2, Piano Quartet op.1 and Piano Quintet op.8, 1889–93). The most successful chamber work from this period is the String Quartet op.11 (1896), which has all the freshness and melodic charm of Suk's early music and, in its slow movement, a foretaste of the more serious and personal style of *Asrael*. He wrote only one more quartet (op.31, 1911). Although his only important works for the solo violin are the well-known *Čtyři skladby* ('Four Pieces', op.17, 1900) and a one-movement concerto, the Fantasy op.24 (1902–3), the sound of the solo violin combining with the orchestra is one that permeates much of Suk's music, from the famous *Radúz*solo onwards. Suk was also a fine pianist, performing frequently to his friends and occasionally in public, and he wrote rather more piano music. The earlier compositions were generally published in small groups of characteristic pieces (opp.7, 10 and 12, 1891–6) whose full-blooded, well-placed chords suggest Brahms, but whose undemanding forms, rich if meretricious harmony, melodic clichés and fluent passage-work more often suggest the salon. The Suite op.21 (1900, originally planned as a sonatina) attempts a more balanced design, continued in the programmatic suites *Jaro* ('Spring') op.22*a* and *Letní dojmy* ('Summer Impressions') op.22*b*, both written in 1902 after the birth of his son. They illustrate Suk's subjective Romantic piano style at its ripest, the last piece of op.22*a*, 'V roztoužení' ('In Love'), achieving a popularity similar to that of the *Love Song* from op.7. But op.22*a* also contains 'Vánek' ('The Breeze'), a delicate, Impressionistic piece, revealing a more imaginative approach to figuration, and a type of harmony that was turning from heavy chromaticism to a more modal idiom. These qualities, and the intimate nature of *O matince* ('About Mother', op.28, 1907), written after the death of his wife, are developed in Suk's greatest work for the piano, the suite of ten short pieces *Životem a snem* ('Things Lived and Dreamt', op.30, 1909). All have detailed descriptions of their character, some have additional programmes (no.5 'on the recovery of my son') and all inhabit a very personal world; in their economical evocation of mood, their exploration of new musical means and their assured piano technique they foreshadow Debussy's *Préludes*. In later piano works such as *Ukolébavky* ('Lullabies', op.33, 1910–12) and *O přátelství* ('About Friendship', op.36, 1920), Suk pared down his means to achieve a classic simplicity in which the subtle control of harmony is particularly striking.

Suk's central achievement was in orchestral music. The high point of his early orchestral writing is the Serenade for strings op.6 (1892) and the op.16 suite, *Pohádka* ('Fairy Tale', 1899–1900), arranged from the *Radúz* music. The more ambitious works that followed, the Violin Fantasy op.24 (1902–3) and the Straussian tone poem *Praga* op.26 (1904), have a slightly portentous quality that seems out of keeping with Suk's limited emotional range up to then. The deaths of Dvořák (1904) and his daughter (1905), Suk's young wife, within the space of 14 months shattered the composer's life and attitudes, and set into motion the vast *Asrael* symphony op.27 (1905–6). It is arguably his greatest work, and one of the finest and most eloquent pieces of orchestral music of its time, comparable with Mahler in its structural mastery and emotional impact. Although none of the orchestral works which follow *Asrael*are designated symphonies, all have symphonic ambitions and proportions, particularly the two single-movement pieces *Zrání*

Josef Suk: portrait by 'Dr Desiderius', watercolour, 1928

('Ripening', op.34, 1912–7) and *Epilog* op.37 (1920–29). *Pohádka léta* ('A Summer's Tale', op.29, 1907–9) is the lightest of the post-*Asrael* orchestral works, a suite more than a symphony, showing a serene acceptance of life whose equanimity is disturbed only by the poignancy of the 'Blind Musicians' movement or the Mahlerian imagery of the fourth movement, 'In the Power of Phantoms'. As the title suggests, *Ripening* charts a man's personal development (that of Suk himself) as he grows through the pain of life's tragedies. In *Epilog* the psychological programme – made more concrete by the texts sung by soloists and chorus – becomes darker as its subject begins to contemplate his own mortality.

3. STYLE. Unlike his Czech contemporaries Janáček and Novák, Suk derived almost no stimulus from folk music and very little from literary sources. Julius Zeyer's was the only important literary influence on him: his *Radúz and Mahulena*, with its legendary Slavonic world, its message of true, courageous love and clear-cut moral values articulated much of the young Suk's outlook on life. Its dreamy, slightly sad, introspective mood is one that runs through much of Suk's early music, at first no more perhaps than as a *fin-de-siècle* pessimism, but soon acquiring a specifically Slavonic direction characterized by his dumka music. Suk wrote dumkas in opp.7 and 21 (the *poco triste* movement of op.17 was also originally entitled 'Dumka') but there are dumka-like movements (such as the *Legenda* of op.10) in all his early music. The funeral march is another *Radúz* feature, anticipated in Suk's early orchestral funeral march (1889, dedicated to himself), apotheosized in the second movement of *Asrael* and becoming terrifyingly grim in the march section of *Ripening* (based on the seventh piece, marked 'forthright, later with an expression of overpowering force', of *Things Lived and Dreamt*). In the polka music for the 'game of the swan and the peacocks' in *Radúz* (later worked into the second movement of the suite) Suk wrote in a popular style derived from Czech dance music. There are other such pieces among the piano music (notably the minuet from op.21) and even during the years of *Ripening* and *Epilog* Suk wrote light, appealing music such as the *Ella Polka* (1909) or the marches *V nový život* ('Towards a New Life', op.35*c*, 1919–20), which won him an award at the 1932 Olympics at Los Angeles, and *Pod Blaníkem* ('Beneath Blaník', 1932). His last composition was a Czech dance, a *Sousedská* (1935) for small chamber ensemble.

Radúz is central to Suk's development. He identified the young couple Radúz and Mahulena with himself and his wife at the happiest time of their lives; it drew from him his most radiant, tender, earnest and abundantly melodic music. He remodelled some of it in his next work, the women's choruses op.15. It also became a point of reference for future works, its death motif of two augmented 4ths recurring prominently from *Asrael*onwards. There are other examples in Suk's later music (notably in *Things Lived and Dreamt* and *Ripening*) of self-quotation and other personal symbols. Another prominent topos is that of the 'fantastic dance'. Early examples are the 'Bacchanale' in *Beneath the Apple Tree* (1900–01) and the *Fantastické scherzo* op.25 (1903), a *danse macabre* with banal waltz rhythms, quirky chromatic tunes and highly imaginative orchestration. Later metamorphoses in the scherzo movements of *Asrael* and *A Summer's Tale* suppress the dance element and heighten the malevolence of the fantasy. In *Epilog* the dance is propelled by the biblical quotation sung by the male chorus: 'Prach jsi a v prach se obrátíš!' ('Death thou art and unto death shalt thou return!'). This verbal context, together with the death theme from *Radúz* on the brass cutting through skirling wind, scurrying strings, death-rattle side-drums and the moaning of demons (the wordless male chorus), conjures up an apocalyptic vision whose intensity is unique in Suk's work.

Suk's late orchestral music had become very complicated. His harmony was originally sensuously Romantic, with a fondness for augmented chords (especially that of the augmented 5th), chromatic alteration, Neapolitan relations and the tonal ambiguity produced by frequent pedals (e.g. in pedal movements such as the lullaby from *About Mother* and the second movement of *Asrael*). Later he began to exploit polytonality more explicitly and systematically in *Ripening* and *Epilog*. He was able to make these last scores comprehensible only by his precise aural imagination and his superb craftsmanship as an orchestrator, a skill on which he placed great emphasis as a teacher.

Suk's later formal control grew from unpretentious beginnings. Most of his piano pieces have simple repetitive structures; he successfully employed (e.g. in the violin *Balada*, 1890) the fashionable monothematicism of the time but his early attempts at sonata form, even in the last movement of the Serenade for strings are uneven, lacking a sense of the dramatic opposition of key centres (so striking in *Asrael*) and tending towards an uncharacteristic long-windedness. The seams of the one-movement Violin Fantasy are carelessly concealed, but the later single-movement string quartet is much more subtle and adept. It cost him much effort, even at the height of his powers, and prepared the way for the impressive single spans of *Ripening* and *Epilog*. These two pieces showed Suk's musical language at its utmost sophistication, his response to the modern music he came across on his frequent tours. They also showed him dangerously far from his roots as a simple 'muzikant' of the Czech *kantor* tradition. From about 1912 his rate of composition noticeably slackened. His tiring life as a performer meant that composition was a spare-time occupation; his duties at the Prague Conservatory, which he took very seriously, made further demands, but as the premières of his works became more spaced out it became clear that neither these commitments nor the increasing effort that the later scores must have cost fully explained the gaps. Suk seems to have had misgivings about his increasingly complicated musical speech, alien to many of his listeners; indeed, he derived a childlike pleasure from the enthusiasm that his popular pieces (such as the *New Life* march) aroused. The gulf between Suk the kantor and Suk the sophisticate was perhaps too great to bridge.

WORKS

ORCHESTRAL AND VOCAL ORCHESTRAL

Planned works: Ve stínu lípy [In the shade of the lime tree], sym. cycle after S. Čech, 1896; cycle of sym. poems from Czech history, 1915–17

op.	
—	Early compositions, str: Fantasy, d, 1888; Smuteční pochod [Funeral march], c, 1889, rev. 1934
4	Dramatická ouvertura, a, 1891–2
6	Serenade, E, str, 1892
9	Pohádka zimního večera [Tale of a Winter's Evening], ov. after W. Shakespeare, 1894–5, rev. J. Vogel, 1925
14	Symphony, E, 1897–9

16 Pohádka [Fairy Tale], suite from Radúz a Mahulena, 1899–1900
24 Fantasy, g, vn, orch, 1902–3
25 Fantastické scherzo, 1903
26 Praga, sym. poem, 1904
27 Asrael, sym., c, 1905–6
29 Pohádka léta [A Summer's Tale], sym. poem, 1907–9
— Pod jabloní [Beneath the Apple Tree], 5 tableaux from op.20, A, SATB, spkr, orch, 1911–12
34 Zrání [Ripening], sym. poem, 1912–17
35a Meditace na staročeský chorál 'Svatý Václave' [Meditation on an Old Czech Hymn 'St Wenceslas'], str/str qt, 1914
35b Legenda o mrtvých vítězích [Legend of the Dead Victors], funeral piece, 1919–20
35c V nový život [In a New Life], march, SATB, orch, 1920; pf duet version, 1919
37 Epilog, sym. piece (Ps xxiii, Bible: *Genesis*, J. Zeyer, arr. L. Vycpálek), S, Bar, B, SATB (small), SATB (large), orch, 1920–29, rev. up to 1932
— Pod Blaníkem [Beneath Blaník], march, 1v, orch, 1932, orchd J. Kalaš

KEYBOARD

unless otherwise stated all for piano two hands

— Early compositions: Sonata, C, 1883, unpubd; Ov., 1884–5, unpubd; Polonaise, c, 1886–7, arr. 4 hands, 1887; Untitled piece, B♭, 1886–7; Untitled piece, G, 1886–7; Jindřichohradecký cyklus [Jindřichův Hradec Cycle], 1886–7; Fugue, c, 1888–9, unpubd; Fugue, c, 1890, also arr. str qt, 1890, both unpubd
Drei Lieder ohne Worte, 1891 [no.3 (Melodie) became op.7 no.6 (Capriccietto)]
5 Fantaisie-polonaise, 1892
7 [6] Klavírní skladby [Piano Pieces], 1891–3
— Capriccietto, G, 1893
— Humoreska, C, 1894
— Lístek do památníku [Albumleaf], 1895
10 Nálady [Moods], 5 pieces, 1895
12 [8] Klavírní skladby [Piano Pieces], 1895–6
13 Sonatina, g, 1897, rev. as op.21
— Vesnická serenáda [Village Serenade], 1897, arr. 2 cl, str qt, db, 1935, unpubd
— Bagatelle arr. of original third movt of Sym., op.14, 1898
21 Suite, 4 pieces, 1900
22a Jaro [Spring], 5 pieces, 1902
22b Letní dojmy [Summer Impressions], 3 pieces, 1902
28 O matince [About Mother], 5 pieces, 1907
— Psina španělská [Spanish Joke], 1909
30 Životem a snem [Things Lived and Dreamt], 10 pieces, 1909
33 Ukolébavky [Lullabies], 6 pieces, 1910–12
36 O přátelství [About Friendship], 1920

JOHN TYRRELL

Suk, Josef (ii) (*b* Prague, 8 Aug 1929). Czech violinist, grandson of JOSEF SUK (i) and great-grandson of Dvořák. He was taught from childhood by Jaroslav Kocian, whose pupil he remained until Kocian's death in 1950; he also studied at the Prague Conservatory until 1951, and then with M. Hlouňová and Alexander Plocek at the Prague Academy (1951–3). He first appeared in public in 1940. In 1948 he was chosen to take part in exchange concerts in Paris and Brussels, but it was a Prague recital in 1954 that confirmed his maturity as an artist. At this time he was leading the orchestra for drama productions at the Prague National Theatre, where he was engaged from 1953 to 1955. A continuing interest in chamber music from his student days brought about his leadership of the Prague Quartet (1951–2) and his formation in 1952 of the Suk Trio, with Josef Chuchro (cello) and Jan Panenka (piano).

Suk's reputation as a violinist flourished more widely from 1959, when he appeared as soloist with the Czech PO on a tour of three continents; he has also made a number of world tours with the Suk Trio. He was named soloist of the Czech PO from 1961, and made his British début at the 1964 Promenade concerts in concertos by Mozart and Dvořák, when he was highly praised for his silken tone, expressive fervour and immense technical skill. His playing reveals his clear perception of style and content, expressed with a rich fund of lyric feeling that avoids excessive display. He has played violins by Antonio Stradivari (the 'Libon' dated 1729), Guarneri del Gesù ('Prince of Orange', 1744) and Giovanni Guadagnini ('Ex Vieuxtemps', 1758), and his many recordings, which include outstanding discs of unaccompanied Bach and of the Beethoven, Dvořák and Berg violin concertos, have won several international awards. He retains a particular interest in sonata playing and formed a duo with Zuzana Růžičková in 1963 and a trio with Janos Starker and Julius Katchen for two years before Katchen's death in 1969. The trio made acclaimed recordings of the Brahms trios, while Suk and Katchen's strong poetic readings of the Brahms violin sonatas have rarely been equalled. Suk also recorded frequently with Panenka and has appeared with Stephen Kovacevich and other pianists. In 1974 he founded the Suk Chamber Orchestra, comprising twelve strings, of which he remains artistic director. Since 1973 he has often played the viola, both in chamber ensembles and in solo works such as Shostakovich's Sonata op.147. In 1980 Suk was appointed to teach the violin at the Vienna Hochschule für Musik.

ALENA NĚMCOVÁ

Suk, Václav [Váša; Vyacheslav Ivanovich] (*b* Kladno, 16 Nov 1861; *d* Moscow, 12 Jan 1933). Russian conductor and composer of Czech birth. After studying the violin at the Prague Conservatory and composition privately with Fibich, he became leader of an opera orchestra in Kiev, 1880–82, and then from 1882 to 1887 was a violinist in the orchestra of the Bol'shoy Theatre. From 1885 he became known as a conductor in various Russian cities and from 1906 to 1933 he was a conductor at the Bol'shoy (chief conductor 1928–33); he was also principal conductor of the Stanislavsky Opera Theatre in Moscow from 1927. Suk was much esteemed for his thoroughness in operatic preparation, and Gozenpud called him one of the best interpreters of Rimsky-Korsakov's works. His opera *Lesův pán* ('Lord of the Forests'), to a Czech libretto by J.V. Frič, based on K.H. Mácha's verse classic *Maj* ('May'), was first produced in Russian translation at Kharkiv in 1900, and in Czech at Prague in 1903. Suk's other compositions include a symphonic poem *Jan Hus*, a Serenade for string orchestra, piano pieces and songs. Regarded as one of the most distinguished Russian conductors, he was created People's Artist in 1925.

ARTHUR JACOBS

Sukowaty, Wenzel (*b* Vienna, 31 July 1746; *d* Vienna, 9 July 1810). Austrian music copyist. Although Weinmann states that Sukowaty's shop may have been founded *c*1784, payment records show that he was the principal music copyist for the Viennese court theatres from 1778 until 1796 (Edge, 1995). Important copies from his shop include original performance scores for *Die Entführung aus dem Serail*, *Le nozze di Figaro*, *Don Giovanni* and *Così fan tutte* (all *A-Wn*, some with autograph entries by Mozart); signed manuscripts of Sarti's *Fra i due litiganti* and Salieri's *La grotta di Trofonio* survive in Budapest (*H-Bn*). Sukowaty copies are typically in several hands; it is difficult to determine how many employees worked for him and at what times, whether they were temporarily subcontracted, and whether they additionally worked for other copy shops or as independent entrepreneurs, all of which bears on the authority of manuscripts deriving from his shop. To date, none of his copyists has been identified by name. Sukowaty also sold manuscripts commercially, including orchestral scores, individual arias and piano scores; he was a regular advertiser in the

Viennese press, chiefly the *Wiener Zeitung* (for Sukowaty's Mozart advertisements, see Deutsch).

CLIFF EISEN

Sukri, Uking (*b* Bandung, Indonesia, 18 Feb 1925; *d* Ujungberung, Indonesia, 17 April 1994). Sundanese *kacapi* (zither) player and *tembang Sunda* (accompanied sung poetry) master. He was attracted to music at an early age and received his first instruction from a sympathetic neighbour. From 1953 to 1983 he worked at Radio Republik Indonesia (RRI) Bandung, where he first played *kacapi rincik* (small, high-pitched zither), along with Oyo Tarya on *kacapi indung* (large lower-pitched zither) and Ono Sukarna on *suling* (bamboo flute), accompanying such famous *tembang* singers as Nyimas Saodah and Apung S. Wiratmadja. He became the *kacapi indung* player when Tarya died in 1966. The RRI group recorded cassettes beginning in the 1970s and travelled to Europe several times; during this period, the group also developed the genre *kacapi-suling* (instrumental interpretation of the metrical *panambih* songs of *tembang Sunda*), the broadcasts of which proved to be extremely popular. Sukri was active in the *tembang Sunda* competitions sponsored by Daya Mahasiswa Sunda (DAMAS). He was also noted for the quality of the *kacapi* he built, and his instruments remain highly valued. His *tembang* compositions (e.g. *Ombak-ombakan*) continue to be performed, as does his well-known *degung* composition, *Karang Ulun*. He taught at the Akademi Seni Tari Indonesia (ASTI, now Sekolah Tinggi Seni Indonesia (STSI)), the government-sponsored arts institute in Bandung, from 1983 until his death. His playing styles for both *kacapi indung* and *rincik* were widely disseminated on the radio and on cassettes and have influenced several generations of *kacapi* players.

HENRY SPILLER

Šulek, Stjepan (*b* Zagreb, 5 Aug 1914; *d* Zagreb, 16 Jan 1986). Croatian composer, conductor and violinist. He completed his violin studies with Vaclav Huml at the Zagreb Academy of Music, where he periodically also attended Bersa's composition class. He was appointed professor of violin there in 1945 and professor of composition in 1947. Until his retirement in 1975, his composition class produced most of the important contemporary Croatian composers, from Kelemen, Horvat and Detoni to Davorin Kempf. Šulek was also active as a chamber musician, playing in the Zagreb Quartet (1938), and in a trio with the pianist Ivo Maček and the cellist Antonio Janigro. From 1958 to 1962 he was the conductor of the Zagreb Radio Chamber Orchestra, which grew under his direction into an ensemble of international standing. In 1954 he was elected to membership of the Zagreb Academy of Arts and Sciences; he later became the general secretary of its music department.

As an outstanding symphonist, Šulek was, along with Papandopulo, the leading personality of 20th-century Croatian music. His Romantic mode of expression, the Baroque-like structure of his compositional material, his Classical organization of form, and his rejection of both the neo-national realism of the 1940s and 50s and the avant-garde trends of the 1960s, are the basis on which he developed his all-embracing musical language, which can be understood in terms of distinct developmental periods. The first period (1942–69) – to which belongs the opera *Oluja*, the first six symphonies, the first three Classical Concertos, and most of his solo concertos – is full of neo-Baroque and neo-Classical energy. From his Third Piano Concerto (1970) and the orchestral *Epitaf* (1971), to the organ concerto *Memento* (1974), he developed an even more glittering sound (recalling Ravel and Richard Strauss) and the discursive form of late Romanticism (Liszt, Mahler). The rhetorical element in his music was further advanced in the works written after 1975, particularly in his second and third piano sonatas, the Symphony no.7 and the cycle of five string quartets *Moje djetinstvo* ('My Childhood'). Šulek turned increasingly to mottos and symbolic motifs in the works of his last decade. His form gradually developed towards a rhapsodic freedom, contrasting with the Classical balance of his earlier compositions. As a result of his composing 'music about music', his late works are radically retrospective, with elements suggesting a closeness to musical postmodernism.

WORKS
(*selective list*)

Stage: Koriolan [Coriolanus] (op, 3, Šulek, after W. Shakespeare), 1953–7, Zagreb, 12 Oct 1958; Oluja [The Tempest] (op, 3, Šulek, after Shakespeare), Zagreb, 28 Nov 1969; De veritate (ballet), Zagreb, 10 June 1977

EVA SEDAK

Suling [seruling]. Bamboo ring flute of Indonesia, Malaysia and the southern Philippines. There are various types and sizes. The end-blown variety as it is commonly found is made from a bamboo tube, open at the bottom and closed with a node at the top. A small wedge-shaped hole is cut in the node, together with a small opening just below it, and this is partly covered by a narrow bamboo or rattan ring which guides the player's breath along the slit between the hole and the ring (*see* FLUTE, figs.1*b* and 3*g*). In Central and East Java the tube is about 45 to 52 cm long and about 1·5 cm in diameter; the *suling sléndro* has four fingerholes, the *suling pélog*, five. In West Java the tube is about 53 cm long and about 2 cm wide. The instrument is played either alone or in ensembles, in which case it is often known by the name of the ensemble in question. The *suling degung* of the Sundanese areas of West Java, used in the *gamelan degung*, is about 30 cm long and has one large and three small fingerholes. The *suling réyog*, used in the ensemble to accompany comic *réyog* shows, is fairly short and thick and has three fingerholes.

In Bali the *suling* is about 25 to 30 cm long and 20 to 25 mm wide. It is used in orchestras such as the *gamelan arja*, *genggong* ensemble and *gamelan pejogedan*. The larger *suling gambuh* is about 87 cm long and 40 mm wide, has six fingerholes and can produce a range of about 2·5 octaves. It is held obliquely and a circular breathing technique is used. Several of the flutes are played together in the *gambuh* ensemble.

In the Toraja area of Sulawesi a transverse *suling* is used in the *bas-suling* ensemble, and it is included also in the *pompang* ensemble in Ambon, Maluku. In the Buginese and Makassar areas of South Sulawesi a *suling* with six fingerholes and a water-buffalo horn ring stop is usually included in an ensemble with *kacapi* (plucked lute) and *gendang* (double-headed drum) to accompany dancing. A similar end-blown flute (*suling lembang*) is found in the Sa'dan Toraja area of South Sulawesi; usually two or four are played together by male musicians using circular breathing to accompany a female singer performing *ma'marakka* music.

In the Angkola and Mandailing areas of North Sumatra the transverse *suling* is about 35 cm long and 25 mm wide, with six fingerholes.

Twin ring flutes called *suling rapi* are found in the Mamasa and Rantepao areas of South Sulawesi, connected parallel to each other by means of wound rattan. One flute has five fingerholes and the other none, serving as a high-pitched drone.

In Malaysia, various kinds of bamboo flutes are known by such names as *suling* and *seruling* and in east Malaysia, as *selengut* and *sangui*. As in Indonesia, some are end-blown, others side-blown, some are blown with the mouth and others with the nose. They are played for entertainment and are frequently associated with magic power. Flutes of the Orang Asli in central Malaysia are called *suling* or *sangui*; the use of nose breath in a ceremonial context attaches especially powerful magical significance.

The *suling* is found among several peoples of the southern Philippines: the Magindanao, Tiruray, Manobo, Bukidnon and Tausug.

MARGARET J. KARTOMI

Sulkhanishvili, Niko (*b* in the village of Atskuri, eastern Georgia, 1871; *d* Tbilisi, 3 Dec 1919). Georgian composer and choral conductor. He studied singing at the Telavi Spiritual School and then in 1884 entered the Tbilisi Spiritual Seminary, where he studied under the master of Georgian folk choral singing, L. Agniashvili. He then returned to conduct the choir of the Telavi Spiritual School (1890–1902) and after taking part in a folklore expedition in 1912, organized an ethnographic choir with which he also performed his own works. A folksong expert, he gained a masterly knowledge of the art of choral writing and is acknowledged as a writer of classic Georgian choral music.

Sulkhanishvili played a decisive role in establishing professional Georgian music and was a founder of various genres in Georgian a cappella choral music: the ritualistic and staged *Mestviruli* ('Bagpipe Song') and *Gutnuri* ('Song for Ploughing'); the original 'Georgian madrigals' including *Mash, gamarjveba tkbilo sitsotskhlev* ('Greetings, Joyful Life'), *Samshoblo khevsurisa* ('The Khevsur's Homeland') and the chorale *Gmerto, Gmerto* ('O God, God'); the more recent type of orthodox canticle which takes the form of non-canonical arrangements, including *Khvalitye imya Gospoda* ('Praise the Name of the Lord'), *Bog Gospod'* ('The Lord God'), *Kondak ko svyatïm* ('Kontakion for the Saints') and *Velikaya yekteniya* ('The Great Prayer'). As distinct from the traditionally three-part Georgian choral singing, Sulkhanishvili initiated a four-part division (soprano, alto, tenor and bass) along European lines which nonetheless took account of the diverse features of Georgian folk and church music. The originality of the forms stems from the dynamic selection of folksong variants and this gives rise to an overall reading of the modal motifs of the folk sources. With their vivid national distinctiveness, the monumental choruses of Sulkhanishvili are the finest examples of Georgian professional choral music.

WORKS

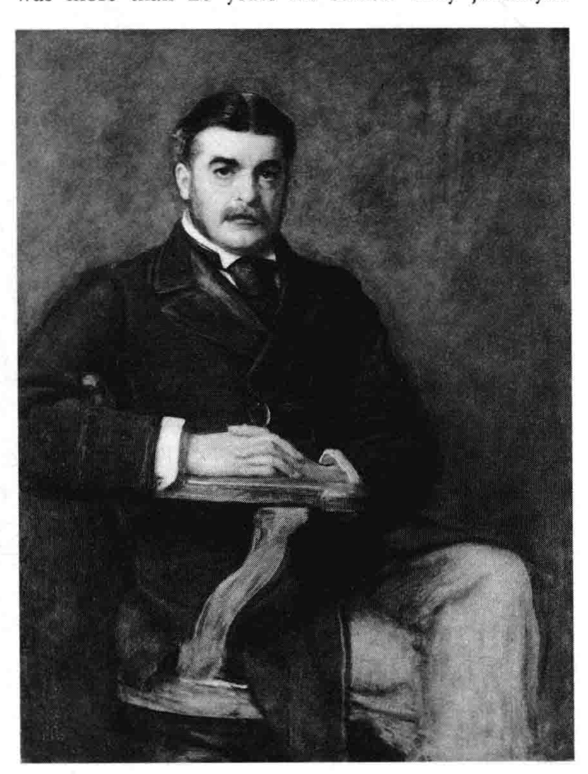
Sullivan, Sir **Arthur (Seymour)** (*b* Lambeth, London, 13 May 1842; *d* London, 22 Nov 1900). English composer and conductor of mainly Irish descent. His maternal grandmother was Italian; suggestions of a partly Jewish descent are unsupported by evidence. Though he composed in a great variety of musical genres, his widest and most durable fame was won in operetta, especially in partnership with the dramatist and satirist W.S. Gilbert (1836–1911).

1. Life: (i) Early career (ii) Operetta and maturity (iii) The final decade.
2. Works: (i) Operettas (ii) Other works. 3. Posthumous reputation.

1. LIFE.

(i) Early career. During Sullivan's infancy the family moved from London to Sandhurst, where his father, Thomas Sullivan, was sergeant bandmaster at the Royal Military College (1845–56). Sullivan gained from this move an early intimacy with wind instruments; he also learnt the piano and, at about eight years old, began to compose. His exceptional singing voice won him admission to the Chapel Royal (1854–7), despite his being about two years older than most boys on entry. The musical tuition and quasi-parental authority of the master of the choristers, Thomas Helmore (at whose house they lived), were of the utmost value to him. While still a chorister he became in 1856 the first recipient of the Mendelssohn Scholarship, which offered (initially) one year's free tuition at the RAM.



In 1857 the family moved back to London, where Thomas Sullivan took a civilian appointment as professor of clarinet at the newly founded Royal Military School of Music, Kneller Hall. At the RAM, where Sullivan studied the piano with William Sterndale Bennett and composition with John Goss, his Overture in D minor was publicly performed on 13 July 1858. The scholarship was extended for a second year and then for a third in order to send him to the Leipzig Conservatory, where Moscheles was his personal mentor as well as one of his piano teachers (with Louis Plaidy); he studied composition with Julius Rietz and was encouraged as a conductor.

His graduation exercise at Leipzig, which he conducted on 6 April 1861, was a suite of incidental music to *The Tempest* much on the lines of Mendelssohn's to *A Midsummer Night's Dream*. Returning to London, he met George Grove, who arranged for a performance of the *Tempest* music (revised) under the baton of August Manns at the Crystal Palace on 5 April 1862. The work won an immediate and extraordinary success: 'it may mark an epoch in English music', wrote the influential critic Henry F. Chorley in *The Athenaeum*. It was repeated a week later; in 1863 Hallé likewise gave it two performances with his orchestra in Manchester. Sullivan was thereafter never short of commissions and was exceptionally permitted to dedicate his Procession March (also called Royal Wedding March; Crystal Palace, 10 March 1863) and other works to the Prince of Wales himself, the future King Edward VII.

He established a foothold on the choral festival ladder with *Kenilworth* at Birmingham (8 September 1864) and an overture in C (usually called *In memoriam*) at Norwich on 30 October 1866. A symphony (later dubbed 'the Irish') was performed at the Crystal Palace on 10 March 1866 and an overture, *Marmion*, marked his entry into the Philharmonic Society's programmes on 3 June 1867. He had begun to work on an opera (*The Sapphire Necklace*, later renamed *The False Heiress*) with Chorley as librettist, but it was never to reach performance, and his first theatrical appearance was made with a one-act ballet score, *L'île enchantée*, presented as an afterpiece to Bellini's *La sonnambula* on 14 May 1864 at Covent Garden, where Michael Costa, the musical director, had given him the position of organist.

The prestige of such achievements being no guarantee of income, Sullivan still found it necessary to hold a church organist's post (at St Michael's, Chester Square, then at St Peter's, Cranley Gardens), to conduct an amateur choir (the Civil Service Musical Society) and to teach occasionally. Songs of the type somewhat miscalled 'drawing-room ballads' (successful sales of which depended on the work being 'pushed' by well-known singers at their concerts) began to earn him substantial sums. *Will he come?* (1865) had words by Adelaide A. Procter, to whose verse Sullivan later turned for the runaway success *The Lost Chord* (1877). He also tapped a popular vein in hymn tunes, notably 'St Gertrude' (*Onward, Christian soldiers*, 1871), and was himself the editor of *Church Hymns with Tunes* (1874).

Sullivan formed a close friendship with Grove, who was more than 20 years his senior. They journeyed

1. Arthur Sullivan: portrait by John Everett Millais, 1888 (National Portrait Gallery, London)

together in 1867 to Paris and then to Vienna, where they recovered part of Schubert's missing music to *Rosamunde*. Grove introduced the young composer to the aging Tennyson and the song cycle *The Window* (1871) was the result. (The publication was to have had illustrations by Sullivan's friend John Millais, but the poet's procrastination was such that Millais allowed his drawings to be dispersed.) Grove also helped plan Sullivan's programmes as conductor of the Glasgow Choral and Orchestral Union (1875). At the first major concert in the Royal Albert Hall in 1871, with works by Gounod and Ferdinand Hiller representing France and Germany, a new cantata by Sullivan (*On Shore and Sea*) stood for British music. In 1876, while still in his early 30s, he was appointed principal of the newly established National Training School for Music, and remained there until 1881 (the school was later merged into the RCM).

(ii) Operetta and maturity. As yet there had been no hint of the way in which operetta was to dominate Sullivan's career. *Cox and Box* (originally with piano, for a private musical circle, 1866) and *The Contrabandista* (1867), both with F.C. Burnand as librettist, were hardly more than agreeable diversions on a 'serious' composer's path; the same may be said of Sullivan's earliest collaboration with W.S. Gilbert, *Thespis* (the score is lost), tailored to the demands of burlesque at the Gaiety Theatre in 1871. Only with the one-act *Trial by Jury* at the Royalty Theatre in 1875 (as an afterpiece to Offenbach's *La Périchole*) did Gilbert and Sullivan establish their joint theatrical mastery at a stroke. Richard D'Oyly Carte, a sub-manager on that occasion, was determined to exploit their united capabilities and *The Sorcerer* (1877) was the first fruit of his enterprise.

Even more successful was *HMS Pinafore* in the following year. The indignity of pirated versions (paying nothing to author or composer) in the USA prompted Carte to take Gilbert, Sullivan and a company of London performers to New York, where *The Pirates of Penzance* was launched on the last day of 1879 before being performed in London. *Patience* (1881) was next in the sequence of successes which caused 'Gilbert and Sullivan' to be recognized as virtually a genre. Carte was emboldened to build the Savoy Theatre, the first theatre in London to be completely lit by electricity. It opened in 1881 with a transfer of *Patience*, *Iolanthe* (1882) being the collaborators' first new work for that theatre. In 1883 Sullivan was knighted. After the less successful *Princess Ida* (1884) came *The Mikado* (1885), with which he and Gilbert won their longest run (672 performances). Carte took it to Berlin and Vienna in 1886 and of all the operettas it was to become by far the most often performed in translation.

Sullivan invariably conducted the opening performances of his operettas (and Gilbert was invariably the stage director of their collaborations). A mark of esteem was his appointment as conductor of the Leeds Triennial Musical Festival from 1880: he launched there his new oratorio ('sacred music drama') *The Martyr of Antioch* in that year and *The Golden Legend* in 1886, and won much praise in 1883 for what the *Musical Times* called 'the most complete interpretation of Bach's sacred masterpiece [the Mass in B minor] ever heard in this country or, for that matter, in any other'. But he was obliged by kidney disease to conduct seated, and a general want of energy was sometimes felt. Having been appointed conductor of

2. 'Three little maids' from Gilbert and Sullivan's 'The Mikado', Savoy Theatre, London, 1885: (from left to right) Sybil Grey (Peep-Bo), Leonora Braham (Yum-Yum) and Jessie Bond (Pitti-Sing)

the Philharmonic Society of London in 1885, he resigned after three seasons, privately citing among his reasons the critics' disparagement of him in comparison with 'their god, Richter'.

It was operetta, however, that maintained Sullivan in sufficient wealth to relish the pleasures of society, particularly that 'fast' section of which the Prince of Wales was leader. He was a gregarious clubman, a guest at aristocratic house parties, a keen race-goer, and a confirmed gambler at cards (in London) and at the tables (in Monte Carlo). His friendships embraced members of the Rothschild and Sassoon banking families, as well as the Duke of Edinburgh, Queen Victoria's youngest son, who, as a rear-admiral, took Sullivan as his guest (along with Sullivan's close friend, the composer Frederic Clay) on a Baltic naval cruise in 1881. With another friend, the political journalist Edward Dicey, he visited Egypt in the winter of 1881–2. In the summer of 1885, when Carte once again fought 'pirate' productions by taking 'his' *Mikado* to New York, Sullivan took an extended trip to California in order to visit his deceased brother Frederic's young children, who had recently been bereaved a second time by the death of their mother.

Though he never married, a strong sense of family duty never left him. He brought up Frederic's eldest child, Herbert, who in due course became the composer's joint biographer (with Newman Flower, C1927). He maintained a long, devoted liaison, never made public, with Mary Frances Ronalds, a prominent American hostess in London society who had separated (but was not divorced)

from her husband: typically, his care was extended to her father ('the guv'nor' in Sullivan's diaries) and her children.

Sullivan's affability of temperament brought him quickly to informal terms with many colleagues, but extensive correspondence addressed to 'My dear Gilbert', 'Dear S.' and the like shows the professional distance kept between him and his most celebrated collaborator. (Cartoons in the press frequently contrasted a smiling, short composer and a tall, stern-looking librettist.) More importantly, by the mid-1880s Sullivan began to chafe at the artistic terms of the collaboration: he considered his emotional range shackled by the rigour and rhyming of Gilbert's verse and the artificiality of his plots. As early as 1884 he told Carte he wanted to write no more Savoy-type operas.

His withdrawal from extended orchestral composition had been conspicuous: the *Overtura* [*sic*] *di ballo* of 1870 was his last independent work in that field. Given his unsystematic habits of work – long procrastinations followed by working days of 18 hours or more – any hope of reconquering old territory was unsure. Declining an invitation to write (for the Leeds Festival) another symphony, he convinced himself that his artistic self-rehabilitation would come with a 'grand' opera. Meanwhile with *The Yeomen of the Guard* (1888) Gilbert accommodated Sullivan with a plot of quasi-historical substance and 'real' emotion, but its preparation brought tension and quarrels.

Carte, prepared to back Sullivan beyond the confines of the Savoy, was even willing to build a new, larger theatre, the Royal English Opera House (now the Palace Theatre). But before the new project could be realized (and after *The Gondoliers*, the last great Gilbert and Sullivan success, 1889), Gilbert had quarrelled with Carte over the proper budgeting of funds for interior decoration at the Savoy. In what became known as the 'carpet quarrel' Gilbert sued Carte, Sullivan took Carte's side, and the public was treated in September 1890 to the spectacle of Gilbert and Sullivan on opposite sides in a court of law over what seemed a mere trifle. (The action was inconclusive.)

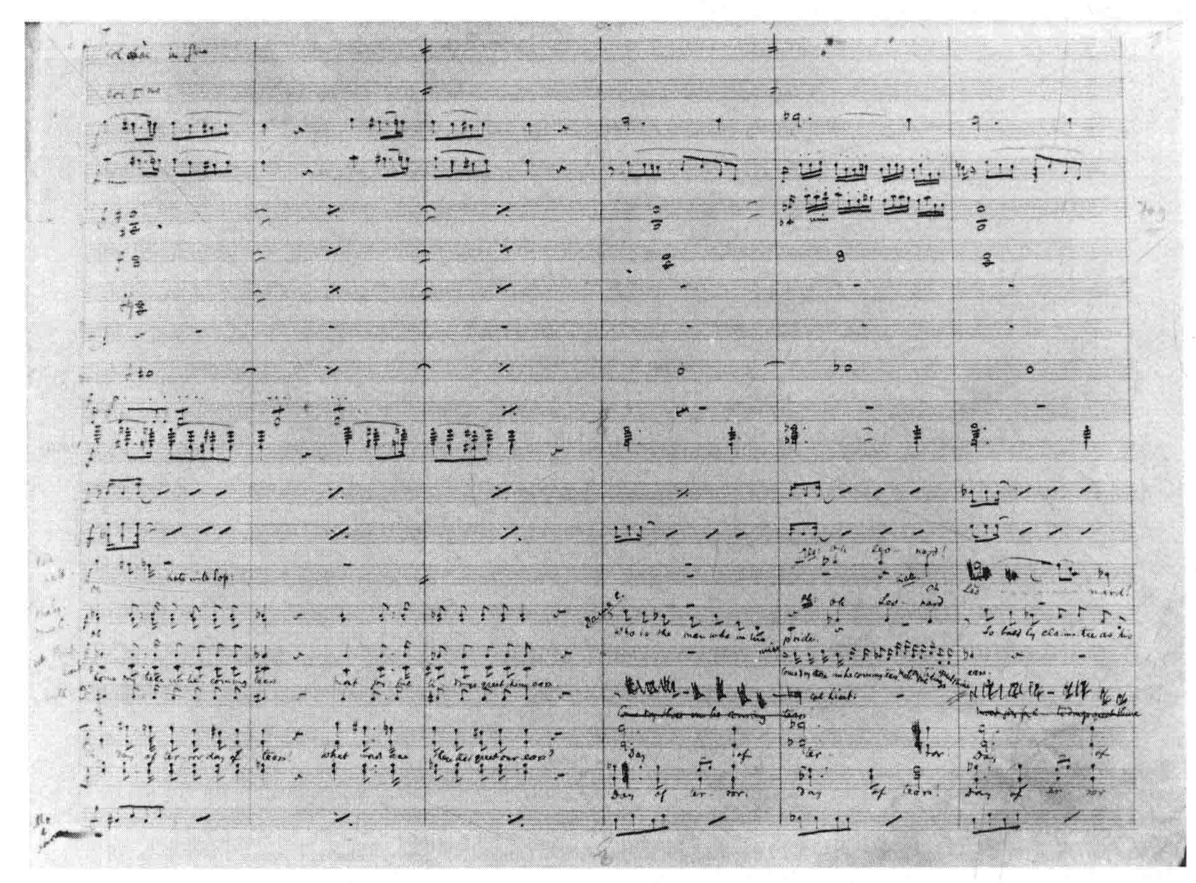
(iii) The final decade. On 31 January 1891 Sullivan's sole 'grand opera', *Ivanhoe*, with a libretto by Julian Sturgis after Sir Walter Scott's novel, was launched by Carte on the extraordinary principle of a continuous nightly run (as for operetta) with constantly changing casts. Its total of 160 performances, though remarkable enough, was insufficient to cover Carte's costs and he had to sell the theatre. When produced in Berlin in 1895, *Ivanhoe* was savaged. To feed Carte's continuing regime at the Savoy, Sullivan continued to provide works, both with other librettists and, after an eventual reconciliation, with Gilbert (*Utopia Limited* and *The Grand Duke*): but the eggs were no longer golden. His last operetta, *The Emerald Isle*, was unfinished at his death: Edward German completed it for performance.

In 1899 Sullivan resigned, under unfriendly pressure, from the Leeds Festival conductorship. A sick man, his creative force was almost spent. Yet he remained, in the general as well as the official view, an unparalleled incarnation of his country's music. In his last years, during the South African (Boer) War, it was typical that he

3. Ducal party and the Grand Inquisitor in the Act 1 quintet from Sullivan's 'The Gondoliers', Savoy Theatre, London, 1889: (from left to right) Frank Wyatt and Rosina Brandram (Duke and Duchess of Plaza-Toro), W.H. Denny (Don Alhambra del Bolero), Decima Moore (Casilda) and Wallace Brownlow (Luiz)

should compose a song-setting for Kipling's rousingly patriotic ditty 'The Absent-Minded Beggar' (all proceeds going to war charities) and should also anticipate the victory celebrations with a *Te Deum* which was duly performed in St Paul's Cathedral in June 1902, more than a year and a half after his death.

In 1897 he had paid his first and only visit to Bayreuth, hearing *Der Ring des Nibelungen* and *Parsifal*, and had not much liked either the works or their staging, noting in his diary: 'What a curious mixture of sublimity and absolutely puerile drivel are all these Wagner operas'. Earlier in the same year he had formed a new, informal contact with Queen Victoria in person, when he played the harmonium at an Easter service while she was staying at a hotel at Cimiez, near Nice. Three visits to Windsor Castle followed, and the conferment of the Royal Victorian Order (1897). He had previously been made a Chevalier of the Légion d'Honneur (1878) and had received the Turkish order of the Medjidieh (1888), as well as honorary doctorates from Cambridge (1876) and Oxford (1879) and the fellowship of the RAM.



He had made provision for burial in the same grave as his father, mother and brother at Brompton Cemetery, but the offer of burial at St Paul's was deemed to override his wish. By the Queen's command the cathedral service on 27 November 1900 was preceded by another at the Chapel Royal, St James's Palace, where the uniformed boy choristers saluted their predecessor. A memorial statue by Sir William Goscombe John stands in the Embankment Gardens in sight of the Savoy Theatre. Among his bequests the autograph scores of *The Mikado* and *The Martyr of Antioch* went to the RAM, those of *The Yeomen of the Guard* and *The Golden Legend* to the RCM; most of the remainder of his artistic property remained in family possession (his nephew Herbert Sullivan was the residuary legatee until trustees broke up the estate in 1966).

2. Works.

(i) Operettas. Ethel Smyth, a devoted younger admirer of Sullivan as both man and artist, recollected in her memoirs (1919) the occasion when

> he presented me with a copy of the full score of *The Golden Legend*, adding, 'I think this is the best thing I've done, don't you?' and when truth compelled me to say I think *The Mikado* is his masterpiece, he cried out 'O, you wretch!' But though he laughed, I could see he was disappointed.

The sheer power of survival which has attached to Sullivan's operettas (chiefly those with Gilbert, but with *Cox and Box* received into the canon also) compels prior attention to be devoted to them. The refinement and resource of musical technique is out of all proportion to the modesty of their technical requirements: with few exceptions the roles do not demand 'operatic' competence (which is why amateurs perform them so successfully), nor is orchestral virtuosity required from the modest force of two flutes, oboe, two clarinets, one bassoon (in later works two), two horns, two cornets, two trombones, a single percussionist and strings (fig.4).

4. Autograph MS from Act 2 of Sullivan's 'The Yeomen of the Guard', composed 1888 (GB-Lcm FS, f.186r)

The harmonic and contrapuntal skills he learnt by experience at the Chapel Royal and by instruction at the RAM and in Leipzig, the piquancy of woodwind which he absorbed from his father's military background and the general currency of musical ideas from Mendelssohn to Bizet were all applied to giving Gilbert's text a musical expression which both complements that text and can live in independence from it. (Orchestral and band excerpts and various dance arrangements maintained their own popularity.) Though he is probably prized chiefly as a melodist, Sullivan made it clear that his starting-point in tackling a text was the choice of basic rhythm. For the benefit of his early biographer Arthur Lawrence (C1899) he set forth the variant possibilities for 'Were I thy bride' from *The Yeomen of the Guard* which had to be explored before one rhythmical pattern was accepted and duly took shape (ex.1).

Ex.1 *The Yeoman of the Guard*

On the broadest scale his musical settings in the operettas are determined by their dramatic shape as 'given' by Gilbert: the two-act works all conform to the Rossinian principle of a first act concluding in the maximum dramatic and musical complexity. Thus Sullivan's first-act finales are characteristically substantial, the second-act finales often perfunctory. Gilbert's share in Sullivan's structures is often underestimated: the opening of *The Gondoliers*, where a complete scenic action is traversed in some 17 minutes of music uninterrupted by spoken dialogue, is deliberately set forth in the libretto. At the opposite end – in what might be called 'micro-setting' of words – Sullivan could achieve a comic verbal point without jolting the melodic line. Appropriately, the Rev. Dr Daly in *The Sorcerer* rises to a high note at 'Did I look pale? then half a parish trem-bled' and the Duke of Plazo-Toro (*The Gondoliers*) evokes the nursery in vaunting his daughter's infant charms (ex.2).

Ex.2 *The Gondoliers*

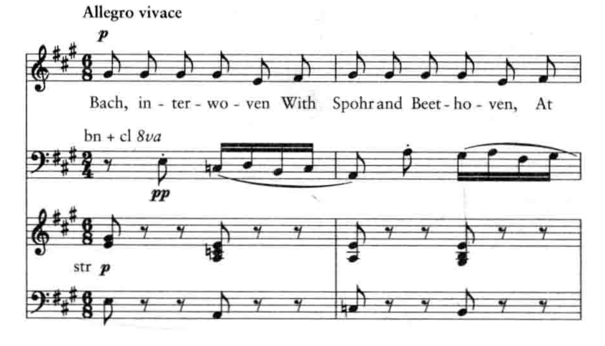
Sullivan's genius chiefly shows, however, in the invention and polish of individual numbers – solos, ensembles, choruses – in which the melodies and their harmonic underpinning capture so well the expressive movement or the dramatic turn of events. Sullivan's musical warmth may even override Gilbert's dryness. Yum-Yum's 'The sun whose rays' in *The Mikado* is verbally a mere conceit (in both senses); but the wistfully rising and falling tune in G major, with its exceptional placing of a dominant minor chord, is irresistible. Incidentally, the instrumental introduction, its falling G–E–D–B figure echoing the authentic Japanese march used for the entrance of the Mikado himself, exemplifies the cunning musical integration of the whole operetta; the figure is found also in the Katisha–Ko-Ko duet ('If that is so/Sing derry-down-derry') and elsewhere.

A characteristic, indeed almost the trademark, of Sullivan's operetta style is his 'counterpoint of characters': the presentation by different personages of two seemingly independent tunes which later come together. (Berlioz's *La damnation de Faust*, enormously popular throughout Sullivan's formative years, may have furnished the model.) Perhaps the wittiest example occurs in *The Pirates of Penzance*, the rapid weather-chatter of the female chorus (2/4) being counterpointed by the lovers' duet in waltz time, the whole number shifting with Schubertian ease from B to G and back again. Even before this, in *The Zoo*, counterpoint of almost equal deftness marks a quartet – or rather double duet – of one comic and one serious pair of lovers. In *The Mikado* the number of dissimilar tunes separately announced and later combined to be counterpointed extends to three ('I am so proud', 'My brain it teems', 'I heard one day').

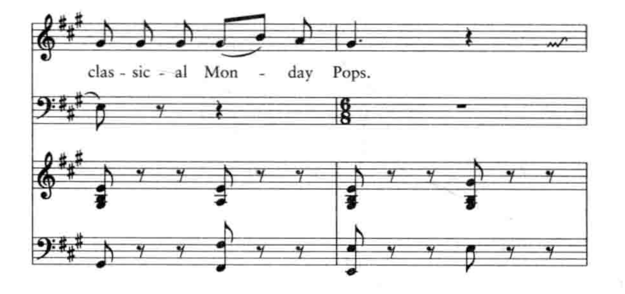
The Zoo is also to be cherished for the musical representation of a tongue-tied orator: not only is he prompted by the chorus, but the continuity of his line is helpfully supplied by an oboe. Exceptionally, and like its immediate predecessor *Trial by Jury*, *The Zoo* is an all-sung one-acter. All the later, longer operettas include speech, and all of Gilbert's are in two acts, except for *Princess Ida* (three acts), where the librettist in parodying Tennyson's *The Princess* modelled the structure on his own previously written play in spoken verse.

In adopting some of the standard components of *opera buffa* and *opéra comique* (the mid-Victorian popularity of Auber should not be forgotten), Sullivan summoned verve and individuality. Marches are prominent and well differentiated, from *The Sorcerer* (where the hero is a guards officer) to the deliberate Japanese borrowing in *The Mikado*; most notably in *Iolanthe*, not only do the peers enter marching, but the climax of Act 1 comes with the defiant counter-marching of peers and fairies. The device of comically rapid articulation ('patter') is extended past Rossini's and Donizetti's use with a patter trio in *Ruddigore*.

The operettas of Offenbach, so popular in the London theatre both in French and in translation, provided a precedent (if such were needed) for musical parody. In Sullivan's usage the parody might be loosely allusive or quite specific, *Trial by Jury* providing the best examples of each: the generalized Handelian pomp in the welcome



to the Learned Judge and, in the sextet and chorus 'A nice dilemma', a close imitation of 'D'un pensiero' from the first-act finale of Bellini's *La sonnambula*. Not parody, but a near relation in witty allusion, is the quotation from a Bach organ fugue (the 'Great' G minor BWV542) at the words 'masses and fugues and ops/By Bach, interwoven/ With Spohr and Beethoven') in *The Mikado* (ex.3). Far from blatant, almost obscurely placed on clarinet and bassoon, this is an example of Sullivan's ability to please his more sophisticated listeners without abating the flow of readily memorable tunes and repetitive rhythms.



There are lapses into what is now seen as Victorian sentimentality: in the final cadences of many songs, in an over-indulgence of tonic pedals, in the repeated-note melody which begins 'I hear the soft note' in *Patience*. But in the best of the operettas such things are outweighed by harmonic felicities, *Iolanthe* being a treasure-house of such things. Here, in the love duet 'None shall part us', Sullivan extends Gilbert's four-line stanza by a repetition of the last two lines in order to elaborate harmonically what might have been a straight transition from a cadence in B minor to the dominant 7th of the tonic, G. The sustained viola and cello line is a characteristically telling stroke of orchestration (ex.4).

Iolanthe is remarkable for Sullivan's use of a variable character-theme (it can hardly be called a Wagnerian leitmotif) for the Lord Chancellor. *The Yeomen of the Guard*, in a rather different fashion, gives to the Tower of London a representative orchestral theme (never sung) which, rather disappointingly, is not brought back into the joyful final ensemble. In general, however, unification by associating recognizable themes with characters or objects would doubtless have been considered an inappropriately heavy procedure for operetta (or 'comic opera', which remained the preferred term of both librettist and composer).

Among the late, non-Gilbert operettas (plus the so-called romantic musical drama, *The Beauty Stone*), that which came nearest to re-stimulating Sullivan's gift was

Ex.3 *The Mikado*

Ex.4 *Iolanthe*

The Rose of Persia (1899) to Basil Hood's frankly Gilbertian libretto. But *Haddon Hall* (1892), with a three-act libretto by Sydney Grundy, deserves remark on at least two counts. In 'When the budding bloom of May' it displays one of the best of Sullivan's quasi-madrigalian concerted pieces, a successor to 'Brightly dawns our wedding day' in *The Mikado* and 'Strange adventure' in *The Yeomen*; and Act 2 has Sullivan's only example of extended orchestral music bridging the gap between two physical locations and continuing into the second, forming 49 pages of vocal score uninterrupted by speech, out of 169 for the whole opera. Unhappily this technical innovation is not sustained by musical quality.

Sullivan's operetta style developed little over the years. It is true that the later works show incidental modernisms: Eric Blom (*Grove5*) acutely identified a passage in *Utopia Limited* (1893) as sharing a harmonic trait with the Strauss of *Der Rosenkavalier* (1909–10). But in general the modules, as it were, lay at Sullivan's command from the start. It is not surprising that the early *HMS Pinafore* and *The Pirates of Penzance* have maintained leadership in popularity (particularly in the USA) alongside *The Mikado*, a work of the composer's ripest period.

The overtures published with the vocal scores of the operettas are of varying status. Many of them were delegated by the composer to a musical assistant, that of *The Mikado* bearing the initials H.C. (Hamilton Clarke) in the manuscript. Little more was required, after all, than to fashion a potpourri of the anticipated songs. The overture to *Iolanthe*, exceptionally the composer's own, is stamped by a dancing woodwind tune (which never occurs in the operetta itself) against the cello's slower delivery of 'O, foolish fay'. Likewise, the overture to *The Yeomen of the Guard* is the composer's work and takes a quasi-Classical regular form: its opening evocation of the Tower Theme is particularly impressive.

The vocal scores themselves, always issued after the first-night performances and therefore at least in a limited sense authoritative, nevertheless do not always represent the complete sequence of numbers as performed on those

opening nights. Between the two published vocal scores of *The Sorcerer*, one corresponding to the work's original production (1877) and the other to that which entered the Savoy repertory (1884), the differences are substantial; likewise between the original *Ruddigore* (1887) and the vocal score corresponding to the D'Oyly Carte company's revival in 1920–21. Authorized full scores were not published while the collaborators' copyright subsisted; the German full score of *HMS Pinafore* under the title *Amor am Bord* (Brunswick, 1882) is unauthorized.

(ii) Other works. *Ivanhoe*, the all-sung 'grand opera' with which Sullivan hoped to display his muse flying free from the shackles of Gilbert, has failed for good reason to establish itself within the general opera repertory, even in Britain. It is a compromised work: the melodic line, though no longer bound to the periodicity of operetta, rarely takes wing on its own. At a time when opera was renewing itself through extended symphonic flow (as in the *Ring*) or through compression (*Cavalleria rusticana*), Sullivan took his audience through nine scenes, none musically linked to the next; the songs, where not actually strophic, are liable to end on a prolonged cadence calculated to focus on the singer's voice and to elicit a round of applause. The aria for the captive Rebecca, 'Lord of our chosen race', with its throbbing viola accompaniment, is not only the most memorable in the work but is placed with real artistry in the scene which embraces it.

After the operettas, indeed, it is not *Ivanhoe* which best represents Sullivan but that almost smothered category 'incidental music', with which may be grouped his ballet music (insofar as it has been rediscovered). The incidental music to *The Tempest* (1861) retains the freshness which won the composer his first fame, and cunningly employs the principle of thematic metamorphosis (Schumann, rather than Liszt, being the probable inspiration). The plaintive 'warning' oboe figure at the opening, representing Prospero's pervasive magic, becomes the main tune of the Banquet Dance (ex.5), appropriately so, because the

Ex.5 *The Tempest*

(a) Andante con moto
ob
p espress.

(b) Allegro grazioso
fl, cl

ostensible jollity of the banquet is a hidden manifestation of Prospero's menace. The music to *The Merchant of Venice* (1871) forecasts the ability of the later operetta tunes to take on an independent orchestral life. And the overture for Henry Irving's production of *Macbeth* (1888) almost suggests the mature symphonic composer which Sullivan never became.

The youthful symphony of 1866 is nevertheless, on the terms of lyricism and gentle pathos, a not unsuccessful work. The Cello Concerto of 1866 (which may be grasped with some assurance from its reconstruction by Charles Mackerras and David Mackie after the loss of the original score) is a much lesser, poorly proportioned work and it is not surprising that Sullivan himself seems to have abandoned interest in it. The *Overtura di ballo* (1870) remains Sullivan's pre-eminent piece for the orchestra, displaying thematic metamorphosis with prodigious energy and invention.

Of Sullivan's weightiest choral works, both *The Martyr of Antioch* (1880) and *The Golden Legend* (1886) now seem more like repositories of their (uneven) constituent pieces than compelling wholes. The Carl Rosa Opera Company's venture of putting the former work on stage in 1898, to the surprise of the composer, is unlikely to be repeated. The most attractive of the choral works is the much shorter festival *Te Deum* written to mark the recovery of the Prince of Wales from illness in 1872 and first performed at the Crystal Palace: the use of an (optional) military band adds to the exhilaration when across a jaunty march a familiar hymn tune ('St Ann') breaks in.

To solo instrumental and chamber music Sullivan contributed nothing of importance, but a youthful set of Shakespearean songs (published 1866), including *Orpheus with his lute*, is an honourable emulation of the intimate seriousness of German lieder, far from the blatancy of the current English ballad style.

3. Posthumous reputation. Performances of Sullivan's work abroad – orchestral and choral pieces had been given in Paris, Berlin, Leipzig, Boston, New York and Chicago – confirmed the esteem in which his countrymen held him. There had never been a British composer so widely known in such a variety of music, one so capable of filling the needs of Victorian Britain with its universality of domestic pianos, its cheap vocal scores and songsheets, and its ubiquitous choral societies and bands.

But among the critics, academics and other formers of musical taste, disparagement of Sullivan's status began virtually with his death. The obituary by Fuller Maitland in *The Cornhill Magazine* (C1901) recognized the skill of the operettas but accused him of prostituting his talents:

> The Offenbachs and Lecocqs, the Clays and the Celliers, did not degrade their genius, for they were incapable of higher things than they accomplished ... But if the author of *The Golden Legend*, the music to *The Tempest*, *Henry VIII* and *Macbeth* cannot be classed with these, how can the composer of 'Onward, Christian Soldiers' and 'The Absent-Minded Beggar' claim a place in the hierarchy of music among the men who would face death rather than smirch their singing-robes for the sake of a fleeting popularity?

The first edition of Ernest Walker's *History of Music in England* (1907) not only applied the term 'disgraceful rubbish' to such songs as *The Lost Chord* and *The Sailor's Grave* but also impugned the artistic worth of his concert works. Sullivan was labelled as 'after all, the idle singer of an empty evening' (a reference to William Morris's self-deprecation as 'the idle singer of an empty day'). Such attacks may now be seen in the context of partisanship for the concept of a 'British musical renaissance' supposedly beginning with the generation after Sullivan (Stanford, Parry and Mackenzie). Undeniably, however, public performance of works other than the operettas underwent a swift and severe decline in the half-century following the composer's death, almost his only remaining champion being Sir Henry Wood, who in 1942 – at the height of World War II – initiated and directed a Sullivan centenary concert at the Royal Albert Hall.

Since the 1950s, however, when the label 'Victorian' had ceased to be derisive in musical and general contexts, a steady if unsensational rehabilitation has been in progress. The acquisition (and later amplification) by the

Pierpont Morgan Library, New York, of a magnificent Gilbert and Sullivan collection gave new scope for research. From the 1970s, the composer's diaries became publicly accessible, in part at that library, but mainly at Yale University. A major defence of Sullivan's art was raised in various writings by the British (American-resident) scholar Nicholas Temperley, in whose general survey (D1981) of British music between 1800 and 1914 *The Lost Chord* is described as 'Sullivan's maligned masterpiece'.

Following a pioneer recording (1968) of the Symphony by the conductor Charles Groves, the compact disc era brought a surge in the exposure of Sullivan's non-operatic compositions, including songs with piano, incidental music to plays, ballet music and even a complete *Ivanhoe*. It is not surprising that the longer festival choral compositions have more stubbornly resisted major revival, apart from a centenary performance under Mackerras of *The Golden Legend* in Leeds (1986). The hymn tunes which Sullivan composed by the dozen likewise remain trampled under modern ecclesiastical distaste, though *Onward Christian Soldiers* is retained in the vernacular memory.

The operettas, monopolized by the D'Oyly Carte Opera Company under copyright restrictions until 1961, were thereafter colonized also by major British opera companies, and among leading conductors Mackerras and Marriner followed Sargent in recording them. The D'Oyly Carte company as a linear inheritance from Sullivan's time ceased performing in 1982. It was relaunched in 1988 as the New D'Oyly Carte Opera Company, and moved its headquarters to Birmingham in 1991. With changes in the popular taste for light theatrical entertainment, the tradition of a constant presence of 'G. and S.' on tour, with annual London seasons, was no longer assured. But the appreciation of Sullivan's broad musical personality seems to have been firmly renewed. The Sir Arthur Sullivan Society began in 1977 its programme of research, publication and performances: the first book on Sullivan in any language other than English appeared (in German, by Meinhard Saremba) in 1994; and a British and an American firm independently began to publish critical editions of the full scores of the Gilbert and Sullivan operettas from the mid-1990s.

WORKS

printed works published in London unless otherwise stated; where no autograph source is given for stage, vocal orchestral and orchestral works, MS has not been traced

Private collections:

DNS – D.N. Stone, Fairfax, VA
FWW – F.W. Wilson, New York

ARTHUR JACOBS

Sullivan, Daniel (*d* Dublin, 13 Oct 1764). Irish countertenor. He appeared at Chester with the Lampes in 1741 and made his London début at Drury Lane in 1743 as Moore in *The Dragon of Wantley*, singing in several other stage pieces by Lampe at Drury Lane and the New Theatre in the Haymarket (1743–5). Handel engaged him for his Covent Garden oratorios in spring 1744; he created the parts of Athamas in *Semele* and the title role in *Joseph and his Brethren*, and sang Micah in *Samson* and David in *Saul*. According to Mrs Delany he was '*a block* with a very fine voice', which put Handel 'mightily out of humour'. His voice was a low alto, with a compass of *g* or *a* to *c''*; Handel seems to have transposed the part of Joseph down for him before performance, and he may have been able to sing tenor roles such as Acis at pitch.

Sullivan returned to Dublin in 1745–6, rejoined the Drury Lane company for the 1746–8 seasons, and sang regularly in Dublin (Smock Alley) in 1748–54. Most of his later career was spent there and at Bath, where he was associated with Chilcot, Linley and Passerini in Handel's oratorios and similar works between 1755 and 1759. In Dublin he appeared in stage works by Purcell, Boyce, Arne and Carey at Smock Alley, and in a concert with Guadagni at Crow Street Music Hall in March 1752.

WINTON DEAN

Sullivan, Marion Dix (*fl* 1840–50). American composer. Although little is known about her life, Marion Dix came from New England and married J.W. Sullivan of Boston in 1825. She was the first American woman composer to produce a commercial hit song, *The Blue Juniata* (1844). It was published in several collections and set as piano variations by Charles Grobe and Gould, and was mentioned in Mark Twain's autobiography. Her music is in the parlour-song tradition of memorable melodies supported by diatonic harmonies, with simple chordal accompaniments. She wrote the texts as well as the melodies for most of her songs. However, some of her publications include collaborations with other composers; for example, *Bible Songs* (1856) was published with piano accompaniments by Benjamin Johnson Lang.

WORKS

for solo voice, piano, unless otherwise stated

printed works published in Boston unless otherwise stated

The Blue Juniata (J.W. Sullivan), 1v, gui (1844), arr. pf by E.L. White; Jessie Cook (1844); Marion Day (1844); Oh! Boatman, row me o'er the stream, duet (1844), arr. pf by White; The Field of Monterey (1846); Gypsy, perf. NAOMI ANDRÉ

Sullivan, Timothy (Richard) (*b* Ottawa, 16 Dec 1954). Canadian composer. He studied composition in Toronto with Samuel Dolin, Walter Buczynski, and John Beckwith, and gained the degrees of BMus (1979), MMus (1980) and DMus (1999) from the University of Toronto. He taught at the Royal Conservatory of Music in Toronto (1979–89), and was the director of its composition division (1985–9). In 1987 he began a one-year term as a composer-in-residence with the Canadian Opera Company, which resulted in the première of his opera *Dream Play*. He has experimented with a wide variety of styles and idioms, from jazz and tonal harmony to indeterminacy and serialism. On occasion he draws on music of the past, as in *Florence* (based on the life of Florence Nightingale), which uses salon music of the 19th century, and *The Archeology of Karl*, based on two late Beethoven string quartets. Sullivan is particularly drawn to the combination of theatrical elements with music in various genres, including ballet and modern dance, opera, film and television. He has also created music for various electronic media, including tape, computer processed sound environments, MIDI and videodance. (*EMC2*, R. Elliott; *GroveO*, R. Pincoe)

WORKS
(*selective list*)

Stage: Tomorrow and Tomorrow (monodrama, 1 scene, T. Sullivan), 1987, New York, 28 March 1987; Dream Play (op, 1, Sullivan after A. Strindberg: *Ett drömspel* [A Dream Play], 1988, Toronto, 11 May 1988; Florence: the Lady with the Lamp (op, 2, A. McPherson), 1992, Elora, ON, 31 July 1992; The Archeology of Karl . . . a Romantic Adventure (ballet), 1993, Vancouver, 25 Nov 1993; The Don Juan Variations (ballet), 1995–6, Ottawa, 3 Feb 1996; 10 scores for modern dance performances, 1993–8

ROBIN ELLIOTT

Sully, James (*b* Bridgwater, 3 March 1842; *d* London, 1 Nov 1923). English writer on psychological subjects with emphasis on the psychology of music. He was from a dissenting (Baptist) family, one of eight children of a merchant and colliery proprietor. After working in his father's business, he entered Regents Park College to read philosophy in preparation for the ministry. He obtained the BA in 1866, continued his studies at Göttingen and Halle, received the London University MA with gold medal in 1868, and was married the same year. In 1869 he became classics tutor at the Baptist College, Pontypool, leaving the following year to be a private tutor and assistant to the editor of the *Fortnightly Review*. Around this time Sully abandoned his earlier religious views. He contributed several articles to the *Fortnightly Review*, the *Westminster Review* and the *Saturday Review*. In 1871–2 he studied anatomy and physiology in Berlin. A nervous breakdown in the mid-1870s led to recuperative travel in Italy. He settled in Hampstead in 1878 and continued to write and lecture on musical, psychological and philosophical subjects. In 1892 he was elected Grote Professor of Philosophy of Mind and Logic at the University of London. He retired in 1903.

Sully's positions on the psychology of music, developed principally in his book *Sensation and Intuition* (London, 1874), lie between those of Herbert Spencer and Edmund Gurney. Sully retained many of Spencer's theories about the emotions but, unlike Spencer, recognized the importance of musical form. Sully believed that musical experience can in theory be fully explained in terms of the physics of sound, the physiology of the ear and commonplace mental associations, as opposed to Gurney's invocation of a metaphysical 'ideal motion' or a special mental faculty for the perception of music. (See especially Sully's review of Gurney's *The Power of Sound* in *Mind*, old ser., vi (1881), 270–78.)

WILLIAM J. GATENS

Sul ponticello (It.: 'on the bridge'; Fr. *au chevalet*; Ger. *am Steg*). In string playing, an instruction to bow close to (or even on) the bridge of the instrument (*see* BOW, §II, 2(xi) and 3(xii)). This encourages the higher harmonics, producing a thin, nasal, glassy sound (see ACOUSTICS, §II, 7). Notable examples include the opening scene of Wagner's *Tristan und Isolde*, the 'Marche au supplice' in Berlioz's *Symphonie fantastique* and several passages in Schoenberg's *Pierrot lunaire* and the string quartets of Bartók.

□

Sul tasto [sulla tastiera] (It.: 'on the fingerboard'; Fr. *sur la touche*; Ger. *am Griffbrett*). In string playing, an instruction to bow (or occasionally pluck) near or over the fingerboard (*see* BOW, §II, 2(xi) and 3(xii)). This reduces the higher harmonics, resulting in an ethereal tone (*see* ACOUSTICS, §II, 7). Composers occasionally use the term FLAUTANDO to call for this effect.

□

Sultzberger, Johann Ulrich (*b* Schaffhausen, bap. 17 Dec 1638; *d* Berne, Jan 1701). Swiss trumpeter, cornettist, teacher and composer. He grew up in Winterthur, where his father was a civic trumpeter from 1639, and he too learnt the trumpet. In 1657 his family moved to St Gallen. In 1661 after he had become self-supporting, he went to Berne as a cornettist, where he soon rose to prominence as a civic trumpeter and became the leading light in the city both in instrumental and vocal music. In 1672 he founded Berne's first collegium musicum and in 1675 was made the city's first musical director. The Reformation had banished music from the churches of Berne, much to the detriment of the city's musical life. After 150 years of inactivity a musical revival then took place, thanks to Sultzberger, not only in the churches but also in the schools and in the home. Adverse circumstances, however,

clouded the last years of his life, and much of his good work was undone. He was most important for his educational work: as founder and director of the collegium musicum he exercised a decisive influence on the musical education of the students. His work as a composer is less significant. The original songs in the two publications of 1674 failed to establish themselves, although the psalm settings in his *Transponiertes Psalmenbuch* were sung in the churches of Berne until the 19th century.

WORKS

Salomons des Ebreischen Königes geistliche Wohl-Lust oder hohes Lied . . . mit beygefügten Newen, vom fürtrefflichen Johann Schoppen gesetzten Sangweisen . . . fürgestellt durch Filip Von Zesen, jetzunder aber . . . vermehrt durch Johann Ulrich Sultzberger (Berne, 1674)

Dreygestimmter Zesischer Salomon . . . mit vielen Melodeyen vermehret, sampt beygefügter geistlichen Seelen-Lust und noch einem Appendice in Truck verfertiget von Johann Ulrich Sultzberger (Berne, 1674)

Transponiertes Psalmenbuch, das ist, D. Ambr. Lobwassers Psalmen Davids, worinn die Hoch-Clavierten Psalmen transponiert und samt den gewohnlichen Fest-Gesängen in ein gleichen Schlüssel gesetzt (Berne, 1675)

MAX ZULAUF

Sulzer, Johann Anton (*b* Rheinfelden, 18 Sept 1752; *d* Konstanz, 8 March 1828). Swiss writer and composer. He attended the Jesuit Gymnasium in Solothurn from 1763 and studied Catholic theology at Fribourg from 1772 until 1774; he then took a doctorate in law at the University of Freiburg im Breisgau (1783) and became a high magistrate at the Swiss monastery of Kreuzlingen (1785). In 1798 he obtained a post as librarian and professor of ecclesiastical law at the lyceum in Konstanz and taught history and practical philosophy there from 1807. He repeatedly applied without success for a chair in philosophy or law at the University of Freiburg.

Though he never received instruction in composition, Sulzer composed more than 80 songs and various pieces for the piano and violin (piano sonatas op.1, *Sammlung von Clavierstüken ... mit beständiger Begleitung einer Violine*, 1789, and violin sonatas op.3). He set poems by his friends Johann Caspar Lavater and Ignaz von Wessenberg (administrator for the bishopric of Konstanz), and contributed melodies to the Konstanz *Christkatholisches Gesang- und Andachtsbuch* (1812), which became the model for numerous other German diocesan hymnals. In his own time Sulzer's compositions enjoyed considerable popularity, despite their now apparent dilettantish weaknesses.

MANFRED SCHULER

Sulzer, Johann Georg (*b* Winterthur, 16 Oct 1720; *d* Berlin, 27 Feb 1779). Swiss aesthetician and lexicographer. Following theological studies in Zürich he held posts as a vicar in a nearby town and as a tutor in Magdeburg. These positions provided opportunities for studies in the sciences and mathematics and enabled him to assimilate the poetic and aesthetic theories of Johann Bodmer and Jacob Breitinger. In 1747 Sulzer became professor of mathematics at the Joachimsthal Gymnasium in Berlin and three years later was elected to the Royal Academy of Sciences. During this period he wrote articles on philosophy and aesthetics and embarked on his most important work, the *Allgemeine Theorie der schönen Künste*. The work is an encyclopedia containing articles on both general and specific topics in the arts. Sulzer's approach was eclectic, incorporating ideas assimilated from such authors as Dubos, Batteux, Lord Kames, J.A. Schlegel and A.G. Baumgarten. By the time the *Allgemeine Theorie* appeared, many of its ideas were out of date, a situation reflected in unfavourable criticism from Herder and Goethe. Nonetheless the work influenced later writers such as Koch.

Having little or no training in music, Sulzer relied on Johann Philipp Kirnberger and J.A.P. Schulz for the articles on music. Kirnberger and Sulzer jointly wrote the musical articles as far as 'Modulation', but Sulzer's failing health made it impossible for him to continue. Kirnberger and Schulz wrote the articles from 'Preludiren' up to the letter S, and from that point the work was entirely by Schulz except for the article 'System', which had been written earlier by Sulzer and Kirnberger.

HOWARD SERWER

Sulzer, Salomon (*b* Hohenems, 30 March 1804; *d* Vienna, 17 Jan 1890). Austrian cantor and composer. He was the first musician since Salamone Rossi to raise the standards of composition and performance in the synagogue. Three outstanding qualities made him legendary among Jews of the western world. First, his baritone-tenor voice drew admiration not only from the Viennese community whom he served as Obercantor from 1826 until 1881, but also from scholars, musicians (including Meyerbeer, Schubert, Schumann and Liszt), and even the aristocracy; in 1868 he became Knight of the Order of Franz Joseph. Second, his fiery temperament created a vogue among contemporary cantors, who tried to imitate both his singing style and his everyday deportment. Third, and most significant in the development of Jewish music, his compositions became the models upon which almost every newly emancipated congregation based its synagogue ritual covering the entire year. *Schir Zion* (music for the synagogue service), published in two separate volumes (1838–40 and 1865–6), constitutes the earliest complete and thoroughly organized repertory in Hebrew to be set for cantor and four-part male choir. Sulzer's aim, as stated in the preface to volume i, was 'to consider, as far as possible, the traditional tunes bequeathed to us, to cleanse the ancient and dignified type of the later accretions of tasteless embellishments, to bring them back to the original purity, and to reconstruct them in accordance with the text and with the rules of harmony'.

ALEXANDER KNAPP

Sumac, Yma [Chavarri, Emperatriz] (*b* Ichocan, 10 Sept 1927). Peruvian soprano, active in the USA. Brought up in the Andes, she sang in local festivals until she came to the attention of government officials and the family moved to Lima, where she appeared in concert and enrolled in school. From 1942 to 1946 she sang in South America in various groups with her husband Moises Vivanco and cousin Cholito Rivero; the three named themselves the Inca Taky Trio, and in 1946 they arrived in New York. Sumac became famous in 1949 with an appearance at the Hollywood Bowl and the release of the recording *Voice of the Xtabay*, which quickly sold over 500,000 copies. During the 1950s she sang in concert, on radio and television, and in nightclubs across the world, performed on Broadway in *Flahooley* (1951), and made two films (*Secret of the Incas*, 1954; *The Loves of Omar-Khayam*, 1957). She became a naturalized American citizen in 1955. After several international tours in the 1960s, she made no major appearances until 1975, when she returned to New York's Town Hall for two performances. Sumac's tremendous popularity was due in part to the music she sang (exotic arrangements, often by Vivanco, of South American folk songs) but more importantly to the outstanding qualities of her voice, which ranged well over three octaves from a deep contralto to a pure and high coloratura. Her repertory also included operatic arias, although she was not at her best in these; nevertheless she attracted the attention and praise of distinguished classical musicians.

ELLEN HIGHSTEIN

Sumarsam (*b* Dander, Bojonegoro, East Java, 27 July 1944). Indonesian ethnomusicologist and gamelan performer. He received his earliest formal training at Konservatori Karawitan (Indonesian National Conservatory of Music) in Surakarta, where he earned a teaching diploma in 1964. He went on to complete the BA at Akademi Seni Karawitan (Indonesian National Academy of Music) in Surakarta in 1968 and taught there from 1967 to 1971. In 1972 he was made a visiting artist at Wesleyan University, where in 1976 he earned the MA and was promoted to artist-in-residence; he became adjunct associate professor of music in 1990. He continued his studies at Cornell, taking the doctorate in 1992, and was made adjunct professor of music at Wesleyan the same year. In addition to numerous performances as musical director or *dhalang* (shadow puppeteer) in the USA and other countries, Sumarsam is a prolific scholar, focussing on the history, theory and practice of Javanese gamelan music. His publications include a landmark book on gamelan history (1995), numerous articles in English and Indonesian, and several books of gamelan music notation.

Sumatra. *See* INDONESIA, §VI.

Sumaya, Manuel de. *See* ZUMAYA, MANUEL DE.

Sumera, Lepo (*b* Tallinn, 8 May 1950; *d* Tallinn, 2 June 2000). Estonian composer. He studied at the Tallinn Conservatory (graduated 1973), where his composition teachers were Heino Eller and Heino Jürisalu. His first orchestral work, *In memoriam* (1972), written in memory of Eller, has been performed internationally. He went on to work as recording director at Estonian Radio, to teach at the Estonian Music Academy (from 1978), where he directed the electronic music studio, and to serve as the Estonian minister of culture (1988–92). His honours included four Estonian state prizes and a prize for the best film score at the Espinho (Portugal) film festival. In 1997 his Fifth Symphony (1995) was chosen as the first recommended work at the UNESCO Composers' Rostrum in Paris.

Sumera created individual, dramatic, form-defining outlines for each of his works, employing richly imaginative timbres as dramatic characters. By combining unlike musical events in his compositions he avoided dramatic excess and maintained an introverted character. During the 1970s he used free dodecaphony, chromatic modes and collage techniques; from 1981 to 1986, influenced by Estonian *runo* songs, he wrote in a style best described as postminimal: diatonic modes and long sections of motivic repetition appear in complex polyrhythmic textures, but not without contrasts and climaxes. In the late 1980s he began to employ synthetic chromatic modes and to create a greater variety of harmonic colours.

WORKS
(*selective list*)

Dramatic: Anselmi lugu [Anselm's story] (ballet, 3, M. Murdmaa, after E.T.A. Hoffmann), Tallinn, 1978; Pantomiim (K. Kurg), Tartu, 1981; Yashcheritsa [The Lizard] (ballet, 2, A. Petrov, after A. Volodin), 1987–93; Kaleva (multimedia dance drama, M. Blossfeldt, after trad. Estonian), New York, 1988; Olivia meistriklass [Olivia's Master-class] (multimedia chbr opera, P. Jalakas, after E. Ounapuu), Tallinn, 1977; over 50 film scores

Vocal: Elust ja surmast [About Life and Death] (cant., L. Seppel), chorus, orch, 1975; Seenekantaat [Mushroom Cant.] (H.-K. Hellat), chorus, fl, pf, perc, 1978–83; Saare piiga laul merest [Island Maiden's Song from the Sea] (trad. Estonian epic), SATB, speaking chorus, b drum, 1988; Kolm sonetti [Three Sonnets] (W. Shakespeare), S, speaker, boys' chorus, orch, 1996; Concerto per voci e strumenti (D. Kareva), chorus, chbr orch, 1997

MERIKE VAITMAA

Sumeria. *See under* MESOPOTAMIA.

Sumer is icumen in. A singularly elaborate specimen of the ROTA, composed around 1250, probably in Reading (and therefore often referred to as the Reading Rota). It is also known as the Summer Canon. The piece is related to the motet, because the round is supported by a texted *pes* (*see* PES (i)), the two halves of which are combined with each other by means of voice-exchange. The secondary Latin poem (*Perspice christicola*) may have been added in order to make the composition fit for inclusion in the manuscript (now *GB-Lbl* Harl.978, f.11*v*; see illustration). It seems to have been an afterthought, since the *pes* has only an English text, which is related to the English words of the rota. It has been contended that the piece was conceived as a special kind of Latin motet (Harrison), since the first five notes of one of the *pedes* happen to represent the beginning of a Gregorian cantus firmus that might be considered seasonally relevant to the Latin text of the rota. A good many factors, however, argue against this suggestion (Sanders, 1965). A more recent argument for the priority of the Latin poem (proposed by Obst) is of questionable validity; it is based on less than impartial evaluations of the musical treatment of the prosody of the two texts, which is in any case of limited relevance.

The proper mode of performance is explained in the source (*Hanc rotam …*):

This round can be sung by four fellows, but must not be performed by fewer than three, or at least two, apart from those performing the *pes*. It is sung as follows: While the others remain silent, one begins together with those who have the *pes*, and when he shall have come to the first note after the cross, another begins, and so on with the rest. But each shall pause at the written rests, and not elsewhere, for the duration of one long note. One singer repeats this [the first *pes*] as often as necessary, observing the rest at the end. Another sings this [the second *pes*] with a rest in the middle but not at the end, at which point he at once repeats the beginning.

'Sumer is icumen in', rota composed c1250 (GB-Lbl Harl.978, f.11v)

No ending is specified for the piece, which may be conveniently concluded when the leading voice has sung its part twice. No other composition specifically written for as many as six voices is known before the late 15th century. (Actually, the tune is so constructed that it could be sung as a rondellus for three, four, six, eight or twelve voices.)

Facets characteristic of most 13th-century polyphony preserved in English sources are quintessentially embodied in the Summer Canon: major mode, stress on the chords of tonic and supertonic, *pes*, frequency of triads, predilection for regular periodicity, and the easy rhythmic swing best represented by 6/8 metre in modern transcription. (Both the date and the rhythm of *Sumer is icumen in* suggested by Bukofzer in 1944 are erroneous.) The Summer Canon is the earliest extant secular composition that must be called a tonal organism, both harmonically and melodically. Owing to freakish luck it has been preserved through the centuries and indicates the prior existence of a highly developed musical culture that evidently exerted a vital influence on the specifically English evolution of the conductus and the motet in 13th-century England as well as on the second generation of Notre Dame composers.

ERNEST H. SANDERS

Sumikura, Ichirō (*b* Tokyo, 27 Oct 1932). Japanese musicologist. He studied musicology with Kōzō Hattori and composition with Tomojirō Ikenouchi at the Tokyo National University of Fine Arts and Music, graduating in 1957 and completing his postgraduate studies in 1958 with a dissertation on Bach's *Art of Fugue*. He then started lively journalistic activities, writing concert reviews and critical essays for newspapers and the music journal *Ongaku geijutsu*, among others. He started to teach at the Tōhō Gakuen School of Music in 1962 and was appointed assistant professor the following year. His discovery in 1966 of an autograph manuscript of Bach's *Aus der Tiefen* BWV246/40a established his international reputation as a Bach scholar (*Ongaku-gaku*, 1966). In 1970 he was recalled to the Tōhō Gakuen School of Music, where he became a professor in 1981. Meanwhile he spent a year in Germany as a visiting professor at the Institute of Musicology of the Freie Universität Berlin (1976–7). He served as the first Japanese representative on the board of the IMS from 1988 to 1996 and was made president of the Musicological Society of Japan in 1995. He is also the president of Japan Bach Society. His chief interest remains the music of Bach and he has published an edition of Bach's Inventions and Sinfonias. Besides his own writings, he has translated works by Max Weber, Karl Geiringer, Howard Ferguson, Friedrich Smend and Friedrich Blume.

MASAKATA KANAZAWA

Summer, Donna [Gaines, La Donna Andrea] (*b* Boston, 31 Dec 1948). American pop singer and songwriter. While working in musical theatre in Europe, she began to record with the producers Giorgio Moroder and Pete Bellotte in Munich. After some European success, a 17-minute version of her single *Love to love you, baby* (1975) was released by Casablanca Records in America and became a major disco hit, in both the rhythm and blues and pop charts. The recording featured Summer moaning and sighing over a lush orchestration that resembled a film soundtrack in its episodic structure. Summer did not have another hit until *I feel love* (1977), a song featuring dense synthesizers and minimal vocals. A string of hits followed, some of which were written or co-written by Summer: the Grammy-winning *Last Dance* (from the 1978 film, *Thank God it's Friday*), *MacArthur Park* (1978), *Bad Girls*, *Hot Stuff* and *Dim all the lights* (all 1979).

The most popular artist of late 1970s disco, Summer was also the most versatile singer of the genre which enabled her to achieve further success in the 1980s with such songs as *Love is in control* (*Finger on the Trigger*) (1982), *She works hard for the money* (1983) and *This time I know it's real* (1989, produced by Stock, Aitken and Waterman). However, she never regained the popularity she enjoyed in the disco era. Her influence continues in the work of such singers as Whitney Houston and Mariah Carey who employ their vocal skill in an elaborately produced dance idiom.

DAVID BRACKETT

Summonte, Antonio (*b* Naples; *d* Naples, 10 Dec 1637). Italian composer. In his last years he was prior of the convent of S Maria del Carmine at Naples. The texts of most of the 20 madrigals in his *Primo libro di madrigali a cinque voci* (Naples, 1618) are drawn from Pomponio Nenna's popular seventh book (1608) and G.B. Nanino's third book (1612) of five-voice madrigals. Of the two surviving voice parts, the cantus includes short, syllabic phrases in inflexible rhythms and with unimaginative melodic contours. In a note to singers Summonte explained that he had included *passaggi* on the vowel 'u' in the madrigal *Filli mi rid'e fugge* to confound those who forbade them on this vowel. He may also have published in 1618 a book of motets for three to five voices.

KEITH A. LARSON

Summy-Birchard. American firm of music publishers. In 1931 John Sengstack acquired the Clayton F. Summy Company, founded in Chicago in 1888. In 1957 Summy took over C.C. Birchard & Co., a Boston firm founded in 1901, and the resulting firm took the name Summy-Birchard Company; at that time it was based in Evanston, Illinois, but it later moved to Princeton, New Jersey, and is now known as Birchtree, Ltd. Clarence Birchard had a particular interest in American music; he commissioned American composers to write for his pioneering school and community songbooks and was an early publisher of Bloch, Copland, Howard Hanson, Ives and Varèse. David Sengstack succeeded his father as president of the firm in 1958. In 1960 Summy-Birchard acquired the Arthur P. Schmidt Company of Boston (established 1876) and in 1969 McLaughlin & Reilly (founded in 1903), a Boston firm devoted primarily to music for the Catholic church. Summy-Birchard now specializes in instructional materials, notably piano series and Suzuki method books. In December 1988 Warner Chappell purchased the firm, including its most valuable possession, *Happy Birthday to you*, originally published in Summy's *Song Stories for Kindergarten* (1893). The song's copyrights are not due to expire until 2010; its royalties reportedly amount to a million dollars a year. (*FuldWFM*)

W. THOMAS MARROCCO, MARK JACOBS/LESLIE A. TROUTMAN

Sumner, William Leslie (*b* Airmyn, Yorks., 24 April 1904; *d* Nottingham, 5 Aug 1973). English physicist and authority on the organ. He gained a first-class honours degree in physics at King's College, London (1925), where he also studied theology. He taught at Southampton University and King Edward VII School, Sheffield, before becoming successively lecturer, senior lecturer and reader (1955) in the department of education at Nottingham University; he retired in 1969. He wrote several standard works on science in education.

His career as a specialist on the design, construction, history and repertory of the organ began with studies in Paris; at King's College he served as chapel organist. During the 1920s he travelled widely in Europe and explored the Baroque organs of Arp Schnitger and the Silbermanns long before the neo-classical movement in England; one product of his research, *The Organ*, was received as the most comprehensive work on the subject this century. He was frequently consulted on organ design, notably at Southwell Minster and Ely Cathedral. He was awarded a PhD by Nottingham University in 1953 and made a Fellow of the Royal School of Church Music in 1969.

STANLEY WEBB

Sumponyah. A musical term occurring in the book of *Daniel*. *See* BIBLICAL INSTRUMENTS, §3(xiii).

Sumsion, Herbert (Whitton) (*b* Gloucester, 14 Jan 1899; *d* Frampton-on-Severn, 11 Aug 1995). English organist. He was a boy chorister at Gloucester Cathedral at a time when more new English music was being heard than at any time since Purcell, and the Three Choirs Festival had acquired a new momentum under G.R. Sinclair at Hereford, Ivor Atkins at Worcester and Herbert Brewer at Gloucester. Sumsion was Brewer's pupil and assistant, succeeding his teacher as organist in 1928. He held the post for 39 years, during which his open-minded approach to new music helped the festival to adjust to changing taste. Sumsion enjoyed a close association with Kodály, Elgar, Vaughan Williams and Holst; his interpretation of *The Dream of Gerontius* sounded as if Elgar himself were conducting. In later years he negotiated the first performance of Howells's *Hymnus Paradisi* and new works by Finzi (both composers were his close friends). He composed mostly for voices and organ and his *Festival Benedicite* in D was first performed at the 1971 Gloucester festival, when the rebuilt organ was inaugurated. A skilled conductor and organist, Sumsion was also an able accompanist and chamber music player, and he continued to compose until he was well into his nineties. He was awarded the Lambeth DMus in 1947 and made a CBE in 1961.

STANLEY WEBB

Sun. American record label, one of the most important sources of early rock and roll music. It was established in Memphis, Tennessee, in 1953 by Sam Phillips, a former disc jockey who had set up the first permanent recording studio in the city in 1950. There he recorded blues and country singers for such companies as RPM in Los Angeles and Chess in Chicago. Among his early recordings was *Rocket 88* by Jackie Brenston, which is sometimes cited as the first rock and roll record.

The label's first big hit came from the Prisonaires, a vocal group formed by five convicts, but its success story began after Phillips signed Elvis Presley to a recording contract in 1954. Presley's mixture of black and white music, often known as rockabilly, soon drew enthusiastic audiences, and after he had made five hits for Sun his contract was sold to the much larger RCA Victor company in 1956. Sun continued to thrive, however, initially through Carl Perkins, whose composition *Blue Suede Shoes* had been a hit for Presley. Johnny Cash joined the label in 1955, and Jerry Lee Lewis in 1957. The recordings were marked by a distinctive sound with deep echo, which was created in Phillips's small studio. Sun recorded numerous other local musicians, including Charlie Rich, but its golden age had ended in 1959. In 1968 Phillips ceased recording and sold the company. Subsequently there were numerous reissues of Sun's rockabilly and rock and roll classics.

DAVE LAING

Sunandar [Sunarya], **Asep** (*b* Jelekong, Ciparay, Indonesia, 3 Sept 1955). Sundanese *dalang* (master puppeteer) of *wayang golék purwa* (rod puppet theatre). The name Giri Harja ('Mountain of prosperity') is associated with a 'dynasty' of *dalang* established by Abeng Sunarya (1918–88). Of Sunarya's four sons who are *dalang* (Ade Kosasih, Asep Sunandar, Ugan Sunagar and Iden Subasrana) Asep Sunandar has received the most recognition both at home and abroad. He began to take serious interest in *wayang* at the age of 15 and his first performance was presented by his father in 1972. He is renowned especially for visually captivating puppet manipulation, jokes, humour and experiments with music. He incorporates elements of American cartoons, Chinese martial-arts movies and Hindi films into his performances, which often feature slow-motion fight scenes, 'special effects' such as spurting blood and exploding heads, slapstick visual stunts and withering political satire. The result appeals to sophisticated urban residents as well as to the rural audiences that have long formed the core audience for *wayang* in West Java. His unique style was at first controversial but has since been much imitated. In 1985, he won the prestigious first prize in the Binojakrama Padalangan (annual Sundanese *wayang* competition). He has performed abroad in Asia, Europe and America, and has been instrumental in developing other media for *wayang* performance, such as commercial recordings and television broadcasts.

HENRY SPILLER

Sunday school hymnody. Hymns composed and collected as a result of the rapid growth in the American Sunday school movement in the 19th century. *See* GOSPEL MUSIC, §I.

Sundberg, Johan (Emil Fredrik) (*b* Stockholm, 25 March 1936). Swedish acoustician. After qualifying as an organist and cantor (Uppsala, 1957) he studied musicology, aesthetics, philosophy and mathematics at Uppsala University (BA 1961, MA 1963), where he took the doctorate with a dissertation on the scaling of open-flue organ pipes (1966). From 1964 he worked at the Royal Institute of Technology, Stockholm, later becoming professor of music acoustics, and in 1967 was appointed part-time lecturer in musicology at Uppsala University where he received a personal chair in music acoustics in 1979. He was treasurer (1972–6) and president (1976–9) of the Swedish Acoustical Society and fellow of the Acoustical Society of America (1982). As president of the Music Acoustics Committee of the Swedish Royal Academy of Music, he initiated a number of public seminars on music acoustic themes in Stockholm, 1975–93. He gained the honorary doctorate from the University of York in 1996. Sundberg is recognised as the leading international authority on the acoustics of the singing voice. His research has been the foundation for much of the present understanding of vocal tract and nasal resonance, vocal fold function, breathing, vibrato and expression in both

solo and choral singing. His early work is summarised in 'The Acoustics of the Singing Voice' (1977) and *Röstlära* (1980). He has also contributed to research on music theory and acoustics.

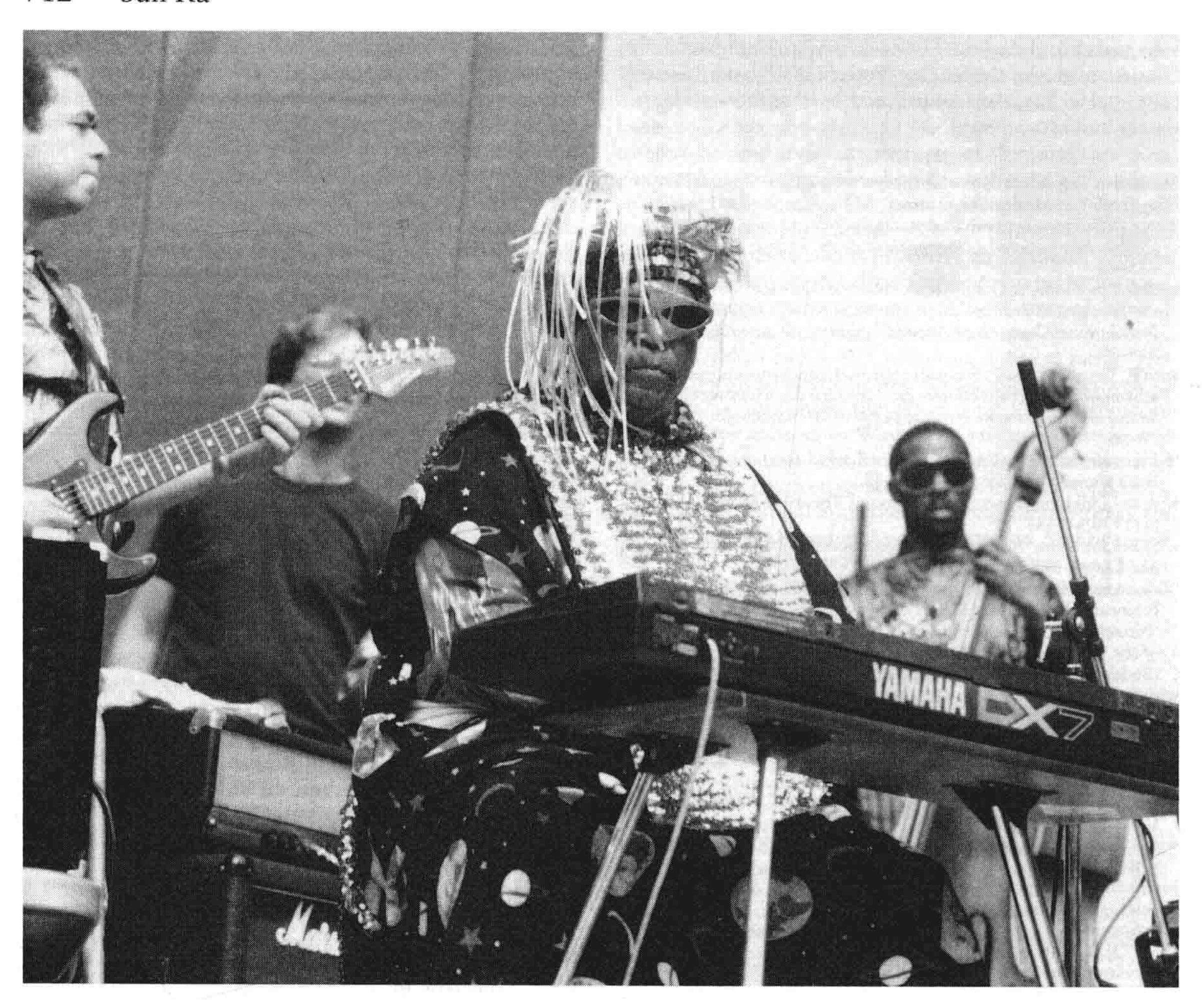
MURRAY CAMPBELL



Suneburg [Sunnenburg], **Friedrich von.** *See* FRIEDRICH VON SUNNENBURG.

Suñol (y Baulenas), Gregorio Maria (*b* Barcelona, 7 Sept 1879; *d* Rome, 26 Oct 1946). Spanish teacher of plainchant. He took his vows as a Benedictine monk at Montserrat Abbey on 14 September 1895, was ordained priest on 20 September 1902 and in 1943 appointed abbot of S Cecilia, near Montserrat. He became an admirer of Mocquereau on his first visit to the monks of Solesmes (then refugees on the Isle of Wight); he remained a faithful, intelligent disciple of the Solesmes school. From 1907 to 1928 he directed the choir at Montserrat. He spread the teaching of Solesmes enthusiastically throughout Spain, setting up a number of schools for its propagation. His *Método completo de canto gregoriano según la escuela de Solesmes* was an enormous success (eight editions from 1905 to 1943) and was translated into French (Tournai, 1906, 7/1932), German, English, Italian and Portuguese. But his most important work was the *Introducció a la paleografía musical gregoriana* (Montserrat, 1925), completed, revised and translated into French with help from René Renaudin (Tournai, 1935; bibliography by H. Anglès). In 1931 Suñol was summoned to Milan by Cardinal Schuster, who made him the director of the Pontifical School of Ambrosian Chant and asked him to prepare a new practical edition of Ambrosian chant. This latter was an immense labour, but was undertaken and completed with astonishing rapidity: *Praeconium paschale* (Milan, 1934), *Cantus missalis* (Milan, 1935), *Antiphonale missarum* (Rome, 1935), *Officium et missa pro Defunctis* (Rome, 1936), *Ordinarium Missae et cantus varii* (Rome, 1936), *Liber vesperalis* (Rome, 1939). In 1930 he succeeded Ferretti as director of the Scuola Pontifica (from 1931 the Pontificio Istituto di Musica Sacra) in Rome. (H. Anglès: 'Il canto gregoriano e l'opera dell'abate Don G.M. Suñol', *Revue grégorienne*, xxvii (1948), 161–73)

EUGÈNE CARDINE

Sun Ra [Blount, Herman 'Sonny'; Bourke, Sonny; Le Sony'r Ra] (*b* Birmingham, AL, May 1914; *d* Birmingham, 30 May 1993). American jazz composer, bandleader and keyboard player. He played the piano in Fletcher Henderson's orchestra in 1946–7 (using the names Herman 'Sonny' Blount and Le Sony'r Ra), and first attracted attention as an arranger. During the mid-1950s his Myth-Science (or Solar) Arkestra became significant in Chicago and began to issue recordings; it also played in the film documentary *The Cry of Jazz* (1959), for which Sun Ra composed the score. He moved to New York in 1960, by which time he had begun to develop a unique and highly inventive ensemble style that was to attract a considerable following, particularly among European jazz enthusiasts. In the 1970s Sun Ra and the Arkestra settled in Philadelphia. They reached large audiences by touring and lecturing at American colleges and universities, by performing in Europe, and above all by appearing on the nationally broadcast television programme 'Saturday Night Live' (1976). A documentary film, *Sun Ra: a Joyful Noise*, was made in 1980, directed by Robert Mugge. Although over the years he often had little work, Sun Ra kept his band together; inspired by their leader's intense devotion to his music, the players rehearsed constantly, and the band continued to tour and record until his death.

Along with Cecil Taylor and Ornette Coleman, Sun Ra significantly influenced the new jazz styles of the 1960s. Much of his earlier work derived from the popular and commercial jazz of the time; *Reflections in Blue* (on *Sound of Joy*, 1957, Del.) is in a conventional bop style, also incorporating blues patterns and common formal designs. But if the accepted recording dates for the album *Angels and Demons at Play* – 1955–7 (Saturn) – are correct, then

Sun Ra with members of his Arkestra, Central Park, New York, 1987

by this time Sun Ra had already foreshadowed elements of the free-jazz style. For example, his composition *A Call for All Demons* from this album presents a wonderfully humorous combination of atonal improvising and Latin dance rhythms: the piece might best be described as a free-jazz mambo. Within ten years works such as *Cosmic Chaos* (on *The Heliocentric Worlds of Sun Ra*, 1965, ESP) showed a radical, complex, often frenetic idiom and an obsession with percussion instruments. Sun Ra employed freely improvised solos in busy combinations with microtonal melodies and electronic effects, often juxtaposing standard jazz tunes with aleatory solo work on such instruments as piccolo, violin and synthesizer in addition to saxophones and trumpets. These musical innovations are combined with novel mixed-media techniques loosely based on astronomical and ancient Egyptian imagery; the band's performances commonly included slide and light shows and modern dance.

Sun Ra's importance as a keyboard player lies in his use of new instruments to explore new timbres. He was a capable pianist, but made notable recordings on electric piano (from 1956), clavioline (from 1963) and Moog synthesizer (from 1969). He also performed on other conventional and unusual keyboard instruments, including the celesta, organ and rocksichord – an electric keyboard that combines the sharp attack of a harpsichord with the glossy, sustained sound of an electric piano.

ROBERT H. DICKOW/R

Sun Yude (*b* Baoshan, Shanghai, 1904; *d* 1981). Chinese *pipa* and *xiao* player. Like his contemporary LI TINGSONG, Sun Yude was a pupil of *pipa* master Wang Yuting (1872–1951). From 1922 Sun was active as a professional musician, establishing a number of organizations intended to spur the development of 'national music' (*guoyue*), a transformation and amalgamation of traditional regional

repertories and performance styles intended to be open also to modern, Western musical principles.

During the 1930s and 40s Sun held a number of performance posts, featuring as a soloist in two Chinese cultural missions to America (1938 and 1947). After 1949 he performed in numerous Asian and European nations as a member of a further governmental touring ensemble and then as part of the Shanghai People's Acrobatics Troupe (Shanghai renmin zajituan). In 1956, Sun became deputy director of the Shanghai National Instruments Orchestra (Shanghai minzu yuetuan).

Sun composed a few pieces for *pipa*, for instance *Yingxiongmen zhanshengle Daduhe* ('The Heroes Vanquish the Dadu River'). Despite its revolutionary title, this composition forms part of a long Chinese tradition of 'military' pieces evoked on the *pipa* lute. Sun's method for *xiao*, his second instrument, was published in 1962.

JONATHAN P.J. STOCK

Suona. Shawm of the Han Chinese. A transliteration of the Arabic *zūrnā* or the related Central Asian SURNĀY, the Chinese name usually appears as *suona* or (during the 18th century) *suernai*. Other historic names include *dachui* ('great blow') and *jinkoujiao* ('golden mouth horn'). Contemporary popular names include *laba* (technically, a long metal horn), *haidi* (a small *suona* variant), and many local names.

The *suona* body is usually constructed of a type of redwood or other hardwood, with seven frontal finger-holes and one thumb-hole. Its bore is conical and its exterior scalloped in profile (perhaps in imitation of bamboo nodes). Sizes vary according to region and function, moderate-sized instruments measuring about 45 cm or longer. A very small double reed (made from a species of river reed, *luwei*) is bound with thin copper wire to a hollow metal staple, below which is a lip plate which guides playing position. This reed assembly is inserted into the upper end of the instrument. Loosely fitted over the lower end is a large flaring metal bell. In performance, the player's mouth completely encloses the reed without touching it. Experienced players use circular breathing to produce the characteristic uninterrupted tone. Normal performance range is about one and a half octaves, though a more extended range is possible. Tonal colour is bright, especially suitable for outdoor occasions.

The *suona* was introduced into China from Central or West Asia. While not documented in Chinese literature until the Ming dynasty (1368–1644), it was clearly pictured in cave art about 1000 years earlier. Recently discovered on the wall of an old Silk Road religious monument in far western Xinjiang province, dating to between the 3rd and 5th centuries AD, is a drawing of a musician playing a relatively short one-piece shawm. As shown by Liu Dongsheng (1987), this instrument is strikingly similar to the colourfully-decorated *suernai* still played by the Uighur people living in that area. By the Ming period, the *suona* was already established on the

Suona, with brass pirouette and bell (reed missing) (Museum of Fine Arts, Boston)

Central Plain of north China. According to a reference in the encyclopedia *Sancai tuhui* (1619), the instrument was constructed in a form similar to that of today: '*Suona*, looks like a *laba*, but has seven holes; its head and tail are made of copper, tube of wood'. The reference states further that 'it was used for military purposes, but now is very popular among the people'.

Usage of the *suona* (now usually with eight holes) in village wedding and funeral processions (and many other outdoor occasions) is today widespread in mainland China and Taiwan among both Han Chinese and minority

peoples. Large instruments are often played for funerals, smaller ones for weddings. The *suona* is also commonly employed in traditional opera ensembles to announce auspicious moments, such as weddings or the entrance of soldiers or high-ranking guests. During and following the 1950s, the instrument was constructed in 'families' (e.g. alto and tenor) and given Western-style keys (for adaptation to equal temperament), but these 'reformed' instruments today are employed primarily by professional musicians within the context of the concert hall.

Supanggah, Rahayu (*b* Boyolali, Java, 29 April 1949). Indonesian composer, performer and writer on music. From a family of *dhalang* (shadow puppet masters), he studied at the high school conservatory in Surakarta; in 1965 he was selected as a member of an arts mission to China, Korea and Japan. Supanggah continued his studies in traditional Javanese music at the Indonesian Academy for the Performing Arts in Surakarta, where his innovations were encouraged by the school's director, S.D. Humardani. After studying ethnomusicology at the University of Paris VII (PhD 1985), he returned to teach at the Academy in Surakarta, becoming its director in 1997. He has also taught music at San Diego State University, Cambridge University and institutions in Australia and Europe. An internationally acclaimed composer and a pioneer of new music in Indonesia, Supanggah has composed over 100 pieces for music, film and dance, employing both Indonesian instruments, especially gamelan, and instruments from around the world. His composition experiments have grown out of his mastery of the gamelan. Supanggah has collaborated with many artists, directors, choreographers and composers worldwide, including Barbara Benary, Peter Brook, Philip Corner, Suka Hardjana, Sardono Kusuma, Vincent McDermott, Sal Murgiyanto and Toshi Tsuchitori. He writes regularly for various newspapers and magazines in Indonesia.

JODY DIAMOND

Superius (Lat.: 'top', 'uppermost'). A term used particularly in the 16th century to denote the highest voice of a polyphonic composition. In sources of 14th- and 15th-century music lower voices are usually identified as tenor, contratenor, contratenor bassus etc, but upper voices are normally not specified at all. The term 'superius' came into common use with the advent of music publishing, when it became necessary for each partbook to carry some identification (*see* PARTBOOKS).

OWEN JANDER

Superoctave (Ger. *Superoktave*). As the name of an organ stop, Superoctave denotes the Principal-scaled rank an octave above the so-called Octave (*Oktave*). The latter was itself an octave above the basic Principal rank of the department concerned. Thus if the *Prinzipal* is 16′ and the *Oktave* 8′, the *Superoktave* is 4′; or respectively 8′, 4′ and 2′. Not until German influences became strong in the mid-19th century was the term ever used on English organs in preference to 'Fifteenth'. In Germany itself, *Superoktave* as a rank in large organs emerged out of the Mixture only from about 1550, previous 2′ ranks being scaled as flutes of various types. As the name of an organ coupler, Superoctave is normally a misnomer, the coupler concerned being an Octave coupler playing notes an octave above, not an octave above the octave.

See under ORGAN STOP (*Fifteenth*).

PETER WILLIAMS

Superposition. *See* REACHING OVER.

Supertonic. The second DEGREE of the major or minor scale, so called because it lies one step above the tonic.

Supervia [Supervía], **Conchita** (*b* Barcelona, 9 Dec 1895; *d* London, 30 March 1936). Spanish mezzo-soprano. She can have had little musical training when at the age of 14 she made her operatic début in minor roles with a touring Spanish company at the Teatro Colón, Buenos Aires. In November 1911, not yet 16, she was chosen as the Octavian of the Rome première of *Der Rosenkavalier*; in the 1915–16 season she appeared in Chicago as Charlotte, Mignon and Carmen, and during the 1920s sang widely

Conchita Supervia in the title role of Bizet's 'Carmen'

in Spain, and at La Scala (Octavian, Cherubino, Humperdinck's Hänsel and Ravel's Concepcion) and elsewhere in Italy. Her international fame began with her assumption of the brilliant Rossini mezzo parts in *L'italiana in Algeri*, *La Cenerentola* and *Il barbiere*; these roles, together with that of Carmen, formed the centre of her stage repertory during the last decade of her life, and brought her to Covent Garden in 1934 and 1935. By then Supervia had married an Englishman, Ben Rubenstein, and settled in London, becoming very popular also on the concert platform. She died after childbirth when her career was at its height. Supervia possessed exceptional gifts of musicianship and temperament. Her rich and vibrant mezzo attained a high degree of flexibility. Few singers conveyed so keen a pleasure in the sheer act of singing; and her enunciation, in several languages, was extremely vivid. These virtues, combined with a mischievous sense of humour and a delightful stage and platform personality, made her a superb interpreter of Rossini and Bizet, as of Falla, Granados and Spanish folksong. Her numerous discs, though sometimes adding an untruthfully strident quality to her louder tones, convey well the vivacity, charm and intimacy of her singing.

DESMOND SHAWE-TAYLOR

Supičić, Ivan [Ivo] (*b* Zagreb, 18 July 1928). Croatian musicologist. He studied the piano at the Academy of Music in Zagreb, graduating in 1953. Between 1960 and 1963 he was attached to the CNRS in Paris, and in 1962 completed the doctorate in musicology at the Sorbonne with a dissertation on the sociology of music which was subsequently published in Croatian in 1964. He taught in the musicology department of the Zagreb Academy of Music (1964–86) and at the University of Strasbourg (1979–93). He was a visiting fellow at Harvard University (1967–8) and president of IMS (1982–7). He has been a member of the editorial boards of *Acta musicologica* and *Arti musices* and is the founder editor of the *International Review of the Aesthetics and Sociology of Music*. In his numerous publications he has discussed the sociological and aesthetic aspects of music and issues of musical signification. He has also investigated the aesthetic implications of the music of several contemporary Croatian composers within a broader context of contemporary philosophy of music.

BOJAN BUJIĆ

Suppan, Jakob. *See* ZUPAN, JAKOB.

Suppan, Wolfgang (*b* Irdning, 5 Aug 1933). Austrian musicologist. At Graz he studied the clarinet, violin, piano

and music theory at the conservatory, and musicology with Hellmut Federhofer and Josef Marx at the university (1954–9), where he took the doctorate in 1959 with a dissertation on H.E.J. von Lannoy. After working in Freiburg as an assistant at the East German Folklore Institute (1961–3) and director of the music department of the Deutsches Volksliedarchiv (1963–74), he completed the *Habilitation* in 1971 at the University of Mainz with a study of German song in the second half of the 16th century, and became reader there. In 1974 he was appointed professor and director of the Ethnomusicological Institute at the Graz Musikhochschule. He has been a guest professor at the universities of Frankfurt, Göttingen, Innsbruck and Salzburg. His professional appointments include editor of *Musikethnologische Sammelbände* (from 1977), president of the International Society for the Promotion and Investigation of Band Music (from 1974), president of the Johann Joseph Fux-Gesellschaft (from 1995) and president of the World Association for Symphonic Bands and Ensembles (1995–7). Most of his research has been in ethnomusicology, particularly in European folksong and folk music with a regional focus on Styria, in wind music and in a philosophically based anthropology of music.

RÜDIGER SCHUMACHER

Suppé [Suppè], **Franz (von)** [Francesco Ezechiele Ermenegildo Cavaliere Suppé Demelli] (*b* Spalato, Dalmatia [now Split, Croatia] 18 April 1819; *d* Vienna, 21 May 1895). Austrian composer and conductor of Belgian descent. His father and grandfather were Austrian civil servants working in Dalmatia, his mother Viennese. Despite paternal opposition Suppé showed his musical talent at an early age, encouraged by the bandmaster Ferrari and the cathedral choirmaster Giovanni Cigalla (1805–57). He was sent to study law at Padua, but he heard and made much music, visiting Milan and meeting Rossini, Donizetti and Verdi as well as hearing their operas.

After his father's death in 1835 he and his mother went to Vienna. He considered studying medicine but he took up music in earnest, taught and encouraged by Seyfried and Sechter; although the former's testimonial of 14 March 1840 emphasizes Suppé's abilities in serious composition, he helped secure him a post, initially unpaid, as third Kapellmeister at the Theater in der Josefstadt in autumn 1840. There his first complete score was very successfully given on 5 March 1841; under the title of *Jung lustig, im Alter traurig, oder Die Folgen der Erziehung* it received a favourable review in the *Theaterzeitung*, being praised for qualities associated with his later masterpieces:

> Melodious, rich in tender ideas [and] fine nuances, clearly and effectively orchestrated and containing such surprising modulations and transitions, that the overture and most of the songs and choruses had to be encored ... The whole composition has traces of the Italian style but now and then goes in for thoroughly vernacular, simply handled themes.

Suppé is reported to have said later that much of the success was due to his having unconsciously (owing to his very limited knowledge of German) treated a *Jodler* in the style of a sentimental Donizettian farewell, through misunderstanding the text. Donizetti, a distant relative, encouraged Suppé during one of his visits to Vienna (probably in the early 1840s) when the young man showed him the score of an opera, *Geltrude*, that he was then writing but was never performed, and Donizetti was probably instrumental in bringing about Suppé's later visits to Italy.

Until 1845 Suppé wrote well over 20 scores for the Theater in der Josefstadt (and for the director Franz Pokorny's other theatres in Baden, Ödenburg (Sopron) and Pressburg (Bratislava), in which he was mainly employed in and about 1843); among them were *Ein Morgen, Mittag und Abend in Wien*, *Nella die Zauberin* and a score for *A Midsummer Night's Dream* (all 1844); he also appeared with success as a singer on the provincial stages, making his début in that capacity as Dulcamara (in *L'elisir d'amore*) at Ödenburg on 2 May 1842.

In 1845 Suppé moved to Pokorny's newly acquired Theater an der Wien, where for the next 17 years he was Kapellmeister, sharing the duties with Lortzing in 1846–8 and with Adolf Müller from 1848. Apart from a string of more or less successful theatre scores, he conducted many important operatic performances – for instance the productions of Meyerbeer's *Die Gibellinen in Pisa* (*Les Huguenots*) in May 1846, with Jenny Lind and Tichatschek, and *Vielka* (*Ein Feldlager in Schlesien*) with Lind and Staudigl in February 1847.

In 1860 Suppé's *Das Pensionat* was the first successful attempt at a genuine Viennese operetta in answer to the French product, which since October 1858 (the Carltheater production of Offenbach's *Le mariage aux lanternes*) had been gaining a firm hold on the Viennese repertory. In 1862 Suppé moved to the Kaitheater and in 1865 to the Carltheater (formerly the Theater in der Leopoldstadt). Year after year he turned out a series of theatre scores, ranging from overtures and incidental music to operettas, opera parodies and even the occasional opera. Among his greatest successes were *Gervinus* (1849), *Flotte Bursche* (1863) and *Fatinitza* (1876), each of which received 100 or more performances in a few years; and, above all, *Boccaccio* (1879), which he referred to as 'the greatest success of my life'. In the late 1870s he purchased an estate in Lower Austria, and his increasing fame was reflected in invitations to visit the first Bayreuth festival in 1876, and Paris, Brussels, Germany and Italy (1879). In 1881 he was given the freedom of the City of Vienna. In 1882 he retired from his post as Kapellmeister to the Carltheater, though he continued to compose until the end of his life, enjoying successes in Germany in 1883 when he conducted his latest operetta, *Die Afrikareise*. Although he was working on another operetta, *Das Modell*, at the time of his death, his last works were mainly sacred.

Suppé is the earliest Viennese composer of musical farces whose works still survive as viable stage scores (and popular overtures), and later in his career he became the first master of the classical Viennese operetta in the train of the acclimatized scores of Offenbach. His light, fluent style includes the ability to vary a phrase length or melodic and rhythmic figure in a personal and immediately effective way. Though now remembered mainly as the composer of overtures such as *Dichter und Bauer*, *Leichte Kavallerie* and *Ein Morgen, Mittag und Abend in Wien*, his ambitions extended to the composition of large-scale sacred works and operas. He is at his best and most characteristic in the series of famous operettas from *Die schöne Galathée* (1865) to *Boccaccio* (1879). Numbers like 'Hab ich nur deine Liebe', 'Mia bella Fiorentina' and 'Holde Schöne' from *Boccaccio* have an irresistible elegance and élan, and his scoring is worthy of the finest orchestras rather than the bands that so often seize upon the overtures in particular. The song 'O du [Des ist] mein Österreich' of 1849 has become virtually Austria's second national song.

WORKS
(selective list)

for complete list of stage works see GroveO

overtures, potpourris, marches and songs from many of the stage works were published – usually with no date, but presumably soon after the premières; chief sources of MSS and printed music are A-Wgm (including many autograph scores), Wn, Wst; all performances and printings cited below were in Vienna unless otherwise stated.

PETER BRANSCOMBE (work-list with DOROTHEA LINK)

Supposition. The concept, proposed by Rameau (*Traité de l'harmonie*, 1722), that chords of the 9th and 11th, among others, arise from a 7th chord by placing a 'supposed' bass one or two 3rds below the FUNDAMENTAL BASS. For instance, in the chord *f–a–c′–e′–g′–b′* the fundamental bass is *c′*, while the 'supposed' bass is *f*. The doctrine of chords by supposition was adopted and modified by Roussier, Marpurg and others; A.F.C. Kollmann claimed to confute it by averring that it was theoretically simpler to treat Rameau's 'supposed' bass as the fundamental and to regard the 9th and 11th, following Kirnberger, as structurally inessential transient notes.

Rameau, in calling his concept 'supposition', extended a sense in which the word had been used to describe notes of a melody that do not belong to the concurrent harmony; see, for instance, the definition of 'supposition' in J.G. Walther's *Musicalisches Lexicon* (1732).

See also ORNAMENTS, §7.

MICHAEL KASSLER

Suprana, Jaya (*b* Denpasar, Bali, 27 Jan 1949). Indonesian composer and pianist. After taking piano lessons and composing with gamelan-influenced pentatonic scales, he enrolled at the Yogyakarta Music Academy in 1966; he left a year later for West Germany, where he studied composition and the piano at the Musikhochschule in Münster and the Folkwanghochschule in Essen. In the late 1960s Suprana was at the forefront of contemporary music performance on Indonesian TV. Completing his studies in 1972, he taught the piano at several schools in Germany. On his return to Indonesia in 1976 he taught, gave concerts and set up musical foundations, including the Semarang Music Forum. Suprana frequently used the

idioms of post-serialism in his early works, for example in *Paramnesia* for solo piano (1970). His intensive study of gamelan music with Ki Nartosabdho in the mid-1980s prompted him to return to his earlier use of pentatonic scales; his music also moved closed to tonality. Suprana's works, many of which are written for piano and small ensemble, have been performed in Europe, America, New Zealand and in Asian countries. His non-musical achievements in social science, herbal medicine and humour reveal the characteristic way in which Indonesian society resists tight compartmentalization.

FRANKI RADEN

Supraphon. Czech record company and music publisher. As a record company it was formed in 1946 through the nationalization of the Esta and Ultraphon companies as Gramofonové Závody-Supraphon (Supraphon Gramophone Works) under the direction of the composer Jan Seidel, who had previously been artistic adviser to Esta. The first studios and pressing plant were at Rokoska, but the growth of the industry by 1948 led to a move to a new pressing plant at Loděnice, starting production in 1951 and still in use in 2000. The Domovina studio came into use in the early 1940s, and in 1949 the fine acoustical properties of the Dvořák Hall in the Rudolfinum were recognized, so beginning its long-standing status as the company's principal recording studio for serious music.

The biggest leap forward in both artistic and international terms came with the appointment of Jaroslav Šeda as director of Supraphon in 1953. He widened the availability of records at home with the setting up of 150 Supraphon shops and developed international awareness through the national export–import company Artia, and created the journal *Gramofonový klub*, the first 14 issues of which sold 31,150 copies to 8686 subscribers; by the 20th issue sales had risen to 775,000. He initiated two important series, Musica Antiqua Bohemica and Musica Nova Bohemica. The repertory also included many Czech operas under leading conductors and symphonic and chamber music recordings of both Czech and international repertory. Šeda also recorded music of which the Communists did not approve, including works by Janáček and Martinů, early music and religious music. His successor Jiří Štilec, appointed in 1993, strengthened the CD catalogue and drew on the firm's valuable historic archive.

The first Czech stereo recordings were produced in 1958 and the last 78 r.p.m. discs pressed in 1961. In 1967 the company's name was shortened to Supraphon. During this period, in the face of political opposition, a group of Czech composers led by Jan Hanuš set up the firm Panton, to publish contemporary music, and from 1967 to produce recordings; in 1971 a Slovak recording company, Opus, was established in Bratislava. Contemporary music was served also by live recordings from the annual Týden nové tvorby (Week of New Works) issued by Supraphon and later also by Panton.

Supraphon has been in the forefront of new recording developments. Its early long-playing records benefited from Fairchild tape equipment acquired in 1950, and the company made the world's first digital recording in 1972 with the Smetana Quartet. With the same ensemble it issued the first chamber music CD available world wide in 1982. In 1998 Supraphon issued the first European digital video disc to be commercially available.

Changes came in 1993 with privatization in the Czech Republic. The pop music and video firm of Bonton bought Supraphon, Panton and Opus, thereby gaining control of some 90% of all Czech and Slovak record production. Its policy changes, however, have resulted in a reduction in output on these labels and a loss of some of the best artistic staff.

Supraphon began publishing music in 1967. After the Czech music publishing firms were nationalized at the end of 1949, state publishing continued at first under the imprints of Orbis and Hudební Matice. The catalogues of these two firms were brought together in 1953 as the music section of the Státní Nakladatelství Krásné Literatury, Hubdy a Umění (State Publishers of Literature, Music and Art), which rapidly developed a large catalogue including material reprinted from the old Hudební Matice list, as well as a considerable growth in new publications. Among the most important series started in the 1950s was the complete critical edition of Dvořák's works. On 1 January 1961 the firm was reconstituted as Státní Hudební Vydavatelství (State Music Publishers); this firm published one of the most important Czech musical reference works, *Československy hudební slovník* (*ČSHS*), in 1963–5. On 20 February 1967 the firm's name changed again, to Editio Supraphon.

As well as publishing editions of works by Smetana, Dvořák, Martinů, Suk and Janáček (a Janáček critical edition was inaugurated in 1978), Supraphon has maintained a vigorous policy of publishing works by contemporary composers. Early music is published in the monumental series Musica antiqua bohemica, Musica viva historica and Documenta historicae musicae. Supraphon has also published important books on music, including editions of Dvořák's letters and Janáček's theoretical writings. In 1971 the Slovak composers represented in Supraphon's catalogue were taken over by the newly established firm of Opus in Bratislava.

Supraphon's music and book publishing was taken over in 1994 by Bärenreiter (with which Supraphon had earlier collaborated on several projects), and for a time was known as Bärenreiter Editio Supraphon. In 1997, however, the firm regained its independence.

GRAHAM MELVILLE-MASON, NIGEL SIMEONE

Supremes, the. American soul vocal group. It was originally formed in 1959 as the Primettes by DIANA ROSS (*b* 1944), Mary Wilson (*b* 1944), Florence Ballard (1943–76) and Betty McGlown. McGlown was soon replaced by Barbara Martin. After a solitary release on LuPine records, the Primettes signed to Motown and changed their name to the Supremes. Initially paired with producer and writer Smokey Robinson, the Supremes' first six singles were commercial failures. Martin left the group in the spring of 1962 after their second Motown release. It was only when Berry Gordy suggested that the lighter voiced Ross replace Ballard as the lead singer and the group was paired with the writing and production team of Holland, Dozier and Holland that the Supremes found international success. The 1963 *When the Lovelight Starts Shining*

through his Eyes began an incredible series of 28 hit singles, 12 of which, including *Where did our love go?* (Motown, 1964), *Stop! In the name of love*, *Baby Love* (both Motown, 1965), *You can't hurry love*, *You keep me hangin' on* (both Motown, 1966), *Love Child* and *Someday we'll be together*, were number one hits in the American pop charts. In 1967 Ballard was replaced by Cindy Birdsong (*b* 1939), formerly of Patti LaBelle and the Blue Belles. The same year the group's name was changed to Diana Ross and the Supremes, paving the way for Ross's departure from the group at the end of 1969 and her subsequent solo career.

From 1969 there were a number of changes of personnel, with Wilson the only consistent member until the group disbanded in 1979. The post-Ross Supremes achieved a modicum of success with such songs as *Up the Ladder to the Roof* and *Stoned Love* (both 1970), *Nathan Jones* (1971) and *Floy Joy* (1972).

ROB BOWMAN

Supries, Joseph (*b* Cotignac, Var, 19 Nov 1761; *d* Aix-en-Provence, 27 July 1822). French composer and organist. On 14 June 1781 he was admitted to an ecclesiastical position in Aix-en-Provence; later he obtained the office of deacon. He was a pupil of Padre Santo-Vito at the *maîtrise* of St Sauveur Cathedral, Aix-en-Provence, and on 21 February 1787 he became the cathedral organist. He held this position until his death, apart from an interruption caused by the Revolution, when he went to Rome, returning only in 1807 after the reinstatement of the cathedral chapter. Supries and Balthazare Michel (1749–1825), the *maître de chapelle* of the cathedral, were early teachers of Félicien David.

According to Abbé Arnaud, Supries was a 'talented accompanist, fertile improviser and faultless harmonist' (see Marbot). His melodies are often attractive but suffer from excessive vocal ornamentation. His harmony is colourful, and his treatment of modulation rich and original; instrumentation is carefully handled.

Suriani [Suriano, Surianus], **Francesco.** *See* SORIANO, FRANCESCO.

Surinach, Carlos (*b* Barcelona, 4 March 1915). American composer of Catalan origin. After taking piano lessons from his mother and from Josep Camirals, he studied composition with Enrique Morera at the Barcelona Conservatory (1936–9). In 1940 a scholarship allowed him to study composition with Hugo Baltzer at the Düsseldorf Hochschule, then conducting with Pabst at the Cologne Hochschule (1941). At the Preussische Akademie der Künste Berlin (1941–2) he took further studies in composition with Trapp, also attending the seminars of Richard Strauss.

In 1942 he returned to Barcelona and became conductor of the Barcelona PO and the Liceo. After a period in France (1947–50), he moved to the United States (1951) and became a US citizen in 1959. During the 1960s he emerged as one of the most successful composers of ballet music. He collaborated with the Martha Graham Ballet Company and several other companies. In 1963 the ballet *Feast of Ashes*, written for the Joffrey Company, was given more than 500 times.

Although a Catalan by birth, Surinach's music appropriates flamenco motives such as the Phrygian mode (A–G–F–E), often punctuated by a robust rhythmic pulse. He is also a colourful and inventive orchestrator, a skill that he successfully used in his arrangements of 18th- and 19th-century Spanish music and the completion of the orchestration of Albéniz's *Iberia*.

From his formative years, the Spanish element is clear. His *Tres canciones* (1945) are settings of the quintessentially Spanish poets Federico García Lorca and Antonio Machado, and *Flamenco cyclothymia* (1967) introduces direct allusions to Andalusian music, including guitar-like arpeggios for the piano and echoes of the gypsy violin style. However, his German training permeates works such as the Piano Quartet (1944) and the Passacaglia-Symphony (1945). His *Doppio concertino* (1954) is neoclassical in style, with distinct, unblending textures, persistent ostinato figures, an energetic final movement, and extensive manipulations of the Phrygian flamenco mode.

ANTONI PIZÀ

Suriname [Surinam], Republic of. Country in South America. Suriname (formerly Dutch Guiana) is situated between French Guiana and Guyana on the north-east coast. Bounded to the south by Brazil and to the north by the Atlantic Ocean, it has an area of 163,820 km². Suriname is notable for its heterogeneous population: ethnic groups among its approximately 450,000 inhabitants include East Indians ('Hindustanis', 35%), Creoles (30%), Indonesians (18%), Maroons (descendants of escaped slaves, also known as 'Bush Negroes', 10%), Chinese (2%), Europeans (1%), and other minorities such as Lebanese. The indigenous inhabitants were the Carib, Arawak and Warroo Indians, and Amerindians comprise 3% of the present population, retaining their own languages and aspects of their religious and musical traditions. There is no state religion. Most Creoles are either Protestant or Roman Catholic; the majority of the East Indians are Hindu, although some are Muslim; most of the Indonesians are Muslim; and the Maroons maintain distinct religions that are largely African-derived.

In 1651 the English founded the first European settlement in the territory and in 1667 Suriname was ceded to the Dutch. From the mid-17th century slaves from West Africa were brought to work on the sugar-cane plantations, and, after the abolition of slavery in 1863, Chinese, Javanese and East Indian indentured workers were introduced to meet the severe labour shortage that followed emancipation.

The official language of Suriname is Dutch, but English is spoken by many; Sranan (which contains elements of Dutch, English, Portuguese and several African languages) is a widespread creole, serving as lingua franca among the different groups.

1. Amerindians. Amerindian peoples of the interior of Suriname include the Wayana, the Trio (Tirió) and the Akurio. The Akurio are nomads; the Wayana and the Trio are seminomadic cultivators. Although there has been little musicological research on the Akurio or the Trio, it is known that the latter have a diversified musical tradition including shaman songs, used to communicate with spirits during healing ceremonies. They have a variety of aerophones, including bone flutes, an end-blown bamboo flute called *monota*, a nose flute and panpipes, which are sometimes accompanied by an idiophone made of turtle shell that is rubbed to produce a monotone pulse. Flutes are sometimes played heterophonically in ensembles of two or more. Extensive proselytizing by North American and European missionaries over the last few decades has resulted in the loss of much of the Trio musical repertory and has had an especially negative impact on the shamanistic song tradition.

The Wayana live in the same general region as the Trio, and there has been a certain amount of musical exchange between them (for example, one type of Wayana flute, the *tïlïyo-luwen*, resembles the Trio *monota*, and its Wayana name means 'Trio flute'). A good portion of Wayana music-making is associated with public gatherings and community events, such as *marake* (adolescent initiation ceremonies), *kalau* (occasions for relating the principal myths of the Wayana tradition), funerals, shamanistic rites and inter-village dance ceremonies held as an expression of good relations between neighbours. The consumption of *kasili* (a fermented beverage made from cassava) usually plays an important part at such events. Some musical genres are also performed by individuals or small groups in more private settings. Wayana instrumental music is particularly rich in aerophones. These include *waitakala*, or *tule* (large bamboo clarinets, sometimes played in ensembles of three or more, using a hocketing technique); *patete* (bamboo nose flute); *luweimë* (bamboo panpipes with four tubes, sometimes accompanied by *kuliputpë*, a turtle-shell idiophone played by rubbing with the edge of the hand); *kukunkuhuli* (small side-blown clarinet consisting of a bamboo tube attached to a small calabash or ceramic equivalent); *pëlum-pëlum* (bamboo flute with four holes); *kapau-yetpë* (small bone flute with three holes); *welëh-welëh* (notched bamboo flute with three holes); *titilu* and *pehpeu* (side-blown bamboo horns, usually played heterophonically together with the *kapau-yetpë* flute); and several other kinds of aerophones. Idiophones (apart from *kuliputpë*) include *kawai* (seed rattles tied around the ankle for dancing) and stamping sticks, used in most dances. Among the forms of Wayana vocal music that have been noted in the anthropological literature are *ëlëmi* (magical songs), *mareicae* (songs performed by men to attract women) and *melanda* (songs performed by men to express affection for their wives).

The Indians of coastal Suriname, the Carib or Galibi (Kalina) and Arawak (Lokono), are settled cultivators and have had extensive contact with the urban and rural Creoles. Traditional Arawak songs, flute music and dances are remembered only by old people, while the young

Arawak use the *kawina* music of the rural Creoles (see §3) at feasts. The Arawak transverse flute known as *jankabuari*, once played solo or to accompany singers at traditional dance festivals, is played infrequently today; when it is, it is most often accompanied by guitar. The Caribs, by contrast, have maintained their traditional music and use it extensively at shaman ceremonies, *kasili* feasts, initiation ceremonies, and *omanganon* and *epekodono* (first and last mortuary rites). There are three main types of *wale* (song): those known as *alemi*, which are considered old, and are usually performed by a *pïyei* (shaman) accompanied by a *malaka* (hand-held calabash rattle), while invoking spirits; those sung at funeral ceremonies, primarily by women, accompanied by *kalawasi* rattles (small closed baskets without a handle, containing dry seeds); and those performed with *sambula* (drum) accompaniment, most often by men, at various ceremonies and celebrations. The *sambula* (from Spanish, *tambora*) is a relatively recent innovation among the Carib; a double-headed cylindrical drum with a diameter greater than its height, it is generally played in sets of two or three, hung from a horizontal bar and struck with a padded stick.

2. Maroons. Beginning in the late 17th century, groups of Africans escaped slavery and fled inland to the forests, establishing small settlements along the main rivers. Maroon peoples, descended from these groups, include the Ndyuka, the Saramaka, the Aluku or Boni, the Paramaka, the Matawai and the Kwinti.

The Maroons can be divided into two major cultural zones: eastern (Ndyuka, Paramaka and Aluku) and western (Saramaka and Matawai). Those in the same zone speak mutually intelligible dialects of a common language and possess broadly shared musical cultures, with the exception of the Kwinti, who, though located in the western area, are culturally closer to the eastern Maroons.

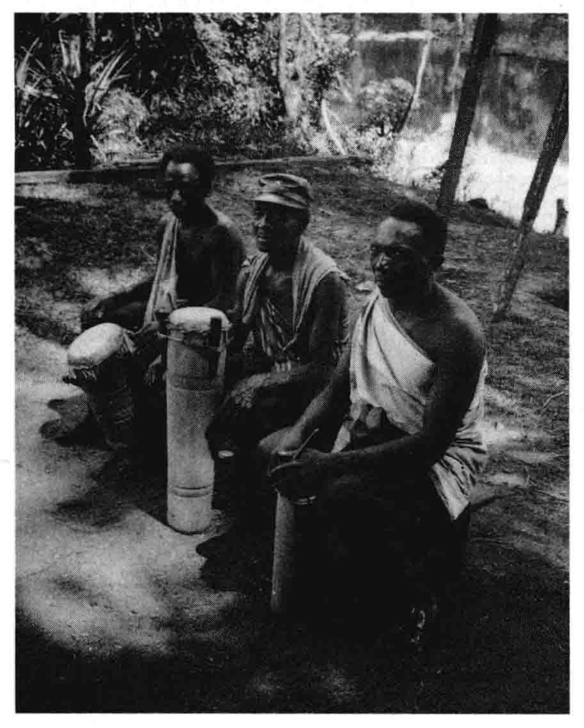
There are a number of music and dance genres associated specifically with eastern Maroons (though some of these are on occasion performed by western Maroons as well). *Mato*, *susa*, *songe* (also known as *agankoi*) and *awasa* are the most frequently performed genres among the Ndyuka, Paramaka and Aluku, forming an integral part of the *booko dei* and *puu baaka* funerary rites that are the most important ceremonial events in eastern Maroon life. Songs in all of these genres are sometimes performed without instrumental accompaniment, by a male or female singer and a predominantly female chorus who sing the responses. When performed as part of a dance, however, they are accompanied by an ensemble of three single-headed conical drums with open feet that vary slightly in size and are played with bare hands and, in some cases, sticks. Known as the *gaan doon* (large drum) and *pikin doon* (small drum), these share certain design features with drums that are found among several West African peoples, ranging from the Akan of Ghana and Côte d'Ivoire to the Fon of Nigeria and Benin. Some styles require other percussion instruments, such as the *kwakwa*, a long wooden plank beaten simultaneously by several players, each wielding two sticks. For *awasa*, dancers often wear *kawai* (seed rattles, originally borrowed from neighbouring Amerindian peoples) on their ankles; these form an integral part of the music.

Eastern Maroons also have a number of distinct music and dance genres associated with *obia pee* (ceremonies concerned with the invocation of gods and spirits, some of which possess devotees). Some of these genres, such as *kumanti* (centring on spiritual protection and healing) feature the same drums as the genres mentioned above. Others require special instruments. For instance, *papa* or *vodu* music (played for snake gods) requires a long (two metres or more) cylindrical single-headed drum called *agida*, played with the palm and fingers of one hand, with a single stick held in the other; *ampuku* (forest spirit) music, on the other hand, is led by a drum called *asakembu*, used in no other genre. Although these religious musical genres, like most Maroon musical forms, represent syntheses of elements from various parts of West and Central Africa, some are clearly related to specific African regional traditions; for instance, *kumanti* drumming (which is often augmented with a metallic idiophone called *adaulo*) must be seen, at least in part, as a descendant of certain Akan drumming traditions, while *papa* (*vodu*) drumming has discernible Ewe/Fon roots.

In addition to these major dance-drumming traditions, there are a number of other musical genres associated with various contexts: *tuka*, danced around the body of a deceased person before burial; *fon ken* and *fon alisi*, work songs used for beating sugar cane and rice, respectively; *awawa*, unaccompanied singing used for social commentary and criticism; and *tutu*, traditional flute melodies (now played on imported instruments, usually plastic recorders). In some villages, one can still encounter the *agwado* (or *agbado*), a three-string bow lute (pluriarc) consisting of a large gourd resonator through which three small bows are inserted. *Agwado* is played alone or used to accompany solo singing. Finally, a recently invented dance and drumming genre, *aleke*, merges older Ndyuka styles with elements from Creole genres such as *kawina* and *kaseko*, serving as an important medium of self-expression for the young.

The western Maroons, particularly the Saramaka, have an equally rich and varied musical culture (one that overlaps in many respects with that of eastern Maroons). Among the most important secular music and dance genres are *adunké* and *sêkêti*. *Sêkêti* songs, many of them containing social commentary, are performed in a wide variety of contexts. They may be used, for example, to accompany daily chores, gossip at spontaneous gatherings, welcome a chief returning to his village, or entertain crowds at major performance events such as funerals. Songs are sometimes performed unaccompanied (either solo, or by a leader and chorus with hand-clapping) and at other times with the backing of a full drum ensemble. New songs are constantly composed. *Sêkêti* also provides the musical accompaniment for two of the most popular western Maroon styles of dancing, *djómbo sêkêti* and *tjêke*. Other social dance genres, backed by distinct drumming styles and songs, include *alesingô* (danced on poles held horizontally by two men) and *bandámmba* (performed by women to welcome a man returning to his village after a long absence).

Saramaka religious music corresponds in many ways to that of the eastern Maroons. The main genres of music and dance linked with possessing gods and spirits, *komantí*, *apúku* and *papá*, closely parallel eastern Maroon *kumanti*, *ampuku* and *papa*, making use of similar drum ensembles, song styles and esoteric languages. Among the Saramaka, however, *papá*, unlike its eastern Maroon equivalent, has a special association with death rites. And



while the Saramaka *apínti* drum is virtually identical to the *gaan doon* and *pikin doon* of eastern Maroons, certain other Saramaka drums used in both secular and religious genres (such as *deindein* and *lánga doón*, both single-headed, cylindrical drums with tuning wedges) have no exact counterparts among the Ndyuka, Paramaka or Aluku (fig.1).

Other important Saramaka musical genres include work songs such as *matjáu baai* (tree-felling songs) and *údu baai* (log-hauling songs); *papái bèntá* (a form of lamellophone made with four or more split reeds, played primarily by young men); and *kóntu* songs (performed at wakes during story-telling sessions).

In contrast to the Saramaka, the Matawai no longer practise their traditional religious forms extensively and most of the older ceremonies are unknown to the younger generation. Non-religious forms such as *adunké* and *fósitén sêkêti* are known only by older people. The only Matawai form regularly used at ceremonial dances is the *banya*: the songs and dances are accompanied by two or three *apínti* and a *kwakwa* (among the Matawai this refers to a small wooden bench, beaten with two sticks). Nowadays, Matawai dances sometimes also feature the *kawina* music of rural Creoles.

Drum languages (*apinti tongo*) play an important part in both eastern and western Maroon ceremonial life; these are used to announce important events, to intone proverbs, to praise names and to communicate with the ancestors.

Maroons of all groups place a high value on artistic innovation, and the resulting cultural dynamism is reflected in music as much as in other arts. Not only are new songs constantly composed (in virtually all genres), but new genres periodically arise and come into fashion. Over the last two decades of the 20th century, as migration to the coast increased, Maroons (particularly Saramakas and Ndyukas) exerted an important influence on urban popular music. Not only young Ndyukas brought their *aleke* music to the recording studios of the capital, Paramaribo, but young Maroon musicians from all groups came to play a dominant role in the production of recorded *kaseko* (see §3 below).

1. Saramaka drum ensemble with (left to right) dei dei, tumao and apinti at Guyaba, Brokopondo district

3. Rural and urban Creoles. Ceremonies for the *winti* or *komfo* (spirits or deities) are essential to the religious life of both rural and urban Creoles, since it is believed that Masra Gran Gado (the Supreme Deity) cannot be worshipped directly. The classification and the characteristics of *winti* vary according to different regions and 'schools': spirits include earth, water and sky *winti*, snake *winti* (the *vodu* and the *dagwé*), the *ampuku* (small inhabitants of the forest) and the *kromanti* (African *winti* associated with protection and healing). The *winti* are addressed in their own songs and drum rhythms. Each song presents in a short text a complex of ideas about the nature of the *winti*; during ritual observance participants possessed by *winti* perform dances in their honour. Drums used for these ceremonies are the *apinti*, the *agida*, *pudya*, *langa dron* and *man dron* (single-headed cylindrical drums of different sizes) and the *kwakwa* bench. In some areas, *winti* has been combined with popular forms such as *kawina* and *kaseko* (see below). In these newer versions, the *bigi tu* (sousaphone or tuba) has been reinterpreted in African terms and has come to play an important role in ritual, being used to invoke and entertain possessing gods and ancestors.

The *kawina* (or *kawna*), a popular musical form of rural Creoles, consists of songs in leader-chorus form accompanied by the *kawina* band, which comprises the *apinti*, *kawina dron* (small double-headed cylindrical drums), *kwatro* (from Spanish *cuatro*, a small four-string guitar), a pair of rattles made of tins, and sometimes other percussion. Beginning in the late 1980s, there was a resurgence of *kawina* in Paramaribo; a new urban variant called *kaskawi* developed, incoporating electric guitars and keyboards along with elements of urban *kaseko* and other Afro-Caribbean styles. This remains one of the most popular urban styles among the young. Old-time *kaseko* bands that play the genre called *bigi poku* or *skratji poku* were once typical urban ensembles; they consist of wind instruments (clarinets and saxophones), a banjo, a pair of calabash rattles and a military drum kit, and are used to accompany the *setdansi* (creolized versions of European ballroom and salon dances such as the *kadriri* or quadrille and the *lanciers* or lancers dance), and for various festive occasions in Paramaribo. In the second half of the 20th century, after being strongly influenced by North American jazz, *kaseko* absorbed many elements from foreign dance musics such as Guyanese *badji*, Trinidadian calypso and soca, Latin American salsa, Jamaican reggae and North American funk. Today it is played primarily by urban ensembles (featuring electric guitars, keyboards, drum kit, brass, saxophone and assorted percussion) and recordings are made in high-tech studios for mass consumption. Consisting of several sub-styles and sung in a number of Suriname's languages, *kaseko* is now widely considered the national popular music.

Other traditional Creole forms include *anansi* stories (tales of the spider-trickster Anansi), which often have songs; *lobi singi* (songs criticizing lovers or venting other personal emotions, sung by women); and *banya*, *laku* and *susa*, various dance ceremonies, less popular in the 20th

century than formerly, but still organized during festivities commemorating emancipation.

Although little European music is performed in Suriname, Creole music often combines European melodies and metres with Sranan-language texts; harmonized Protestant hymns and psalm singing are also sometimes heard, even in the performance of the *winti* melodies. European musical influence has been exerted by Roman Catholic and Moravian missionaries, especially on the Amerindians and the Creoles.

4. EAST INDIANS. The Hindustanis, descendants of the indentured labourers who emigrated from India between 1873 and 1916, now constitute the single largest ethnic group in Suriname, numbering around 170,000, with roughly another 100,000 residing in the Netherlands since the 1970s. Around 82% of the Hindustanis are Hindu, the remainder being mostly Muslim. Most of the indentured labourers came from Bhojpuri-speaking regions of North India, whose traditional folk music culture has constituted the basis for much Indo-Surinamese music, as well as for the closely related East Indian music traditions of nearby Guyana and Trinidad. Although the Indo-Surinamese population is smaller than those of the latter countries, the continued vitality of a Bhojpuri-based koine (called *Sarnami*) as a spoken language has lent a particular resilience and depth to Indian music traditions in Suriname.

Much Indo-Surinamese music has clear links to Bhojpuri-region forms, direct exposure to which, however, was minimal after 1916. Particularly closely related to North Indian counterparts are women's song forms tied to life-cycle events, such as *sohar* childbirth songs and wedding songs such as *maṭkoṛ* and *gāli*; stylistically similar are light *catnī* (CHUTNEY) songs with loosely erotic texts and simple, catchy tunes in verse-and-refrain structure. All these are strophic songs, typically sung in quadratic metre (North Indian *Kaharvā*) by groups of female amateurs accompanying themselves variously on *ḍholak* (barrel drum), *mañjīrā* (cymbals) and (or) *dāṇḍtāl* (a metal rod struck idiophonically with a smaller, u-shaped piece of metal). Among the predominantly male amateur song forms, particularly prominent is *cautāl*, a genre associated with the vernal *phagwa* (*holī*) festival, in which two groups of singers antiphonally exchange verses to the accompaniment of vigorous *ḍholak* playing in 7/4 and 4/4 metres. Verses from the epic Rāmāyaṇa may also be sung in this manner, often by competing amateur groups. Hindu temples are focal sites for these and other types of collective singing, especially devotional *bhajans* sung responsorially with accompaniment on *ḍholak*, harmonium and often the tambourine-like *khañjari*. Formerly popular, but now rare, is the narrative or topical male song form *birhā*, sung to the accompaniment of the *nagārā* drum-pair, and in some respects resembling early 20th-century Indian *birhā* style.

Until around the 1940s, folk theatre genres like *Gopichand* and *Raja Harishchandra* were widely performed by semi-professional male troupes, featuring songs and dances. By this time, local *qawwālī* specialists, influenced by records of Indian singers like Kalloo Qawwal, came to be popular performers at weddings, Muslim functions and other events. An overlapping and ultimately more significant genre is *baiṭhak gānā* ('sitting music'), constituting a tradition of serious, primarily devotional songs sung by solo, semi-professional male specialists accompanied by *ḍholak*, harmonium and *dāṇḍtāl*. *Baiṭhak gānā* evolved as a counterpart to (and influenced by) Guyanese and Trinidadian '*tān*-singing'. Although incorporating Bhojpuri-derived folk elements, these genres also comprise idiosyncratic versions of *dhrupad*, *ṭhumrī*, *tillānā* and other genres which link them, however obliquely, to North Indian classical and light-classical music. *Baiṭhak gānā* was typically performed (often in competitive formats) in all-night sessions at weddings and wakes, and at nine-day Hindu rituals called *yajña* (*yaj*, *jag*). *Baiṭhak gānā* singers, like *cautāl* groups and, in many cases, *bhajan* afficionados, derive song texts not only from oral tradition, but also from anthologies published in India.

Under the influence of modernization many of the aforementioned genres (such as *baiṭhak gānā* and *birhā*) have declined dramatically and some, like folk theatre, have disappeared altogether. After the 1940s, Indian film music became by far the most popular kind of music among Indo-Surinamese, and much amateur and professional singing is devoted to renditions of Indian hits. By the mid-20th century, several professional ensembles had also emerged which performed film songs, along with *qawwālī* and *bhajan*, at weddings and other festivities. In the 1980s some contemporary performers like Kries Ramkhelawan (*b* 1958), influenced by Trinidadian trends, popularized 'chutney-soca', which fuses traditional *catni* lyrics and melodies with dance-band instruments and soca or calypso rhythms.

5. JAVANESE. Most Suriname Javanese are Muslim, some of whom still speak Javanese and have retained many Indonesian traditions. Their most important events are the celebration of Indonesian independence, wedding feasts, circumcision ceremonies and the *jaran kepang* (a dance in which participants in a state of trance mime horses; fig.2). At feasts a *wayang kulit* (shadow-puppet play) or a *tayub* is usually performed; the *tayub* includes songs and dances of the *lèdèk* (female singer-dancer) who is accompanied by a gamelan ensemble, while the *wayang kulit* is based on the Hindu epic drama, the Rāmāyaṇa. The *dalang*, who handles the puppets and sings the texts, is a versatile artist who knows the ancient languages for the plays and partly directs the ensemble. *Ludruk*, a mixture of folk theatre, music and dance, is also very popular.

2. *Javanese jaran kepang (ritual trance dance) accompanied by gamelan ensemble*

Soon after their arrival in 1890, the Javanese labourers in Suriname began to design and build their own gamelans using local materials such as scrap metal left over from railroad construction. Today, the gamelan of Suriname is based exclusively on the *sléndro* tuning system. Usually the gamelan consists of a selection of the following group of instruments: *kendang* (double-headed barrel drum); *gambang, demung, thithik, saron* or *penurus* (metallophones, with 7 to 14 keys); and some combination of various other metallophones and/or gongs, such as *kenong* and *ketuk*, as well as local versions of the Javanese suspended bronze gongs (*kempul, suwukan* and *gong ageng*). The number of instruments varies from five to eight; some gamelan also include the *suling* (end-blown bamboo flute), or perhaps *gendèr* (a metallophone with tuned bamboo pipe resonators). Gamelan used in *jaran kepang* may also feature *tarompet* (a type of oboe) and *ketipung* (a small single-headed drum). A full Javanese gamelan with instruments of both *sléndro* and *pélog* tunings is housed in the Indonesian Embassy, but Surinamese musicians use only the *sléndro* section of the set.

Other musical contexts and genres include various *slametan* rites (making use of gamelan and other instruments); *terbangan* (percussion-accompanied Islamic devotional songs); *angklung* (music for ensembles of various bamboo idiophones); *menore* (a type of religious folk theatre with musical accompaniment); and *kotekan* (rice-pounding music). Each of these can be further broken down into sub-styles. For instance, there are two types of *terbangan* ensembles, used to accompany different categories of songs: *terbangan cilik* (or *terbangan kencring*), made up of a *bedug* (a large ritual drum beaten with a stick) and a type of tambourine; and *terbangan-maulad nabi* (or *terbangan-gede*), consisting of a number of large drums played with the hands, along with the *kendang* (the double-headed gamelan drum).

Finally, a number of more obviously creolized forms have recently appeared among the Javanese of Suriname. As in Indonesia, *kroncong* music is popular, a genre that fuses certain musical concepts and conventions from the gamelan tradition with Western instrumentation and tonality (*see* INDONESIA, §VIII, 1). Surinamese *kroncong* ensembles most often feature some combination of violin, Hawaiian guitar, flute, guitar, ukelele (or banjo), double bass and sometimes cello, along with vocals. Suriname has also produced a Caribbeanized version of the gamelan, the 'steel gamelan', modelled in part on the steelbands of Trinidad, but still using the *sléndro* tuning. This and other such examples show that Surinamese Javanese music continues to adapt to the larger creole culture that surrounds it, even as it maintains an identity of its own.

TERRY AGERKOP/KENNETH BILBY (1–3, 5), PETER MANUEL (4)

Surman, John (Douglas) (*b* Tavistock, Devon, 30 Aug 1944). English jazz baritone and soprano saxophonist. While still at school he played in jazz workshops organized

by Mike Westbrook (1958–62), then studied at London College of Music (1962–5) and London University Institute of Education (1965–6). He continued to play with Westbrook until 1968 and to record with him until 1975. While performing in his group at the 1968 Montreux International Jazz Festival he won an award as best soloist. In 1970 he toured Europe with Francy Boland's big band.

From 1969 to 1972 Surman toured with The Trio (the group re-formed in 1977 as Mumps with the addition of Albert Mangelsdorff), and from 1973 to 1975 he played in the saxophone trio SOS. Thereafter he worked with Miroslav Vitous (1979–82) and Azimuth. In the 1980s he was active with an ensemble of 11 brass and rhythm players known as the Brass Project (from 1981), and with Graham Collier's big band Hoarded Dreams and Gil Evans's British Orchestra (both 1983). He toured again with Evans in 1986 and 1987. Since 1972, he has recorded a series of well-received solo albums, as well as recording in duo with the singer Karen Krog (1977–99) and in quartets of his own (1991–4) or led by the pianist Paul Bley (1987–91). Surman is much in demand as a sideman on a wide range of jazz recordings, and in recent years has increasingly worked with improvising musicians from a folk or world-music background, notably the Tunisian oud payer Anouar Brahem (1997) and the Moldavian pianist Mikhail Alperin (1998).

Surman transferred John Coltrane's characteristic phrasing to the baritone saxophone, a feat requiring considerable technical powers. He has also mastered the extreme upper register of the baritone, thus expanding its versatility as a solo instrument. With SOS he employed synthesizers and electronic techniques, pre-programming synthesizer parts over which the three saxophones improvised in performance; he further developed this aspect of his work throughout the 1970s. Surman's personal style is one of stunning dexterity, technical mastery and emotional depth; his playing mixes a harsh, forceful delivery with softer lyricism. The fluency and range he achieved early in his career on both baritone and soprano saxophones may be heard on John McLaughlin's innovative jazz-rock album *Extrapolation* (1969, Marmalade). Soon after making this recording he turned to more personal methods of expression. On his first solo album, *Westering Home* (1972, Isl.), Surman made effective use of multi-track recording techniques, using bass clarinet and a variety of other instruments in addition to the two saxophones to explore folk-related themes, a technique he has developed on five subsequent solo albums (1979–94) and in his many collaborations. His intensely personal music is often evocative and atmospheric, and draws heavily on his knowledge and experience of English and European folk, brass-band, classical and church music. As a composer he has received commissions for church music and ballet scores, including *Private City* for the Sadler's Wells Royal Ballet (1987) and *Proverbs and Songs* for the Salisbury Festival, performed in Salisbury Cathedral by Surman (solo saxaphone), John Taylor (pipe organ) and the Salisbury Festival Chorus (ECM, 1996). In 1998 he gave the première of a chamber orchestra version of his solo recording *Road To St Ives* (ECM, 1990), commissioned by the Bournemouth Sinfonietta. His work with the Brass Project in collaboration with John Warren demonstrates his often neglected strengths as a composer and arranger.

SIMON ADAMS

Surnāy [sornā, surla, surle, sūrnā, surnāī, ṣurnāy, zournas, zukra, zurla, zurna, zūrnā]. Folk shawm of West and Central Asia, south-eastern Europe and parts of North Africa. Its general form is a conical wooden tube 30–45 cm long, but its length may extend to 60 cm. It is played with a double reed and usually has a pirouette.

1. Terms, distribution and history. 2. Structure. 3. Performance.

1. Terms, distribution and history. The instrument is widely distributed under various closely related names: in Uzbekistan, Tajikistan and Kyrgyzstan (*surnāy*), Kuwait and the United Arab Emirates (*ṣurnāy*); Kashmir and Rajasthan (*surnāī*); Iran and Afghanistan (*sornā*); Pakistan (*sūrnā*, but more usually *śahnāī*); Syria, Iraq, Turkey, Armenia, Dagestan, Azerbaijan and to a lesser extent Georgia (*zurna*/*zūrnā*); northern Greece and Bulgaria (*zournas*); Macedonia and southern Yugoslavia (*zurla*); Albania (*surle*) and Romania (*surla*).

The instrument is also found in North Africa, although terminology is more varied: Tunisia (*zukra*); Algeria (sometimes *zūrnā*, but more generally *raita*). The *ghayṭa*/*raita* of Morocco, Algeria and Libya (*see* Gaita (i)), and the Mizmār of Egypt are essentially the same instrument. Different but related forms of shawm are widely distributed in India (Śahnāī); Ladakh (*sur-na*); Sumatra and West Malaysia (Sarunai), China (Suona, often popularly called *laba*) and Inner Asia (Tibetan *rgya-gling*; Mongolian *bishgüür*).

The instrument we know as the *surnāy*/*zurna* became established after the advent of Islam (7th century). Its wide diffusion relates to the expansion of Islamic culture. During the pre-Islamic period types of aerophone with a reed existed in Mesopotamia, North Africa and Arabia; the *ṣūr* is mentioned in the Qur'an as an aerophone and in the *ḥadīth* (traditions of the Prophet Muhammad). In classical Arabic texts we find *surnā*, *surnāy*, *ṣurnā* and *ṣurnāy*. (The later use of *z* is due to Ottoman influence.) The instrument was probably a synthesis of types from Iran, Mesopotamia, Syria and Asia Minor, introduced into military bands and spread into newly conquered areas. During the Ottoman period the *zurna* spread westwards into Europe in the *mehter* bands (*see* Janissary music). A related type of ensemble known as Naqqārakhāna was used for royal, ceremonial, civic or military music in West and Central Asia, the Indian subcontinent, Malaysia and Sumatra. The *suona* arrived in China some time before the 16th century, probably during the 14th century, perhaps from Central Asia.

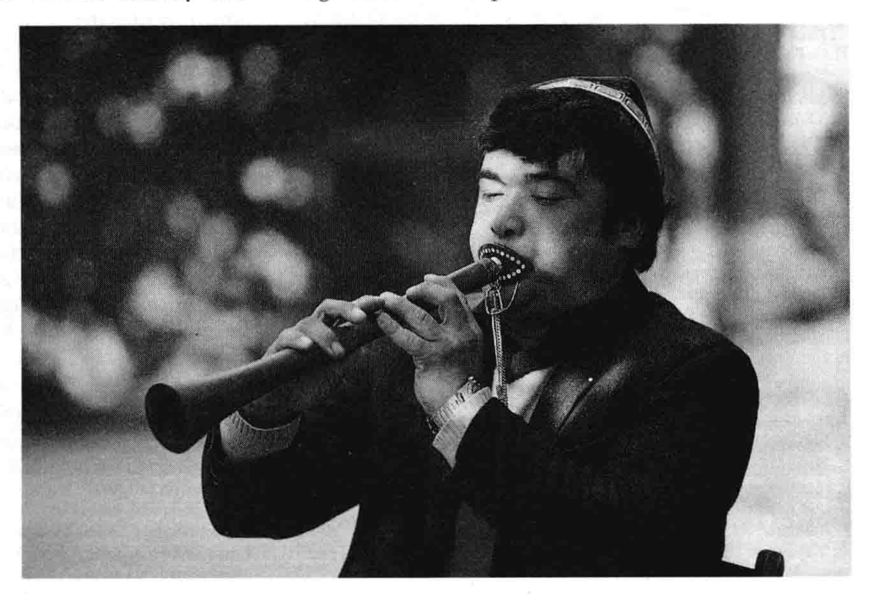
2. Structure. The instrument has several parts. The double reed consists of two blades of cane-like reed (usually *Arundo donax*) nearly 2 cm in length. For storage these are held closed with a bridle. The double reed fits over a small tubular staple, usually of brass, joining to the body. The player's lips press on the pirouette (or

1. Sornā and dohōl players, Herat, Afghanistan, 1977

rosette), a small disc of wood, ivory, mother-of-pearl or other material. Not all instruments have one. In models belonging to the Ottoman region, following through into the Caucasus and Central Asia, a fork is placed inside the body of the instrument. This ingenious device serves to convert the air column inside from a cylindrical shape into a conical one; this causes over-blowing to the octave rather than the 12th.

The body is made of a single conical piece of wood, widening towards the end, which is bell-shaped or flared. Different types of wood are used, apricot being the most common. There are six or (usually) seven finger-holes and one thumb-hole. The body may be ornamented with metal plates, sometimes made of finely engraved silver. Turkish instruments may have further ornamentation, and Azerbaijani instruments are often enamelled and ornamented with lazurite and metal or silver rings. The bell-shaped end of the *surnāy* is called the *ka'ba*. This is the name of the holiest place of Muslim worship in Mekka and explains the wide use of this instrument in Islamic culture.

3. Performance. The compass of this type of shawm is between one and a half to two octaves, depending on the model. The full compass is rarely used. Playing technique involves continuous 'circular breathing' (fig.1).



An outdoor instrument, the shawm has a bright, powerful sound. Its uses were various: military and ceremonial bands; funeral music (which survives in Armenia); escorting notables to Friday prayers; marking the beginning of a pilgrimage; sentry duty; annual celebrations of the flooding of the Nile; and within types of shadow puppet theatre, Turkish *karagöz* shadow puppets and *wayang kulit* in Malaysia.

In most areas the instrument is now confined to festive outdoor music, usually played in small ensembles (often two shawms and one or more drums) or simply as a duo of shawm and drum. The accompanying drum is usually the double-headed cylindrical *dohol* (Iran and Central Asia), *davul* (Turkey and south-eastern Europe) or *ṭabl* (Arab world). Sometimes there are two or three shawms within an ensemble (as in Kashmir and Egypt). Two may play in unison, or one may maintain a drone. Within an ensemble there may be different sizes, e.g. in Turkey the large *kaba zurna*, middle-sized *orta zurna* and small *cura zurna*. Sizes also vary regionally: in Uzbekistan the Khorezm type is larger than that of Tashkent.

Nowadays the shawm and drum ensemble provides music at weddings, circumcision parties, dances, games, competitions, national independence celebrations, festivals, demonstrations and marches, and it enlivens communal work such as ditch-digging. At wrestling festivals at Edirne, Turkey, each team has its *davul* and *zurna* ensemble, which uses a rhythmic code to comment on the various stages of the match. In Khorezm, Uzbekistan, circumcision parties (*qurly toy*) may gather two to five thousand people. There the *surnāy* is the main instrument for women musicians as well as men; elsewhere male players are the norm.

In many regions this instrument is played by members of the lowest social classes. In Turkey (including south-eastern Kurdish areas), Greece and the Balkans players are Gypsies. In Afghanistan barber-musicians play the *sornā*. Arabs seem to have shown some disinclination, or even aversion, towards playing the instrument. In Syria it is played by various groups of non-Arabs including Ghorbats, and in the Gulf States the *surnāy* is the prerogative of Baluchis and Africans.

The Central Asian *sornā/surnāy* reveals connections with the *maqām* system of art music. In western Afghanistan some pieces bear the names of 'Persian

2. The surnāy, traditionally played at weddings, Moscow village, Uzbekistan

maqāms' (*maqām-e fārsī*), e.g. *Now Rūz Sabā*, *Now Rūz 'Arab*, *Shur*, *Chahārgāh*, *Zāoul*, *Dūgāh Olang* and *Shahnāz-e Jām*. In Uzbekistan some *mukom* pieces may have originated from *surnāy* instrumental versions, e.g. *Surnāy Manosy*, *Surnāy Dugohi*, *Surnāy Munojāty* and *Surnāy Iroki*. Uzbekistan has three different regional schools: Khorezm, Ferghana and Tashkent.

CHRISTIAN POCHÉ/R (with RAZIA SULTANOVA)

Suroto [Soeroto], **Ki Anom** (*b* Juwiring, Klaten, Central Java, 11 Aug 1948). Javanese *dhalang* (shadow puppeteer) and composer. He was born into a family of performing artists and took an early interest in *wayang kulit* (Javanese shadow puppetry) and gamelan music, following and playing music for his puppeteer father, Ki Hardjodarsono, from the age of six. He performed his first all-night show at the age of 12 and began his professional career at 18. To supplement the training he received from his family he attended three *wayang kulit* schools: Himpunan Budaya Surakarta, Pawiyatan Karaton Surakarta and Habirandha (in Yogyakarta). In 1973 he made his first eight-hour *wayang kulit* commercial recording (*Kakrasana Rabi*, on the Lokananta label), followed by over 100 such recordings with five different companies during the next 15 years. One of the most acclaimed *dhalang* of his generation, he also composes pieces for Javanese gamelan, which are often featured in his *wayang kulit* performances. Though his most frequent engagements are in Jakarta and Central Java, he has performed all over Indonesia and internationally in Australia, Japan, Thailand, Egypt, the USA, the Netherlands, Britain and many other European countries. He has also frequently appeared on nationwide television broadcasts in Indonesia and is the recipient of numerous awards, including a Hadiah Seni (National Arts Award, Department of Education and Culture, 1995) and a Satya Lencana (Medal of Honour, from President Suharto, 1996), as well as awards from the Department of Tourism, Post and Telecommunications (1995), from the governor of Central Java (1996) and from the mayor of Surakarta (1993).

R. ANDERSON SUTTON

Surrey Chapel. London proprietary chapel, musically the most important of the 18th century. *See* LONDON (i), §I, 5.

Surzyński. Polish family of musicians. Three brothers were particularly active. Their father Franciszek Surzyński (1826–78) was an organist, teacher and conductor, active in Śrem and Środa (1852–70) and later in Poznań and Buk; their brother Piotr Surzyński (1859–1935) was an organist in Inowrocław.

(1) **Józef Surzyński** (*b* Śrem, 15 March 1851; *d* Kościan, 5 March 1919). Theologian, reformer of church music, composer, conductor and musicologist. From 1872 until 1873 he studied mathematics and music theory (with Oscar Paul) in Leipzig, where he also attended the conservatory and played the viola in the Thomaskirche. He studied theology in Rome (1874–9), obtaining his doctorate in 1880, and worked as a chaplain in Paris (1879–80). After returning briefly to Poland he moved to Regensburg, where at the school of church music he absorbed the principles of the Caecilian movement. In Poznań he worked as cathedral organist (1881–7), conductor of the cathedral choir (1881–94), teacher, organizer and official of the St Wojciech Society (1883–94). He also lectured on liturgy and Gregorian chant at the Poznań theological seminary. From 1894 to 1919 he was curate at Kościan, where he continued to involve himself in a wide range of activities as performer, organizer and teacher. He founded societies of church music and arranged concerts in Kraków, Lwów, Przemyśl, Tarnów, Warsaw and other Polish towns, in which he conducted or lectured.

Surzyński did much towards the reform of church music on Caecilian lines in Poland, and he was rewarded by the pope with the order of Pro Ecclesia et Pontifice. His critical and editorial work on old Polish music was of particular importance, and his archival researches enabled him to publish a four-volume collection of source material, *Monumenta musices sacrae in Polonia*, which contains examples of Polish music from the 16th century to the 18th. He published music in the supplements to the periodical *Muzyka kościelna* ('Church music'), to which he also contributed many articles and of which he was editor from 1884 to 1902. His many compositions include 14 mass settings, small liturgical pieces, religious songs and organ miniatures, and show the influence of the Regensburg school of church music.

(2) **Stefan Surzyński** (*b* Środa, 30 Aug 1855; *d* Lwów, 6 April 1919). Organist, teacher, conductor and composer, brother of (1) Józef Surzyński. He studied at the Regensburg school of church music, and was employed as organist at Poznań Cathedral, and as choral conductor in Poznań and Brzeżany. From 1888 to 1913 he was organist and director of church music at Tarnów Cathedral, and from 1913 to 1919 he was organist and conductor at Lwów Cathedral. He composed secular and religious works, including three sets of organ preludes, and with his brothers published collections of Polish songs. Many of his works and manuscripts are in the National Library in Warsaw.

(3) **Mieczysław Surzyński** (*b* Środa, 20 Dec 1866; *d* Warsaw, 11 Sept 1924). Organist, teacher, conductor and composer, brother of (1) Józef Surzyński. He studied in Berlin (1885–7), Leipzig (1887–90) and at the Regensburg school of church music (1891), and then worked as an organist and teacher in Poznań, Libawa, St Petersburg, Saratov and Kiev. From 1904 he was a choral conductor in Warsaw, from 1906 taught at the Warsaw Conservatory and from 1909 was organist at St John's Cathedral. He wrote piano pieces, secular choral works and mass settings, as well as studies and other pieces for organ.

KATARZYNA MORAWSKA/KRYSTYNA WINOWICZ

Susa, Conrad (Stephen) (*b* Springdale, PA, 26 April 1935). American composer. He studied at Carnegie Mellon University, where his teachers included Lopatnikoff, and at the Juilliard School of Music, with Bergsma, Persichetti and others. In 1972, after a period of activity in New York, he moved to San Francisco. He has served as composer-in-residence for the Old Globe Theater, San Diego (1959–94), dramaturg for the Eugene O'Neill Memorial Theater Center, Connecticut, New

London, and as a member of the composition department at the San Francisco Conservatory (from 1988). Among his honours are the George Gershwin Memorial Scholarship, the Gretchaninoff Prize and two Ford Foundation Fellowships.

A prolific composer of incidental and choral works, Susa writes in a style characterized by an inventive use of tonality, brilliant instrumental and vocal timbres, and polyphonic textures. The wide emotional range of his music is exemplified in his five operas: *Transformations* (1973), based on a contemporary re-telling of Grimms' fairy tales by poet Ann Sexton, is one of the most widely performed American operas; *Black River: a Wisconsin Idyll* (1975, rev. 1981, 1993) is a surrealistic tragedy set in late 19th-century rural America; *The Love of Don Perlimplin* (1984), adapted from Lorca's play, explores the conflicting demands of love and honour; *The Wise Women* (1994) is both a Christmas mystery play and a witty parable; and *The Dangerous Liaisons* (1994, rev. 1997) is a masterly study of desire and self-deception cast as a grand opera.

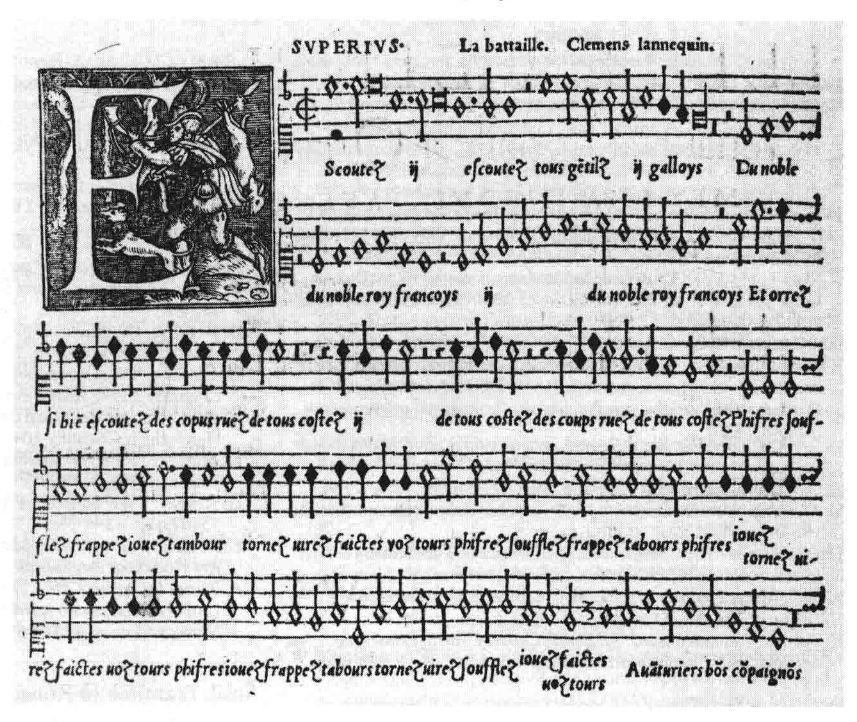
BYRON ADAMS

Susato, Johannes de. *See* SOEST, JOHANNES VON.

Susato, Tylman [Tielman] (*b c*1510–1515, Soest, nr Dortmund; *d* ?Sweden, 1570 or later). Music publisher, composer and instrumentalist, active in the southern Netherlands. His birthdate is based on a document of 1565 which states he was about 50 years old ('out omtrent L jaren'). His place of birth, also suggested to be Soestdijk, near Utrecht, is clearly in the environs of Cologne (probably Soest in Westphalia): he refers to himself as 'Tilemannus Susato Agrippinus' (the Roman name for Cologne) in two publications, he is described in 1561 as 'Thielman Suzato, geboeren van Coelen' and in 1563 as one born outside the lands of the Emperor. Further, he was granted a subsidy in 1542 by the city of Antwerp for bringing a new trade from outside. Documentation confirms that he was the son of another Tylman (Thielmanssone); his father may have been the blind musician 'Tielman dem blynden' mentioned in a 1508 Corpus Christi procession in Cologne. Some confusion has been caused by Susato's reference to Dutch as 'our mother tongue' in his first book of Dutch songs (1551); however, this is logical considering his residence of more than 20 years in Antwerp and the audience to whom the print is addressed.



The first documentation of Susato in Antwerp is in 1529 when he served as a calligrapher for the Confraternity of Our Lady. In 1531 he joined the town band, with whom he performed until 1549. A player of sackbut, trumpet, crumhorn, flute and recorder, Susato performed frequently for the evening service of the Confraternity of Our Lady (on sackbut). By the mid-1530s, he had married Elizabeth Peltz, sister of the head of the Marian confraternity; the couple had three children: Jacob, Clara and Catheryna. It may have been for his wedding that the text of a recently discovered madrigal by Lasso in a Swedish manuscript was dedicated to him.

In 1541 Susato formed a partnership with two Antwerp printers, Hendrik ter Bruggen and Willem van Vissenaken; he probably served as the compiler for Antwerp's first single-impression music book, *Quatuor vocum musicae modulationes*, issued in 1542 under Vissenaken's name. Following a long and complex lawsuit, Susato acquired all shares in the business and set up a printing house on Twaalfmaandenstraat, moving to a newly built house called the 'Cromhorn' in 1551. Between 1543 and 1561 he published 22 chanson books (in two series), 3 books of masses, 19 motet books (in two series) and 11 books in a series entitled Musyck Boexken including two books of secular Dutch songs, one book of dances arranged from popular songs, and eight books of *souterliedekens* (psalm settings). A number of these publications were reissued in later 'hidden' editions bearing the same date as the first.

Susato acquired his first printing privilege, valid for three years, on 20 July 1543. In 1546, when this privilege expired, he turned to sacred music, issuing his mass and first motet series. A sworn oath of his good Christian conduct, filed on 30 June 1546, may suggest he was suspected of heresy. His next printing privilege, granted in 1549 for his eleventh chanson book, required the recommendation of the Flemish court composer Benedictus Appenzeller. In this same year Susato was dismissed from the town band, along with several other instrumentalists, for an offence committed during the processional entry into Antwerp of Emperor Charles V and his son Philip.

Susato's success in business was aided by a number of well-positioned men whom he counted among his friends and to whom he dedicated his music publications. Susato's son Jacob (*d* 1564) joined the printing firm by at least 1558, and in 1561 took over his father's shop issuing only one book, *Le premier livre de chansons* of Lassus (1564), before his death. It has been incorrectly assumed that Tylman died before Jacob and before the subsequent sale of his printing materials to Christopher Plantin.

A sales note on the title-pages of Susato's last four music books (*Souterliedekens*, 1561) signal his move to Alkmaar, in north Holland. His will, dated 6 August 1564, was drawn up there; however, his lands were confiscated in 1567, along with those of his Calvinist family members. From 1565 Susato and his son-in-law, Arnold Rosenberger, were involved in the marriage

Opening of the superius voice of the chanson 'La bataille' from 'Le dixieme livre contenant la Bataille a quatre de Clement Jannequin' (Antwerp: Susato, 1545), printed by type from single impression

negotiations between Erik XIV of Sweden and the Princess of Lorraine, Susato serving as a letter carrier. He testified in a trial of 1567, brought against the lead emissary to Lorraine, where Susato was declared innocent of any wrong-doing, and he remained in Sweden until at least 1570. He either died there or returned to the northern Netherlands to be with his daughter and son-in-law.

Susato's music publishing firm was the first successful one established in the Low Countries. His music books, mostly in oblong quarto format, reveal that he owned two music type founts (both nested, or interlocking): the first a unique fount used exclusively until 1551 (see illustration); the second, a smaller font employed by music printers in southern Germany, Basle and Lyons. The specific contents of his print shop are itemized in the documentation of its sale in 1565 by the widow of Jacob Susato to Christopher Plantin.

Most of Susato's publications are anthologies of works by Flemish composers active in the Low Countries and at the Imperial Court; the chanson and motet books were published in series organized by mode and voicing. Among those issued in single-composer editions were Susato himself as well as Thomas Crecquillon, Orlande de Lassus, Clemens non Papa and Josquin Des Prez. Josquin's *Septiesme livre des chansons* (1545), issued 24 years after the death of the composer, is the earliest published source for 23 chansons; this has raised questions concerning Susato's source for the works and the accuracy of his attributions. Susato published Lassus's so-called 'op.1', a collection of chansons, madrigals, villanesche and motets, as an added book in his first chanson series (*Le quatoirsiesme livre*, 1555), and he later issued a motet book by Lassus as well. His eight books of Dutch-texted metrical psalm settings (*Souterlie de kens*) – four each by Clemens non Papa and his student Gherardus Mes – were intended for home devotional use.

As a composer Susato wrote over 90 chansons, many of which parody well-known French and Flemish models. Two books (1544 and 1552) contain two- or three-part didactic settings, and other larger-voiced settings are expanded parodies in imitative style of famous chansons. Many of Susato's chansons are arranged in groups of textually and musically related works called *responses* and *replicques* while his dance collection (1551) features simple four-voice arrangements of well-known chansons set in homophonic style, probably intended for amateur performance. His motets are well-crafted in imitative polyphony; *In illo tempore* (1545) is the basis for his only mass, and *Salve quae roseo decora* (1540) is an occasional work in praise of the city of Antwerp.

PUBLICATIONS

(*selective list*)

all published in Antwerp

Masses: Liber I[–III] missarum (1545[1], 1546[3–4])

Motets: Liber primus [–IV] sacrarum cantionum (1546[6–7], 1547[5–6]); Liber primus [–XIV] ecclesiasticarum cantionum (1553[8]–1558[3]) [Liber XV, 1560, contains only compositions by Lassus; liber XIII, 1557, lost], Liber V–VIII ed. *in the Sixteenth Century Motet*, xv–xvi

Dutch songs: Het I[–II] musyck boexken, 4vv (1551[18–19]), ed. in RRMR, cviii (1997)

Dances: T. Susato: Het III musyck boexken … alderhande danserye, 4vv (1551/*R*), ed. F.J. Giesbert: Danserye zeer lustich . . . om spelen op alle musicale instrumenten (Mainz, 1936); Clemens non Papa: Souterliedekens I[–IV], Het IV[–VII] musyck boexken, 3vv (1556–7); G. Mes: Souterliedekens V–VIII … musieck boucken no.VIII–XI, 4vv (1561)

Chansons: Vingt et six chansons, 5vv (1543[15]); Le premier [–14] livre des chansons, 4–8vv (1543[16]–1555[19]); T. Susato: Premier livre des chansons, 2/3vv (1544); La fleur des chansons…livre I[–VI] (1552[7–11]) [livre III, 1552 with works by Susato only, incomplete], 79 chansons ed. in SCC, xxix–xxx (1994)

Doubtful publications: Clemens non Papa: Motecta, 5vv (1546), listed in Goovaerts; Madrigali e canzoni francesi, 5vv, mentioned in *FétisB*, but probably pubd by Waelrant and Laet, 1558; Evangelia dominicorum, attrib. Susato in Goovaerts, pubd by Berg & Neuber, 1554[10]–1556[9]

WORKS

all published in Antwerp

Sacred: Missa 'In illo tempore', 5vv, 1546[3]; Domine da nobis, 4vv, 1545[2]; Fili quid fecisti, 4vv, 1542[7]; In illo tempore, 5vv, 1545[3]; Musica domum Dei optime, 6vv, 1540[7]; Nihil homini firmum, 2vv, 1549[16]; Peccata mea Domine, 5vv, 1554[9]; Salve quae roseo decora serto, 5vv, 1546[6], ed. A. Tirabassi (Brussels, 1923); 10 souterliedekens, 3vv, in Het IV–VII musyck boexken (1556–7)

Secular: Premier livre des [31] chansons, 2/3vv (1544), ed. A. Agnel (Paris, 1970–71); Tiers livre des [30] chansons, 2/3vv (?1552); also 30 chansons, 4–6vv, in 1543[15], 1543[16], 1544[10], 1544[12], 1545[14], 1549[29], 1552[7], 1552[8], 11 ed. in SSC, xxix–xxx (1994); 6 Flemish songs in Het I–II Musyck boexken (1551[18–19]), ed. in RRMR, cviii (1997)

Instrumental: 13 basse danses, 15 gugliardes, 6 pavanes, 8 allemandes, 9 rondes, 10 other dances in Het derde musyck boexken … alderhande danserye (1551/*R*), ed. F.J. Giesbert: *Danserye zeer lustich … om spelen op alle musicale instrumenten* (Mainz, 1936)

KRISTINE FORNEY

Susay [Suzoy], **Jo(hannes)** (*fl c*1380)). French composer. He was perhaps the son of the Pierre de Susay who in 1332 was a clergyman in the French royal chapel. The anonymous *Règles de la seconde rhétorique* mentions Iehan de Susay as being still alive at the beginning of the 15th century. The extremely complicated style of the three-voice ballades indicates that they were composed between 1385 and 1395. The four-voice *ballada duplex* (with *ouvert* and *clos* in both sections), still close to Machaut in its style, could have been composed earlier. All three ballades survive in the Chantilly Manuscript (*F-CH 564*); *Pictagoras, Jabol et Orpheus* is also in *I-Tn* T.III.2 (see Ziino).

URSULA GÜNTHER

Sušil, František (*b* Rousínov, nr Slavkov, 14 June 1804; *d* Bystřice pod Hostýnem, 31 May 1868). Moravian folksong collector. He was educated at the grammar school at Kroměříž, a centre of Baroque music in Moravia, and took orders in Brno in 1827. Contact with the folklore of his birthplace and other parts of Moravia and Silesia determined his Czech national consciousness and Slavonic cultural interests. By 1832 he had prepared for publication the first folksong collection in Moravia; the result of Sušil's systematic, and in his time unique, collecting activity, *Moravské národní písně* ('Moravian folksongs'), grew into one of the most remarkable monuments of Czech culture of the first half of the 19th century, containing 2091 tunes and 2361 texts. It includes every basic kind of folksong, traditional ballads, ceremonial songs, shepherds' tunes and typical dance-songs from the whole of Moravia and the southern part of Silesia. *Moravian Folksongs* did not claim the status of a scholarly work, but as documented evidence of the contemporary Moravian folksong repertory the collection has been valuable both as a source for musicologists and for its relatively accurate notation. Sušil carefully recorded the use of dialect in the texts and respected and preserved such characteristic features of the melodies as their non-diatonic inflections. However, his musical education was influenced by Baroque and Classical music theory, and his use of conventional key signatures in the transcriptions shows that he regarded the songs as being basically either in major or minor tonality. He organized the rhythm in regular bars, mostly 2/4, 3/4 and 4/4, and only occasionally used compound metres. His views on the character of the Slavonic and Czech folk music in Moravia, expressed in the preface to the collection, had a direct influence on the growth of modern Czech music, particularly upon Křížovský, who first harmonized and later artistically reshaped and incorporated a number of melodies and texts from the *Moravian Folksongs* in his unaccompanied male choruses. Other composers who used Sušil's texts and melodies in their works include Dvořák, Janáček, Novák and Martinů.

JIŘÍ VYSLOUŽIL

Suslin, Viktor Yevseyevich (*b* Miass, Ural region, 13 June 1942). Russian composer. He attended a music school and then the conservatory in Kharkiv before transferring in 1962 to the Gnesin Institute in Moscow where he studied composition with Peyko and the piano with Vedernikov. He then worked as an editor for the publishers Muzïka (1966–80) and taught score reading and instrumentation at the Moscow Conservatory (1972–5). In 1975, along with Gubaydulina and Artyomov, he founded the improvisation group Astrea. He emigrated to Germany in 1981, settled near Hamburg and from 1984 worked for the publishers Sikorski and as an assistant professor at the Lübeck Musikhochschule. He founded the Appen Classics concert series in 1995, and since 1997 has been the curator of the Bellaieff collection in Frankfurt. His works are chiefly for chamber forces – with the notable exception of the orchestral work *Leb'wohl . . .* which he dedicated to Gubaydulina upon his leaving Russia – many of which, like the *Capriccio über die Abreise*, have won him considerable recognition. He has experimented with the use of unusual timbres particularly in his organ works; the Second Sonata 'In My End is My Beginning' is notable for its bell-like sonorities, while in *Lamento* the extreme registers of the instrument are investigated. The concatenation of triads, unified by a dodecaphonic series is of central significance to Suslin's language; this technique is clearly evident in the *Trio Sonata* and *24 trezvuchiy* ('24 Triads'). A dodecaphonic series serves as a source of symmetrical harmony in *Mitternachtsmusik*, while in *Leb'wohl* such symmetry results in the juxtaposition of layers of powerful orchestral sound. This concern for structural rigour is counterbalanced by a predilection for aleatory techniques (*Gioco appassionato*, which was written on 36 playing cards) and improvisation. His revision in 1990 of his system of quarter-tone compositions – in the works *Grenzübertritt* and *Le deuil blanc* – was for Suslin 'a transition into the 21st century'.

VALENTINA KHOLOPOVA

Suspended action (Fr. *mécanique suspendue*; Ger. *hängende Traktur*; It. *meccanica sospesa, trasmissione sospesa*). A form of mechanical (or tracker) action used in organ construction since at least the 15th century, in which each key is back-pivoted, the key front being held up by the pallet's springing either directly through two vertical trackers and a ROLLERBOARD or indirectly, as in a Classical French *positif* action, through stickers and a backfall. An action in which a track-pivoted key is held up by a sticker whose lower end is on top of the pallet is called a 'pin action'. *See* ORGAN, §II, 5.

Suspension. (1) (Fr. *suspension*; Ger. *Vorhalt*; It. *sospensione*). A dissonance configuration in which the dissonant or NON-HARMONIC NOTE is tied over from the previous beat (where it is consonant) and resolved by step, usually downwards; a suspension whose non-harmonic note resolves upwards is sometimes called a 'retardation' (from Lat. *retardatio*, a term used in the 17th and 18th centuries).

(2) In French Baroque performance practice, the expressive truncation of a note at its beginning, as shown in ex.1 from Couperin's *L'art de toucher le clavecin* (Paris,

1717); the remainder of the harmony normally appears in its expected position on the beat, while the exact length of the delay is determined by the performer's taste. The term 'demi-soupir', as well as 'suspension', was sometimes applied to this ornament, and the fact that Brossard in his *Dictionnaire des termes* (Paris, 1701) defined the Italian cognate *mezzo-sospiro* as a figure (identical with the modern quaver rest) which 'marks that one is silent for

the eighth part of a bar' suggests that the ornament may originally have been a vocal device.

See also ORNAMENTS, §7.

JULIAN RUSHTON

Susskind, (Jan) Walter (*b* Prague, 1 May 1913; *d* Berkeley, CA, 25 March 1980). British conductor of Czech birth. He studied composition with Josef Suk and Karel Hába and piano with Karel Hoffmeister at the Prague State Conservatory, and conducting with Szell at the German Academy of Music. In 1934 he became Szell's assistant at the German Opera, Prague, where he made his conducting début with *La traviata*; at the same time he was pianist with the Czech Trio (1933–42). On the closure of the German Opera in 1938 he went to England, where he continued to perform with the Czech Trio, resuming his conducting career in 1941. Several music directorships followed, with the Carl Rosa Opera Company (1943–5), the Scottish National Orchestra (1946–52), the Victoria SO, Melbourne (1953–5), the Toronto SO (1956–65) and the St Louis SO (1968–75). During his time in Toronto he explored the orchestral repertory widely, introducing works theretofore unheard, including symphonies by Bruckner and Mahler; he continued this policy of exploratory programme building with the St Louis SO, with which he made over 200 recordings. He also founded the National Youth Orchestra of Canada (1960), directed the Aspen Music Festival (1962–8) and the Mississippi River Festival (from 1969), and taught at the University of Southern Illinois (1968–75). In 1978 he became adviser and principal guest conductor of the Cincinnati SO. Susskind's compositions include works for piano and for violin and orchestra, songs, and scores for films and the theatre.

RICHARD BERNAS/RUTH B. HILTON

Süssmayr [Süssmayer], **Franz Xaver** [Dolcevillico, Francesco Saverio] (*b* Schwanenstadt, Upper Austria, 1766; *d* Vienna, 17 Sept 1803). Austrian composer. He studied music as a boy with his father, a teacher and choirmaster in Schwanenstadt. In 1779 he moved to the monastery school at Kremsmünster and later studied philosophy and law at the Ritterakademie there. While a student he participated in services at the cathedral as a singer, violinist and organist, and took composition lessons from local teachers. Beginning in or around 1785 he composed several operas that were performed in the monastery theatre. In the late 1780s he moved to Vienna, where he taught music privately and performed in the Hofkapelle. He began occasional studies in composition with Mozart in 1790 or 1791, subsequently working for him as a copyist, almost certainly assisting him in composing the *secco* recitative for *La clemenza di Tito* and completing the Requiem at Constanze Mozart's request. After Mozart's death he studied with Salieri. Several of Süssmayr's first operatic projects in Vienna were undertaken for Schikaneder's Theater auf der Wieden; then, in 1792, he became harpsichordist and acting Kapellmeister for the Nationaltheater. Two years later, in May 1794, he was made Kapellmeister of the Viennese court's newly re-established National-Singspiel in the Kärntnertortheater. In 1798 Süssmayr applied to succeed Pierre Duttilou as court composer in Vienna but was not offered the post; he served as Kapellmeister of the National-Singspiel until his death, composing a series of German works for the national stage. He also wrote cantatas (for performance in Vienna and Kremsmünster) and other sacred and instrumental works.

Like many late 18th-century German composers, Süssmayr worked in a variety of operatic genres. He wrote a handful of Italian operas, both serious and comic, for theatres in Vienna and Prague. His German works range from modest Singspiele for Kremsmünster in the early north German vein to extravagant heroic-comic operas produced in Vienna. He gained fame as the composer of *Der Spiegel von Arkadien* (1794), commissioned by the librettist Schikaneder. Written in the tradition of *Die Zauberflöte*, it features lyrical arias, folklike songs, lengthy finales and the musical depiction of ambitious scenic effects. In his *Eipeldauer Briefe* (1794), the writer Joseph Richter observed soon after the première that pieces from the opera were often sung and played in cafés and taverns around Vienna. Schikaneder and Süssmayr even filed an official protest against several Viennese music shops that were selling copies of the opera's most popular numbers without their permission.

Among the works Süssmayr composed for the Kärntnertor, *Der Marktschreyer* (1799) and *Solimann der Zweite* (1799) enjoyed the most performances. The latter's success is reflected in Beethoven's set of piano variations (WoO76, 1799) on the terzetto 'Tändeln und Scherzen'. The popularity of Süssmayr's works is also attested by the ballet *Il noce di Benevento* (1802), which was given in German and Italian theatres up to about 1835, and by Paganini's *Le streghe* op.8, which borrows a theme from another of his ballets. Süssmayr, like most Viennese opera composers, used a wide range of national styles in his German works, including Italian *seria* and *buffa* idioms, French *comique* forms, popular German styles and melodrama. His melodic gift and formal craftsmanship show best in his solos, duets and trios; larger ensembles and choral numbers often lack intensity, with little of the contrapuntal and harmonic interest necessary to sustain long scenes. His church music, which belongs to the declining tradition of the south German and Austrian Baroque, survived in the repertory until the mid-19th century.

Süssmayr is now remembered for his primary role in completing Mozart's Requiem K626. In a letter to Breitkopf & Härtel dated 8 February 1800, Süssmayr claimed to be one of several composers to whom Mozart's widow entrusted the completion of the Requiem. According to this letter, he and Mozart had often sung and played through the completed sections and discussed matters of composition and instrumentation. Early in 1792 Süssmayr probably completed the instrumentation from the Kyrie to the end of the offertory, thereby finishing work undertaken by Joseph Eybler and probably Maximilian Stadler, and completed the 'Lacrymosa' from bar nine onwards as well as the Sanctus, Benedictus, Agnus Dei and communion, for which no material by Mozart survives. Circumstantial evidence, such as the quality of the musical ideas, motivic consistency and structural relationships between movements, features absent from Süssmayr's own sacred works, suggests that Süssmayr may have worked from small autograph fragments or sketches; however, numerous errors in harmony and part-writing, an avoidance of contrapuntal complexity and an almost continuous obbligato accompaniment attest to his compositional limitations. Throughout the manuscript Süssmayr appears to have consciously imitated Mozart's

scribal hand, even forging Mozart's signature and the year 1792.

Süssmayr completed the rondo finale to Mozart's 1791 horn concerto in D K412 on 6 April 1792. This movement, formerly considered to be by Mozart (K514), uses the same thematic material as Mozart's incomplete draft; entirely new is the horn intonation of the liturgical Lamentatio chant in mid-movement. Süssmayr may also have had some share (along with Johann Anton André and Friedrich Johann Eck) in the work known as Mozart's Violin Concerto in E♭ (K268/Anh.C14.04), whose authenticity has long been questioned.

His brother Joseph Süssmayr (*b* Schwanenstadt, 1776; *d* Schwanenstadt, 21 Sept 1830) was a schoolmaster in his native town; he was also municipal and church Kapellmeister there and in 1822 he founded a society for church music.

WORKS

STAGE

Die Liebe für den König, oder Karl Stuart (Spl, 5, G. Stephanie the younger and B. Planck), Kremsmünster, Stift, 25 April 1785, *A-KR*
Die Liebe auf dem Lande, *c*1785 (Spl, 3, C.F. Weisse), *Wgm*
Die Drillinge (Spl, R. Bonin and Planck), Kremsmünster, Stift, 19 Feb 1786
Der Bürgermeister (Spl, F.A. Brühl and Planck), Kremsmünster, Stift, 6 Aug 1786, *KR*
Die gar zu strenge Kinderzucht (Spl, F.X. Jann and Planck), Kremsmünster, Stift, 4 Feb 1787
Nicht mehr als sechs Schüsseln (Spl, B. Wallner, after F.W. Grossmann), Kremsmünster, Stift, 10 June 1788
Die väterliche Rache (Spl, Jann and Planck), Kremsmünster, Stift, 1 July 1789
Der rauschige Hans, 1791 (Spl, M. Lindemayr), for Lambach, Stift, unperf.
Moses, oder Der Auszug aus Ägypten (grosse Oper, 2, 'von einem Theaterfreund'), Vienna, Wieden, 4 May 1792, *D-DS*
Der Vogelsteller (ballet, Antonio Muzzarelli), Vienna, Burg, 8 Aug 1792
L'incanto superato (favola romanesca, 2, G. Bertati), Vienna, Burg, 8 July 1793, Prague, 1793, *A-Wn*, *H-Bn** as Der besiegte Zauber, Prague, 1793
Piramo e Tisbe, *c*1793 (azione tragica, 2, M. Coltellini), inc., *Bn* (partly autograph)
Meister Schnaps, oder Er führt ihm's Mädchen selbst zu, ?1793 (Posse, 1), inc., *A- Wn*, *H-Bn**
Il turco in Italia (Il musulmano in Napoli) (ob, 2, C. Mazzolà), Prague, Landesständisches, 12 Feb 1794, *Bn**
Der Spiegel von Arkadien (heroisch-komische Oper, 2, E. Schikaneder), Vienna, Wieden, 14 Nov 1794, *A-Wn* (*R*1986 in GOB, xvii), *CZ-BER* (excerpts), *D-HR*, *Mbs*, *H-Bn** vs (Vienna, 1795); rev. as Die neuen Arkadier (C.A. Vulpius), Weimar, Hof, 2 Feb 1796, *D-Bsb*, vs (Mannheim, n.d.; Brunswick, n.d.)
Idris und Zenide (heroisch-komische Oper, 2, J.G.C.L. Gieseke, after C.M. Wieland), Vienna, Wieden, 9 May 1795
Die edle Rache (komische Oper, 2, F.X. Huber), Vienna, Kärntnertor, 27 Aug 1795, *A-Wn*, *D-Bsb*, *DO*, *H-Bn**
Die Freiwilligen (Gemälde der Zeit, 1, Stephanie), Vienna, Kärntnertor, 27 Sept 1796, *A-Wn*
Der Wildfang (komische Oper, 2, Huber, after H. von Kotzebue), Vienna, Kärntnertor, 4 Oct 1797, *Wn*, *D-Bsb*, *Mbs*, *H-Bn**, *US-Wc*
Der Marktschreyer (Operette, 1, F.K. Lippert), Vienna, Kärntnertor, 6 July 1799, *A-Wgm*, *D-DS*, *H-Bn**, *US-Wc*, vs (Offenbach, n.d.)
Solimann der Zweite, oder Die drei Sultaninnen (Die Liebe im Serail) (Spl, 2, Huber, after C.-S. Favart), Vienna, Kärntnertor, 1 Oct 1799, *A-Wn*, *D-Bsb*, *Dl*, *DS*, *Mbs*, *H-Bn**, *US-Wc*, vs (Bonn, n.d.; Vienna, n.d.)
Gülnare, oder Die persische Sklavin (Spl, 1, Lippert, after B.-J. Marsollier), Vienna, Kärntnertor, 5 July 1800, *A-Wn*, *H-Bn**
Phasma, oder Die Erscheinung im Tempel der Verschwiegenheit (heroische Oper, 2), Vienna, Kärntnertor, 25 July 1801, *A-Wn*, *D-DS*, vs (Vienna, n.d.)
Das Hausgesinde, 1802 (Posse, 1), unperf., *H-Bn**
Il noce di Benevento (Die Zauberschwestern) (ballet, S. Viganò), Vienna, Kärntnertor, 14 Jan 1802, *I-Mc*
L'imbarazzo degli amanti (farca, 1), unperf.
Gl'uccellatori (dg, after ?C. Goldoni), inc., *A-Wgm*, *Wn*, *H-Bn**
Alcidoro e Dalisa, o sia Gli amanti in Tempe, 1 scene, *Bn**
Various pieces in Die Liebe macht kurzen Prozess, oder Die Heirat auf gewisse Art (1798); sections of unidentified operas and items for insertion into operas by other composers in *A-Wn*, *Wgm*, *H-Bn* (some autograph) [for details see Lehner and Kecskeméti]
Doubtful: List und Zufall (komische Oper, 2, M. Stegmayer), Vienna, An der Wien, 11 Jan 1806

VOCAL

Masses: C, 4vv, orch, *A-KR* (2 copies) (Vienna, ?1810); D, 4vv, orch, *HE*, *KR*, *Wa*, *CZ-Pu*; B♭, 4vv, orch, *A-Waf*; 1 mass in *D-LEt*; German requiem, G, 4vv, org, 1 Feb 1786, *A-KR*; German requiem, B♭, 4vv, orch *KR*
Other sacred: 1 vesper, *KR*; Te Deum, 12 Aug 1792, *KR*; Ave verum, 1792, *H-Bn**; 3 grads, incl. Miserere mei Domine *H-P*; 6 offs, incl. Angelus Domini descendit, *A-KR*, Ave Maria, 1785, *KR*, Exsultate justi, canon, *WIL*; Lauda Sion, *KR*, *WIL*; Tantum ergo, D, *VOR*, *SK-Mms*; Tantum ergo, C, *A-KR*, *WIL*; 2 Predictlieder, *KR*; Alleluia, *H-Bn*; other works, *A-KR*, *H-Bn*
Cants.: Feyer Lied zum Geburtstag … Franz II, 5/12 Feb 1794, Prague, Teynkirche, *Bn**; Cantata per la nascita della … archiduchessa Carolina (G. Arrivabene), Vienna, 13 Dec 1795, *A-KR*, *H-Bn*(partly*), as O ihr glücklichen Ufer der Krems, Kremsmünster, 24 June 1796; Der Retter in Gefahr (J.L. Rautenstrauch), Vienna, 19 Sept 1796, *A-SEI*, *Wn*, *D-Rtt*, *H-Bn**, *NL-DHgm*; Kantate für die Ankunft des Erzherzogs Karl, 1796; Böhmens Erretter, 1796; Das Namensfest (J.B. Bergopzoomer), 20 Nov 1799, *H-Bn**, ed. I. Kecskeméti (Budapest, 1965); Der Kampf für den Frieden (Rautenstrauch), Vienna, 23 Dec 1800, *Bn**; Lob des Ofnerweines (Süssmayr), B solo, str qt, Vienna, 20 Oct 1802, *A-KR**; Cant. (Huber), 3vv, chorus, *H-Bn**; Auf dem Lande hat das Leben, 2 solo vv, chorus, orch, *Bn**; Bürger lasst uns Waffen nehmen, 8 solo vv, chorus, orch, *Bn*; O sing im Purpurkleide, 3vv, chorus, orch, *Bn*; Zeila, 2vv, chorus, obbl hns *Bn*; single works, ? from cants., *Bn**
Other secular: Lieb und Freundschaft geben uns ein grosses Gut, 4vv, *A-HE*, *KR*, *Wn*; Die Freundschaft und die Liebe, canon 3vv; Erlaubt mir gnäd'ge schöne Damen, B, orch, *H-Bn**; Lasst uns unsres Lebens freuen, B, orch, *Bn**; Ger. and Fr. lieder, *D-DGs*, *Hs*, *GB-Lbl**, *H-Bn*

INSTRUMENTAL

Orch: syms., *A-KR*, *Wgm*, *D-MÜs* (frag.), 3 in *H-Bn*; Synfonia turchesa, C, *A-KR*, *H-Bn*; Pf conc., C, *Bn* (2 movts); cl conc., D, *GB-Lbl* (2 frags.); Ov., *H-Bn**, ed. I. Kecskeméti (Budapest, 1965); divertimentos, 4 in *A-KR*; cassations; *c*80 dances, orch and kbd, *Wn*, *H-Bn**, *US-BEm*; marches, *D-Bsb*, *H-Bn*
Chbr: Qnt, fl, ob, vn, va, vc, *A-KR*, *Wgm*; Qnt, ob, eng hn, vn, vc, gui, *KR*; 4 str trios, *KR*; Serenade, 1797, fl, va, hn; March, 2 fl, *H-Bn**; fl duet, *A-HE*

LINDA TYLER, CARYL L. CLARK

Sustaining pedal [damper pedal, loud pedal, open pedal]. A name often used for the right pedal of the piano, which when depressed raises the dampers from all the strings, allowing them to vibrate freely in sympathy with any notes being played. In earlier pianos, this effect was sometimes achieved by the use of knee-levers or hand-stops. It was sometimes possible to raise the treble and bass dampers separately, as on those instruments provided with a divided pedal or the less common ones with two damper pedals.

EDWIN M. RIPIN

Sutanto (*b* Magelang, Java, 5 Feb 1954). Indonesian composer. After voice training at the Indonesian Music Academy in Yogyakarta he studied composition there with Jack Body in 1975. Sutanto's espousal of an extreme and uncompromising freedom of expression ran counter to the academy's conservative attitude towards modern music. He rose to prominence as a composer in 1979, winning first prize in a Jakarta Arts Council composition contest which gave his works the opportunity to be performed in London, Wellington and Sydney. In response to a commission by the Young Composer Festival in Jakarta in 1979, he produced a music theatre piece entitled *Sketch for an Idea*. He caused a furore with this work, terrorizing the audience with the aggressive behaviour of the performers. Sutanto founded the Institute of Arts and Cultural Studies in Magelang, then in the early 1990s settled and carried on his musical activities in the village of Mendut in central Java. Proclaiming his house and studio a centre for world culture, he inspired many composers, artists and intellectuals to come to the village. They were performing for the villagers rather than for an urban audience familiar with experimental art. Sutanto has often collaborated with the village community in subsequent works. For example, in 1994 he brought dozens of villagers, with traditional instruments and many ducks, by pedicab to an experimental arts festival in Surakarta. His work *Show Sexy* resembled a ritual, dissolving the boundary between performers and audience in a chaotic manner. A composer occupying a unique position in Indonesian contemporary music, Sutanto is also known and respected as an artist of great originality.

FRANKI RADEN

Suter, Hermann (*b* Kaiserstuhl, Aargau canton, 28 April 1870; *d* Basle, 22 June 1926). Swiss conductor and composer. He studied in Basle from 1885 to 1888 with Hans Huber (piano and composition) and Alfred Glaus (organ), in Stuttgart from 1888 to 1890 with Faisst (organ and composition), and finally in Leipzig from 1890 to 1892 with Reinecke (composition). He returned to Switzerland in 1892, settling in Zürich, and became conductor of the male voice choirs of Uster (1892), Schaffhausen (1893) and Wiedikon (1894). He became organist at the Enge-Zürich church in 1894 and professor at the Zürich Conservatory in 1896. In the following year he was also appointed conductor of the Winterthur City Choral Society, and became conductor of the Zürich Mixed Voice Choir in 1901. From 1902 he was based in Basle, where he conducted the symphony concerts of the Allgemeine Musikgesellschaft until 1928, and the choral societies of the Basler Gesangverein and of the Basler Liedertafel until 1925. He was on the executive committee of the Schweizerischer Tonkünstlerverein from 1909. In 1913 he was awarded an honorary doctorate from Basle University, and from 1918 to 1921 he was director of the Basle Musikschule and Conservatory. Suter attracted contemporary composers to Basle, including Richard Strauss, who came there as early as 1903.

Suter provided 27 in all of his relatively few compositions with opus numbers. They include the First Quartet, dedicated to Huber (op.1, 1901), the Festspiel *St Jakob an der Birs* (op.13, 1912), the Symphony in D minor (op.17, 1913), the Violin Concerto in A major written for Adolf Busch (op.23, 1924), and his most famous work, the oratorio *Le laudi di San Francesco d'Assisi* (op.25), which had its première in Basle Cathedral on 13 June 1925. This oratorio and the violin concerto made Suter known as a composer beyond Switzerland. Wilhelm Furtwängler conducted *Le laudi* in Vienna on 20 January 1926, and the then Thomaskantor, Karl Straube, conducted the work in Leipzig only eight days later. To this day the oratorio has had a continuous tradition of performance, and it has been recorded several times. As a composer Suter's roots were in the late Romantic tradition of the New German School, to the style of which he added a number of specifically Swiss touches.

JOSEPH WILLIMANN

Suter, Robert (*b* St Gallen, 30 Jan 1919). Swiss composer. He studied the piano with Paul Baumgartner at the Basle Conservatory (from 1937) and music theory with Müller von Kulm and Mohr (diploma 1943). After teaching at the Berne Conservatory (1945–50), he returned to the Musik-Akademie der Stadt Basel, where he taught first at the Musikschule (until 1955) and later at the Konservatorium (until 1984). For a number of years he also worked as a music editor in the Basle studio of the Rundfunk der deutschen und rätoromanischen Schweiz. Active as a jazz pianist, he has performed as an accompanist in cabaret and theatre performances, and improvised accompaniments to silent films. He served as president of the Basle branch of the ISCM from 1954 to 1964. His honours include numerous commissions and several awards, including the composition prize of the Swiss Composers Union (1977) and the European Composition Prize (1997).

Largely self-taught as a composer, Suter received several lessons from Geiser, a pupil of Busoni, and was introduced to Schoenberg's 12-note method in the 1950s by Wladimir Vogel. He received further stimuli at Darmstadt, where he attended courses run by Wolfgang Fortner and Ernst Krenek. He always preserved an undogmatic and independent attitude, however, and never belonged to a particular compositional school. Nonetheless, his encounter with Schoenberg's *Pierrot lunaire* (Basle, 1937) was of such decisive importance that free atonality influenced all of his creative work. His first important composition, the *Musikalisches Tagebuch no.1* (1946, rev. 1960) retains neo-classical periodicity and tonal relationships, but shows Schoenberg's influence in its motifs, richly varied instrumentation and use of speech-song. It also introduces Suter's lyrical writing style, his preference for suite-like forms, and his orientation towards chamber music. Later he was inspired by the music of Berg, Webern, Bartók and Stravinsky. With his introduction to the 12-note method in the 1950s, his handling of constellations of intervals became more conscious and rigorous, although he never identified himself as a serialist. Core intervals characterize nearly all of his later works, determining the horizontal and vertical structures of a composition, but not excluding spontaneous compositional intervention. He also experimented with a 'controlled aleatory style' and increasingly wrote for orchestral forces.

Although Suter has aimed 'to rely exclusively on the unique capability of music . . . to express and communicate that which cannot be expressed and communicated through any other means', he has sometimes compromised this self-imposed ban on musical metaphor. The *Ballade von des Cortez Leuten* (1960), for example, relates a text by the young Brecht, and a line of Brecht ('Von diesen Städten wird bleiben: der durch sie hindurchging, der Wind!') from the *Hauspostille* prefaces the *Marcia funebre* (1980–81, rev. 1994). The intention of *Der abwesende Gott* (1978) is discernible in its subtitle 'Ein (An-)Klagegesang', and the middle movement of *Capriccio* (1991), a distinctive elaborate blues, he has described as 'a kind of reverence towards the music of black America, which as its most immediate expression of affective individuality shows such a uniquely rich spectrum: sensitivity, desire, rebellion, resignation and grief. Almost a piece of programme music . . .'. In contrast, his orchestral work *L'art pour l'art* (1979) suggests that as a composer you do not have to have a message, and so appeals to the listener not to ask first what it is an artist wants to say, but rather to ask what are the criteria for the work of art.

ANTON HAEFELI

Sutermeister, Heinrich (*b* Feuerthalen, nr Schaffhausen, 12 Aug 1910; *d* Morges, 16 March 1995). Swiss composer. After preliminary studies in the humanities in Basle and Paris, he attended classes in musicology at Basle University in 1931. From 1932 to 1934 he was a pupil of Courvoisier, Röhr, Geierhaas, Pfitzner and Orff at the Munich Akademie der Tonkunst. He returned to Switzerland in 1934 and spent a year working as an opera coach at the Berne municipal theatre. Subsequently, he devoted himself to composition, settling at Vaux-sur-Morges on Lake

Geneva in 1943. In 1958 he was made president of the Mechanlizenz, the Swiss association for mechanical copyright, and from 1963 to 1975 directed a composition class at the Hanover Hochschule für Musik. In 1977 he was elected a member of the Bavarian Academy of Arts.

Sutermeister first attracted attention during the 1930s with a series of works including the Divertimento for strings and the radio opera *Die schwarze Spinne* which, with their dynamic rhythms and primeval melodic and harmonic simplicity, clearly reflect the influence of his teacher Orff. Equally decisive for his development, however, was an early encounter with Debussy's *Pelléas et Mélisande*, and a passionate enthusiasm for Verdi's late operas. These relatively traditional models caused him to reject modernism, and opt for a more spontaneous and diatonic mode of expression that would remain comprehensible to a wide audience.

Such ideals found particular favour in Nazi Germany where Sutermeister received a prestigious commission from the Dresden Staatsoper for his opera *Romeo und Julia*. First performed in 1940 under Karl Böhm, it secured an extremely favourable critical response and was staged in more than 20 different German theatres during the next few years. With its fresh melodic invention, highly skilled manipulation of theatrical effects and its unbridled romanticism, *Romeo und Julia* perfectly fulfilled Goebbels's demand that new operas of the period should divert the public from the harsh realities of war. But Sutermeister's attempt to capitalize on this success with a further Shakespearean opera *Die Zauberinsel* (based on *The Tempest*) misfired, and the work quickly dropped out of the repertory.

After the war Sutermeister continued to focus his attention on operatic composition, though with mixed results. Drawing his inspiration from a wide variety of literary models (Dostoyevsky, Flaubert, Nestroy, Wilde and Ionesco), he demonstrated an impressive versatility of approach, and always took care not to resort simply to well-tried formulae. Nonetheless, his somewhat anachronistic musical language seemed at odds with the work of most of his contemporaries. While some operas such as *Raskolnikoff* (1948) and *Titus Feuerfuchs* (1958) attained some popularity, much of his output was quickly forgotten, and he rarely recaptured the potent melodic spontaneity of *Romeo und Julia*.

Outside the opera house, Sutermeister achieved considerable popularity in Switzerland with his choral works, many of which were designed to be performed by amateur groups. Of particular note are the powerful and dramatic *Missa da requiem* (1957), dedicated to the memory of the conductor Issay Dobrowen, and the *Te Deum 1975* (1974) which presents a rather different and more unsettling interpretation of the religious text than the familiar 19th-century examples of Bruckner and Verdi.

ERIK LEVI

Suthaus, (Heinrich) Ludwig (*b* Cologne, 12 Dec 1906; *d* Berlin, 7 Sept 1971). German tenor. He studied in Cologne and made his début at Aachen in 1928 as Walther. Engagements followed at Essen (1931–3), Stuttgart (1933–41), the Berlin Staatsoper (1941–8) and then the Berlin Städtische (later Deutsche) Oper (to 1965). He first sang at Bayreuth in 1943 as Walther, a performance which was recorded; he returned in 1944 in the same role and in 1956–7 as Loge and Siegmund. He sang Tristan at Covent Garden in 1953, the year of his American début as Aegisthus (*Elektra*) at San Francisco, where he also sang Tristan, Siegmund and Erik. At Vienna, where he first appeared in 1948, his roles included Florestan, Otello and Hermann (*The Queen of Spades*). In 1949 he sang the Emperor in *Die Frau ohne Schatten* at the Teatro Colón and the next year sang Števa Buryja in the first South American production of *Jenůfa*. His large repertory also included Rienzi, Bacchus, Pedro (*Tiefland*), Samson, the title role in *Sadko* and the Drum Major (*Wozzeck*). Suthaus's voice was a true Heldentenor, which he used with intelligence and fervour in his Wagner roles. Among the most notable of his recordings of these are his Siegmund, Siegfried and Tristan under Furtwängler.

HAROLD ROSENTHAL/ALAN BLYTH

Sutherland, Dame **Joan** (*b* Sydney, 7 Nov 1926). Australian soprano. Her mother taught her until she was 19 when she trained formally in Sydney with John and Aida Dickens. She sang in concerts, oratorios and broadcasts throughout Australia and in August 1947 made a significant concert début in Sydney as Purcell's Dido. In 1951 she sang the title role in Eugene Goossens's *Judith* at the NSW Conservatorium. The same year, having won Australia's most prestigious vocal competition, she went to London and studied with Clive Carey at the Opera School of the RCM. She then joined the Covent Garden company, where she immediately made her mark at her début on 28 October 1952, as the First Lady in *Die Zauberflöte*.

At Covent Garden, Sutherland sang a diversity of roles during the 1950s with increasing dramatic and vocal confidence. These included Amelia (*Un ballo in maschera*), Aida, Frasquita and Micaëla (*Carmen*), several parts in the *Ring* cycle, Agathe, the soprano parts in *Les contes d'Hoffmann* and Eva. She created the role of Jenifer in Tippett's *The Midsummer Marriage* (1955) and sang Madame Lidoine in the British première of Poulenc's *Dialogues des Carmélites* (1958). In 1956 she made her Glyndebourne début as Countess Almaviva in *Figaro*, and added a notable Elvira (*I puritani*) in 1960.

Her greatest talent, developed and encouraged by RICHARD BONYNGE, whom she married in 1954, lay in Italian bel canto opera of the 18th and 19th centuries. She was a thrillingly agile and eloquent Alcina for the Handel Opera Society in 1957, the year she sang Gilda and Desdemona, both moving portrayals, at Covent Garden. In 1958 she made her international début as Donna Anna at the Vancouver Festival, recording the role under Giulini the following year. But international recognition of her full vocal stature came with her sensational appearance at Covent Garden, on 17 February 1959, in the title role of *Lucia di Lammermoor*, produced by Zeffirelli. In Venice, after a performance of *Alcina*, she was hailed as 'La Stupenda', and it was in that role that she made her American début, in Dallas, on 16 November 1960. Her débuts as Lucia at the Paris Opéra (25 April 1960), La Scala (14 May 1961) and the Metropolitan (26 November 1961) were all highly acclaimed. Her two recordings of the part capture her special qualities of pathos and coloratura brilliance. In 1965 she took her own company to Australia, with Bonynge as musical director.

With a beautiful, soft-grained voice of great range, power and flexibility, Sutherland could deliver fiendishly difficult coloratura with exceptional agility, clarity and mellifluous warmth. She had a vocal range from *g* to *e‴*, and was blessed with an exquisitely even trill. On the debit side, she was frequently criticized for swallowing

Joan Sutherland in the title role of Handel's 'Alcina'

the vowels and blurring the consonants, a failure evident on many of her recordings.

From the early 1960s onwards Sutherland enjoyed huge success in all the major international opera houses, extending her repertory to include the Bellini roles of Amina (1960), Beatrice di Tenda (1961) and Norma (1963), and reviving Rossini's *Semiramide* (1962) and Donizetti's *La fille du régiment* (1966, in which her spirited performance, which she also recorded, was long admired), *Maria Stuarda* (1971), *Lucrezia Borgia* (1972) and *Anna Bolena* (1984). Her lively championship of the early 19th-century Italian repertory did much to bring it back into favour.

To her Verdi roles she added Violetta (1960), Leonora in *Il trovatore* (1975) and Amalia in *I masnadieri* (1980). She was an accomplished Handelian (Cleopatra in *Giulio Cesare* was one of her outstanding roles) and also distinguished herself in the French repertory with Marguerite de Valois in *Les Huguenots* (1962), Marguerite in *Faust* (1965), *Lakmé* (1967) and Massenet's *Esclarmonde* (1974).

Sutherland's recorded repertory includes an early two-disc set entitled 'The Art of the Prima Donna', which catches her tone and technique in their absolute prime, and most of her major roles. In addition to Lucia these include Alcina, Semiramide, Amina, Mary Stuart, Gilda, Violetta, Marguerite de Valois, the four roles in *Les contes d'Hoffman* and Turandot, a part she never sang on stage. While her recordings reveal an intermittent failure to distinguish, by vocal means alone, one character from another, they eloquently enshrine the range and extent of her achievement. In 1979 she was made a DBE. She retired in 1990 (when her farewell performance in Sydney was as Marguerite de Valois) and in 1991 was awarded the Order of Merit.

NORMA MAJOR/ALAN BLYTH

Sutherland, Margaret (Ada) (*b* Adelaide, 20 Nov 1897; *d* Melbourne, 12 Aug 1984). Australian composer and pianist. Her father was a writer and amateur pianist, and other relatives included musicians, artists, scientists and academics. Her musical education included studies with Edward Goll (piano) and Fritz Hart (composition) at the Marshall Hall (now Melba) Conservatorium and later at the Melbourne University Conservatorium. At the age of 19 she was invited by Verbrugghen, the director of the New South Wales State Conservatorium of Music, to appear as soloist with the NSW State Orchestra in public concerts under his direction. She gave recitals and taught theory and piano during World War I and up to 1923, and wrote a number of short teaching pieces for the piano. She left Australia in 1923 for further study in composition, orchestration and conducting in London and Vienna. In London she was for a time a pupil of Bax; during this period she produced her first published works, including the Violin Sonata, which received especially warm praise from Bax. She returned to Melbourne in 1925.

The period between 1925 and 1935 was relatively fallow, but during the next 35 years she was active as a composer, performer (principally of chamber music) and teacher, contributing greatly to the musical and cultural development of Australia. She was also a vigorous champion of the music of Australian composers. For many years, her own works gained comparatively little recognition. During the 1960s, however, the rapid growth of performances, recordings, publication and commissioning of Australian compositions made some reparation. Her considerable services to Australian music received official recognition in 1969 when she was awarded an honorary DMus from the University of Melbourne, and again in 1970 when she was made an OBE. In addition, she was awarded the Queen's Jubilee medal in 1977 and made an officer of the Order of Australia (AO) in 1981. Failing eyesight and incapacitation following a stroke precluded further composition in the final decade and a half of her life.

Sutherland has become recognized as one of the first 20th-century Australian composers to write in an idiom comparable with that of her generation in Europe. Her music was influenced by that of her teacher, Bax, and by the English pastoral idiom; the richer, more sensuous elements of this style are most noticeable in some early songs, keyboard and chamber music. Unlike many Australian composers of the first half of the 20th century, however, she soon integrated these influences in a personal idiom, absorbing a wide range of stylistic sources, contemporary continental as well as English. The composers with whose work Sutherland's later music shows greatest affinity may be identified as Bartók, Hindemith, Stravinsky, Shostakovich, Prokofiev, the French 'six' and the later Vaughan Williams.

Her music at times betrays Romantic warmth and often displays considerable strength of utterance and rhythmic vitality, although restraint, conciseness of expression and a strong taste for contrapuntal development must be considered basic qualities. This last element is especially prominent in many of her chamber works and is aptly reflected in the title of one of the best of these, *Discussion* (1954) for string quartet. Her chamber music also shows a typically 20th-century interest in varied, often unusual instrumental combinations. Romantic elements are perhaps most marked in orchestral works such as the Violin Concerto (1960), often considered the greatest of her orchestral works, and the tone poem *Haunted Hills* (1950; a musical evocation of the Dandenong Ranges near Melbourne and one of her few works with programmatic intentions). Another of the finest and most characteristic of her larger works is the Concerto Grosso (1958), in which two fast movements, characterized by an effective use of dissonant counterpoint as well as by rhythmic drive and rhetorical strength, enclose a lyrical slow movement of brooding melancholy. Lyrical qualities are also to be found in her many songs; the settings of poems by Judith Wright contain some fine examples. Her single opera, *The Young Kabbarli*, a one-act chamber opera, was given its première at the Festival of Contemporary Opera and Music in Hobart in 1965.

WORKS
(*selective list*)

DAVID SYMONS

Sutton, John (*fl* late 15th century). English composer. A John Sutton, MA, was a Fellow of Magdalen College, Oxford in 1476, resigning his fellowship in 1477 on being elected to one at Eton College; his name disappears from the Eton records after 1479. A 'Sutton' whose first name is unrecorded graduated MusB at Cambridge in 1489.

The Eton Choirbook (*GB-WRec* 178, ed. in MB, x–xii, 1956–61) contains Sutton's only known composition: a fine *Salve regina* in seven parts. This has as its cantus firmus the antiphon *Libera nos*, which members of Eton College were required by statute to recite daily. The setting is unusual in its metrical organization, consisting of four sections in triple, duple, triple and duple metre; the second of the three statements of the cantus-firmus stretches across three of these sections, changing from triple metre to duple and back again. Some features of Sutton's style, such as the slightly aimless melody, the occasional roughness of dissonance treatment, and certain cadential and ornamental figures, occur also in works by other senior composers in the choirbook such as William Horwood, John Nesbett and Richard Hygons.

NICHOLAS SANDON

Sutton, R. Anderson (*b* Bryn Mawr, PA, 16 Nov 1949). American ethnomusicologist. He earned degrees at Wesleyan University (BA 1971), University of Hawaii (MA 1975), and University of Michigan (PhD 1982) with Barbara Smith (Hawaii) and Judith Becker (Michigan). He was appointed assistant professor (1982) and professor (1993) at the University of Wisconsin and served as the director of the Center for Southeast Asian Studies, 1991–4; he was also vice-president of the Society for Ethnomusicology (1993–5). His writings focus on the musics of Central and East Java and South Sulawesi (Indonesia), with special emphasis not only on musical matters (aesthetics, variation, improvisation) but also cultural aspects (identity, cultural politics, mass media). He has directed the Javanese gamelan programme at the university since 1982.

TERRY E. MILLER

Suvenor. *See* CUVENOR.

Suvini Zerboni. Italian firm of music publishers. Originally part of a theatrical company of the same name, it was founded in Milan in 1907, and owes its development to Paolo Giordani, who was company director from 1930 until his death in 1948. He aimed to build up a collection of Italian compositions and make them internationally known, but his efforts were interrupted by World War II. He was joined in 1935 by the Hungarian Ladislao Sugar,

who was head of the firm until his death when his son Piero Sugar took over. Sugar brought Hungarian composers into the firm's catalogue, so that it now includes many compositions by Sándor Veress, Dorati, Seiber and others. He also negotiated an agency agreement with Editio Musica Budapest and important reciprocal agency agreements with Schott and other firms. Suvini Zerboni publishes works by Spanish and contemporary Japanese composers as well as editions of Italian classical music (including the series Orpheus Italicus); it is also known for its guitar publications. By far the greater part of its catalogue (which numbered about 4000 items in 1998) is recent and contemporary Italian music, including works by Berio, Alfredo Casella, Castiglioni, Aldo Clementi, Dallapiccola, Donatoni, Fedele, Ghedini, Maderna, Luca Mosca, Gian Francesco and Riccardo Malipiero, Petrassi and Pizzetti; it was the first Italian publishing firm to deal in electronic music. Other composers published by the firm include Ernest Bloch and Pousseur. Suvini Zerboni also publishes books on music and issues two periodicals, *Il Fronimo*, devoted to the guitar, and *La cartellina*, for teaching and choral singing.

ALAN POPE

Suwardi [Soewardi], **Al(oysius)** (*b* Sukoharjo, Java, 21 June 1951). Indonesian composer and gamelan player. Suwardi, whose forename is pronounced 'A.L.', entered the conservatory of classical Javanese music in Surakarta in 1969 then studied at the Indonesian Academy for the Performing Arts (1973–81); he subsequently taught there. He began in 1974 to realise his aim of developing indigenous classical music so that it would become one of the foundations of contemporary Indonesian music. In 1976 Suwardi was involved in an experimental project led by Franki Raden to produce music for the film *November 1828*, directed by Teguh Karya, which won the music prize at the 1978 Indonesian Film Festival. Adopting Raden's approach of treating gamelan instruments as autonomous sound sources, Suwardi and his colleagues searched for new technical performance possibilities. His experiments with the construction of gamelan instruments have resulted in a *gender* (metallophone) with motor-driven resonators and a *gambang* (xylophone) made out of metal pipe. As a composer of new indigenous classical music he has an extraordinary sensitivity towards matters of intonation and timbre, as apparent in such works as *Gender* (1984) and *Nostalgia* (1991). He studied ethnomusicology at Wesleyan University in Middletown, Connecticut, and in 1986–7 was a Fulbright visiting scholar to the USA. Suwardi is exceptional in having mastered the practice of both traditional and contemporary gamelan music to the same high degree.

FRANKI RADEN

Suyoto, Haryo 'Yose' (*b* Bandung, Java, 1952). Indonesian composer. Known as a skilled guitarist in his youth, in 1974 he enrolled at the Indonesian Music Academy in Yogyakarta. After initially studying the cello, the arrival of the lecturer Jack Body prompted Suyoto to switch to composition, and he became acquainted with the freedom of expression of contemporary music. He studied composition and the cello in Wellington with the help of Body, then entered the Jakarta Arts Institute to study composition with Slamet Sjukur. Suyoto's most productive period as a composer came when he returned to Yogyakarta at the end of the 1980s to complete his studies at the Indonesian Music Academy (renamed the Indonesian Arts Institute), where he subsequently became a teacher; in his works of this period he explored expressive possibilities through the application of contemporary techniques. He acknowledged the influence of Cage, apparent both in his compositional approach and in his musical ideas, in *Homage to John Cage* (1992) for nine radios. In other works Suyoto has used unconventional sound sources and experimented with aleatory techniques.

FRANKI RADEN

Suys, Hans. Organ builder. *See under* SUISSE.

Suzoy, Johannes. *See* SUSAY, JO.

Suzuki, Masaaki (*b* Kobe, 29 April 1954). Japanese organist, harpsichordist and conductor. He studied composition with Akio Yashiro at the Tokyo National University of Fine Arts and Music; graduating in 1977, he continued to study the organ at the graduate school with Tsuguo Hirono, taking the MA in 1979, the year he made his professional début as an organist. He then went to Amsterdam and studied the harpsichord with Ton Koopman, the organ with Piet Kee and improvisation with Klaas Bolt at the Sweelinck Conservatory. Meanwhile he won second prize (the highest given that year) in improvisation (1980) and third prize in organ performance (1983) at the Flanders Early Music Festival in Bruges. Returning to Japan in 1983, he started a career as a soloist, while organizing and conducting ensembles to perform the works of J.S. Bach. In 1990 he founded the Bach Collegium Japan, an ensemble of voices and period instruments specializing in Bach's works; with this group he started a regular series of concerts in 1992, and in 1995 he began to record all of Bach's cantatas, the first volumes of which have been acclaimed for their polish and insight. In 1996 he commenced a complete recorded cycle of Bach's harpsichord music. Suzuki became an assistant professor at Kōbe Shōin Women's College in 1983 and at the Tokyo National University of Fine Arts and Music in 1991. He has also given concerts in Europe, Israel and Australia. For his playing and conducting of Bach's works he received the Mobil Music Prize in 1999.

MASAKATA KANAZAWA

Suzuki, Shin'ichi (*b* Nagoya, 18 Oct 1898; *d* Matsumoto, 26 Jan 1998). Japanese educationist and violin teacher, founder of the Suzuki method. His father Suzuki Masakichi (1859–1944) was first a maker of *shamisen* (Japanese string instruments), but he later began to manufacture violins, successfully mechanizing production in 1900 and founding the Suzuki Violin Seizō Co. in 1930. The company became the largest violin-making firm in Japan, while Masakichi himself went on making instruments by hand. Shin'ichi went to the Nagoya Commercial School (graduating in 1915), and concurrently studied the violin under Andō Kō (1878–1963), a pupil of Joachim; he went to Berlin (1921–8), where he became a pupil of Karl Klingler, another of Joachim's pupils. On his return he established the Suzuki Quartet with three of his brothers. In 1930 he became president of the Teikoku Music School; a few years later he founded the Tokyo String Orchestra and as its conductor introduced Baroque music to Japanese audiences.

Shin'ichi Suzuki teaching a class of children in Japan

Suzuki's educational method is not a mere process of music education, but his philosophy and its application. In 1933 he realized that children of any nationality could freely speak their mother tongue regardless of their intelligence, remembering 4000 words by the age of five. He also noticed that young children accept high-level stimuli with hardly any pain, form voluntary desires and acquire excellent abilities, while learning their mother tongue as naturally as they develop their characters. He believed that good environments and conditions are conducive to the development of ability, as in learning speech, and decided to apply this principle to his violin teaching. Although not ruling out hereditary factors, he believed that any child could develop a high standard of ability by adapting external stimuli. The repetition of stimuli, and the period, the frequency and the time of stimuli given to the child are important conditions; his theory is related to the physiology of cerebra. His first pupil taught by this new method was Etō Toshiya, then a small child.

Towards the end of World War II Suzuki moved to Matsumoto, Nagano prefecture, where he organized the Yōji Kyōiku Dōshikai (Group for Child Education). In 1948 he won the cooperation of the master of Hongo Primary School, Matsumoto, where he organized an experimental class of 40 students. Pupils in any subject were given only a few exercises, easy enough to enable the whole class to answer perfectly; the next day the same exercises were reviewed before proceeding. In this way it was possible for everyone to reach the same high standard. Suzuki went on to found the Sainō Kyōiku Yōji Gakuen, where a class of 60 children aged three to five is taught Japanese pronunciation, Chinese letters, expression, calligraphy, drawing, English conversation and gymnastics, following his method.

In the Sainō Kyōiku Kenkyū-kai, Matsumoto (founded in 1950), Suzuki taught violin playing according to his method. As his main purpose was the development of character through musical education, or more specifically through violin playing, he avoided using the words 'music' or 'violin' in the name of his institute. 196 pupils graduated in 1952; in 1972 the graduates included 2321 violinists. At the annual meeting of the institute at the Budō-kan, Tokyo, there is usually a performance of such pieces as a Bach gavotte or a Boccherini minuet by 3000 children or of a Mozart violin concerto by a small group of older students. The Sainō Kyōiku Kenkyū-kai has 83 local chapters throughout Japan, with 280 classes, 160 teachers and 6000 students. The Suzuki method has also been applied to the cello, flute, piano and other instruments. From 1964 Suzuki frequently toured the USA with his students, giving lectures and demonstrations; violin lessons according to his method are given at several American universities and conservatories, including Oberlin Conservatory of Music. In 1973 he visited England, Switzerland and the USA with nine violin pupils. In 1996 the Suzuki Shin'ichi Memorial Hall was inaugurated in Matsumoto. Among internationally known violinists those who were taught by the Suzuki method are Etō Toshiya, Toyota Kōji, Kobayashi Takeshi, Kobayashi Kenji, Suzuki Shūtarō, Urakawa Takaya, Kuronuma Yuriko, Shida Toshiko and Satō Yōko.

MINAO SHIBATA/MASAKATA KANAZAWA

Svanholm, Set (Karl Viktor) (*b* Västerås, 2 Sept 1904; *d* Saltsjö-Duvnäs, nr Stockholm, 4 Oct 1964). Swedish tenor. At first a church organist and singer, in 1929 he became a pupil of John Forsell at the Stockholm Conservatory opera school. In 1930 he had made his

Set Svanholm as Tristan in Wagner's 'Tristan und Isolde'

début with the Swedish Royal Opera in the baritone roles of Silvio and Rossini's Figaro, and in 1937 he was engaged by the company. In 1936 he had made his tenor début as Radames (*Aida*), and he subsequently took on such heavy tenor parts as Otello, Siegmund, Parsifal and Tristan. He sang at Salzburg and Vienna (1938), Berlin, Budapest and Milan (1941–2) and Bayreuth (1942). In Sweden his repertory included Manrico (*Il trovatore*), Canio (*Pagliacci*), Florestan, Bacchus (*Ariadne auf Naxos*), Idomeneus, Tristan and the *Ring* tenor roles; in 1946 he sang Peter Grimes in the Swedish première of Britten's opera. In the same year he visited North and South America, singing Siegfried at the Metropolitan. At Covent Garden he sang regularly from 1948 to 1957, notably as Lohengrin and Siegfried. His performances were admired for intelligence, musicianship and stamina, as his recordings as Siegfried, Tristan and Loge (in Solti's *Ring*) confirm. He was director of the Swedish Royal Opera from 1956 to 1963 and introduced several contemporary operas, among them *The Turn of the Screw*, *Mathis der Maler* and *The Rake's Progress*.

CARL L. BRUUN/ALAN BLYTH

Svanidze, Natela (*b* Akhaltsikhe, southern Georgia, 4 Sept 1926). Georgian composer. She studied composition with Andria Balanchivadze at the Tbilisi State Conservatory (graduating 1951) before continuing her education with Fortunatov and Peyko in Moscow. From 1956 she has devoted part of her time to teaching music history and theory at the Georgian Institute of Theatre and Cinema, and later was made a professor. A board member of the Georgian Composers' Union, she became an Honoured Artist of Georgia in 1981. She was among the most receptive to the radical renewal of Georgian music in the early 1960s, which came about through the contacts, newly enjoyed by Soviet composers, with international festivals of contemporary music. Svanidze's composing career proper began in the 1960s, when having broken away from the Georgian Romantic school, she began an arduous path to creative maturity and individuality set in a broad stylistic base. A sense of freshness and experiment in her works is the result of her inclination towards the new, the artistic avant garde, and speaks of her keen awareness of the spirit of an era. Her employment of dodecaphonic, serial, sonoristic, aleatory and electronic techniques, in the spirit of the Polish avant garde, is combined with collages of episodes of old Georgian chorales, ritual laments and songs from the towns. In her music the chaotically complex atmosphere of contemporary life enters into a dialogue of eternal artistic values; hence the eclecticism and dramatic use of montage that obtain a sense of generalization and lend the effect of a linking-together of past and present times. The genres that she has principally employed are the symphony and oratorio, although chamber music has played a role in the development of her more recent style. Among the most conceptually significant of her works are the First Symphony (1967), the chamber oratorio *Pirosmani* (1969), the oratorio *Kartuli lamentatsiyebi* ('Lamentatia Georgica', 1974) and the Second Symphony (1989). Her music has enjoyed particularly sympathetic and effective championship by Gennady Rozhdestvensky, to whom her First Symphony and the oratorio *Pirosmani* are dedicated.

LEAH DOLIDZE

Švara, Danilo (*b* Ricmanje, nr Trieste, 2 April 1902; *d* Ljubljana, 25 April 1981). Slovene composer and conductor. While at the Handelshochschule, Vienna, he studied the piano privately with Trost (1920–22). He completed studies in politics and law at Frankfurt University (1922–5), at the same time studying the piano with Malata and conducting with Scherchen. After a period as répétiteur and conductor at the Ljubljana Opera (1925–7) he attended the Hoch Conservatory, Frankfurt (1927–30), as a pupil of Szekles (composition), von Schmiedel and

Rottenberg (conducting) and Wallenstein (stage direction). Švara was then active as a music critic, conductor (he was director of the Ljubljana Opera from 1957 to 1959) and teacher of conducting at the Ljubljana Academy of Music. A follower of radical compositional trends in the 1930s, he later employed a more moderate style, returning to Expressionist atonality and 12-note technique in the 1960s, as in *Ocean*. His strength lies in his stage and orchestral music.

WORKS
(*selective list*)

Stage: Kleopatra (op, 2, Švara) 1936, Ljubljana, 11 May 1940; Veronika Deseniška (op, 4, Švara, after O. Župančič and J.E. Tomič), 1941–5, Ljubljana, 29 Dec 1946; Prešeren: Slovo od mladosti [Farewell to Youth] (op, 3, L. Prennerjeva), 1952, Ljubljana, 23 May 1954; Nina (ballet), 1964; Ocean (op, 5, Švara, after L. Andreyev), Ljubljana, 3 March 1969; Pinocchio (ballet), 1970; Štirje junaki [The 4 Heroes] (children's op, 2, Švara, after J.L. Grimm and W.C. Grimm), 1973, Maribor, 22 Dec 1974

ANDREJ RIJAVEC (text), IVAN KLEMENČIČ (work-list)

Svéd, Sándor [Sved, Alexander] (*b* Budapest, 28 May 1906; *d* Budapest, 9 June 1979). Hungarian baritone. He studied the violin in Budapest and singing in Milan with Sammarco and Stracciari, whose example undoubtedly helped form his strong voice and forceful style. He made his début at Budapest as Luna in 1928, but his fame derives from his period at the Vienna Staatsoper, 1935–9, where he was soon entrusted with the heroic roles in the Italian repertory, his Amonasro in *Aida* in 1938 under De Sabata being particularly admired. Bruno Walter esteemed him enough to cast him as Onegin, Lysiart (*Euryanthe*), Posa and Escamillo, while he also made his mark as Wolfram in *Tannhäuser* under Furtwängler. Later he added Sachs to his Wagner repertory, recording two of his monologues. From 1936 he made an equally powerful impression at Covent Garden where he undertook Rigoletto, Amonasro and Scarpia. Despite the size of his voice his singing was nimble enough to undertake Rossini's Figaro. He made his Metropolitan début in 1940 as Renato (*Un ballo in maschera*) and remained there until 1950. In Florence he performed Boccanegra and Guillaume Tell (whose aria he recorded). Svéd sang the latter role again near the end of his stage career, at the Vienna Volksoper in 1958. He also sang lieder, recording some suitably dark-hued songs in 1940. The vibrant depth of his tone can be heard on a representative selection of arias from his Verdi roles recorded between 1936 and 1947.

ALAN BLYTH

Svedbom, (Per Jonas Fredrik) Vilhelm (*b* Stockholm, 8 March 1843; *d* Stockholm, 25 Dec 1904). Swedish composer and teacher. He first devoted himself to studies in the humanities at Uppsala University. He took the doctorate in 1872 and became university lecturer in the history of literature. From 1873 to 1876 he studied further in England and on the Continent, becoming a pupil of Friedrich Kiel in Berlin. He was elected a member of the Swedish Royal Academy of Music, Stockholm, in 1876, and was its secretary until 1901. He then became director of the conservatory of the academy where he had been teacher of the history of music since 1877. Svedbom also held other important musical posts. He was, from 1878, secretary of the Musikaliska Konstföreningen, an association for the publication of unprinted Swedish music; and in 1880 he and Ludvig Norman founded the Musikföreningen i Stockholm for the performance of choral works with the assistance of the royal chapel. He was the president of this society. His compositions are mostly vocal, including a few cantatas (e.g. *I rosengården*). Of his choral songs his arrangement of the folksong *Hej dunkom* for male voices is still performed. His most famous solo song is the ballad *Sten Sture*.

FOLKE BOHLIN

Sveinbjörnsson, Sveinbjörn (*b* nr Reykjavík, 28 June 1847; *d* Copenhagen, 23 Feb 1927). Icelandic composer and pianist. He took a degree in theology before deciding (probably on the encouragement of the Norwegian composer Johan Svendsen, who visited Iceland in 1867) to embark on a musical career. Sveinbjörnsson went to Copenhagen in 1868, where he studied privately with V.C. Ravn. In 1870 he went to Edinburgh and taught the piano there to finance further studies with Carl Reinecke in Leipzig (for eight months, 1872–3), after which he returned to Edinburgh, where he lived as a piano teacher until 1919. He was a founder of the Edinburgh Society of Musicians (1887) and an active performer, undertaking two extensive concert and lecture tours of the USA and Canada (1911–13 and 1919–22). His remaining years were divided between Iceland and Denmark. He died in Copenhagen, but was buried in Reykjavík.

Sveinbjörnsson was a refined and lyrical composer, sometimes bordering on the sentimental, sometimes attaining an expression of heroic dignity. The influence of Danish songs (chiefly by Berggreen and Gade) during his youth in Iceland was intensified by his studies in Copenhagen; later, he came into direct contact with the Mendelssohn tradition in Leipzig. His English contemporaries detected in him a 'Nordic strain' and he was commissioned to compose the incidental music to the Icelandic scenes in Hall Caine's *The Prodigal Son* (Drury Lane, 1905); Icelanders, however, found him cosmopolitan or English. Sveinbjörnsson himself became increasingly aware of his heritage of Icelandic folksong and always regarded himself as an Icelandic composer.

His works consist chiefly of songs with piano accompaniment, mostly through-composed, the piano often subtly illustrating the text. About three-quarters of them are settings of English texts, as are some of his 30 choral pieces. Some of his songs (e.g. *King Sverre*) appeared in more than one edition during his lifetime. His *Royal Cantata* (1907, composed for the visit of King Frederik VIII of Denmark to Iceland) was for a long time the most ambitious musical composition by an Icelander, and earned him the highest royal honour. The hymn which he composed for the 1000th anniversary (1874) of the Norse settlement in Iceland became the Icelandic national

anthem. His piano pieces include many paraphrases of Icelandic folksongs, such as the *Idyl* and *Vikivaki* (Icelandic dance); some were composed primarily for teaching purposes (*Descriptive Pieces for the Young* and a Duet in A for four hands, based on Scottish dances). His most important chamber works are the Sonata in F for violin and piano and two trios (for violin, cello and piano) in E minor and A minor. Two *Icelandic Rhapsodies*, mostly paraphrases of Icelandic folksongs, are his principal orchestral compositions.

In 1954 his widow Eleanor Sveinbjörnsson (née Christie) presented his manuscripts to the Icelandic people (the collection is now in *IS-Rn*). (J. Thórarinsson: *Sveinbjörn Sveinbjörnsson* (Reykjavík, 1969))

THORKELL SIGURBJÖRNSSON

Sveinsson, Atli Heimir (*b* Reykjavík, 21 Sept 1938). Icelandic composer and teacher. He first studied the piano with Rögnvaldur Sigurjónsson at the Reykjavík College of Music, then from 1959 to 1963 attended the Staatliche Hochschule für Musik in Cologne, where his teachers included Günter Raphael and Rudolf Petzold (composition), Bernd Alois Zimmermann (instrumentation), and Hermann Pillnay and Hans Otto Schmidt (piano). He also participated in courses given by Stockhausen and Pousseur at Darmstadt and Cologne, and studied electronic music with Gottfried Michael Koenig in Bilthoven (1964). He has taught at the Reykjavík College of Music, and was active as a freelance producer of music programmes for the state radio. He served as chairman of the Society of Icelandic Composers (1972–83) and of the Nordic Composers' Council (1974–6). In 1976 he became the first Icelandic composer to win the Nordic Council Prize for his Flute Concerto. He was elected a member of the Swedish Royal Academy in 1993.

A remarkably versatile and prolific composer, Sveinsson is among the most important Icelandic composers of his generation. He employed serial technique frequently in his early works, such as *Hlými* ('Sounds', 1965), while the hypnotic repetitions of single pitches in *Mengi* ('Quantities', 1966) betray the influence of Cage. In the 1970s he wrote several aggressive and provocative works, including *Hjakk* ('Tautology'), in which a brutal, monotonous rhythm is repeated incessantly for 15 minutes. However, some of his works dating from between 1976 and 1980 are in an individual neo-romantic idiom (*Plutôt blanche qu'azurée*, 1976); he also began to develop a more introspective style, in which slow tempos, soft dynamics and the atmospheric use of instruments seem to negate temporality altogether. Among early examples of this personal kind of minimalism are the slow-moving choral *Haustmyndir* ('Autumn Pictures', 1982) and parts of the large ballet score *Tíminn og vatnið* ('Time and the Water', 1983–4). He has also explored this style in solo instrumental works, such as the extended meditation for clarinet, *Thér hlið, lyftið höfðum yðar* ('Lift up your heads, ye gates', 1993).

His output also features a large variety of tonal, often folk-like melodies, notably in the music for the children's play *Dimmalimm* (1970) and his settings of children's verses in *Ljóðakorn* ('Little Verses', 1981). Another feature of many works is his ability to imitate older styles, from Renaissance madrigals in *Madrigaletto* (1974) to Handel in *Tittlings minning* ('In Memory of a Dead Sparrow', 1994). The Schubertian *Jónasarlög* ('Songs to Poems of Jónas Hallgrímsson', 1996) are models of Biedermeier-like simplicity, while the hour-long First Symphony (1999) is a particularly dense, modernist work that places heavy demands on the orchestra. His ability to compose in virtually every style and genre places him in a category of his own among Icelandic composers.

WORKS
(*selective list*)

DRAMATIC

Ops: Silkitromman [The Silken Drum] (Ö. Árnason, after Y. Mishima), 1981–2, Reykjavík, National, 5 June 1982; Vikivaki (Th. Vilhjálmsson, after G. Gunnarsson), RÚV TV, 13 April 1989; Tunglskinseyjan [The Isle of Moonlight] (S. Pálsson), 1994–5, Beijing, 22 March 1997; Hertervig (P.-H. Haugen), 1996; Krisnitakan á Íslandi [The Conversion of Iceland] (Th. Gylfason), 1999–2000

Ballet: Tíminn og vatnið [Time and the Water] (S. Steinarr), S, A, Bar, SATB, orch, 1983–4

Incid music: Dimmalimm (H. Egilson, after G. Thorsteinsson), 1970; Dansleikur [A Dance] (O. Björnsson), 1973, perf. 1974; Ofvitinn [The Genius] (K. Ragnarsson, after Th. Thórðarson), perf. 1983; Ég er gull og gersemi [I am a treasure] (S. Einarsson, after D. Stefánsson), 1979; Land míns föður [My Father's Country] (Ragnarsson), 1985; Sjálfstaett fólk [Independent People] (Ragnarsson and S. Guðmundsdóttir, after H. Laxness), 1999

INSTRUMENTAL

Orch: Hlými [Sounds], 1965; Flower Shower, 1973; Hreinn Gallerý Súm, 1974; Hjakk [Tautology], 1979; Infinitesimal Fragments of Eternity, 1982; Sym. no.1, 1999

Concs.: Könnun [Exploration], va, orch, 1971; Fl Conc., 1974; Trobar Clus, bn, orch, 1980; Jubilus II, trbn, perc, tape, wind, 1986; Draumnökkvi [Dream Boat], vn, str, hpd, 1987; Eldtecken [Signs of Fire], pf, wind ens, 1995, arr. pf, orch, 1998; Erjur [Discords], vc, str, pf, 1997

Other inst: Mengi [Quantities], pf, 1966; Urwälder, hpd, 1976; 21 músíkmínúta, fl, 1980; Gloria, pf, 1980; Óður steinsins [Ode of the Stone], pf, nar, 1983; Dansar dýrðarinnar [Dances of Glory], gui, fl, cl, vc, pf, 1983; Dal regno del silenzio, vc, 1989; Thér hlið, lyftið höfðum yðar [Lift up your heads, ye gates], cl, 1993; Agnus Dei, pf, 1997

VOCAL

Choral (unacc. unless otherwise stated): Madrigaletto (O. Björnsson), 1974; 2 Songs in memoriam Benjamin Britten, 1978: The Sick Rose (W. Blake), Death be not Proud (J. Donne); Haustmyndir [Autumn Pictures] (S. Hjartarson), SATB, 2 vn, vc, accdn, 1982; Japönsk ljóð [Jap. Poems], SATB, gui, 1984; Haustvísur til Máríu [Autumn Verses to the Virgin Mary] (E.Ó. Sveinsson), 1984; Herbst (R.M. Rilke), 1992; Máríukvaeði [Poem to the Virgin Mary] (Laxness), 1995

Solo vocal: Ljóð fyrir börn [Poems for Children], 1v, pf, 1978; Landet som icke är [The Land that does not Exist] (E. Södergran), S, wind qnt, 1979; Karin Månsdotters vaggvisa för Erik XIV [Lullaby of Karin Månsdotter for Erik XIV] (Z. Topelius), 1v, fl, a sax, gui, perc, 1979; Ljóðakorn [Little Verses], 1v, pf, 1981; Tittlings minning [In Memory of a Dead Sparrow] (J. Thorláksson), 1994; Jónasarlög [Songs to Poems of Jónas Hallgrímsson], 1v, vn, cl, db, pf, 1996

WRITINGS

'Listamannalíf' [The life of an artist], *Birtingur*, xiii/4 (1967), 26–8

'Listamannalíf II', *Birtingur*, xiv/1 (1968), 59–63

'Listamannalíf: hugleiðingar um nútíð og fortíð' [The life of an artist: meditations on the past and the present], *Tímarit Máls og menningar*, lviii/4 (1997), 18–36

ÁRNI HEIMIR INGÓLFSSON

Sveinsson, Gunnar Reynir (*b* Reykjavík, 28 July 1933). Icelandic composer. He worked as a professional jazz and dance-band musician (1950–63) and was first percussionist with the Iceland SO (1956–64). From 1955 to 1961 he studied theory and composition with Jón Thórarinsson at

the Reykjavík College of Music. He continued his studies with Ton de Leeuw and Léon Orthel at the Amsterdam Conservatory (1964–6) and with G.M. Koenig and Werner Kaegi at the Studio voor Elektronische Muziek, University of Utrecht (1973–4). He then returned to Reykjavík, where he has since worked as a composer, jazz musician and teacher. As a composer he is not much attracted to the official musical scene in Iceland, preferring to compose for musicians whom he knows personally, be they in the theatre, the church, amateur choirs or jazz clubs. Within these circles his music is highly regarded. A prolific composer of nearly 200 pieces, his works, anchored in the European 20th-century musical tradition, are in an atonal style that recalls Hindemith, while also being inspired by jazz. In addition, his music is often rooted in Icelandic folk music and literature.

WORKS

MAREK PODHAJSKI

Svendén, Birgitta (*b* Porjus, 26 March 1952). Swedish mezzo-soprano. She studied at the Opera School in Stockholm and made her début at the Royal Opera there in 1981 as Olga (*Yevgeny Onegin*). After singing Flosshilde at Bayreuth in 1983, she added most of the Wagner mezzo roles to her repertory, making her débuts at the Metropolitan Opera in 1989 and Covent Garden in 1990, both as Erda, a role she has also recorded. Her Strauss roles include Octavian, Clairon (*Capriccio*) and Gaea (*Daphne*). In 1995 she was appointed a Singer of the Swedish Court. Svendén's performances are distinguished by her even, well-proportioned voice and natural stage intelligence.

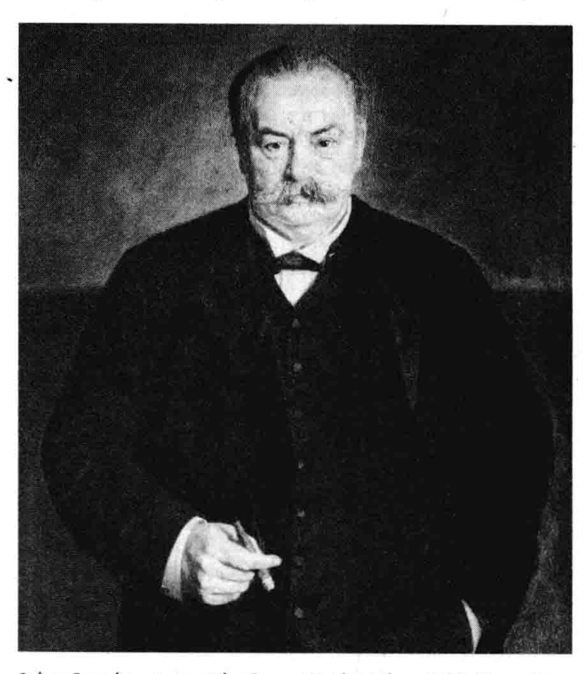
ANDREW CLARK

Svendsen, Johan (Severin) (*b* Christiania [now Oslo], 30 Sept 1840; *d* Copenhagen, 14 June 1911). Norwegian violinist, composer and conductor.

1. LIFE. His father was a military musician who gave him instruction in a variety of instruments. At the age of nine he began to play in local dance orchestras and at 11 to compose dances and marches, two of which were later published. He joined the army and soon transferred to the regimental band, where he became solo clarinettist. The violin was his principal instrument, however; he took lessons from F. Ursin and played in the orchestra of the Norwegian Theatre, of which Ibsen was director from 1857. His first experience of the symphonic repertory was as a first violinist in the series of subscription concerts arranged by Halfdan Kjerulf and J.G. Conradi in 1857–9, when Beethoven's music made a deep impression on him. He then became a pupil of Carl Arnold, whose instruction he always valued highly, though it seems to have consisted mainly of a thorough study of Beethoven's and Mozart's violin sonatas. In 1859 he met Ole Bull and in 1860 conducted a concert in Bergen. He also organized a small orchestra of his own, the Norwegian Music Society. In 1862 he travelled through Sweden and Denmark to north Germany, hoping to make his way by playing the violin, but in Lübeck, in the middle of winter, having reached the end of his resources, he appealed for a loan to the Norwegian-Swedish consul, who, impressed by his playing, obtained a stipend for him from the king to study in Leipzig. In Lübeck Svendsen composed a Caprice for orchestra with solo violin, which he sent with his application to Leipzig. Offered a place in an advanced class, he thought his education so deficient that he asked to start at the beginning.

Svendsen began at the conservatory in December 1863, studying with Moritz Hauptmann, Ferdinand David, E.F. Richter and Reinecke. Intending to prepare for a career as a violin virtuoso, by the end of 1864 he had shifted his interest to composition. In 1865 a nervous complaint in the fingers of his left hand compelled him to stop playing for a time. As compensation he was allowed to deputize for David as conductor of the conservatory orchestra. His performance was greeted with approval, as was his String Quartet op.1. At the end of 1865 he was at work on his String Octet op.3 and the Symphony no.1 in D op.4. When the Octet was performed at the conservatory in 1866, it was received with such enthusiasm that Breitkopf & Härtel asked to publish it and Svendsen was awarded the conservatory's first prize. When he left the conservatory in May 1867 he had completed the symphony and the String Quintet op.5.

Svendsen spent summer 1867 accompanying the German publisher Brockhaus on a North Atlantic tour that took them to Copenhagen (where he met Gade), Scotland, the Faeroe Islands and Iceland. In August he returned to Norway after an absence of five years and in October conducted a concert of his orchestral music, including his First Symphony, the Caprice, the Andante of his Quintet and his orchestrations of Liszt's Second Hungarian Rhapsody and of a minuet by the peasant fiddler Johan Steenberg. An enthusiastic (anonymous) review by Grieg recognized Svendsen's freshness and originality as a composer and his complete command of the orchestra, as both a brilliant orchestrator and an authoritative conductor. However, the lack of public response to his concert confirmed Svendsen's misgivings about musical conditions in Christiania, and he left Norway to spend the winter on a state stipend in Leipzig. In spring 1868 he went to Paris, where he heard a great deal of music and had the String Quartet and Quintet performed at musical soirées, at one of which, in the summer of 1869, he was accompanied by Saint-Saëns in an early performance of Grieg's Second Violin Sonata, dedicated to Svendsen. In March 1870 he accepted a position as leader and assistant conductor of the Euterpe orchestra in Leipzig and left Paris with regret. In May a group of Germany's best virtuosos played his Octet at the music festival in Weimar; there he met Liszt, who impressed him as being unbearably vain. The Franco-Prussian war, which broke out in July, caused his expected



engagement in Leipzig to be postponed. Once he reached Leipzig, however, he completed the Violin Concerto op.6, begun in Paris, and a one-movement Cello Concerto op.7; during the Gewandhaus season (1870–71) he scored a great success conducting his First Symphony. At about the same time he announced his engagement to Sara Levett, an American whom he had met in Paris, and in summer 1871 they were married in New York. Back in Leipzig at the end of September, Svendsen could at last take up his appointment with the Euterpe concerts, where his Symphonic Introduction to *Sigurd Slembe* (a drama by Bjørnstjerne Bjørnson) was performed that year. In May 1872 Svendsen was one of the musicians invited to play in the large orchestra assembled to perform Beethoven's Ninth Symphony under Wagner's direction for the laying of the foundation stone of the Festival Theatre in Bayreuth. Svendsen was a great admirer of Wagner's music, and in Bayreuth the two soon became close friends. When Svendsen's Jewish wife decided to receive Christian baptism, Wagner and Cosima stood as godparents to her. In Bayreuth Svendsen completed his 'episode for large orchestra', *Karneval i Paris* op.9, which Wagner thought 'a lot of fun'.

In autumn 1872 Svendsen returned to Christiania as joint conductor with Grieg – from 1874 sole conductor – of the Music Society concerts. For Grieg this was 'the richest season I have experienced in Norway, thanks to my brilliant colleague Johan Svendsen', as it was also for Svendsen, as both composer and conductor. His compositions during this period include some of his most interesting works, such as the orchestral legend *Zorahayda* op.11 and the orchestral fantasy *Romeo og Julie* op.18, the Festival Polonaise op.12, the *Norsk kunstnerkarneval* op.14, the Symphony no.2 in B♭ op.15 and the first three Norwegian Rhapsodies opp.17, 19 and 21, as well as a number of arrangements of folk melodies for string orchestra. This, the most productive period of his creative life, was no doubt encouraged by the congeniality of his native environment and by the government's award to him of an annual composer's salary in 1874.

In 1877 Svendsen obtained a leave of absence from the Music Society, and in November he conducted his Second Symphony in Leipzig. He spent the winter in Rome, where he completed his Fourth Norwegian Rhapsody op.22. Although he enjoyed the company of Sgambati, to whom he dedicated the published score of *Romeo og Julie*, he found musical life in Rome uninteresting and in spring 1878 went to London. There he met Sarasate, who assisted in the performance of all his chamber music and generously put at his disposal his Paris residence when Svendsen moved there in the autumn. In Paris Svendsen found the musical environment he had been missing. He heard a great deal of new music, renewed old acquaintances and made new ones, including Mme Viardot. Pasdeloup included two of his Norwegian Rhapsodies in his concerts and allowed Svendsen to conduct his own Second Symphony. He conducted two concerts in Angers which were so successful that he was offered a post there. But two sets of songs, nine in all, was the apparent total of his creative achievement during these two years. In 1880 he returned to Christiania, where in the succeeding three years he also produced very little. However, one work from this period, the Romance for violin and orchestra op.26, deservedly became internationally popular, although the high quality of the piece was often obscured by the innumerable arrangements to which it was subjected. This was virtually the end of Svendsen's career as a composer, with the exception of a few relatively unimportant works commissioned for specific occasions.

Svendsen's importance as a conductor, the greatest in Scandinavia, continued to grow. During the 1881–2 season he gave two performances, the first in Norway, of Beethoven's Ninth Symphony, which raised musical standards in Christiania to a level that impressed Bülow on his visit there in May 1882. In October he conducted two concerts of his own works in Copenhagen, as a result of which the administration of the Royal Opera invited him to Copenhagen to succeed the aging Paulli as conductor there. He was appointed in 1883. That the highest musical post in Denmark should go to an outsider aroused resentment, and Svendsen's efforts to introduce changes and improvements were criticized. However, his genius and personal charm won him the confidence of the theatre administration, the respect of his colleagues and the affection of the public, and his years in Copenhagen are remembered as a peak in the city's musical life. Svendsen also gave an annual series of orchestral concerts and raised the Royal Chapel Orchestra to the level of the best in Europe. He also visited Vienna, Moscow, London, Brussels, Helsinki and other cities as a guest conductor.

Obliged to retire in 1908 because of ill-health, Svendsen continued to live in Copenhagen, where, after the dissolution of his first marriage in 1901, he had married the ballerina Juliette Vilhelmine Haase. As he had, for patriotic reasons, retained his Norwegian citizenship, he was not entitled to a Danish pension, but the state awarded him an honorary one. The Norwegian government also reinstated the composer's salary that had been suspended when he left Norway in 1883, though his work as a composer after that time is of relatively minor importance (in 1892 he had been given leave of absence from conducting to compose three works for the golden wedding anniversary of King Christian IX and Queen

Johan Svendsen: portrait by Georg Nicolai Achen, 1908 (Kongelige Teater, Copenhagen)

Louise; of these, the ballet *Foraaret kommer* ('The Arrival of Spring') op.33 is the last work to which he gave an opus number).

On the podium Svendsen was a majestic figure of commanding, almost military, authority, completely in control and with the confidence born of careful intelligent preparation and a perfect musical memory. Those who played under him said that he had an ideal beat, discrete, precise and easy to follow, and a hypnotic glance. Off the podium he was modest and congenial, generous and helpful. Of the young musicians who benefited from his teaching, advice and encouragement, the most outstanding was Carl Nielsen, who played under him from 1889 to 1905 and was always warm in his expressions of gratitude and admiration.

2. WORKS. It is inevitable that Svendsen's name should be coupled with Grieg's, as these two constitute the culmination of national Romanticism in Norway. Yet, though they present an attractive picture of mutual admiration, respect and affection, lasting throughout their lives, they were complementary rather than similar. As Grieg himself observed in a letter in 1882, '[Svendsen] has precisely all that which I don't have' – that is, a natural mastery of the orchestra and of the large Classical forms. In his review of Svendsen's Christiania concert in 1867 Grieg found Svendsen's Caprice rather formless, but Svendsen pointed out that it had been composed before he had studied form in Leipzig, though he also argued that 'one cannot always maintain the old forms when one wants to present new ideas'. Svendsen's student works show the ease with which he used the old forms. He found little need to experiment with these, although the Quintet is in only three movements, of which the second is a theme and variations (as is his arrangement for string orchestra of the Norwegian folktune *I fjol gjaett'e gjeitinn*: 'Last year I was tending the goats'); and the Cello Concerto is in one movement, with a slow section inserted between the development and the recapitulation.

At the same time Grieg expressed (in a letter) his admiration for Svendsen's orchestration, tentatively daring to see the influence of Berlioz. This suggestion would seem to gain support from the Berliozian subjects of some of the works composed after his first stay in Paris: *Karneval i Paris*, *Zorahayda*, *Norsk kunstnerkarneval* and *Romeo og Julie*, in which, as perhaps also in the Symphonic Introduction to *Sigurd Slembe*, he seemed to forsake Classical ideals in favour of descriptive music using freer forms designated 'An Episode', 'A Legend' or 'A Fantasy'. Only *Zorahayda* has a literary programme, drawn from Washington Irving's *Legend of the Rose of the Alhambra*, which is inserted in the score as a guide to the piece's six sections. Here Svendsen also used motivic transformation, and the Spanish-Moorish subject allowed him to create an exotic orchestral atmosphere. In *Norsk kunstnerkarneval*, which depicts a Norwegian artists' carnival in Rome, the city is represented by an Italian folksong and the artists by a Norwegian one. This was the first occasion on which Svendsen used folk material. In 1867 Grieg had written of 'the boldest national tone' of the First Symphony and thought the Scherzo to be 'national through and through', but in 1881 he 'searched for the Scandinavian' in the Introduction to *Sigurd Slembe*. Svendsen was unquestionably a patriot with strong feelings for his homeland; after his move to Copenhagen he wrote to his father of his longing for Norway and confessed 'sometimes it is as if I will not be able to endure it down here for any length of time'. He loved the folk melodies of his people and made sensitive and attractive arrangements of a number of them, as well as treating them superbly in his four Rhapsodies, which are much more than folksong arrangements. Characteristic traces of these national melodies are also found in his own melodies and motifs, for example in the scherzo movements of both symphonies. But despite his Romanticism Svendsen was too 'classical', too objective a personality to submerge himself and his art in patriotic fervour as had Ole Bull or Grieg.

The Violin Concerto was the first by a Norwegian, apart from the two virtuoso works by Ole Bull, and the Cello Concerto was presumably the first of its kind in Norway. Both are very attractive and well written, but it is perhaps their weakness that the beauty and elegance of the solo parts do not sufficiently compensate the soloist for the lack of virtuoso display. While they cannot be expected to rival the lovely Romance in popularity, they deserve a more frequent hearing than they have had. The two symphonies are not the first by a Norwegian, but they are the earliest to have won an audience in Norway and to have remained in the repertory. They are among Svendsen's finest and most representative works; the return to Classical principles evident in the Second effectively contradicts the impression that Svendsen had been converted to the more radical Romanticism of Berlioz and Wagner in the years following the composition of the First. He was a born symphonist: Grieg observed 'the perfect balance between the ideas and the technical means' in his First Symphony; and in the Second the wealth of ideas and the greater expressivity of the mature artist perhaps make this his masterpiece. It was certainly to be expected that his future development as a composer would be as a symphonist, but his move to Copenhagen virtually put an end to his creative work. The blame for this sterility has been attributed to the demands made on him as a conductor, but even five years earlier, in Paris, he had found composition virtually impossible; as he wrote to Grieg, 'nothing that I try works out'. There is reason to suppose that personal problems raised great obstacles to his inspiration and concentration. It is known that in 1882 he was at work on a third symphony, which it has been supposed was never finished. However, from an unfinished volume of memoirs by John Paulsen, *Aftnerne i Arbinsgade*, it appears that this work suffered a fate worse than incompletion. Svendsen had completed the symphony, he told Paulsen, but one day his wife Sara took the manuscript in a jealous rage and cast it into the fire. This tragic incident came to Ibsen's knowledge and provided the basis for the famous scene in *Hedda Gabler* (1890) in which Hedda casts Eilert Løvborg's manuscript into the fireplace.

Svendsen's style was very much his own, although attempts have been made to relate it to that of Beethoven, Schumann, Mendelssohn and Gade on the one hand, and Berlioz, Liszt and Wagner on the other. He stands somewhere between the two camps, a cosmopolitan rather than an eclectic. His melodic style is normally firmly tonal and diatonic; sometimes a descending root position triad, often at the end of a phrase and perhaps with repetitions which waver between major and minor modes, suggests the influence of Norwegian folk music. Chromatic passages usually occur in slow tempos and

express a mood of Romantic longing, as in *Zorahayda* and in the openings of the Romance for violin and of the last movements of both symphonies. His harmony is normally quite traditional and functional, not nearly so daring in the use of dissonance as Grieg's (though Svendsen shared with his progressive countryman a trick of harmonizing melodies with descending chromatic chords). His rhythm is straightforward and uncomplicated, rarely indulging in cross-rhythms and with a fondness for dotted rhythms in quick passages. Yet the rhythmic element, clean, well marked and elastic, was an essential feature of Svendsen's work both as composer and conductor. Carl Nielsen called his treatment of rhythm his greatest gift to Danish music.

WORKS

ORCHESTRAL

Caprice, vn, orch, 1863; Sym. no.1, D, op.4, 1865–7 (Leipzig, 1868); Vn Conc., A, op.6, 1868–70 (Leipzig, 1870); Vc Conc., d, op.7, 1870 (Leipzig, 1871); Sym. Introduction to Bjørnson's Sigurd Slembe, op.8 (Leipzig, 1872); Karneval i Paris, episode, op.9, 1872 (Leipzig, 1877); Funeral March for King Carl XV, op.10, 1872; Zorahayda, legend, op.11, 1874 (Christiania, 1879); Festival Polonaise, op.12, 1873 (Christiania, 1886); Coronation March for Oscar II, op.13, 1873 (Leipzig, 1873)

Norsk kunstnerkarneval, op.14, 1874 (Leipzig, 1881); Sym. no.2, B♭, op.15, 1874 (Leipzig, 1877); 4 Norwegian Rhapsodies: no.1, op.17, no.2, op.19, no.3, op.21, all 1876 (Christiania, 1877), no.4, op.22, 1877 (Christiania, 1878); Romeo og Julie, fantasy, op.18, 1876 (Christiania, 1880); Romance, vn, orch, op.26 (Christiania, 1881); Polonaise no.2, D, op.28, 1882 (Copenhagen, 1919); Foraaret kommer [The Arrival of Spring], ballet, op.33, for golden wedding of Christian IX, 1892, excerpt, arr. pf (Copenhagen, n.d.); Andante funèbre, 1894 (Copenhagen and Leipzig, 1895); Festival Prelude, 1898; arr. pf (Copenhagen, 1911); I fjol gjaett'e gjeitinn [Last year I was tending the goats], Variations on a Norwegian Folktune, str orch, op.31, 1874 (Leipzig, 1878)

OTHER WORKS

Chbr: Str Qt, a, op.1, 1865 (Leipzig, 1868); Str Octet, A, op.3, 1865–6 (Leipzig, 1867); Str Qnt, C, op.5, 1867 (Leipzig, 1868); Paraphrase sur des chansons populaires du nord, arr. G. Tronchi, humorous march, vn, vc, pf, op.16 (Copenhagen, 1916)

Vocal: 2 partsongs, male vv, op.2, 1865 (Leipzig, 1866): Till Sverige [To Sweden], Aftonröster [Evening Voices]; 5 Songs (Fr. and Ger.), 1v, pf, op.23, 1879 (Paris, 1880); 4 Songs (Nor. and Fr.), 1v, pf, op.24, 1879 (Paris, 1880); 2 Songs (Ger., Fr. and Eng.), 1v, pf, op.25, 1878, 1880 (Christiania, 1878, 1880): Violen [The Violet], Frühlingsjubel; Cantata for unveiling of the Wergeland monument (J. Lie), 1881; Cantata, op.29, for U. of Christiania, celebration of wedding of Crown Prince Gustav, 1881; Cantata for the Holberg Jubilaeum, 1884; Hymn, op.32, for golden wedding of Christian IX, 1892; Festival Cantata, male vv, brass insts, for golden wedding of Christian IX, 1892

Pf: Anna Polka, 1854 (Christiania, 1883); Til saeters [To the Mountain Pasture], waltz, 1856 (Christiania, 1883)

Arrs., str orch: 2 Icelandic Melodies, op.30, 1874 (Leipzig, 1878); O. Bull: Saeterjentens Søndag [The Girl's Sunday on the Mountain Pasture], 1872 (Christiania, 1878); 2 Swedish Folk-Melodies, op.27, 1876 (Christiania, 1878); R. Schumann: Abendlied (Christiania, 1887)

JOHN BERGSAGEL

Svenska Samfundet för Musikforskning [Swedish Society for Musicology]. A society founded in 1919 by members of the Swedish section of the Internationale Musikgesellschaft, to promote musicology, especially research into Swedish music. At the time of its foundation musicology was not an established discipline in Sweden so that from its first volume the *Svensk tidskrift för musikforskning* was of seminal importance. The society has published early Swedish music, in the series Äldre Svensk Musik (1930s), and on a more ambitious scale in the Monumenta Musicae Svecicae (1958–), and the complete works of Berwald. Studies, bibliographies and documents are published in the series Musik i Sverige (1969–). Outstanding presidents of the society have been Tobias Norlind (1919–26 and 1943–4), Einar Sundström (1939–42), C.-A. Moberg (1945–61), Ingmar Bengtsson (1961–86), Anna Johnson (1986–90) and Greger Andersson (from 1990). In 1995 it had about 350 members.

Svete, Tomaž (*b* Ljubljana, 29 Jan 1956). Slovene composer. He studied with Škerl (composition) and Anton Nanut (conducting) at the Ljubljana Academy of Music (1976–81) and with Cerha and Suitner at the Hochschule für Musik in Vienna (1983–8, MA 1989). In 1995 he was appointed lecturer in composition at the faculty of education of the University of Maribor. His Requiem, Ugrabitev z Laudaškega jezera (The Rape from the Laudach Sea) and *Sacrum delirium* have been awarded first prizes at competitions in Ljubljana, Vienna and Gorizia respectively.

His musical vocabulary is determined by a rigorous compositional system. He employs traditional forms, such as the sonata form found in his opera *Kralj Malhus* ('King Malhus'), and constructivist techniques associated with music of the Second Viennese School, a particular influence on his work. In some elements of his musical structures Svete interpolates the Golden Section (e.g. *Minnelieder*) and, later, principles of fractal geometry (e.g. *Formes fractales*). A large part of his output is made

up of vocal works, and several works contain elements of music theatre. Despite some of his compositions being based on literary subjects, programme music in the strictest sense of the word is alien to Svete's music.

WORKS

Ops: Kralj Malhus [King Malhus] (TV op, Svete, after I. Cankar), 1980, Ljubljana, 1983; Ugrabitev z Laudaškega jezera [The Rape from the Laudach Sea] (Svete), 1993, Ljubljana, 1993

Orch: Prekmurska suita, str, 1978; L'amor sul mar, 1987; Divertimento, 1990; Concert de la nuit, vn, db, hp, orch, 1996

Vocal: Srednjeveške balade [Medieval Ballads] (J. Menart), Bar, pf, 1983; Tri pesmi na tekste Gustava Januša [3 Poems of Gustav Januš], Bar, pf, 1984; Minnelieder (King Konradin, 13th century), Bar, pf, 1989; Hommage à Hugo Wolf (M. Merlak), nar, female chorus, chbr orch, 1990; Ein komplizierter Engel, S, str qt, hp, 1991; Requiem (Merlak, Persian texts), nar, S, A, T, B, 2 choruses, 2 ens, orch, 1991; Sacrum delirium (cant., F. Balantič), S, T, chorus, orch, 1994; Evocazione (C. Baudelaire), S, fl, cl, tpt, hp, db, perc, 1995

Chbr: Sonata in modo antico, bn, pf, 1979; Sonatina, tpt, pf, 1979; Pet skladb [5 Pieces], str qt, 1986; Formes fractales, vn, rec, pf, 1988; Hefaistos, vn, pf, 1988; Wie ein Hauch, rec, 1989; Zupftrio, mand, hp, gui, 1990; Str Qt, 1992; Isomerisms, fl, ob, cl, trbn, tuba, perc, pf, vn, va, vc, db, 1993; Hommage à Slavko Osterc, pf, 1994; Rappresentazione sacra, db, fl qt, 1994; Sonata solaris, vc, pf, 1994; Dyphtonque, sax qt, 1996

MATJAŽ BARBO

Svetlanov, Yevgeny (Fyodorovich) (*b* Moscow, 6 Sept 1928). Russian conductor, composer and pianist. He graduated from the Gnesin Institute (1951), where he studied composition with Mikhail Gnesin and the piano with Mariya Gurvich (a pupil of Medtner). In 1955 he also graduated from Shaporin's composition class and Gauk's conducting class at the Moscow Conservatory. He began his conducting career with All-Union Radio in 1953 (while still a student at the conservatory), and from 1955 was an assistant and then a conductor at the Bol'shoy Theatre; later he was principal conductor (1962–4). The theatre and opera were in his blood from childhood: his father had been a soloist at the Bol'shoy and his mother an artist in a mime ensemble. He conducted many of Rimsky-Korsakov's operas, Dargomïzhsky's *Rusalka*, Borodin's *Prince Igor* and Tchaikovsky's *The Queen of Spades*; his interpretations of these works, especially the monumental choral scenes, sounded fresh and colourful. He also conducted modern Russian works, including Shchedrin's *Not for Love Alone* (1961), Karayev's ballet *In a Path of Thunder* (1959) and Balanchivadze's ballet *Pages of Life* (1961), as well as many new foreign works including Bartók's *Bluebeard's Castle*. In 1964 he conducted the Bol'shoy company's productions at La Scala, and in 1984 he conducted *Boris Godunov* at Covent Garden.

While conducting at the Bol'shoy, Svetlanov did not abandon his concert work. In 1965 he became principal conductor of the USSR State SO (later Russian State SO), and it was from this time that he became noted as a symphonic conductor (his recordings of all Tchaikovsky's symphonies have won international acclaim). In 1992 he was appointed principal conductor of the Residentie-Orkest, The Hague. Svetlanov is one of the most versatile Russian musicians: a gifted composer of large-scale symphonic works (including a symphony (1956) and a piano concerto (1951, revised 1976)), instrumental chamber music and vocal pieces (including nearly 50 songs), and a fine pianist. His conducting style is characterized

Yevgeny Svetlanov

by sensitive attention to detail, allied to an ability to grasp and mould the overall structure; his interpretations reveal power of emotional feeling, free of any superficiality or showmanship. His typical programmes include works by Myaskovsky (he has devoted much attention to popularizing Myaskovsky's symphonic music), Shostakovich, Prokofiev, Khachaturian, Shebalin, Knipper, Shchedrin and Eshpay. He performs these in Moscow and during his numerous foreign tours. He is also a noted exponent of Mahler's symphonies. His life and work have been the subject of a film *Dirizhyor* ('The Conductor'). Svetlanov is a prolific recording artist, having recorded virtually all the standard Russian orchestral repertory. He was made People's Artist of the USSR in 1968, and was awarded the Lenin Prize in 1972 and the Glinka Prize in 1975.

I.M. YAMPOL'SKY/R

Sviridov, Georgy Vasil'yevich (*b* Fatezh, Kursk Province, 3/16 Dec 1915; *d* Moscow, 6 Jan 1998). Russian composer, pianist, musical and public figure. After his initial education at the music school in Kursk (1929–32), he studied composition under M.A. Yudin, and piano under Isay Braudo at the Central Music Tekhnikum in Leningrad (1932–6), later transferring to the Leningrad Conservatory (1936–41) where his teachers were Ryazanov and Shostakovich. Sviridov is one of the most significant figures in Russian music of the second half of the 20th century and one of the most popular composers of concert works in post-World War II Russia. His

consistent striving towards a distinctively Russian style has made him the leader of a new nationalist movement in his country.

Sviridov first achieved acclaim with his Pushkin song cycle (1935); their sincerity, simplicity of harmony and texture, the freshness of the modality and the novelty of approach to the text all contributed to their popularity. The 19-year-old student was accepted into the ranks of the Composers Union – a rare instance in the working practices of this organization. In the late 1930s and 40s he wrote much instrumental music, while his tempered enthusiasm for the modernism of Hindemith, Stravinsky and Shostakovich is noticeable in these works, Sviridov found more straightforward resolutions to thematic problems, and felt no need to temper his penchant for melodic expansiveness. The *Al′bom dlya deteï* ('Children's Album') (1948) and *Strana ottsov* ('The Land of Our Fathers') (1950) mark a new stage in Sviridov's development: a Neo-Romantic tendency is signalled by the arrival of the programmatic instrumental miniature, a lyrical diatonicism shattered at moments of tension by dissonant chords, orchestral piano writing, and vocal characterizations by means of recitative and exclamation. *Strana ottsov*, with its lyricism tinted with tragedy, was not consonant with the spirit of banal official patriotism of the late Stalinist era, and the work was first heard only in the autumn of 1953 after Stalin's death.

The Burns cycle (1955), which contains a rare description of life in Soviet Russia (*Vsyu zemlyu t′moy zavoloklo* ['The entire earth is clouded in gloom']), signalled the beginning of the predominance of vocal music in Sviridov's output. Setting Russian poetry from Pushkin to Pasternak, he forged a characteristically singable style. Despite the basic strophic form of the verses, he sometimes overcame the inertia created by the ostinato principle and motivic development so exhaustively employed by Neo-Classic composers; nonetheless, tonality, traditional harmony and *cantabile* melody shunned by the avant garde became the mainstay of Sviridov's inventive melodic art.

With the Yesenin setting of 1955 onwards, national subject matter finally entered his music, establishing a specifically Russian character. The second half of the 1950s, the high point of Khrushchov's liberalism, brought Sviridov wide public recognition. His most ambitious works date from this period, including the oratorios *Dekabristï* ('The Decembrists'), *Dvenadtsat′* ('The Twelve') – to words by his contemporaries, Pushkin and Blok respectively, and the *Pateticheskaya oratoriya* after Mayakovsky.

Sviridov created a new song-style oratorio and introduced symphonic development and scale into strophic verse forms. Inspired by the great Russian poets, he congenially interpreted the Russian Revolution in the spirit of Messianism and Eschatologism.

At this point, a scale – to become characteristic in Sviridov's music – makes its first appearance: a succession of thirds (*E♭–G–B♭–d–f–a–C′♯–E′*), it forms the basis of a limited modal system replacing the extended tonality which was used in the 1940s.

In the early 1960s Sviridov wrote a series of small-scale chamber cantatas taking the inner man as the main theme, including *Derevyannaya Rus′* ('Wooden Russia') after Yesenin; *Grustnïye pesni* ('Sad Songs') after Blok; *Sneg idyot* ('It is Snowing') after Pasternak. The *Kurskiye pesni* ('Kursk Songs') of 1964 are the most successful of these and are based on lyrical folk songs from the Kursk Province all of which deal with the theme traditional in folklore – that of a woman's position in peasant society. The expressive qualities of the old anhemitonic mode (D♭–E♭–F–G) and the resultant harmony, the economic texture, the dazzling orchestration, and the variety of the choral writing have attracted praise: Shostakovich commented that 'there are few notes and much music'. The cantata served as the model for many such works during the 1960s and 70s. Sviridov's association with the cinema during these years gave rise to two popular orchestral suites: *Metel′* ('The Snowstorm') and *Vremya, vperyod!* ('Time, Forward!').

The choral works of the 1970s and 80s are highly valued in Russia and mostly set to the words of folk texts or those of 20th-century Russian poets. Among these can be found a new type of virtuoso choral concerto as exemplified by the *Kontsert pamyati A.A. Yurlova* ('Concerto in Memory of A.A. Yurlov') of 1973. Logically and chronologically, as the final result of Sviridov's late-period choral work, arose the monumental *Pesnopeniya i molitvï* ('Canticles and Prayers') of 1987 to 1997, based on liturgical texts, and considered by some to be one of the more important Orthodox sacred works after Rachmaninoff's *Vsenoshchnoye bdeniye* ('All-Night Vigil').

Sviridov's latter-day attraction towards the philosophical, religious and visionary is reflected in *Otchalivshaya Rus′* ('Russia Cast Adrift') for voice and piano to words by Yesenin (1977). With its symbolic images of the family house in ruins flying away into the sky of Russia (an image paralleling that of the city of Kitezh as used by Rimsky-Korsakov), its vision of the iron guest – a paradoxical symbol of progress bringing destruction to the Earth – and with its evangelical theme of Judas's betrayal, the apocalyptic and especially the chiliastic expectation of a second coming gain increasing importance in Sviridov's late work. Non-linear composition of texts, devoid of plot, form complex multi-layered space-time continua, with freely associative links between poetic images reinforced by a subtly unified language, which requires neither leitmotifs nor thematic development. The mature style is characterized by slow tempi, the use of quasi-liturgical modal systems – usually diatonic – and a very meagre, ascetic texture in which polyphonic vertical chords in the outer registers predominate, creating a sense of depth and perspective which nonetheless conveys a sensation of upward striving.

WORKS
(*selective list*)

Choral orch: Poėma pamyati Sergeya Yesenina [Poem in Memory of Sergey Yesenin] (Yesenin), T, chorus, orch, 1955–6; Pateticheskaya oratoriya [Pathetic Oratorio] (V. Mayakovsky), B, chorus, orch, 1959; Kurskiye pesni [Kursk Songs] (trad.), chorus, orch, 1964; Derevyannaya Rus′ [Wooden Russia] (Yesenin), T, chorus, orch, 1964; Sneg idyot [The Snow is Falling] (B. Pasternak), cant., chorus, orch, 1965; 5 pesen Rossii (orat, A. Blok), S, Mez, Bar, B, chorus, orch, 1967; Vesennyaya kantata [Spring Cantata] (N. Nekrasov), cant., chorus, orch, 1972; Pushkinskiy venok [A Pushkin Wreath] (A.S. Pushkin), chorus, inst ens, 1979; Nochnïye oblaka [Night clouds] (Blok), chorus, inst ens, 1981

Other choral: 5 khorov na slova russkikh poėtov [5 Choruses on Words by Russian Poets] (N. Gogol, A. Prokof′yev, S. Orlov, Yesenin, 1958; 3 khora [3 Choruses], 1973, from the incidental music to A.K. Tolstoy: Tsar Fyodor Ioannovich; Kontsert pamyati A.A. Yulova [Concerto in Memory of A.A. Yurlov], 1973; Pesnopeniya i molitvï [Canticles and Prayers], 1987–97; Strana ottsov [Land of Our Fathers] (A. Isaakian), T, B, pf, 1950; Burns Songs (trans. S. Marshak), B, pf, 1955; Peterburgskiye pesni

[Petersburg Songs] (Blok), S, Mez, Bar, B, pf, vn, vc, 1961–3; Otchalivshaya Rus' [Russia Cast Adrift] (Yesenin), 1v, pf, 1977; Peterburg [St Petersburg] (Blok), Bar, pf, 1996

Chbr and solo inst: Pf Sonata, 1944; Pf Trio, 1945; 2 Partitas, pf, 1946; Al'bom dlya detey [Children's Album], pf, 1948; Muzïka dlya kamernogo orkestra [Music for Chamber Orchestra], 1964; Malenkiy triptikh [Small Triptych], orch, 1964; Metel' [The Snowstorm], suite, orch, 1965; Vremya, vperyod! [Time, forward!], orch, 1967

Principal publishers: Muzgiz, Sovetskiy kompozitor, Muzïka (Moscow)

ALEKSANDR SERGEYEVICH BELONENKO

Svoboda, Josef (*b* Časlav, 10 May 1920). Czech stage designer. He was apprenticed in his father's profession of cabinet maker before studying (1941–3) to be an interior architect. It was through his hobby, painting, that he became interested in stage design. His first work was for an amateur group in Časlav (1942), after which he did designs for the Novy Soubor ('New Group'), of which he was a founder member, in Prague (1943–4). After World War II he studied architecture in Prague (1945–50), also taking over in 1945 the direction of design at the Grand Opera of the Fifth of May, which became the Smetana Theatre in 1948. He was appointed chief designer and technical director of the National Theatre in 1951 and exercised a decisive influence on the development of Czech music theatre. His work outside Czechoslovakia from the late 1950s also considerably affected international opera.

Influenced by the architecturally plastic quality of Czech stage design in the 1930s and 40s and by the ideas of Appia and Craig, Svoboda developed the concept of a 'psycho-plastic stage' whose basic elements of space, time, rhythm and light combine to form a dynamic continuum, allowing for the development of the music drama as a homogeneous kinetic process. The emancipatory experiences of cubo-futurism, constructivism and the Bauhaus are assimilated but largely reinterpreted in a symbolist way, concentrating on the 'inner' (or 'immanent') meaning of the work and the psychology of action (e.g. the dualism of the towers in *Il trovatore*; 1966, Berlin). Svoboda's revival of the constructivist concept of the unity of art and technique campaigning 'for a theatre that truly reflects its age and its scientific spirit' opened new formal horizons to contemporary stage art: the dynamics of the visual processes are not left to stage machinery but are based on a mechanics of transformation, specially designed, and in particular the use of modern lighting techniques. Svoboda made inspired use of such effects as low-voltage light walls dividing up the stage area (*Les vêpres siciliennes*; 1969, Hamburg) or laser beams and holograms (*Die Zauberflöte*; 1970, Munich). In particular, he developed a superb projection technique, involving a complex system of colour projections which sometimes combine to animate a mobile plastic framework (*Oberon*; 1968, Munich, directed by Rudolf Hartmann) or with a transparent cyclorama, hangings, mirrors and lenses (the *Ring*; 1974–6, Covent Garden), which themselves form the variable stage area. From the combinations of slide and film projections based on collage, new forms were devised which have been used in such operas as Nono's *Intolleranza 1960* (1961, Venice; with a third medium, television, 1965, Boston) and Zimmermann's *Die Soldaten* (1969, Munich). There are formal similarities, especially in the montage technique, to the epic, distancing theatre of Piscator and Brecht. But in opposition to this, Svoboda's 'psycho-plastic' stage art is a suggestive and subjective one that seeks to lead on the spectator's imagination, vivifying 'the theatre's traditionally evocative, inherently metaphoric power' (Burian, 1971).

Svoboda's career has been particularly associated with that of Václav Kašlík, the première of whose *Zbojnická balada* ('The Brigand's Ballad') he designed in 1948 for Prague, restaging it in 1986. As well as collaborating with Kašlík on numerous productions (*Die Frau ohne Schatten*, 1967; *Pelléas et Mélisande*, 1969; and *Nabucco*, 1972, all at Covent Garden; and *Idomeneo*, 1981, Ottawa), he designed the first production of Kašlík's opera *La strada* (1982, Prague). Svoboda was responsible for the opening production, *Libuše*, of the refurbished National Theatre in Prague in 1983. Although his 'trademark' staircase began to seem a formula, few other stage designers have had such a consistently influential appeal. The productions he has designed include several that have transferred from one house to another, for instance *Les vêpres siciliennes*, originally mounted in Hamburg in 1969, directed by John Dexter, which went on to the Paris Opéra and the Metropolitan in the mid-1970s and the ENO in 1984. Other notable productions include *From the House of the Dead* (1978, Zürich), *Wozzeck* (1981, Hamburg), Fibich's *Nevěsta messinská* ('The Bride of Messina'; 1985, Prague), Verdi's *Macbeth* (1985, Zürich), *Elektra* (1986, Bonn), Martinů's *Ariadne* (1987, Prague) and *Salome* (1990, Berlin).

MANFRED BOETZKES

Svoboda, Tomas (*b* Paris, 6 Dec 1939). American composer of Czech descent. His First Symphony (1956), completed before any formal composition study, was given its première by the FOK Prague SO in 1957. He studied percussion, composition and conducting at the Prague Conservatory (1954–62) and composition at the Prague Academy (1962–4). Owing to political unrest, he left Czechoslovakia in 1964 and settled in the USA, where he studied at the University of Southern California, Los Angeles (1966–9), with Ingolf Dahl and Halsey Stevens. He was appointed professor of music at Portland State University, Oregon, in 1970. In 1985 he won the ASCAP Foundation/Meet the Composer Award.

Recognized by Britten, Milhaud and Martinů for his compositional ability, Svoboda's style is characterized by rhythmic vitality and a rich, tonal harmonic language. His more than 150 works, of which *Overture of the Season* (1978) is the most widely known, have been performed by major orchestras in North America, Europe and Japan. He has twice served as guest conductor of the Oregon SO in performances of his Fifth 'In Unison' and Sixth Symphonies. A number of his works, including the Symphony no.4 (1975), *Ex libris* (1983), Concerto for Chamber Orchestra (1986) and Second Piano Concerto (1989), have been recorded.

ROBERT A. KING, JR

Swabridge, Thomas. *See* SCHWARBROOK, THOMAS.

Swados, Elizabeth [Liz] (*b* Buffalo, NY, 5 Feb 1951). American composer and writer. She attended Bennington College in Vermont (BA 1972), where she studied composition with Henry Brant. Swados became associated with the La Mama Experimental Theater Company, based in New York, in 1970. For the Romanian director Andrei Serban she composed scores to accompany several of his adaptations of Greek tragedies; she also acted as music director of the International Theater Group, led by Peter Brooks. In 1978 her innovative musical *Runaways* was given its première in New York. Later she collaborated with Garry Trudeau, creator of the *Doonesbury* comic strip, on a musical based on the strip and on a revue about Ronald Reagan (*Rap Master Ronnie*).

In her music for theatre of the 1970s Swados drew on a number of non-Western influences. With *Runaways* she was established as a force in American musical theatre; like her other so-called collage musicals, it treats a common theme in songs and sketches without relying on a plot. She uses a wide range of popular music from pop and punk to salsa in her revues and other shows. She has also written music and prose based on Jewish themes, such as her song cycle, *Giving Thanks* (1996). An award-winning playwright and the recipient of three Obie awards, she is also the author of both fiction and non-fiction.

WORKS
(*selective list*)

Stage: Nightclub Cantata (revue, Swados), New York, 1977; Alice in Concert (after L. Carroll), New York, 1978; Runaways (musical, Swados), New York, 1978; Dispatches (musical, after M. Herr), New York, 1979; The Incredible Feeling Show (musical), New York, 1979; Haggadah (cant., after E. Wiesel), New York, 1980; Under Fire (musical, Swados), New York, 1980; Lullabye and Goodnight (musical, Swados), New York, 1982; A Summer Fable (musical), Boston, 1983; Doonesbury (musical, G. Trudeau), New York, 1983; Jerusalem (orat, after Y. Amichai), New York, 1984; Rap Master Ronnie (revue, Trudeau), New York, 1984; The Beautiful Lady (musical theatre op), 1985; Jerusalem (op), 1986; Esther (dramatic song cycle), 1988; Swing (musical), 1989; The Red Sneaks (musical), 1990; The Story of Job (musical), 1991; Bible Women (musical), 1996; The Hating Pot (musical), 1996; Missionaries (musical), 1996; The Secret Window (children's musical), 1996

CHARLES PASSY/LESLIE N. ANDERSEN

Swain, Freda (Mary) (*b* Portsmouth, 31 Oct 1902; *d* Chinnor, 29 Jan 1985). English composer and pianist. One of the last composition pupils of Stanford at the RCM, she also studied the piano with Dora Matthay (1913–17) and with Arthur Alexander, whom she married

in 1921. She was appointed professor at the RCM in 1924, the year from which her first mature compositions may be said to date. She first came to prominence with *The Harp of Aengus* for violin and orchestra (based on a poem by W.B. Yeats), played by Achille Rivarde at Queen's Hall in January 1925. In 1936 she founded the British Music Movement for the promotion of new music and after World War II she set up the NEMO Concerts, which again promoted her contemporaries' music as well as her own.

On the outbreak of war, Arthur Alexander was marooned in South Africa. Swain wrote a piano concerto for him; scored on very thin paper it was sent by airmail in a number of instalments. Alexander performed it in Cape Town and elsewhere and it became known as the 'Airmail' Concerto. Despite its success, however, and protests by the composer and her supporters, the concerto was never accepted for broadcast by the BBC. In 1940 Swain joined her husband and they toured widely, and later in Australia.

Swain's affinities are with the English school immediately preceding her generation, John Ireland especially. Although the range of her music is limited, the music is vital, individual and presented with technical assurance. While her later music introduces a more dissonant harmony, her earlier instrumental works and especially one or two songs, such as the folklike *The Lark on Portsdown Hill* and sympathetic settings of Housman, show her at her best.

ERIC BLOM/LEWIS FOREMAN

Swan, Alfred J(ulius) (*b* St Petersburg, 9 Oct 1890; *d* Haverford, PA, 2 Oct 1970). American musicologist and composer of English descent. He studied law at Oxford University (BA 1911, MA 1934), devoting much time to musical activities, and then studied music at the St Petersburg Conservatory under V.P. Kalafaty and A.A. Winkler (1911–13). After doing relief work with refugee children's colonies in Siberia (1918–19) he went to the USA, where he taught at the University of Virginia and Sweetbriar College (1921–3) and at the Seymour School, New York (1923–6), before being appointed head of the music departments at Swarthmore and Haverford colleges, Pennsylvania (1926). After retiring (1958) he continued to teach and lecture, at Haverford College, Temple University, the University of Aix-Marseille, and in the USSR, Germany and England. Swan specialized in Russian music and his particular interest in music for the Eastern Orthodox liturgy is reflected in many of his own compositions. He was critical of 18th-century chants with chromatic Western harmonizations, preferring music based on earlier Russian sources, harmonized in modal style, with a judicious use of dissonance and Western imitative procedures.

He was the uncle of the British entertainer and composer Donald Swann.

RAMONA H. MATTHEWS

Swan, Marcus Lafayette (*b* 1827; *d* Bellefonte, AL, ?1869). American composer and tune book compiler. With W.H. Swan (probably his father, William H. Swan, *b* 1798), he compiled a tune book in seven-shape notation, *The Harp of Columbia* (published in Philadelphia, printed in Knoxville, 1848); he is referred to as the publisher and W.H. Swan as the primary composer and compiler. Seven issues

had been published by 1855, the last consisting of 5000 copies. Swan compiled a second shape-note tunebook, *The New Harp of Columbia* (published in Bellefonte, AL, printed in Nashville, 1867, repr. 1919/*R*), which was issued under his name alone; it included his own compositions and a sizable number by Lowell Mason. *The New Harp* is still used in 'old harp' singings in eastern Tennessee. (*See also* SHAPE-NOTE HYMNODY, §3.)

HARRY ESKEW

Swan, Timothy (*b* Worcester, MA, 23 July 1758; *d* Northfield, MA, 23 July 1842). American composer and tune book compiler. His musical education consisted of several weeks' study in a singing school and some fife practice in the Continental Army. He lived mainly in the Connecticut River valley, first in Northfield, moving to Suffield, Connecticut, around 1780 and returning to Northfield in 1807. While in Suffield he worked as a hatter and merchant, and issued a collection of secular duets (14 original) entitled *The Songster's Assistant* (Suffield, CT, *c*1786), and the tune book *New England Harmony* (Northampton, MA, 1801), containing 63 original sacred pieces. Swan's music had become well-known through manuscript circulation by the mid-1780s when it began to be published, though his own tune book sold poorly. Nevertheless, his fuging-tunes 'Bristol', 'Montague' and 'Rainbow' were among the 100 most frequently printed compositions in American tune books before 1811, while the hymn tune 'China' was a standard at New England funerals in the 19th century. He was a gifted melodist (for example, the psalm tunes 'Leghorn' and 'Ronda') and his music is highly characteristic of the early New England idiom, its total diatonicism, strong linearity and unconventional spacings and doublings suggesting unfamiliarity with keyboard instruments and only a limited acquaintance with music theory. The Timothy Swan Papers at the American Antiquarian Society in Worcester contain music manuscripts, a portrait, correspondence, biographical notes and other documents. Other music manuscripts are held at the Kent Memorial Library in Suffield, the Connecticut Historical Society in Hartford and the Boston Public Library.

NYM COOKE

Swan, W.H. (*fl* Knoxville, TN, 1848). American tune book compiler and composer, probably identifiable with William H. Swan jr, the father of MARCUS LAFAYETTE SWAN.

Swanee whistle [swannee whistle, slide whistle, song whistle, piston flute, jazz flute, lotus flute, piston pipe, bird warble] (Fr. *flûte à coulisse*, *sifflet à coulisse*, *jazzo-flûte*; Ger. *Lotosflöte*, *Stempelflöte*; It. *flauto a culisse*). A stopped duct flute, which has no finger-holes, the pitch being altered by means of a piston or stopper, moved up and down inside the cylindrical tube from the lower end by one hand. Folk versions are normally made of cane or bamboo with a cloth-covered, padded piston-head; modern Western examples are usually of plastic or metal, with a tightly fitting leather washer for the piston-head (the principle resembles that of a bicycle pump).

Piston flutes are played in parts of Asia, Africa and the Pacific. In Europe they are known principally as toys and, since the second half of the 18th century, have been incorporated in some BIRD INSTRUMENTS. The swanee whistle is of 19th-century origin, and was popular in light music in the 1920s (hence its jazz names). Slide saxophones, including a soprano 'Swanee sax', were also occasionally used (experimental slide saxophones and clarinets were also built in the latter part of the 20th century). Composers began to score for the swanee whistle at around the same time: Ravel was probably the first, using it to evoke the sounds of a garden at night in *L'enfant et les sortilèges* (1920–25). It also appears in William Russell's *March Suite* (1936) and Leonard Bernstein's two best-known musicals *On the Town* (1944) and *West Side Story* (1957). Five swanee whistles are included in Berio's *Passaggio* (first performed 1963), and other composers who have written for it include David Bedford, Derek Bourgeois, Henry Brant (at least three works), Cornelius Cardew, Hugh Davies, Peter Maxwell Davies (at least four works), Jean Françaix, Alberto Ginastera, H.K. Gruber, Krzysztof Penderecki, Hans Werner Henze (at least three works), Robin Holloway, Wilhelm Killmayer, György Ligeti, Francis Miroglio, Dubravko Detoni (three works), Peter Schickele (as 'P.D.Q. Bach'), Dieter Schönbach, Dimitri Terzakis and the jazz guitarist Sonny Sharrock. Percy Grainger devised a 'free music' machine in 1950 in which a swanee whistle and two recorders were played from a hand-cut punched paper tape.

The origin of the name is, like its spelling, uncertain; there does not appear to be any direct link with the 'Swannee' (i.e. Suwannee) River mentioned in Stephen Foster's song *Old Folks at Home*.

HUGH DAVIES

Swann, Donald (Ibrahím) (*b* Llanelli, 30 Sept 1923; *d* London, 23 March 1994). English composer, writer and performer. Born into a Russian refugee family of amateur musicians, he remained largely self-taught in spite of being an external student at the RCM while still at Westminster School. He studied languages at Oxford where he resumed a schoolboy friendship with Michael Flanders (1922–75). From 1948 to 1956 they contributed topical point numbers, such as *Design for Living* and *Guide to Britten*, to intimate revue in London. Flanders and Swann opened their first two-man show, *At the Drop of a Hat*, in 1956. For 11 years they delighted West End and Broadway audiences with their genial, literate and witty satire, peppered with musical jokes. Their songs celebrated the vagaries of the British way of life, and portrayed a whole bestiary, including *The Gnu* and *The Hippopotamus*. Their second show, *At the Drop of Another Hat*, closed on Broadway in 1967, after which they collaborated occasionally until Flanders's death.

Swann was a prolific composer with a gift for instantly memorable melody and a remarkable facility for assimilating diverse musical styles. The presence of Rachmaninoff and the Russian folksongs of his childhood pervade

his work. During the war he served in Greece, where the native music with its elastic rhythms and throbbing bouzouki accompaniment had a profound and liberating effect on his output. He has written a body of religious music, especially for schools, and composed several musicals, operas, cantatas and substantial song cycles. He was the nephew of the American musicologist Alfred J(ulius) Swan (1890–1970), and his writings include an autobiography, *Swann's Way: a Life in Song* (London, 1991, 3/1997).

LEON BERGER

Swann, Frederick (Lewis) (*b* Lewisburg, WV, 30 July 1931). American organist. He learnt the piano and the organ from an early age and was appointed to his first church position at the age of ten. He attended the School of Music at Northwestern University in Illinois, studied the organ with Thomas Matthews and took the MM degree in 1952. He later studied with Hugh Porter at the School of Sacred Music at Union Theological Seminary in New York, graduating with the MSM degree in 1954. During this formative period he was influenced by such artists as Charles Courboin, Carl Weinrich and André Marchal. His remarkable career as a church musician has included the following positions: assistant organist, First Methodist Church, Evanston, Illinois (1948–52); organist director, First Baptist Church, Evanston (1950–52); associate organist, St Bartholomew's, New York (1952–6); acting organist/director, Brick Presbyterian Church, New York (1952–4); organist, Riverside Church, New York (1957–67); director of music, Riverside Church (1966–82); director of music, Crystal Cathedral, Garden Grove, California (1982–98), after which he became organist in residence at the First Congregational Church, Los Angeles. At the Crystal Cathedral he directed 16 performing groups, and the cathedral's Sunday services were seen on television by millions of viewers throughout the world. An outstanding artist, eclectic in the best sense of the word, Swann has given numerous recitals throughout the USA and Europe, has dedicated many new instruments throughout the USA and has performed with the New York PO, the Chicago SO, the San Francisco SO, and many other leading orchestras. He has judged competitions, led workshops (both organ and choral), and acted as a consultant on pipe organs. Swann's choral and organ compositions are published by Fred Bock Music Company and Hinshaw Music, Inc. His recordings include organ and choral music by Tournemire, Langlais, Duruflé, Franck, Reger, Sowerby, Karg-Elert, Mendelssohn, Bach and many American composers.

CHARLES KRIGBAUM

Swansea. City in Wales. A tradition of organized music-making in Swansea can be traced back to the late 18th century at least (see Thomas), but Swansea owes its present importance as a centre for music mainly to developments which have taken place since World War II.

The Swansea Festival of Music and the Arts was inaugurated in 1948 and is held annually in October. While including occasional participation from local choirs, its main aim has been to attract orchestras, singers and instrumentalists from elsewhere in Britain and abroad, following the pattern established at Edinburgh, although on a more modest scale. Several works have been commissioned from Welsh composers, notably Daniel Jones, who lived in the city for most of his life. The Gower Festival, held annually in July since 1976 in various venues in the surrounding district, has concentrated more on music for small ensembles; its commissions from Welsh composers have included several of Jones's string quartets.

The long traditions of choral singing in Swansea are well represented by the Swansea Philharmonic Choir, founded in 1960 by Haydn James, and the Swansea Bach Choir, founded five years later by John Hugh Thomas. Between 1965 and 1983 Thomas also organized an annual Bach Week at Swansea University, with specialist lectures and recitals concentrating on the music of Bach and his contemporaries. The city is regularly visited by the WNO.

MALCOLM BOYD

Swanson, Howard (*b* Atlanta, GA, 18 Aug 1907; *d* New York, 12 Nov 1978). American composer. His family moved from Atlanta to Cleveland where he studied the

piano from the age of nine. In 1937 he graduated from the Cleveland Institute of Music and in 1938 studied in France with Nadia Boulanger; he remained in Europe during the years 1938–41 and returned later to travel and study from 1952 to 1966. He settled permanently in New York in 1966. Although his compositions were performed as early as 1946, he first attracted national attention when fellow African American Marian Anderson sang his *The Negro Speaks of Rivers* at a New York recital in 1949. She later sang other works by him on concert tours. His Short Symphony, given its première by Mitropoulos and the New York PO in 1950, received the New York Music Critics' Circle Award in 1952. Other honours included Rosenwald and Guggenheim fellowships, a National Academy of Arts and Letters grant and the William and Nona Copley Award. His compositions were frequently played in special series such as the Composers' Forum at Columbia University, the American Music Festival, the American International Cultural Relations concerts in Europe, the Edinburgh Festival and other international music festivals.

Swanson wrote graceful, appealing melodies and used individual harmonic colouring in a basically neo-classical style that allows for free use of dissonance. Critics have labelled his music elegant, intense and spare, while noting at the same time the ever-present, although subtle, influence of black American folk music idioms.

Swarbrick, Dave [Cyril, Eric] (*b* London, April 1941). English folk musician. He spent his early years in Birmingham, where he did his first professional gig with Beryl Marriot's Ceilidh Band and went on to play for four years with the Ian Campbell Folk Group. In was his collaboration with the guitarist MARTIN CARTHY that brought him to the fore on the folk circuit. In 1967 they first recorded 'Byker Hill' on the album of the same name. In 1970 he joined the folk-rock band FAIRPORT CONVENTION, having guested on their album *Unhalfbricking* (1969), after a crash in which Martin Lamble, Fairport's drummer, died. He became Fairport's longest serving member.

Throughout the 1970s Swarbrick became ubiquitous on the folk scene. Fairport Convention disbanded in 1979 when Swarbrick left because of increasing deafness. He returned to acoustic music, and his career picked up momentum with several solo albums (1976, 1977, 1981) illustrating the breadth of Swarbrick's influence and featuring various members of Fairport, including RICHARD THOMPSON.

By the early 1990s Swarbrick had teamed up again with Martin Carthy, with whom he produced two albums. Both served to underline a rekindling interest in traditional folk music.

Swarenote. *See* SQUARE.

Swarowsky, Hans (*b* Budapest, 16 Sept 1899; *d* Salzburg, 10 Sept 1975). Austrian conductor and pedagogue. He studied theory with Schoenberg (from 1920) and Webern (until 1927), and conducting with Weingartner and Richard Strauss. He held appointments at the opera houses of Stuttgart, Hamburg and Berlin, but was not allowed to conduct in Germany between 1936 and 1945, and so turned to opera management (Munich, Salzburg Festival), and sometimes worked abroad (Zürich Opera, 1937–40). For a short time in 1944 he was conductor of the Polish PO in Kraków and from 1946 to 1948 was conductor of Vienna SO. After the war, invitations to conduct in international opera houses and concert halls became frequent. He was director of the opera house in Graz from 1948 to 1950; in 1957 Karajan, who had recently become director of the Vienna Staatsoper, appointed him permanent conductor and he also succeeded Karl Rankl as musical director and principal conductor of the Scottish National Orchestra, 1957–9. Swarowsky's interpretations, particularly in Classical works, always followed the score faithfully, an approach that he advocated in his teaching (he became director of the conducting class at the Vienna Music Academy in 1946) and in his articles. Abbado, Mehta, Timothy Vernon and Ralf Weikert were among his students. His interpretations of the symphonies of Mahler and Bruckner were particularly commended, and he was a strong advocate of the works of Schoenberg, Berg and Webern. He had close links with Richard Strauss, who called him

his 'secret associate' on the libretto of *Capriccio*, and he made German translations of operas by Monteverdi, Gluck, Haydn, Verdi and Puccini.

RUDOLF KLEIN/R

Swarsbrick, Thomas. *See* SCHWARBROOK, THOMAS.

Swart, Peter Janszoon de (*b* ?Montfoort, 1536; *d* Utrecht, March 1597). Dutch organ builder. He used the family name de Swart only towards the end of his life; his son and successor, Dirk Peterszoon de Swart (*d* Utrecht, 20 Nov 1626), used the family name regularly. Peter signed all documents 'Peter Jans'.

Although de Swart was probably born in Montfoort, he was living in Utrecht by 1560. He began his career as a partner of the Utrecht organ builder Cornelis Gerritszoon (*d* 1559), whose father (Gerrit Peterszoon, *d* Haarlem, 1527) and grandfather (Peter Gerritszoon, *d* Utrecht, 1480) both built important organs in and around the city of Utrecht. After the death of Cornelis Gerritszoon, de Swart finished the organ in the Hofkapel of The Hague (1560). Some years later, de Swart associated himself with Jan Jacobszoon du Lin (van Lyn) (i). Dirk Peterszoon de Swart worked with Jacob Janszoon du Lin (*d* before 29 Jan 1623), who in turn was succeeded by Jan Jacobszoon du Lin (ii) (*d* *c*1632). Dirk Peterszoon de Swart stopped building organs in *c*1620, when he became a city bailiff.

Before 1560, the organs in Utrecht were built not only by these local organ builders, but also by such masters as Jan van Covelens from Amsterdam (*d* 1532) and Hendrik Niehoff from 's-Hertogenbosch (*d* 1560). Peter Janszoon de Swart must be seen as the perpetuator of the old Utrecht traditions, but also as an artist who assimilated the radical improvements of the Brabant organ school. He was more conservative than Niehoff, for in his large new organs (like that for Utrecht Cathedral, 1569–71) he still built a 'blokwerk', a principal chorus not divided into separate stops.

De Swart's output is impressive. He was responsible not only for the repair of all organs in the city and province of Utrecht, but also worked in almost all the cities in western Holland and in a number of cities in Gelderland. Although the Reformation affected the liturgical function of the organ, the importance of the instrument in public musical life increased considerably. This explains why de Swart had so much work even after the Reformation (1573 in western Holland, 1579–80 in Utrecht).

Although none of de Swart's organs survives in its original form, fragments of his work do exist. The present organs in Utrecht Cathedral and in the Hooglandse Kerk (St Pancras) of Leiden still contain numerous stops which clearly demonstrate his mastery.

Through this work, de Swart had regular contact with the greatest musicians of the country, including Sweelinck (restoration and repairs to the organs in the Oude Kerk, Amsterdam), Cornelis Boskoop in Delft, Floris and Cornelis Schuyt in Leiden, Philips Janszoon van Velsen in Haarlem and Peter Wyborgh in Utrecht.

MAARTEN ALBERT VENTE

Swayne, Giles (Oliver Cairnes) (*b* Hitchin, 30 June 1946). English composer. He was educated at Ampleforth College and at Cambridge University, where he worked with Leppard and Maw before spending three years at the RAM as a student of Birtwistle, Bush and, once again, Maw. During the years 1976 to 1977 he attended several of Messiaen's classes at the Paris Conservatoire and from 1981 to 1982 made a study visit to the Gambia and southern Senegal – a formative experience he put to creative use as composer-in-residence to the London borough of Hounslow, 1980–83. Together with his second wife, the Ghanaian, Naaotwa Codjoe, he lived in a village near Accra, Ghana, from 1990 to 1996; he has now settled in London.

Following the success of *CRY* (1979), his visionary tone poem for unaccompanied voices, Swayne felt himself at a turning-point, and the opportunity to work with the untrained talents of London school-children was particularly productive in forcing him to submit to a radical self-questioning vis-à-vis his wider musical purpose. Focussing on melody and on a feelable, danceable rhythm, he wrote a succession of relatively small-scale pieces, mostly intended for children or amateurs, that explored ways of communicating sophisticated musical thought in terms of a technique that would neither exclude nor deter the lay majority.

Swayne's stylistic switch to the kind of virtuoso simplicity heard to such memorable effect in *Symphony for Small Orchestra* and *Naaotwa Lala*, or even his brilliantly Mozartian chamber opera *Le nozze di Cherubino*, all dating from 1984, may initially have alienated those who had already cast him as the forward-looking composer of *Pentecost Music* (1977); but time has confirmed the apparently diverse works of the mid-1980s as the product of the same inventiveness. For Swayne is, above all, a composer whose fascination with structural design means that no matter what style he may choose to adopt for a particular piece, the amount of detailed planning from which it springs varies only in kind. Even *CRY*, apparently free-flowing in inspiration, is based on a musical structure of the most intellectual kind. Yet his refusal to be stylistically pigeon-holed has tended to obscure the fact that his output reveals a striking consistency with regard to gesture; as heard in *The Silent Land* (1996) or *Chinese Whispers* (1997), the notion of gestural refrain remains a positive influence on the increasingly contrapuntal works of the 1990s.

In 1999 *Havoc* was commissioned by the BBC to mark the 75th anniversary of the BBC singers, and given its première at the BBC Proms that year.

SUSAN BRADSHAW

Swaziland. Country in southern Africa located between Mozambique and South Africa. It has an area of 17,400 km² and a population of 985,000. British colonial rule established Swaziland as a protectorate in 1903 and independence was achieved in 1968. The population is 84% Swazi and 10% Zulu, and the kingdom's official languages are English and siSwati. Both the siSwati- and Zulu-speaking peoples of Swaziland belong to the Nguni group of Bantu language speakers and speak a tonal language with clicks adopted from neighbouring San and Khoikhoi peoples. Traditional culture is maintained in the country and annual ceremonies are performed and preserved at a national level. Music in Swaziland is largely homogeneous; Swazi vocal music is distinctive but bears a resemblance to Zulu choral singing (Rycroft, 1982, p.315).

1. Terms and concepts. 2. Instruments. 3. Structures: (i) Tonality (ii) Rhythm (iii) Vocal polyphony.

1. Terms and concepts. Music is an integral part of everyday Swazi and Zulu life. Songs are often specific to age-groups or to varying functions, occasions or activities. Swazi songs are frequently instructional, functional or directional (when incorporated into dancing); they may also communicate Swazi mores or collective or individual opinions. Songs are often a permissible forum for the criticism of authority. Women tend to sing in chest voice in their lower ranges, adopting a slow 'diaphragm vibrato' (ibid., 322). A male choral style known as *umbholoho* employs *fortissimo* yelling and falsetto singing.

The term for singing in siSwati, *hlabelela*, refers largely to *kwekhuzela* (choral recitation), a singing style with rising and falling pitches that do not rely on exact musical notes. The category of *hlabelela* does not include *tibongo* praise poetry, although *tibongo* resembles song more than speech. Regular metrical organization is present in *hlabelela*, while the use of fixed melodic pitch values is not essential (ibid., 316). *Ingoma* (pl. *tingoma*) is the general siSwati term for song, of which there are several categories such as *ingoma yebutimba* (hunting song) and *tingoma tekuhlakula* (weeding songs). *Tingoma tekuhlakula* are sung in fields and function as the means for regulating and coordinating the movements of hoes. Categories of songs are also assigned to traditional *emabutfo* age-grade regimental systems, which still operate in Swaziland. *Tingoma temajaha* (regimental songs) are associated with drilling, parading and marches through the country. Many other forms of songs are used in various contexts, including hunting and walking songs, songs performed in the telling of folktales, children's singing-games and lullabies.

2. Instruments. The Swazi and Zulu peoples have historically used instruments primarily for individual music-making; communal music-making has been vocal rather than instrumental. Drums are not known to have existed in either Swazi or Zulu musical performance, although there is evidence of rhythmic patterns being struck on warriors' shields with weapons in war songs. Hand clapping is typically performed by women with the palms flat as an accompaniment to dance-songs; women

also wear *emafahlawane* (ankle rattles) in some wedding dances (ibid., 320). Metal police whistles are the only other instruments used in dancing.

Flutes associated with cattle-herding are known as *umntshingozi* or *livenge*. These are typically long flutes without finger-holes; the air-channel is manipulated by the shaping of the tongue. These instruments are played by boys and men. The Swazi *utiyane* mouth-resonated musical bow was sounded by friction produced by the bowing of the string with a stalk. The *ligubhu*, a large musical bow used for accompanying solo song, included a calabash resonator attached near the lower end of the bow; now there are no known players of the instrument in Swaziland.

The *makhweyane*, another form of resonated bow, is in limited use by young unmarried women and men. Its copper or brass wire string produces two open notes since it is deliberately stopped near the string's centre with a wire noose. Additional fundamentals can be obtained by using a knuckle of the left hand to stop the string just below the noose used to divide it.

3. Structures.

(i) Tonalilty. There is great variance among the scales used by various Nguni peoples. Fourths and fifths are important structural intervals; larger intervals tend to occur at the lower end of scales and smaller intervals at the top (ibid., 322). Dance-songs performed in Zulu and Swazi communities typically draw on variations or combinations of three-note tonal groupings. A common grouping or mode used in solo songs accompanied by the Zulu *ugubhu* bow (Swazi *ligubhu*) is *g–b–c′* (plus octave extensions); the Swazi employ a variant containing *a* rather than *g* (*e–f–a–b–c′*) (ibid., 323).

(ii) Rhythm. Tempos of Swazi and Zulu choral music and older ceremonial dance-songs are slow. These genres use both duple and triple metres. Nguni music is not rhythmically complex, perhaps due to the lack of Nguni percussion instruments. In recreational dance-songs of youths, tempos are much faster; intricate additive patterns such as those used in neighbouring San dance-songs are not used, but additive groupings such as 3+2+3 are employed in some bow-songs. The relationship between vocal rhythms and the rhythms played by the bow is often loose; natural speech rhythms tend to be retained (ibid., 324).

(iii) Vocal polyphony. In his outline of Swazi and Zulu multi-part vocal music, Rycroft (ibid., 324–5) suggests that a fundamental feature of this singing style is that there are always at least two voice parts singing words that do not necessarily correlate; these parts never begin together. Leader–chorus forms are performed in antiphonal alternation or, more often, in a complicated series of overlapping phrases; at its most extreme the overlapping of leader and chorus is almost total when the re-entry of the leader occurs soon after the chorus responds.

In both Zulu and Swazi songs there are more than two offset parts. Since the voices do not begin or end phrases together, there is no sense of what might be considered resolution or cadence. There also seems to be a direct relationship between the performance of bow-songs, in which sung parts are extemporized to the accompaniment of ostinato patterns played on the bow, and that of choral songs.

GREGORY F. BARZ

Sweden (Swed. Sverige). Country in northern Europe. It occupies the central part of Scandinavia, sharing frontiers with Norway to the west and Finland to the east; it is separated from Denmark by the Øresund strait to the south-west. Southern Sweden was united under one king in the 12th century, and by the Union of Kalmar (1379) Sweden, Norway and Denmark were united under Danish rule. With the accession of Gustav Vasa (1523) the country became independent and subsequently rose to a peak of imperial power in the 17th century, when its provinces included Finland (which had long been under Swedish rule), Livonia, Pomerania and Bremen; most of these were lost under the Peace of Nystad (1721).

I. Art music. II. Traditional music.

I. Art music

1. To 1600. 2. The 17th century. 3. 1718–1809. 4. 1809–90. 5. From 1890.

1. To 1600. Archaeological finds in Sweden include pre-Christian musical instruments, the most famous of which are the bronze trumpets of about 1300–500 BCE. Among other discoveries are flutes, animal horns, rattles and a few bridges from string instruments, some of which were probably imported. Stone carvings showing instruments have been interpreted as depicting religious ceremonies; little is known about other functions that music may have had. In the 11th century Christian missionaries introduced a new musical culture. Liturgical chant, at first following English models, soon became dominated by continental influences. As the ecclesiastical organization developed, the needs of church music were also taken into account, and detailed regulations for cathedral music are known from several dioceses. Monasteries were also important musical centres, parts of the monastic liturgical traditions being taken over by the lay churches; the Dominicans were especially influential, above all in Finland, the eastern part of the kingdom. Similarly, an originally Swedish tradition was taken to other countries, including England, by the Order of the Holy Saviour, founded in the 14th century by St Bridget. All convents of the Brigittine order used a special Office in honour of the Virgin, the *cantus sororum*, consisting of seven *hystoriae*, one for each day of the week. Compiled by Petrus Olavi, the Office was set mainly to well-known Gregorian chants, as was Swedish liturgical poetry in general. Gregorian chant of medieval Sweden survives in several complete manuscripts and in thousands of fragments. A

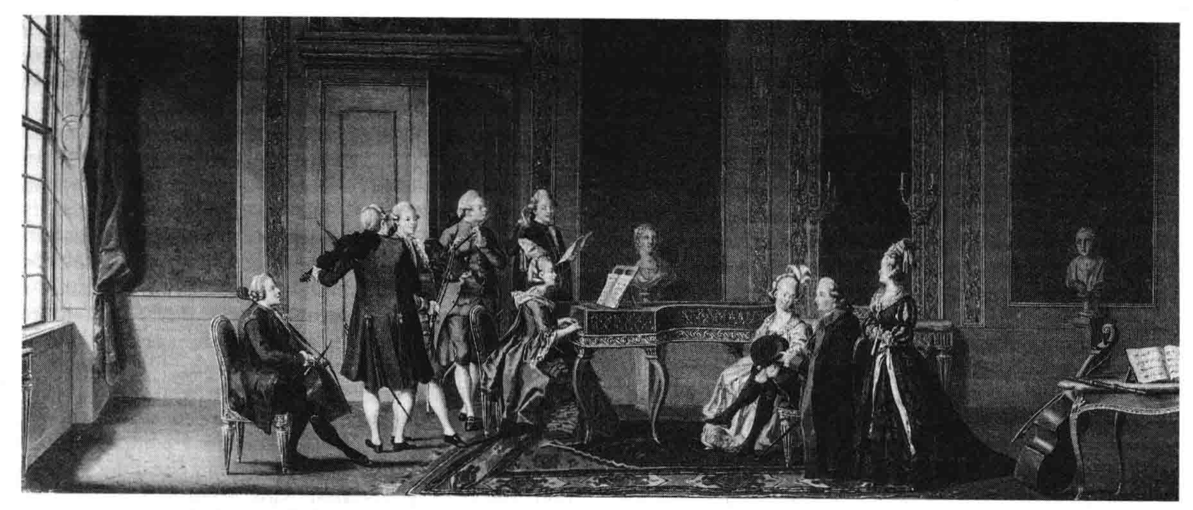
gradual printed in Germany, probably in 1493, for the diocese of Västerås, has been reprinted in facsimile as *Graduale arosiense impressum* (1959–65).

The Reformation did not destroy the Gregorian tradition, even though much of it was abandoned because of the introduction of non-biblical texts. Although parts of the liturgy, such as the Ordinary of the Mass, were translated into Swedish, singing in Latin continued, at least in cities with schools; while the State deprived the Church of its economic means and cathedral music could not be maintained, sacred music remained an important subject in schools. In order to revive the Latin school song repertory in Sweden the young Finnish-born student Theodoricus Petri Nylandensis edited his famous collection, *Piae cantiones* (Greifswald, 1582).

Parisian Ars Antiqua polyphony seems to have been performed in Uppsala Cathedral in the 13th century, for the choir statutes of 1298 record occasions on which organum was sung. There are remains of several organs from about 1400, but they seem not to have been used for polyphonic music; a more modern type is represented by an organ in Malmö Museum, built about 1500 for the church of St Petri in Malmö. A report of a church festivity in 1489 at the Brigittine Vadstena Abbey mentions polyphonic music (*discantus in nova mensura*), although Bridget herself had forbidden polyphony; it was performed by schoolboys and by the *cantores* of Sten Sture the Elder, who then governed the country.

Court music did not become firmly established until Gustav Vasa freed Sweden from the union with Denmark in the early 16th century. Gustav and other members of his dynasty were very interested in music; his son Erik XIV was a composer, and a fragment of a Latin motet by him survives. As Duke of Finland Erik's brother Johan kept his own court musicians in Åbo (Turku), and as King of Sweden he later tried in various ways to enrich the new Swedish liturgy and its music, although without lasting results.

2. THE 17TH CENTURY. In the many cities founded after 1600 musical life was regulated by the guild system, the church organist being the leading musician. Singing, especially at funerals, was still an important source of income for the schools, although school music became predominantly instrumental. At Uppsala University some of the printed dissertations were on musical subjects. In the last quarter of the 17th century collegia musica were organized by the professors Olof Rudbeck and Harald Vallerius, who were also responsible for the musical editing of the new official hymnbook (1697), which had a figured bass for most of the melodies. It was the first Swedish hymnbook with all the melodies printed, although, since 1530, there had been many hymnbooks containing only texts; a 1586 edition contains the earliest Swedish music printing. Congregational hymn singing became more widespread during the 17th century. The Thirty Years War (1618–48) had a great effect on musical life of the country, partly through instruments and music taken as war booty. Many German organists, organ builders, composers and other musicians went to Sweden. Most important of the German court musicians who went to Stockholm about 1620 was the composer Andreas Düben, a pupil of Sweelinck and the first of a dynasty of *Hovkapellmästare*.



In 1646 Queen Christina engaged six French musicians for her court ballets, and it was they who introduced the violin to Sweden. They were replaced in 1652 by an Italian opera company under the direction of Vincenzo Albrici, whose 'Fadher wår' (the Lord's Prayer) was the first choral work with a Swedish text. The queen also heard English consort music played by Ambassador Whitelocke's musicians; after her abdication in 1654 she lived in Rome, where Alessandro Scarlatti was among those in her service. During Charles XI's reign the cultural life of Sweden lay fallow. Attempts were made to produce pastoral dramas with musical elements, such as Johans Celsius's *Orpheus och Eurydice* in the 1680s. But it was not until Nicodemus Tessin contracted Claude de Rossidor's French troupe in 1699 that the first steps towards Swedish opera were taken.

Gustaf Düben (i) succeeded his father as *hovkapellmästare* and as organist of the German Church in Stockholm in 1663. Among his works the *Odae sveticae* (1674) was the first song collection with Swedish texts. In five volumes of *Motteti e concerti* Düben transcribed over 250 pieces of sacred music, mostly Italian, into organ tabulature; he also collected hundreds of works by contemporary German composers such as Buxtehude, Pfleger, Capricornus and Geist. His collection (in *S-Uu* since 1732) is now regarded as one of the main sources of 17th-century music.

3. 1718–1809. The political changes in Sweden after 1718 had important consequences for the country's musical life. Although the court and the nobility kept their leading positions, the middle class became increasingly influential. In Stockholm, Sweden's leading musical city throughout the 18th century, the first public concerts were given in 1731 by the Hovkapell; later the 'Musical Areopague' of the Utile Dulci society (active 1766–86) arranged some 'Cavalier Concerts' (1769–70). Music education was largely restricted to the cathedral schools in various cities. Church music consisted mainly of performances of Passions and oratorios by Pergolesi, Graun and others; the hymnal of 1697 remained the official one for services until 1820–21. During the 18th century writings on musical subjects appeared, culminating in the first book in Swedish on music history, A.A. Hülphers's *Historisk afhandling om musik* (1773), containing an extensive inventory of Swedish organs.

Opera at first occupied a somewhat secondary position and was in general restricted to court festivities, although many plays with music were performed at smaller theatres. For a long time most of the works were of foreign origin and most of the artists were engaged from abroad. An Italian opera company arrived in 1755 but soon dispersed; however, its leader, the composer F.A.B. Uttini, settled in Stockholm and in 1767 became leader of the Hovkapell. During the reign of Gustav III (1771–92) many projects initiated during the previous decades were realized: the Swedish Royal Academy of Music was founded in 1771, the Royal Opera at Stockholm was inaugurated in 1773, and an operatic style based on the ideas of Gluck was developed under the king's patronage.

Many of the composers living in Sweden were of foreign origin, including H.P. Johnsen, who wrote stage works, instrumental pieces and vocal odes; during the 1770s and 80s the German-born composers J.M. Kraus, J.G. Naumann, J.C.F. Haeffner and G.J. Vogler wrote operas and instrumental works, making that period outstanding in Swedish music history, especially for opera. The most important native composer was J.H. Roman, who in his

1. 'A Musical Gathering': painting by Pehr Hilleström, c1779 (Nationalmuseum, Stockholm)

extensive instrumental production absorbed influences from Handel and from contemporary Italian music; in his Mass he 'showed the fitness of the Swedish language for church music'. Composers of instrumental music were J.J. Agrell, who lived in Germany from the 1720s; Ferdinand Zellbell (i), A.N. von Höpken and Johan Wikmanson, who wrote fine string quartets and other chamber music (Zellbell and von Höpken also wrote operas). Parody songs became popular, culminating in the works of C.M. Bellman, whose collections were published by Olof Åhlström, the first Swedish music printer and editor of the periodical *Musikaliskt tidsfördrif* (1789–1834) as well as a composer.

4. 1809–90. Sweden's political and cultural history reached a low ebb during the decades after the assassination of Gustav III (1792). After 1809 (the year of the new constitution) musical life gradually revived in a new form. The initiative was largely taken over by the middle classes, which, despite many idealistically inspired efforts to promote musical activity, led to the domination of narrow-minded dilettantism. Many new music societies were founded, not only in Stockholm (1800), but also in towns like Göteborg (1809), Visby (1815) and Jönköping (1817). After the mid-century, as communications improved, cities and audiences grew and the demand for higher musical standards became more widespread, professional orchestras and music institutions came into being. With the reorganization of the Stockholm Conservatory in 1866 music education became more firmly established. The cancellation of Åhlström's royal privilege in 1823 opened the way for a number of music printing firms, but many of them were short-lived. Later the music publishing trade was dominated by a few firms, all in Stockholm: A. Hirsch (from 1842), A. Lundquist (1856) and Elkan & Schildknecht (1859).

During the first half of the 19th century the stylistic trends of Swedish composers were determined by a deep veneration for the Viennese Classicists, as well as certain Romantic orientations and a growing interest in folk music that was furthered by the collection *Svenska folkvisor* (1814–17, edited by E.G. Geijer, A.A. Afzelius and J.C.F. Haeffner) and by many later musicians, among them J.N. Ahlström and Richard Dybeck. At first the amount of instrumental music composed was small; among the most important composers were B.H. Crusell (sinfonie concertanti, chamber music), Geijer (chamber music with piano) and A.F. Lindblad (two symphonies and seven string quartets). The only significant Swedish operas to be staged were Eduard Brendler's *Ryno* (1834) and Lindblad's *Frondörerna* (1835); stage music consisted mainly of Singspiele in folk style such as Andreas Randel's ever popular *Värmlänningarne* (1846). Most of the music composed in Sweden consisted of smaller vocal works, for example lieder by Crusell, Geijer, Lindblad, J.E. Nordblom, Isidor Dannström, J.A. Josephson and Gunnar Wennerberg, and choral music and vocal quartets by Geijer, A.F. Lindblad, O.J. Lindblad and Prince Gustaf. The author C.J.L. Almqvist wrote *Songes* ('Dreams'), strange and expressive melodies without accompaniment. The works of Franz Berwald, one of the greatest Swedish composers, found no real sympathy among contemporary musicians and listeners because of their individual and personal style; a deeper understanding was apparent only at the end of the century.

In the 1840s and 50s a number of young Swedish musicians studied abroad, especially at the Leipzig Conservatory, thus introducing influences from new German music, which along with the vital interchanges with Danish and Norwegian music determined stylistic developments during the following decades. Symphonic works were produced in greater number (by Ludvig Norman, J.A. Hägg, O. Byström and Andreas Hallén), as were chamber works (string quartets by Norman, violin sonatas by Emil Sjögren). A tenacious classicism and the influence of the German Romantics form the background to the expansive, sometimes symphonically conceived, works of Fritz Arlberg and Sjögren. On the stage operettas and vaudevilles came into favour, while at the Royal Opera, Stockholm, Wagner's works were performed, beginning with *Rienzi* in 1865, stimulating great interest and lively debate; Wagnerian influence is especially prominent in the works of Hallén. The operatic works of I.C. Hallström are more in the style of French opera, and his *Den bergtagna* (1874) was one of many attempts to create a national opera. The outstanding late 19th-century Swedish composer, Johan August Söderman, was notable for his stage music, his intensely expressive ballads, and above all his choral works and lieder.

5. FROM 1890. Towards the end of the 19th century the gradual creation of modern concert life provided a platform for the development of a wider range of musical creativity. Hallén, although belonging to the earlier generation, started this movement in the three main cities with the reconstruction of the Music Society in his native Göteborg (1872), the Philharmonic Society in Stockholm (1885) and the South Swedish Philharmonic Society in Malmö (1902). His isolated activities were followed by the creation of the first symphony orchestras, eventually to replace the operatic Hovkapell, which gave only infrequent orchestral concerts: the Stockholm Concert Society (1902), the Göteborg Orchestral Society (1905) and the much smaller orchestras in Gävle, Helsingborg and Norrköping (1911–12); there were many 'popular' concerts. In Stockholm platforms for this expanding concert life were, first, the concert hall of the Swedish Royal Academy of Music (1878), followed in 1926 by the present Konserthus; Göteborg's Konserthus (1935) replaced the wooden hall of 1905.

Against this background, three important composers of contrasting individuality appeared around 1890, revitalizing the somewhat dormant creative life and re-establishing links with European traditions: Wilhelm Peterson-Berger, a fervent Wagnerian but also a symphonist and miniaturist; Hugo Alfvén, who introduced a Straussian brilliance with his symphonies and nationalistic symphonic poems; and the great pianist and conductor Wilhelm Stenhammar, who gradually moved away from nationalism and found inspiration in Beethoven, Brahms, Berwald, Sibelius and Nielsen.

The years before World War I saw a new group of composers moving towards a more cosmopolitan language: Natanael Berg, who wrote several operas (notably *Engelbrekt*, 1929) and colourful symphonies; Oskar Lindberg, well known as a teacher and church musician; and Kurt Atterberg, who wrote an impressive series of nine symphonies as well as operatic works. Ture Rangström's songs are among the finest Swedish vocal music, while Edvin Kallstenius is noted for his 12-note works. These composers, especially Berg, Atterberg and Lindberg, were responsible for the organization of the Society of Swedish Composers (1918) and of the complementary STIM (Swedish Performing Rights Society, 1923), both of which have played an important part in supporting Swedish composers.

Stronger influence from European movements was introduced by three members of a new generation: Hilding Rosenberg, a symphonist and oratorio composer who linked Expressionism to a Nordic idiom largely independent of nationalism and who became the teacher of a considerable number of younger composers (Karl-Birger Blomdahl, Sven-Erik Bäck, Ingvar Lidholm etc.); Gösta Nystroem, who brought impressionism to Sweden, thereby strengthening the influence of French music; and Moses Pergament, a cosmopolitan of Finnish birth, Russian training and with a Jewish musical background. In the 1930s neo-classicism and French influence became prominent in the works of Dag Wirén and Gunnar de Frumerie, whereas Lars-Erik Larsson turned more to Sibelius and Nielsen. The 1940s saw the breakthrough of modernism with the varied activities of the Monday Group (Blomdahl, Bäck, Lidholm etc.), whose members revitalized Fylkingen (the Society for Contemporary Music, from 1950 part of the ISCM, with a well-equipped special hall for 'intermedia' performances, including a small electronic music studio) and created the important radio series 'Nutida Musik' and the Electronic Music Studio (EMS, one of the leading computerized studios).

During the 1950s there was a reaction to modernism among a group of Larsson's pupils who promoted a nationalist Romantic revival, influenced by Prokofiev and Shostakovich. Jan Carlstedt founded the concert society Samtida Musik (1960), which reacted against the avant-garde tendencies of Fylkingen and 'Nutida Musik'; the music of Hans Eklund, Maurice Karkoff and Bo Linde is also retrospective, whereas Gunnar Bucht is a more independent symphonist. Bengt Hambraeus was the first Swedish composer to visit Darmstadt and continental electronic music studios and introduced new styles and ideas to Sweden; Bo Nilsson followed similar paths. Within these groups many individual composers and styles form the complex reality. Among the older generation are Hilding Hallnäs, with Nystroem one of the leading composers in Göteborg; Sven-Eric Johanson, formerly a member of the Monday Group; Erland von Koch, who has pursued Dalecarlia folk traditions; Allan Pettersson, who has written long, Mahlerian symphonies; Åke Hermanson, known for moderately progressive orchestral works; Torsten Nilsson, who has written church music using modern techniques; and Hans Holewa, who brought Schoenbergian dodecaphony to Sweden. Younger composers include Arne Mellnäs; the organ and 'happening' virtuoso K.-E. Welin; J.W. Morthenson, noted for his 'metamusic'; Siegfried Naumann, who renounced his earlier works and started afresh in a radical idiom; and the prolific opera composer L.-J. Werle. There is also an active group of electro-acoustic music composers, including Knut Wiggen, pioneering as leader of the computer studio EMS (created in 1969), L.-G. Bodin, Sten Hanson and B.E. Johnson; after investigating text-sound elaborations these last three composers have gone their own different ways. A younger generation of electro-acoustic composers includes Tamás Ungvary, Akos Rózmann, Ragnar Grippe, Tommy Zwedberg, Rolf Enström, Åke Parmerud, Anders Blomqvist and Bo Rydberg. Ralph Lundsten evolved his more eclectic idiom in his private 'Andromeda' studio.

The 1960s produced another group of composers taught by Rosenberg, Blomdahl or Lidholm, among them Sven-David Sandström (later professor of composition at the Swedish Royal Academy of Music), Miklós Maros, Daniel Börtz and Anders Eliasson; subsequently composers such as Hans Gefors (especially with his operas), Pär Lindgren, Mikael Edlund, Anders Hillborg, Thomas Jennefelt, Anders Nilsson, Jan Sandström, Ole Lützow-Holm and Karin Rehnqvist have come to prominence.

Swedish Radio administers a music department, including a symphony orchestra and choirs (initially under Eric Ericson) that have become internationally known. The Institute for National Concerts, founded in 1963, and the Arts Council, 1974 enjoy increasing governmental support. There were 22 regional (formerly military) music corps in Sweden. In 1988 they and the regional offices of the Institute for National Concerts came under the control of local government. Opera companies were established in Göteborg in 1920 (with a new opera house inaugurated in 1994), in Malmö in 1944, and in Umeå and Karlstad in the 1970s. These, along with Levande Musik in Göteborg and Ars Nova in Malmö, exemplify the

decentralization of Swedish musical life. In 1971 the private conservatories in Göteborg and Malmö became national music academies.

Even opera, until recently confined to the Royal Opera in Stockholm and less numerous performances in Göteborg, Malmö and elsewhere, has gradually found new platforms. Rosenberg's five operas (notably *Marionetter* ('Marionettes', 1939), Blomdahl's *Aniara*, the world's first space opera (1959) and Bäck's nō-inspired *Tranfjädrarna* ('The Crane Feathers', 1957) established a modern tradition, successfully continued by Werle (his 'arena opera' *Drömmen om Thérèse* ('Dream about Thérèse', 1964), *Resan* ('The Journey', 1969), *Tintomara*, 1973, *Lionardo*, 1987, and *Animalen* ('The Animal Congress', 1979)) and Hans Gefors (*Christina*, 1987, *Parken* ('The Park'), 1992, *Clara*, Paris, 1998). After his TV opera *Holländarn* ('Dutchmen', 1967), Lidholm crowned his career with a setting of Strindberg's *Ett drömspel* ('A Dream Play', 1991) for television. Among younger composers, Jonas Forssell has written successful operas: *Hästen och gossen* ('The Horse and the Boy') at the Norlandsopera (1988), and *Riket är ditt* ('Thine is the Kingdom') for the Vadstena Academy (1991). The internationally famous Drottningholm theatre near Stockholm, built by C.F. Adelcrantz in 1766 and rediscovered by Anje Beijer in the 1920s, performs 18th-century operas using the original wooden machinery and many of the original flats and backcloths. Arnold Ostman, musical director from 1980 to 1991, has made several Mozart recordings based on Drottningholm productions.

II. Traditional music

The history of traditional music is in many ways the history of an ongoing dialogue between intellectuals from the middle classes and singers and fiddlers from the rural society. The Swedish middle class society has played an important role in 'discovering', saving and reviving the music of the rural society.

Since the beginning of the 19th century there has been a conscious collecting of traditional music in different parts of the country. Several revival movements have taken place, the last one in the 1970s. In addition, folk music expressions mix today, reflecting a sort of world music influenced by emigrant musicians, rock, jazz and music from non-European countries. Traditional musics in Sweden have in fact always been strongly influenced by music traditions from other countries, especially from Central and Western Europe. But repertory, instruments and dances have indeed emerged as a Swedish tradition with characteristic local variations and musical expressions. Certain parts of the country were quick to adopt innovations, particularly the coastal districts and the larger cities. Other areas, such as the province of Dalarna, were much more conservative.

Vocal and instrumental traditions in Sweden must be viewed in a Scandinavian context. *Spelmansböcker* (fiddlers' tune books) from the 18th century and the first half of the 19th have much in common in the Nordic area concerning repertory. This is also true with regard to texts and melodies in many of the vocal traditions. *Fäbodmusik*, a peculiarly functional vocal and instrumental music

associated with herding in the summer mountain pastures, is of particular interest.

1. Sources, collections and research. 2. Herding music. 3. Vocal traditions. 4. Instrumental music.

1. Sources, collections and research. Historical research is hampered by the lack of early sources. Though some song texts survive in manuscripts dating from the end of the 16th century, the major work of collection did not begin until prompted by antiquarian interest in the 17th century. The early 19th-century spirit of romantic nationalism inspired the work of collecting and notating melodies. Some of this work was published in E.G. Geijer and A.A. Afzelius's *Svenska folkvisor* ('Swedish folk-songs') in 1814–18. But this interest was almost entirely confined to the medieval ballad; other kinds of traditional singing were largely ignored until the mid-19th century.

The 1870s saw the formation of societies interested in the preservation and study of folk traditions, and large collections of material were received by such institutions. A considerable amount of recording of instrumental traditional music began somewhat later, in particular with the work of A. Fredin in Gotland. Foremost among other collections were Nils Andersson and Olof Andersson, who collected some 15,000 tunes from all but the northernmost parts of Sweden. About half of these were printed in *Svenska låtar* ('Swedish tunes') (N. Andersson, 1922–40). In the 1950s the Swedish Radio and the Svenskt visarkiv (Swedish Centre for Folk Song and Folk Music Research) began recording all types of folk music. Original materials are now kept in a number of state institutions including the Royal Library, the Nordiska Museet, Musikmuseet, Språk -och folkminnesinstictulet and the Svenskt visarkiv, as well as in regional museums and archives. Svenskt visarkiv also receives copies of material from other institutions.

Beside the collections with recorded materials, other materials are possible sources for traditional music. Many thousands of song texts were printed in more than 30,000 surviving broadsides that were printed between the end of the 16th century and the 1920s, including songs from oral tradition and new texts specially written for broadsides. An early source for instrumental music are 18th- and 19th-century *spelmansböcker* with written repertories of both traditional tunes and modern fashion dances.

Early research was concerned with the problems of origins and early history. Around the middle of the 20th century onwards, research moved away from the question of origins and was more concerned with social function, the development of melodic variants and performance. In assessing materials more consideration is now given to the bearers of tradition themselves or to the collectors.

Historical and socio-musical approaches to the study of Swedish traditional music today is often combined with ideological analysis. The new generation of ethnomusicologists often base their research on fieldwork. This has brought forward new questions and methods, but also new subjects of research, e.g. immigrant musics. Many of the qualified ethnomusicologists today are also active as folk musicians.

2. Herding music. In Sweden, as in Norway, much music is associated with herding. Traditional methods of intensive cattle breeding once practised in large areas of northern and central Sweden have survived in some isolated areas. Every farm had a *fäbod* (mountain dairy) around which the animals grazed freely during the summer months, watched over by dairy maids. A particular type of functional music developed. In order to call the cattle or to communicate with other people at a distance, the dairy maid can use a *lockrop* (herding call; ex.1), sung in a kind of falsetto at a very high pitch, by stretching the throat muscles taut. This herding call can be heard over a distance of 4 or 5 km. It may consist of either short phrases or long ornamented melodies, varying according to function and occasion as well as from one district to another. The technique itself is thought to be ancient, and it is also found in other such European mountain regions as the Alps, Pyrenees and the Balkan mountains of Bulgaria.

Signals used to warn of wild animals or to keep them away, were blown on a Lur (ii) (long wooden trumpet) or on a *bockhorn*, a trumpet made from a horn of a cow or a goat. The horn was boiled, cleaned out and given a number of finger-holes.

Knowledge of Swedish *fäbod* music is based partly on literary sources and collections made since the 1840s (particularly those of R. Dybeck), and partly on surviving examples of the tradition. Research on herding tunes and *lockrop* only began in the 1930s when Tobias Norlind examined the developmental aspects of the materials and concluded that a simple call was the original form, and the longer, melismatic calls were more recent. Carl-Allan Moberg presented his studies of herding music in two articles in 1955 and 1959. In the first he dealt with the organization of the *fäbod* and with the *lockrop* technique, and in the second he analysed tune structures. Moberg believed *fäbod* music parallels the alpine *kuhreigen*. He also showed that the often long and ornamented *lockrop* is built on a melodic framework, often coloured by contemporary materials, and is thus a product of its time.

Important new research on this music has been carried out in the last decades at Uppsala University where Anna Ivarsdotter Johnson has studied herding calls with the aid

of melograms (*see* MELOGRAPH). She has concluded that calls are not formulated to a fixed pattern, but their length and form are determined by their function and by the singer's instinct and ability to vary the phrases in her repertory.

Inspired by field recordings made in the 1940s and later, several young folk musicians have adopted the special *lockrop* technique and use *lockrop* in many different musical contexts. Also, contemporary Swedish composers have been inspired by the *lockrop*, such as Ingvar Lindholm in the Intermezzo from his ballet *Riter* (1960) and Karin Rehnqvist in her *Puksånger-lockrop* (1989) for two female singers and kettledrums.

3. VOCAL TRADITIONS. Some vocal genres have lived in oral tradition for a long time, and a few types still survive. Much of the material is common in the Scandinavian-speaking area, e.g. the medieval ballad. The ballad genre was originally connected with dancing. With its prototype, the French *chanson d'histoire*, it made its earliest appearance as part of the medieval courtly romance literature, but spread to the peasantry and became an orally transmitted folksong genre. The ballad, which always has a refrain, has a typically formal and objective narrative style and treats the lives of medieval nobility, medieval Christianity and popular beliefs. Many themes have parallels outside Scandinavia, particularly in the 'Child ballads' of the British Isles and North America. The recorded ballad melodies represent many different stages of style, but they have as a whole more of the older features than other types of folksong have, as for example in their more formulaic melodies (ex.2).

Melodies related to those of the ballads are found in various older recordings of singing-games, many of which have refrains. Some singing-games, which survive in contemporary oral tradition owe their survival to their association with modern Christmas festivities and are generally sung as children's games for dancing around the tree. Popular nursery rhymes and lullabies, known as *småvisor* ('small songs'), are still well represented in oral tradition but only a few melody types are used for them. The commonest of these is known with the words 'Ro, ro till fiskeskär' ('Row, row to the fishing rocks'). Ex.3 gives one of the many variants of this tune, which also has parallels outside Scandinavia. It is almost identical with the anonymous trouvère song *A pris ai qu'en chantant plour*.

A few of the lyrical songs that are found in the 16th- and 17th-century songbooks survived in later tradition, though love songs appear not to have reached the public in large numbers until the 18th and 19th centuries. These were almost always sung in a minor key, and their texts were often disseminated in broadsheets (ex.4). Some seasonal songs are found, though not as many as in other countries. These are chiefly associated with the festivities of Boxing Day, Twelfth Night, Walpurgis Night and May Day, and they were performed by young people who went around singing for money.

Along with orally transmitted songs there are a number by known authors, which were chiefly introduced by means of broadsides, but have since passed into oral tradition and have become subject to variation. Some songs by the very popular poet C.M. Bellman from the end of the 18th century gained a wide circulation; his *Gustafs skål* originated as a Swedish royal anthem but survives today as a singing-game.

In some regions during the 18th century a special tradition of performing Protestant hymns developed, deviating from official versions in the chorale hymnbooks which were influenced by surrounding traditional musics. They are characterized by their melismatic style, in contrast to the syllabic style given in the hymnbooks. The main condition for the development of the musical variants was most likely the absence of accompaniment; older rural parishes seldom had organs in their churches.

Ex.3 *Småvisa*, children's song, Dalarna (Andersson, 1922–40)

Ex.4 Lyrical song, Östergötland; rec. L. Wiede

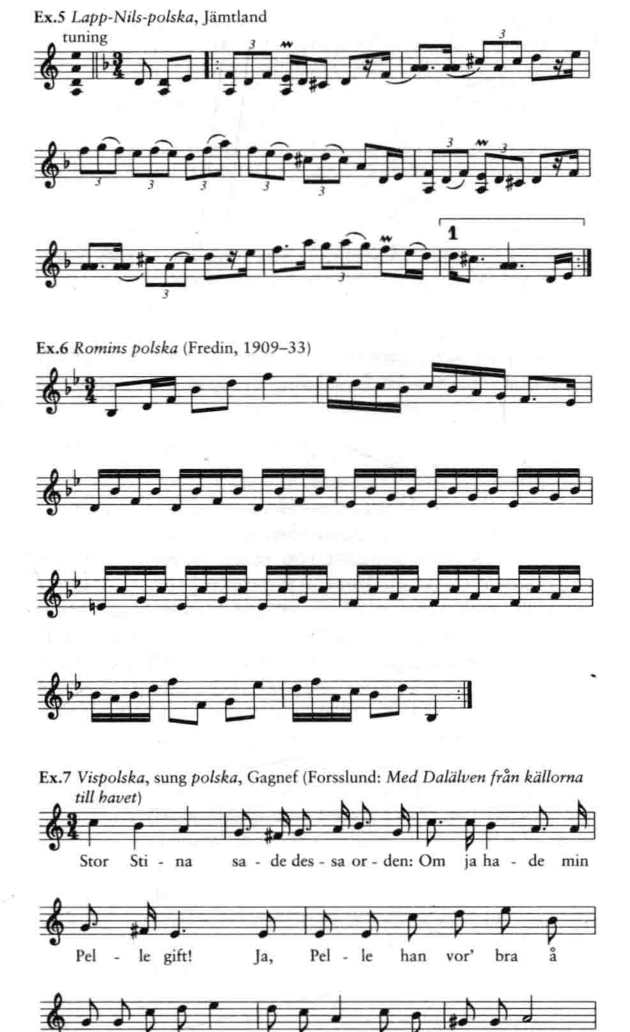
Outside the church the singing of these folk hymns has been kept alive.

Swedish folk songs were performed as solos or in unison and mostly unaccompanied. There were no professional folksingers. In the older rural society, with some 90% of the population living in the countryside and no sharp borderlines between various social classes, we can take for granted that many traditional songs, e.g. the 'small songs', were known and sung by the majority of the people. The very long ballads were on the other hand performed by a smaller number of singers, preferably women representing the rural people in general. Many ballad singers had a deep knowledge of the formulaic style of text and melody and built up their own variants from a store of formulae. The audio recordings of ballads show a very individual performance including a basic pulse of the performance. Many female singers employed a deep alto register. The occurrence of indefinite intervals in ballads, also common in the folk hymns, can be considered reminiscent of older scales.

In traditional song genres the melody types are seldom linked to one specific song or genre, rather they change from text to text. A single set of words was often sung to several different melodies, and a single melody used for several quite unrelated texts. An example of a melody which has held a unique position is *Folie d'Espagne*; it was sung to a great many texts from the end of the 17th century onwards and is still alive in oral tradition and also as an instrumental tune. Different chronological layers can be recognized in the melodies, the oldest found chiefly among folksongs, while currently popular tunes usually of more recent origin were chosen for broadside songs. For older songs a minor scale with no 6th degree was common in which the melody centred around the tonic. During the 19th century a more harmonic conceptualization of music prevailed probably due to the trend towards self-accompaniment on the guitar, zither or PSALMODIKON, a type of bowed box zither usually with one string.

The interest in vocal traditions that started in the 1970s among young people increased during the 1990s. Many folksingers now try to reproduce the repertories and personal performances of older tradition bearers. Folk music groups revive and renew genres such as ballads through the accompaniment of older, reconstructed instruments or through the use of musical style elements from other music cultures.

4. INSTRUMENTAL MUSIC. The oldest instrument still in use is the NYCKELHARPA (keyed fiddle). Though it is bowed like a violin, the strings are shortened by keys instead of by the fingers (fig.2). The *nyckelharpa* has a flat bridge and several drone strings which give the instrument its characteristic sound. It was depicted in medieval church paintings and may date from the 14th or 15th century. In the 20th century the *nyckelharpa* tradition has been strongest in the province of Uppland in central Sweden. A revival of the instrument started in the 1960s and continues to be a popular and common folk music instrument throughout Sweden with many skilful players.



The violin is the instrument most associated with Swedish traditional music. It was probably in general use among rural populations throughout Sweden by the middle of the 18th century. It remained the most widely used instrument for dancing and ceremonial music until the end of the 19th century, when for various reasons it declined in popularity and its repertory began to die out. Those fiddlers still active at the turn of the century had to compete with the accordion, which gradually succeeded the violin as the most popular instrument for dance music.

2. Nyckelharpa (keyed fiddle) player from Uppland

The 18th- and 19th-century fiddler was first and foremost a dance musician, and his repertory consisted of the tunes of fashionable dances (e.g. minuet, cadrille and polonaise in the 18th centry, polska, waltz, schottischeand *polkett* in the 19th century). Fiddlers' notebooks from the 18th century contain a repertory that is rather uniform in Scandinavia, but in the 19th century the development of melodies and playing styles came to vary greatly from place to place. The players were amateurs, and their playing was secondary to their ordinary peasant or artisan occupations. Few were taught to read musical notation or had any classical training. Most of the recorded music was in the keys of A, D and G which could be played using only 1st position. In many areas double stopping and chordings were used, and sometimes scordatura was used to make this easier. Great individual players, such as Lapp Nils (1804–70) of Jämtland in north-west Sweden, could set their stamp on tunes in a wide area over a long period of time; his particular style was marked by its virtuosity, use of harmonics and fast triplets (ex.5).

In some parts of Sweden, particularly the eastern provinces, popular music was influenced by professional musicians and ensembles who performed at manor houses and mills. Similarly, trained church organists helped to introduce the techniques of 'classical' music to folk styles. The polska from Gotland (ex.6) is a conscious imitation of Baroque style with its triadic semiquaver figuration. Popular wedding marches borrowed melodies from military music, and in the process the clarinet became a

Ex.5 *Lapp-Nils-polska*, Jämtland

Ex.7 *Vispolska*, sung *polska*, Gagnef (Forsslund: *Med Dalälven från källorna till havet*)

popular instrument, performing the same function with the same repertory of dance and ceremonial music as the violin.

The POLSKA, a dance in 3/4 time, is derived from the European polonaise. In Sweden its musical development was rich in both rhythm and melody. It superseded and fused with older Swedish melodic material, as can be seen from the types of scales used in many polska melodies. Due to its musical qualities the polska repertory has outlived the dance itself and has always been, and still is, highly esteemed by musicians. The polska also exists as a song type, often with a single verse of nonsense words (ex.7).

During the 20th century instrumental music developed in various directions. During the period of 1910–40 the accordion became the most popular instrument, played either as a solo instrument or in a band with fiddle or guitar. The repertory was no longer restricted regionally; music publishers, the gramophone and radio increased standardization throughout the country. The 'fiddlers' movement' which grew up in the early decades of the 20th century maintained the fiddle tradition by establishing competitions and meetings. Fiddlers have organized fiddlers' associations and as a result a growth of fiddle bands which perform in public has occurred.

Since the folk revival in the 1970s many folk music groups have developed, playing different ethnic instruments along with vocal numbers. The repertory is mostly traditional Swedish, but the musical expressions are mixed with elements from jazz, rock or general ethnic music. There is also an obvious historical trend in the choice of repertory (e.g. medieval ballads) and instruments (preferably drone instruments such as the SÄCKPIPA (bagpipe), VEVLIRA (hurdy-gurdy) and others).

Sweelinck, Dirck Janszoon (*b* Amsterdam, bap. 26 May 1591; *d* Amsterdam, 16 Sept 1652). Dutch organist, composer and music editor, son of JAN PIETERSZOON SWEELINCK. He was a pupil of his father, never married, and was organist of the Oude Kerk, Amsterdam, from his father's death in 1621 until his own (though not before the post had been offered to, and rejected by, the blind Pieter Alewijnszoon de Vois, another Sweelinck pupil). His successor was Jacob van Noordt. He was known for his improvisation. In January 1645 he was severely reprimanded by the church authorities for holding an old-fashioned Christmas celebration at the Oude Kerk to which many 'papists' had been invited – thus the question again arises whether any of the Sweelincks became Protestants (*see* SWEELINCK, JAN PIETERSZOON, §4). He belonged to the Muiderkring, a cultural circle of intellectuals under the leadership of the poet P.C. Hooft; other musicians in this company included J.A. Ban and the organist Cornelis Helmbreecker. In 1645 Sweelinck inspected the new organ in the Laurenskerk at Alkmaar. He edited in 1644 a collection of songs of a popular nature (RISM 1644[3]), of which there is a later, undated edition (Amsterdam, *c*1657, incomplete copy in *B-Bc*). It contains the only pieces certainly by him: four songs to Dutch texts for two to five voices, of which the most important are the *Cecilia Liedt* and the three-voice canon *Oculus non vidit* (these and one other piece, ed. B. van den Sigtenhorst Meyer, Amsterdam, n.d.). A set of keyboard variations on *Hoe schoon lichtet de morghen ster* (*D-Bsb*, ed. in EMN, xvi, 1991) has been attributed to him by Frits Noske (in *J.P. Sweelinck: Opera omnia*, i/3); though this piece is undoubtedly by a pupil of J.P. Sweelinck, the question of authorship remains unresolved.

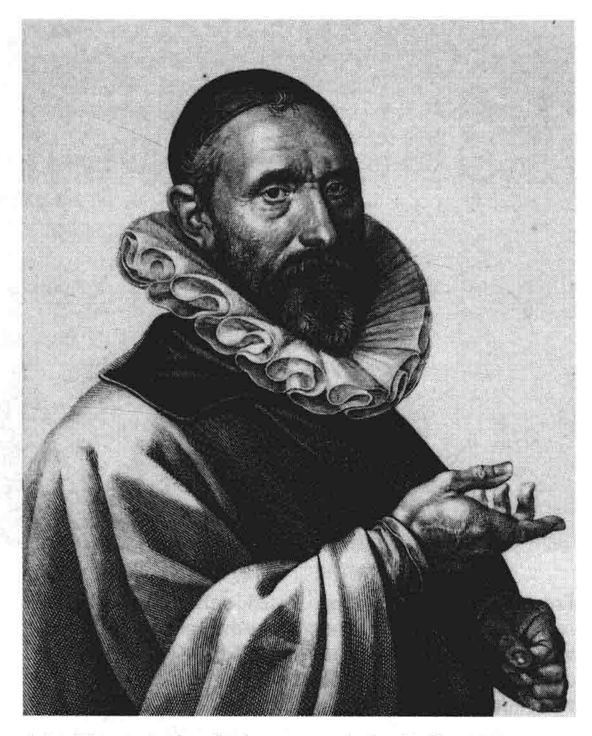
RANDALL H. TOLLEFSEN/PIETER DIRKSEN

Sweelinck [Swelinck, Zwelinck, Sweeling, Sweelingh, Swelling, Swelingh], **Jan Pieterszoon** (*b* Deventer, ?May 1562; *d* Amsterdam, 16 Oct 1621). Dutch composer, organist and teacher. He was not only a famous organist and one of the most influential and sought-after teachers of his time but also one of the leading composers, of vocal as well as of keyboard music.

1. Life. 2. Sweelinck as teacher. 3. Works: introduction. 4. Vocal works. 5. Keyboard works.

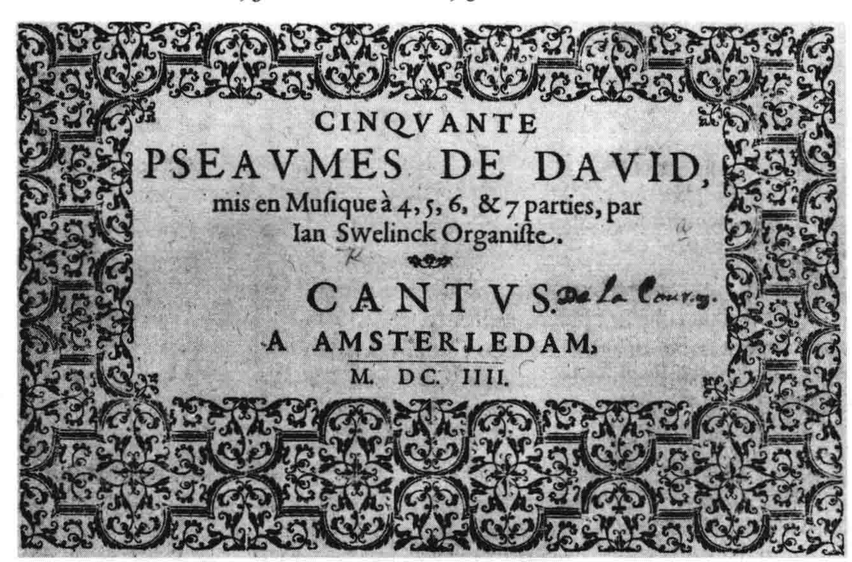


1. LIFE. Sweelinck was the elder son of Peter Swybbertszoon and his wife Elske Sweeling. Swybbertszoon, Sweelinck and Sweelinck's son Dirck were successively organists of the Oude Kerk, Amsterdam, almost uninterruptedly from about 1564 to 1652, and Sweelinck's paternal grandfather and uncle were also organists. For as yet unknown reasons Sweelinck adopted the family name of his mother, first using it on the title-page of his *Chansons* of 1594. From his early youth until his death he lived in Amsterdam. He never left the Low Countries and was never away from Amsterdam for longer than a few days at a time (except perhaps for a stay in Haarlem for study); the oft-repeated tale of his study in Venice with Zarlino, first related by Mattheson in 1740, is without foundation. His early general education was in the hands of Jacob Buyck, pastor at the Oude Kerk, and came to an end with the Reformation of Amsterdam in 1578. Besides his father, who probably gave him his first music lessons but who died when he was 11, his only known music teacher was Jan Willemszoon Lossy, a countertenor and shawm player at Haarlem, of whom little is known. Lossy was not an organist but may have taught Sweelinck composition. Cornelis Boskoop, briefly his father's successor at the Oude Kerk in 1573, may have been among his organ teachers, and if Sweelinck indeed studied at Haarlem he would certainly have heard, and may have studied with, the organists Claas Albrechtszoon van Wieringen (active 1529–75) or the well-known Floris van Adrichem (organist 1575–8), both of whom improvised daily in the Bavokerk there.

Cornelis Plemp, a pupil and friend of Sweelinck, stated that his master was an organist for a period of 44 years. If this is true he would have started in 1577 at the age of 15. His tenure of the position at the Oude Kerk, Amsterdam, can, however, be traced only from 1580, although it may have begun earlier, as the church records from 1577 to 1580 are lacking. His initial salary of 100 florins was doubled in 1586 (the year after his widowed mother died, when he took upon himself the care of his younger brother and sister). In 1590 his salary was raised to 300 florins, with the provision that, should he marry, it would be raised by another 100 or he could live rent-free; later that year he married and chose the latter. His last rise, to 360 florins, came in 1607; he still lived rent-free. Contrary to tradition, he was not engaged as both organist and carillonneur (the latter post was entrusted to the organ builder Artus Gheerdinck). Nor did his duties

include the supplying of music for the regular ceremonial and social occasions of the city magistrate, as was the case in many other cities at that time, although he did provide this music on a few special occasions. This seemingly conscious restriction of his duties has been seen as an attempt by him to keep enough free time for his extensive work as a teacher, for which he became celebrated (see §2 below). But one must not underestimate the demands of his post. Since the Calvinists saw the organ as a worldly instrument and forbade its use during services, Sweelinck was actually a civil servant employed by the city of Amsterdam (which in any case owned the organs). His contract does not survive, but, on the evidence of various second-hand reports and contracts of organists in other important Dutch cities of the period, it is generally assumed that his duties were to provide music twice daily in the church – an hour in the morning and in the evening. When there was a service this musical hour came before and/or after it. Sweelinck was known for his organ and harpsichord improvisations: more than once the proud city authorities brought important visitors to the church to hear the 'Orpheus of Amsterdam'. The instruments at his disposal in the Oude Kerk were a large organ with three manuals and pedal built originally by Hendrik Niehoff in 1539–45, and a small one with two manuals and pedal built in 1544–5 by Niehoff and Jasper Johanszoon (they are described by C.H. Edskes in Curtis, 1969; see also J. van Biezen, 1995).

Sweelinck led an uneventful, well-regulated life. His few documented absences from Amsterdam (except for his marriage) were entirely in conjunction with his professional activities. He inspected new organs at Haarlem (1594, with Philip Janszoon van Velsen and Willem Aertszoon), Middelburg (1603), Nijmegen (1605, with Van Velsen) and Dordrecht (1614, with H.J. Speuy) and the restored or repaired organs at Harderwijk (1608) – where he also wrote a canon for the mayor – Delft (1610), Dordrecht (1614), Deventer (1616) – his birthplace, which he had also visited in 1595, perhaps to give advice about the forthcoming restoration of the organ – Haarlem (1620) and Enkhuizen (1621). In 1610 he was at Rotterdam to act as adviser for planned improvements to the organ in the Laurenskerk, and he played the organ at Rhenen in 1616 during an informal visit with the organ builder Kiespenninck, who had restored the instrument five years earlier. His longest journey was in 1604 to Antwerp, where he purchased a harpsichord (possibly by Ruckers) for the city of Amsterdam.



Sweelinck was buried in the Oude Kerk. He was survived by his wife and five of his six children, of whom only the eldest, DIRCK JANSZOON SWEELINCK, was a musician. John Bull, who was probably a personal friend, wrote a fantasia on one of his themes shortly after his death (see MB, xiv, 1960, rev. 2/1971, p.12). There are two portraits of him. One, a painting of 1606 (in *NL-DHgm*), is attributed to his brother Gerrit Pietersz, a talented painter and the teacher of Pieter Lastman, who in turn taught Rembrandt. The other is an engraving made in 1624 (fig.1); its model is lost.

1. Jan Pieterszoon Sweelinck: engraving by Jan Muller, 1624

2. SWEELINCK AS TEACHER. Sweelinck's gifts as a teacher, for which he was famous throughout northern Europe, are an essential part of his importance for music history, for the founders of the so-called north German organ school of the 17th century (culminating in Bach) were among his pupils. His local pupils included talented dilettantes as well as a number of young professional musicians. The most important of the latter were Cornelis Janszoon Helmbreecker and his own son Dirck; others were Pieter Alewijnszoon de Vois, Jan Pieterszoon van Reynsburch, Willem Janszoon Lossy (son of his Haarlem teacher) and Claude Bernardt. After the turn of the century his reputation attracted pupils from Germany. These included Andreas Düben, Samuel and Gottfried Scheidt, Melchior Schildt and Paul Siefert, as well as Ulrich Cernitz, Jacob Praetorius (ii), Johannes Praetorius and Heinrich Scheidemann, who later held the four principal organists' posts at Hamburg – hence the description of Sweelinck as 'hamburgischen Organistenmacher' (see Mattheson). The pupils of 'Master Jan Pieterszoon of Amsterdam' were seen as musicians against whom other organists were measured, and it was for this reason that talented young men were sent to study with him at the expense of their city councils. The costs included room and board at his house, as well as instruction, and may have totalled 200 florins a year per student. A notable by-product of Sweelinck's pedagogical activities is his translation and adaptation of large sections from the third part of Zarlina's *Le istitutioni harmoniche* (3/1573), which was preserved in a German version through the work of his Hamburg pupils.

3. WORKS: INTRODUCTION. As well as being one of the most famous organists and teachers of his time, Sweelinck was the last and most important composer of the musically rich golden era of the Netherlanders. Research into this period as a whole has brought his music and influence into better focus. He is no longer seen as the lone north European giant of his time but rather as a gifted craftsman and musician who was the equal of his European contemporaries. His influence, however, cannot be said to have extended beyond about 1650, whereas that of

Frescobaldi, for instance, lasted until the end of the century. His keyboard music is now seen to be less the work of an innovator than of one who perfected forms derived from, among others, the English virginalists and transmitted them through his pupils to north Germany. His immediate influence can be seen in the music of Samuel Scheidt and Anthoni van Noordt. His surviving output amounts to 254 vocal works, including 33 chansons, 19 madrigals, 39 motets and 153 psalms (three existing in two versions), as well as about 70 keyboard works, principally in the form of fantasias, echo fantasias, toccatas and variations. Only four pieces, all canons, are known in autograph sources. All his vocal works were printed, and one can assume that he himself corrected most of the proofs. On the other hand, none of his keyboard works was published during his lifetime; however, manuscript sources are surprisingly numerous and transmit mostly reliable texts.

4. VOCAL WORKS. In none of Sweelinck's vocal works, which predominate in his output, is there a setting of a text in his native language – they are for the most part in French – and none of those on sacred texts was written for performance during public worship services. Most are for five voices. Although the performance of one or more vocal parts by instruments is suggested only on the title-page of the *Chansons*, this is not to say that the rest of his vocal music is to be sung *a cappella*: one or more voices of the *Rimes*, for instance, lend themselves well to instrumental performance.

Sweelinck's first publications were of chansons: the collection of 1594 (the year 1584 after the dedication is a typographical error) contains 18 five-part chansons, to which were added four by Cornelis Verdonck. There may have been two further collections (1592–3). Sweelinck published 12 chansons and 15 madrigals in *Rimes françoises et italiennes* (1612). They have an elegance and transparency – inherent in two- and three-part writing – not found in the earlier chansons, and they often include long canonic sections. At least five of the madrigals are modelled on works by Domenico Maria Ferrabosco, Andrea Gabrieli, Macque and Marenzio.

Sweelinck's polyphonic setting of the Psalter has been justifiably called a monument of Netherlandish music unequalled in the sphere of sacred polyphony. From the outset he intended to set the entire Psalter, and the publication of his music for it spanned the whole of his creative life: his first two psalm settings appeared anonymously in a collection of 1597, his first book of psalms was published in 1604 (fig.2), and the fourth and final book appeared shortly after his death. The texts are from the French metrical Psalter of Marot and Bèze, not the Dutch version of Datheen (1566) used in most Dutch churches until 1773. This was probably because the psalms were not intended for use in public Calvinist services but rather within a circle of well-to-do musical amateurs among whom French was the preferred language. This supposition is strengthened by the dedications of the first and second books respectively to the burgomasters and aldermen of Amsterdam and to a number of Calvinist merchants of the city, the latter probably being members of the 'compagnie des nourissons, disciples, fauteurs et amateurs de la douce et saincte musique' of which Sweelinck was the leader. In style and technique the psalms follow in the tradition of Clemens non Papa, Goudimel and their Venetian contemporaries. Homophony appears alongside strict counterpoint, with imitation in all voices; both the strict motet and madrigal style and the lighter chanson and villanella style can be found. Although Sweelinck explored all harmonic possibilities, chromaticism appears only sporadically. The cantus firmi – the melodies of the Genevan Psalter – provide the unifying element in each psalm. Most of the settings fall into one of three general categories: the 'cantus firmus psalm', where each line of the melody (in superius and/or tenor), separated by related interludes, is accompanied by a rhythmically altered form of the melody in the other voices; the 'lied psalm', where the uninterrupted melody appears in the superius; and the 'echo psalm', where the full cantus firmus is found in two separate voices, often in canon.

Sweelinck's other important vocal collection, the *Cantiones sacrae* (1619), is the musical and religious antithesis of the psalms. It comprises 37 motets on texts from the Catholic liturgy and is dedicated to his young Catholic friend and pupil Cornelis Plemp; it thus raises the question as to whether Sweelinck remained a Catholic in the service

of the ruling Calvinist minority. These motets show that in his compositional technique he kept abreast of the music of his time. The lack of a cantus firmus tends to make them more compact, but at the same time they have lost the transparency and vitality of the psalms. Several modern techniques are used: for example, there is more chromaticism, and the counterpoint is more harmonic and ornamental; but the basso continuo is more accurately termed a *basso seguente* (this is the only time that Sweelinck called for a separate instrumental part in a vocal collection). 14 of the motets have codas on the word 'Alleluia', some of them quite extended.

5. KEYBOARD WORKS. Apart from a few undistinguished pieces for lute, Sweelinck's instrumental music is entirely for keyboard instruments and reveals a thorough knowledge of all the major keyboard traditions of his time, especially the English and the Venetian. Although it was never printed it enjoyed wide circulation through the numerous copies made by his pupils. Many works have probably been lost, but those that survive clearly demonstrate his genius.

Sweelinck's works in the free forms – fantasias and toccatas – were developed from similar works by Italians (Andrea Gabrieli, Merulo), Spaniards (Cabezón, Milán), Portuguese (Coelho) and Englishmen (Bull, Philips), as well as from indigenous improvisatory practices. The passage-work is perhaps less brilliant than the Italians' but has a more structural purpose, and there are no traces of colourist ornamentation. The various technical difficulties – above all the manner in which they are incorporated into the toccatas – point to a pedagogical purpose. Most of the toccatas have a homophonic or imitative introduction followed by a section of extended passage-work, and a few include a short *fugato* section. Sweelinck brought a balanced construction, sharper and more concise in its musical conception, to this form, which in lesser hands could become wayward and diffuse. His fantasias are built on a single theme and are usually fugal in character, presenting the theme in augmentation and diminution and introducing a number of secondary themes developed either independently in fugato or used as counterpoints to the main theme. They are in several sections, interspersed with free interludes and imitative sections on important secondary themes, and they have a toccata-like close. They are notable for their monumental construction and strict composition. From a historical point of view they have a special place among Sweelinck's works, for they led the way to the later development of the monothematic fugue. The echo fantasias form a separate genre. They are actually free fantasias without a basic theme; they contain homophonic sections in which there is extensive use of echo effects achieved by alteration of register (octave transposition) or colour (use of different manuals), and there are also sections which employ various canonic techniques.

Sweelinck was also attracted to variation form, in which the style of his music points clearly to the English virginalists, some of whom, notably Bull and Philips, were among his acquaintances. His variation cycles tend to form ordered units and are not a random selection of individual variations. The settings of secular melodies are characterized by the development in each variation of a new musical idea derived from the theme, which thereby often undergoes major alterations or is subjected to ornamentation. The chorale variations are built on another principle, which clearly shows the influence, through Bull, of William Blitheman. This involves using a different number of voices in each variation, placing the unchanged or slightly embellished cantus firmus each time in a different voice and providing variation through the change in contrapuntal treatment.

At least two further prints are lost: a *Chyterboeck* (1602 or 1608) with which Sweelinck was in some way connected – whether as composer (perhaps of only the first piece), arranger or collector, or as the composer whose works were arranged by another – and a collection of fantasias (*c*1630) edited by his pupil Samuel Scheidt; both are known only through auction or book fair catalogues.

Livre quatriesme et conclusionnal des pseaumes de David, nouvellement mis en musique (Marot, Bèze), 4–8vv (Haarlem, 1621) [1621]
2 works in 1597[6]

A Dieu ma voix j'ay haussee (Ps lxxvii), 5vv, 1613; S iii, 11; O iii, 11
Ainsi qu'on oit le cerf bruire (Ps xlii), 8vv, 1614; S iv, 27; O iv, 27
Alors qu'affliction me presse (Ps cxx), 4vv, 1614; S iv, 4; O iv, 4
Alors que de captivité (Ps cxxvi), 5vv, 1614; S iv, 6; O iv, 6
Après avoir constamment attendu (Ps xl), 6vv, 1604; S ii, 38; O ii, 38
A toy, mon Dieu, mon coeur monte (Ps xxv), 5vv, 1613; S iii, 12; O iii, 12
A Toy, ô Dieu qui es là haut aux cieux (Ps cxxiii), 5vv, 1604; S ii, 25; O ii, 25
Aux parolles que je veux dire (Ps v), 5vv, 1621; S v, 12; O v, 12
Avec les tiens, Seigneur, tu as fait paix (Ps lxxxv), 5vv, 1621; S v, 19; O v, 19
Ayes pitié de moy (Ps lvii), 5vv, 1621; S v, 16; O v, 16
Bienheureuse est la personne qui vit (Ps cxix), 6vv, 1614; S iv, 19; O iv, 19
Bienheureux est quiconques (Ps cxxviii), 3–4vv, 1613; S iii, 5; O iii, 5
Cantique de Siméon (see Or laisses, Createur)
C'est en Judee proprement (Ps lxxvi), 8vv, 1621; S v, 43; O v, 43
C'est en sa tres-saincte Cité (Ps xlviii), 8vv, 1621; S v, 42; O v, 42
Chantez à Dieu chanson nouvelle, chantez, ô terre (Ps xcvi), 4vv, 1621; S v, 1; O v, 1
Chantez à Dieu chanson nouvelle, et sa louange (Ps cxlix), 4vv, 1621; S v, 2; O v, 2
Chantez à Dieu nouveau cantique (Ps xcviii), 5vv, 1613; S iii, 8; O iii, 8
Chantez de Dieu le renom (Ps cxxxv), 6vv, 1613; S iii, 21; O iii, 21
Chantez gayement (Ps lxxxi), 6vv, 1621; S v, 38; O v, 38
Deba contre mes debatteurs (Ps xxxv), 6vv, 1614; S iv, 18; O iv, 18
Dès ma jeunesse ils m'ont fait mille assauts (Ps cxxix), 5vv, 1604; S ii, 18; O ii, 18
Des qu'adversité nous offense (Ps xlvi), 6vv, 1621; S v, 36; O v, 36

De tout mon coeur t'exalteray (Ps ix), 4vv, 1604; S ii, 3; O ii, 3
Dieu est assis en l'assemblee (Ps lxxxii), 8vv, 1614; S iv, 28; O iv, 28
Dieu est regnant de grandeur tout vestu (Ps xciii), 4vv, 1621; S v, 8; O v, 8
Dieu nous soit doux et favorable (Ps lxvii), 6vv, 1613; S iii, 17; O iii, 17
Dieu pour fonder son tresseur habitacle (Ps lxxxvii), 5vv, 1621; S v, 26; O v, 26
Di moy malheureux qui te fies (Ps lii), 5vv, 1604; S ii, 22; O ii, 22
Donne secours, Seigneur, il en est heure (Ps xii), 5vv, 1613; S iii, 15; O iii, 15
Donnez au Seigneur gloire (Ps cvii), 5vv, 1621; S v, 15; O v, 15
D'ou vient cela, Seigneur je te suppli' (Ps x) (i), 5vv, 1597[6] (anon.); S ix, 3; O v, pp.306–9
D'ou vient cela, Seigneur, je te suppli' (Ps x) (ii), 5vv, 1621 (reworking of 1597[6] work); S v, 14; O v, 14
D'ou vient, Seigneur, que tu nous as espars (Ps lxxiv), 4vv, 1614; S iv, 2; O iv, 2
Du fonds de ma pensée (Ps cxxx), 5vv, 1604; S ii, 17; O ii, 17
Du malin le meschant vouloir (Ps xxxvi), 5vv, 1613; S iii, 9; O iii, 9
Du Seigneur Dieu en tous endroits (Ps cxi), 8vv, 1621; S v, 41; O v, 41
Du Seigneur les bontés sans fin je chanteray (Ps lxxxix), 6vv, 1614; S iv, 17; O iv, 17
Enfans, qui le Seigneur servez (Ps cxiii), 8vv (2 choirs), 1614; S iv, 24; O iv, 24
Enten à ce que je veux dire (Ps lxiv), 6vv, 1613; S iii, 22; O iii, 22
Enten pourquoy je m'escrie (Ps lxi), 8vv, 1613; S iii, 29; O iii, 29
Entre vous conseilliers qui estes (Ps lviii), 5vv, 1621; S v, 29; O v, 29
Estans assis aux rives aquatiques (Ps cxxxvii), 5vv, 1604; S ii, 13; O ii, 13
Exauce, ô mon Dieu, ma prière (Ps lv), 4vv, 1621; S v, 7; O v, 7
Helas, Seigneur, je te pri' sauve moy (Ps lxix), 5vv, 1604; S ii, 21; O ii, 21
Il faut que de tous mes esprits (Ps cxxxviii), 4vv, 1604; S ii, 6; O ii, 6
Incontinent que j'eu ouï (Ps cxxii), 4vv, 1604; S ii, 7; O ii, 7
Jamais ne cesseray (Ps xxxiv), 6vv, 1614; S iv, 16; O iv, 16
J'ay de ma voix à Dieu crié (Ps cxlii), 6vv, 1604; S ii, 42; O ii, 42
J'ay dit en moy, de pres je viseray (Ps xxxix), 5vv, 1621; S v, 25; O v, 25
J'ayme mon Dieu, car lors que j'ay crié (Ps cxvi), 5vv, 1621; S v, 18; O v, 18
J'ay mis en toy mon esperance (Ps lxxi), 6vv, 1621; S v, 34; O v, 34
J'ay mis en toy mon esperance (Ps xxxi), 7vv, 1621; S v, 39; O v, 39
Je t'aymeray en toute obeissance (Ps xviii), 6vv, 1621; S v, 33; O v, 33
Jusques à quand as establi (Ps xiii), 6vv, 1604; S ii, 36; O ii, 36
Las! en ta fureur aigue (Ps xxxviii), 5vv, 1621; S v, 21; O v, 21
La terre au Seigneur appartient (Ps xxiv), 3–4vv, 1604; S ii, 2; O ii, 2
Le Dieu, le fort, l'Eternel parlera (Ps l), 6vv, 1604; S ii, 34; O ii, 34
Le fol malin en son coeur dit et croit (Ps xiv), 6vv, 1604; S ii, 37; O ii, 37
Le fol malin en son coeur dit et croit (Ps liii), 4–7vv, 1621; S v, 40; O v, 40
Les cieux en chacun lieu (Ps xix), 5vv, 1614; S iv, 9; O iv, 9
Le Seigneur est la clarté qui m'addresse (Ps xxvii) (i), 5vv, 1604; S ii, 32; O ii, 32
Le Seigneur est la clarté qui m'addresse (Ps xxvii) (ii), 3–5vv, 1613; S iii, 7; O iii, 7
Le Seigneur ta priere entende (Ps xx), 4vv, 1604; S ii, 1; O ii, 1
Les gens entrez sont en ton heritage (Ps lxxix), 5vv, 1621; S v, 20; O v, 20
L'Eternel est regnant (Ps xcvii), 6vv, 1604; S ii, 44; O ii, 44
Le Toutpuissant à mon Seigneur et maistre (Ps cx), 6vv, 1614; S iv, 15; O iv, 15
Loué soit Dieu, ma force en tous alarmes (Ps cxliv), 6vv, 1604; S ii, 41; O ii, 41
Louez Dieu, car c'est chose bonne (Ps cxlvii), 5vv, 1621; S v, 23; O v, 23
Louez Dieu, car il est benin (Ps cvi), 6vv, 1604; S ii, 40; O ii, 40
Louez Dieu tout hautement (Ps cxxxvi), 5vv, 1604; S ii, 31; O ii, 31
Misericorde à moy, povre affligé (Ps lvi), 5vv, 1604; S ii, 26; O ii, 26
Misericorde au povre vicieux (Ps li), 6vv, 1604; S ii, 39; O ii, 39
Mon ame en Dieu tant seulement (Ps lxii), 7vv, 1614; S iv, 21; O iv, 21
Mon coeur est dispos, ô mon Dieu (Ps cviii), 6vv, 1604; S ii, 48; O ii, 48
Mon Dieu, j'ay en toy esperance (Ps vii), 6vv, 1614; S iv, 20; O iv, 20
Mon Dieu, l'ennemy m'environne (Ps lix), 5vv, 1621; S v, 13; O v, 13
Mon Dieu me paist sous sa puissance haute (Ps xxiii), 4–6vv, 1604; S ii, 10; O ii, 10
Mon Dieu, mon Dieu, pourquoy m'as tu laissé (Ps xxii), 4vv, 1621; S v, 4; O v, 4
Mon Dieu, mon Roy, haut je t'esleveray (Ps cxlv), 5vv, 1621; S v, 17; O v, 17
Mon Dieu, preste moy l'oreille (Ps lxxxvi), 6vv, 1613; S iii, 26; O iii, 26
Ne sois fasché, si, durant ceste vie (Ps xxxvii), 5vv, 1614; S iv, 10; O iv, 10
Ne vueilles pas, ô Sire (Ps vi), 4vv, 1621; S v, 3; O v, 3
Non point à nous, non point à nous, Seigneur (Ps cxv), 6–7vv, 1613; S iii, 24; O iii, 24
O bienheureuse la personne (Ps cxii), 5vv, 1621; S v, 10; O v, 10
O bienheureux celuy dont les commises (Ps xxxii), 5vv, 1604; S ii, 23; O ii, 23
O bienheureux, qui juge sagement (Ps xli), 8vv, 1614; S iv, 29; O iv, 29
O combien est plaisant et souhaittable (Ps cxxxiii), 5–6vv, 1614; S iv, 8; O iv, 8
O Dieu des armees, combien (Ps lxxxiv), 5vv, 1613; S iii, 14; O iii, 14
O Dieu, donne moy delivrance (Ps cxl), 5vv, 1604; S ii, 28; O ii, 28
O Dieu Eternel, mon Sauveur (Ps lxxxviii), 5vv, 1621; S v, 11; O v, 11
O Dieu, je n'ay Dieu fors que toy (Ps lxiii), 6vv, 1613; S iii, 19; O iii, 19
O Dieu, la gloire, qui t'est deuë (Ps lxv), 6vv, 1613; S iii, 27; O iii, 27
O Dieu, mon honneur et ma gloire (Ps cix), 6vv, 1621; S v, 35; O v, 35
O Dieu, ne sois plus à requoy (Ps lxxxiii), 5vv, 1621; S v, 24; O v, 24
O Dieu où mon espoir j'ay mis (Ps lxx), 5vv, 1614; S iv, 12; O iv, 12
O Dieu, qui es ma forteresse (Ps xxviii), 3–5vv, 1613; S iii, 10; O iii, 10
O Dieu qui nous as deboutés (Ps lx), 5vv, 1604; S ii, 29; O ii, 29
O Dieu tout puissant, sauve moy (Ps liv), 5vv, 1604; S ii, 27; O ii, 27
O Dieu, tu cognois qui je suis (Ps cxxxix), 4–5vv, 1621; S v, 28; O v, 28
O Eternel, Dieu des vengeances (Ps xciv), 5vv, 1621; S v, 22; O v, 22
On a beau sa maison bastir (Ps cxxvii), 3–4vv, 1613; S iii, 4; O iii, 4
O nostre Dieu et Seigneur amiable (Ps viii), 5vv, 1604; S ii, 16; O ii, 16
O Pasteur d'Israël, escoute (Ps lxxx), 5vv, 1604; S ii, 15; O ii, 15
O que c'est chose belle (Ps xcii), 6vv, 1604; S ii, 35; O ii, 35
Oraison Dominicale (see Pere de nous)
Or avons nous de nos oreilles (Ps xlix), 4vv, 1613; S iii, 3; O iii, 3
Or est maintenant (Ps xcix), 6vv; 1621; S v, 32; O v, 32
Or laisses, Createur (Cantique de Siméon) [Nunc dimittis], 5–6vv, 1604; S ii, 51; O ii, 51
Or peut bien dire Israël maintenant (Ps cxxiv), 3–6vv, 1621; S v, 31; O v, 31
Or soit loué l'Eternel (Ps cl), 8vv, 1614; S iv, 30; O iv, 30
Or sus, louez Dieu tout le monde (Ps lxvi), 5vv, 1604; S ii, 30; O ii, 30
[Or sus, serviteurs du Seigneur (Ps cxxxiv) (i)] (not pubd, indexed in 1597[10] but replaced by a chanson by Verdonck)
Or sus, serviteurs du Seigneur (Ps cxxxiv) (ii), 6vv, 1604; S ii, 49; O ii, 49
Or sus, serviteurs du Seigneur (Ps cxxxiv) (iii), 4vv, 1614; S iv, 5; O iv, 5
Or sus tous humains (Ps xlvii), 5vv, 1613; S iii, 13; O iii, 13
O Seigneur, à toy je m'escrie (Ps cxli), 5vv, 1613; S iii, 16; O iii, 16
O Seigneur, loué sera ton renom (Ps lxxv), 4vv, 1613; S iii, 6; O iii, 6
O Seigneur, que de gents (Ps iii) (i), 6vv, 1597[6] (anon.); S ix, 4; O v, pp.295–305

RANDALL H. TOLLEFSEN/PIETER DIRKSEN

Sweeney, Eric (*b* Dublin, 15 July 1948). Irish composer and organist. He studied music at Trinity College, Dublin (graduated 1969), the organ at the Conservatorio di S Cecilia, Rome (1969–70), and composition at the University of Ulster (DPhil 1993). He has taught in the school of music at Trinity College and at Dublin College of Music, and served as choral director at RTÉ (1978–81). In 1981 he was appointed head of the music department at Waterford Regional Technical College and organist at Christ Church Cathedral. He has served on the Irish Arts Council (1989–93) and is a member of Aosdána, Ireland's academy of creative artists.

Until the late 1980s, Sweeney's compositions were written in a range of styles from extended tonality to atonality, and displayed a free use of serial and aleatory techniques. In 1989, however, he began to develop an individual language characterized by the integration of elements of Irish traditional music into minimalist and other tonal contexts. Examples of works in this style include the cantata *Deirdre* (1989), *Dance Music* (1989), commissioned by the RPO, and Duo for Saxophone and Piano (1991). He is included in A. Klein: *Die Musik Irlands im 20. Jahrhundert* (Hildesheim, 1996)

GARETH COX

Sweeney, William (John) (*b* Glasgow, 5 Jan 1950). Scottish composer. He studied at the Royal Scottish Academy of Music and Drama (1967–70), and at the RAM (1970–73)

with Alan Hacker (clarinet) and Harrison Birtwistle (composition). He worked as a woodwind tutor for a number of years and later taught composition at the University of Glasgow. He won the Aeleph Prize for composition in 1981, and has twice been awarded the McEwan Commission from the University of Glasgow (1981 and 1989).

Sweeney's interest in Scottish traditional music is audibly present throughout his oeuvre. The textures of *Salm an Fhearainn* (1987), for 18-part *a cappella* choir, are derived from the heterophonic style of Gaelic psalm-singing, while *Nine Days*, for clarinet with drone, is cast in the form of a piobaireachd. The melody is varied not only in its ornamentation, as in traditional pibroch, but in its contour; also modified is the instrument's tone-colour, through alternative fingerings. In *An rathad ùr* (1989), for tenor saxophone and orchestra, the concern is with a reconciliation of art music with jazz, and a blurring of the distinction between improvised (or more freely structured) and precisely notated music. In the rhythmic language of such works as *Maqam* (1984) and *The Heights of Macchu Picchu* (1988), with their exploration of ostinato and other techniques of varied repetition, Sweeney has been influenced by ancient Greek poetry as well as by Indian and Arab traditions.

WORKS
(*selective list*)

Op: An Turus (A. MacNeacail), 1997

Orch: Maqam, 1984; Glasgow, 1985; Sunset Song, 1986; Cumha [Elegy], 1987; An rathad ùr [The New Road], t sax, orch, 1989; Seann Orain [Old Songs], 1989; Air, Strathspey and Reel, 1990; Conc. grosso, 9 cl, str, timp, 1990; St. Blane's Hill, 1991; A Set for the Kingdom, str, 1991; October Landscapes, 1993; Birth/Procession, 1993; The Lost Mountain (A-bheinn Air Chall), wind band, 1996; Sweeney Astray, 1996

FRANCIS J. MORRIS

Swee' Pea. *See* STRAYHORN, BILLY.

Sweet, Sharon (*b* New York, 16 Aug 1951). American soprano. Prevented by an injury from becoming a concert pianist, she turned to singing, studying first in Philadelphia with Margaret Harshaw and then in New York with Marinka Gurewich. In the course of five years she gave some 150 auditions in the United States without being engaged, her weight and figure counting against her; but in 1985 she sang Aida in a concert performance in Munich and launched her stage career the following season as Elisabeth in *Tannhäuser* at Dortmund. She made her operatic débuts in Berlin and at the Paris Opéra in 1987, and in 1988 sang in a concert performance of *Norma* in Brussels. Sweet returned to the USA in 1989, singing Aida in San Francisco. At the Metropolitan in 1992 she appeared as Lina in the first performances there of Verdi's *Stiffelio*, returning in later seasons as Aida. This was also the role of her début in 1995 at Covent Garden, where she later sang an admired Turandot. Her Italian début took place in the Arena at Verona in Verdi's Requiem conducted by Maazel. Sweet's concert repertory also includes the *Missa solemnis*, *Gurrelieder* and the *War Requiem*. In 1993 she toured for the first time in a series of song recitals. With powerful tones at her command, she has usually been engaged for the more heroic roles in opera, although recordings such as those of Agathe's arias in *Der Freischütz* show her ability to soften the volume and sweeten the expression.

J.B. STEANE

Sweet potato. Colloquial American term for an OCARINA or VESSEL FLUTE.

Swegel (Ger.). *See* SCHWEGEL.

Sweikl (*fl c*1420). Composer. His name, read earlier as 'Sweitzl', is found only in the index of *D-Mbs* Clm 14274 (the 'St Emmeram' codex), attached to a Sanctus, troped *Gustasti necis pocula*, of which only two voices are extant there. The piece appears, in three voices, in *PL-Wn* 8054 and as a fragment in *I-AO* 15 (*see* CLIBANO, JACOBUS DE). Its tenor is derived from a variant of the Sanctus of Mass XVII. By an intriguing coincidence, a Magister Peter Schweikl was a canon of Regensburg in 1442–67, but it must be noted that this part of the St Emmeram manuscript may well have been written in Vienna, before its copyist, Hermann Poetzlinger, moved to Regensburg; moreover, the presence of the piece in the rather earlier Aosta manuscript must caution against assuming identity with a local churchman who had no demonstrable interest in music.

Swell. A device for the gradation of volume in keyboard instruments.

1. The organ. 2. The harpsichord and piano.

1. THE ORGAN. The Swell organ is that manual department of an organ whose chest and/or pipes are enclosed on all sides by a box, one side of which incorporates a device (lid, flap, shutters, sashed panel, etc.) that can be opened and closed by connection with a foot-lever or pedal. A stop or half-stop may be thus enclosed, or several departments (Choir organ, Solo organ) or even the whole organ (Samuel Green, St George's Chapel, Windsor, 1790). The connection from foot-lever to swelling device can be mechanical, pneumatic, electrical, etc. and may be so made that fine gradations in the degree of closure are possible.

Some examples of the small BRUSTWERK of the 16th century may have had doors that could be opened; most authenticated examples before about 1700, however,

have semi-fixed fretwork doors. The idea of foot-operated movable doors or, in chamber organs, flaps, occurred occasionally to builders (T. Mace, *Musick's Monument*, 1676) but the first Swells of significance are the enclosed Echo boxes of Spanish and later English organs provided with liftable lids or, also later, sliding front panels like sash windows. In Spain (Alcalá, *c*1680) the Swell box was often put round a stop or two on the main manual chest; only later did it enclose a whole department, usually either on the floor of the organ or tucked away at the top. Single stops were always those for treble solos of an expressive nature (Corneta, Trompeta, Flute); they were often so in England until about 1780 (Hautboy). French and English organs had their Echo stops on their own treble keyboard, the chest placed in the breast of the organ. Abraham Jordan's advertisement in the *Spectator* (8 February 1712) for his new Swell in St Magnus the Martyr, London Bridge ('never ... in any organ before'), refers to an organ with four sets of keys; thus the Swell was probably an extra Echo department. The Swell organ soon became regarded as indispensable, and although for the next hundred years it remained a short-compass division, the number of stops and the compass of the keyboard gradually expanded; as early as the 1740s it had ousted the Choir organ as the usual second division.

Despite Burney's failure to find them, Swell organs were not uncommon in Europe: large departments low in the organ case, with vertical or horizontal shutters (Venice, *c*1770), little Echo boxes with a solo stop or two (Berlin, 1727; Rostock, 1770), the whole organ in a box (Abbé Vogler, 1784; *see* ORCHESTRION (i)), perhaps with a 'balanced' Swell pedal-lever (Frankfurt, 1827) not requiring to be notched into place like the 'nag's head swell'. Swelling the sound could also be obtained by double or triple touch and by playing free reeds on a higher wind pressure (J. Wilke, 1823).

Important developments took place in England during the 1840s where Hill and Gauntlett introduced full-compass Swells, with complete choruses and a battery of reeds, designed to provide the sort of secondary division then thought to be required by the music of Bach. In the process, Hill made the first 'English Full Swell' (i.e. flue chorus capped with a mixture, and reeds at 16′, 8′ and 4′ pitch) for the Great George Street Chapel, Liverpool (1841). Others concentrated on mechanical refinements: of his reconstructed Swell at Gloucester Cathedral (1847) Willis commented, 'the *pianissimo* was simply astounding'. He and others began to use balanced swell pedals instead of levers during the 1870s. In France, the *Récit expressif* of Cavaillé-Coll's organs never challenged the dominance of the *Grand orgue*, but he deployed harmonic stops, strings and Celestes to maximise its expressive potential.

In both England and America, the first half of the 20th century saw the building of large Swell organs which frequently rivalled the Great in both power and number of registers. In his smaller organs Arthur Harrison often treated the Swell and Great as parts of a single division: the Great provided the chorus work, the Swell provided powerful reeds and refined accompanimental stops for supporting the voices of the choir. This trend attained its logical conclusion (and a musical dead end) in an instrument such as that built for Wakefield Cathedral in 1952 by the John Compton Organ Co., in which four of the five manual departments were enclosed in expression chambers.

The recovery of classical principles and a return to earlier models has led inevitably to a re-thinking of the relevance of the Swell organ. Some builders have compromised by enclosing the *Oberwerk* or placing doors in front of the *Brustwerk*. In England and America the Swell is still found useful for both concert and liturgical work, and Swells of a 19th-century type are regularly appearing in new organs (Meyerson Symphony Center, Dallas, 1992; St John's College, Cambridge, 1994).

2. THE HARPSICHORD AND PIANO. In addition to the machine stop (*see* MACHINE STOP (1)), two kinds of device for producing crescendo effects were applied to English harpsichords (and occasionally to pianos) in the second half of the 18th century. In the earlier of these, the 'lid swell' or 'nag's head swell', depressing a pedal gradually raised a hinged section at the right side of the harpsichord's lid. With the second type, the 'Venetian swell', the entire area of the soundboard was covered by an inner lid fitted with pivoted louvres like those of a Venetian blind, which could be opened by depressing a pedal. The lid swell is first mentioned in the patent specification of Roger Plenius's Lyrachord (1755) and seems to have begun to be applied to harpsichords in the early 1760s. From about 1775 square pianos were fairly often made with a pedal to raise the portion of the lid to the right of the keyboard, over the soundboard. The Venetian swell was patented by Burkat Shudi in 1769 and appears to have been an improvement only to the extent that the operation of its louvres is visually less obtrusive than the flapping of a large section of the instrument's lid.

Both types of swell have two important disadvantages. When they are closed in order to reduce the harpsichord's volume, they severely muffle its tone as well, and even when they are entirely open, they rob the instrument of some of its volume and brilliance. In addition, most of the crescendo that is produced occurs with the first opening of the swell, which is also accompanied by an abrupt brightening of the instrument's tone. Despite these disadvantages, the swells do increase the range of crescendo effects beyond those available with only a machine stop. By providing a lower level of *pianissimo* when closed, they increase the instrument's overall dynamic range, and they also permit the player to achieve crescendos and decrescendos when only one or two registers are in use.

Harpsichords were first fitted with swells at about the same time that the piano was beginning to achieve great popularity. The swell should not necessarily be viewed as a reaction to the piano but rather as a parallel response to fundamental musical conditions. Along with the machine stop it helped the harpsichord to coexist, even to prosper, alongside the piano until nearly the end of the century.

For bibliography *see* HARPSICHORD, PIANOFORTE and ORGAN; for illustration *see* HARPSICHORD §4(ii), fig.12.

PETER WILLIAMS/NICHOLAS THISTLETHWAITE (1), EDWIN M. RIPIN/JOHN KOSTER (2)

Sweney, John R(obson) (*b* West Chester, PA, 31 Dec 1837; *d* Chester, PA, 10 April 1899). American evangelistic song leader and composer of gospel hymns. By the age of 22 he was teaching music in Dover, Delaware. During the Civil War he directed the band of the Third Delaware Regiment, and after the war became professor of music

at the Pennsylvania Military Academy, where he remained for 25 years. For more than ten years during this period he directed music at the Bethany Presbyterian Church and led Sunday-school singing; he was in great demand as a song leader, directing summer assemblies such as those held at Ocean Grove, New Jersey. He composed more than 1000 gospel hymns and assisted in compiling more than 60 collections, most in collaboration with William J. Kirkpatrick. Three of his settings still in use are 'Tell me the story of Jesus' (1880), 'There is sunshine in my soul today' (1887), and 'More about Jesus would I know' (1887).

HARRY ESKEW

Swenson, Ruth Ann (*b* New York, 25 Aug 1959). American soprano. She made her professional début at San Francisco in 1983 as Despina, and has returned there for roles including Pamina, Gilda, Dorinda (*Orlando*), Nannetta and Inès (*L'Africaine*), the latter an enchanting performance recorded on video. Her European début was also as Despina (1985, Geneva). She has subsequently sung Eurydice (Gluck's *Orphée et Eurydice*) at the Théâtre des Champs-Elysées, Paris, Susanna at the Opéra-Bastille, a Young Girl (*Moses und Aron*) at Salzburg and Konstanze at the Staatsoper in Munich. After appearances in Canada and in Chicago (début as Nannetta, 1988), she made her Metropolitan début in 1991 as Zerlina, and has returned to the Metropolitan for roles such as Rosina, Gilda, Gounod's Juliet and Zerbinetta. In 1996 she sang a delightful Semele in her first appearance at Covent Garden. Swenson is as adept in French repertory as in Italian, and has made a notable recording of Juliet in Gounod's opera. Her voice is full, warm and capable of remarkable feats of flexibility.

ALAN BLYTH

Swert, Isidore de. Belgian cellist, brother of JULES DE SWERT.

Swert, Jules de (*b* Leuven, 15 Aug 1843; *d* Ostend, 24 Feb 1891). Belgian cellist. He was first taught by his father, choirmaster of Pieterskerk, Leuven, and began playing in public at about the age of ten; later, Servais heard him and induced him to become his pupil at the Brussels Conservatory. Graduating with *premier prix* in 1858 he visited Paris (where Rossini expressed great admiration for his playing) and toured for some years. In 1865 he settled as Konzertmeister in Düsseldorf, where he gave notable trio performances with Clara Schumann and Auer. In 1868 he moved to Weimar as soloist of the Hofkapelle, but he was called to Berlin the following year as royal Konzertmeister and became one of the first teachers at the Hochschule für Musik. He resigned from this post in 1873 and spent the next three years near Wiesbaden, composing and occasionally touring. His London début in 1875 was an immediate success, and the next year Wagner entrusted him with the formation of the orchestra at Bayreuth, with August Wilhelmj as Konzertmeister. In 1878 de Swert's first opera, *Die Albigenser*, was successfully produced at Wiesbaden; three years later he moved to Leipzig. *Graf Hammerstein*, his second opera, was produced at Mainz in 1884, and a cello concerto was well received in Berlin in 1886. De Swert moved to Ostend in 1888 as director of the music school and professor at the conservatories in Ghent and Bruges. He was a significant figure in the Brussels school of cellists, and an excellent musician; he had a fine technique, and his tone was powerful yet sweet.

His elder brother, Isidore (Jean Gaspar) de Swert (*b* Leuven, 6 Jan 1830; *d* Brussels, Sept 1896), studied with François de Munck at the Brussels Conservatory, graduating with *premier prix* in 1846. He became a teacher at the Bruges music school in 1850, and was solo cellist of the theatre orchestra before moving to Brussels to become solo cellist at the Théâtre de la Monnaie in 1856. He was appointed to the Leuven Conservatory in 1866 and succeeded Servais at the Brussels Conservatory the same year.

LYNDA MACGREGOR

Swerts, Piet (*b* Tongeren, 14 Nov 1960). Belgian composer. He studied at the Lemmens Institute in Leuven and obtained the Lemmens Tinel Prize for piano and composition in 1985. He wrote his first composition at the age of 12. He attended summer courses held by Lutosławski and Kotonski in Poland. His works were twice chosen as compulsory pieces for the Queen Elisabeth Contest: *Rotations* for piano and orchestra in 1987 and *Zodiac* for violin and orchestra in 1993. He won several composition prizes: Flor Baron Peeters, Camille Huysmans, SABAM, Belgian Artistic Promotion, the provinces of Brabant and Limbourg.

Swerts is a versatile, pragmatic and eclectic synthesist, in whose works structure always grows with and from musical content. Imitation and polyphony or shifting panchromatic units are well-known principles; tonality and panchromatism go hand in hand. Swerts favours the chromatic *espressivo*, used in his String Quartet to evoke Mahler, Beethoven, Shostakovich and Ravel in turns. In other works Wagner, Bartók and Lutosławski serve as models, for example in the Symphony no.1 and the *Marcuspassie* which also alludes to Bach and medieval parallel organum.

WORKS
(*selective list*)

Stage: Ajas (L. De Ren), 1986; Les liaisons dangereuses (D. Van der Cruysse, after novel by C. de Laclos), 1996, Ghent, 17 Dec 1996

YVES KNOCKAERT

Sweys, Liebing. Organ builder. *See under* SUISSE.

Swieten, Gottfried (Bernhard), Baron **van** (*b* Leiden, 29 Oct 1733; *d* Vienna, 29 March 1803). Dutch music patron, active in Austria. He was the son of the distinguished doctor Gerhard van Swieten, and the family moved to Vienna in 1745 when his father was appointed personal physician to Empress Maria Theresa. After completing his education at the 'Theresianum', Vienna's exclusive Jesuit school, Gottfried briefly held a post in the Austrian civil service before embarking on an extended period of diplomatic training. Between 1755 and 1777 much of his time was spent abroad, with lengthy stays in Brussels (1755–7) and Paris (1760–63) and a visit to England in 1769. He had a short-lived term with ministerial rank in Warsaw (1763–4), but his one major diplomatic posting was as ambassador to Berlin (1770–77), where he was responsible for Austria's interests in the negotiations with Frederick the Great over the first partition of Poland. He returned to Vienna as Prefect of the Imperial Library, a post he held until his death. During the 1780s as President of the Court Commission on Education and Censorship he was one of the main instruments of Joseph II's liberal policies, but he was relieved of his office by Leopold II on 5 December 1791 (the day of Mozart's death).

As a young man in Vienna, Brussels and Paris, van Swieten was active in amateur music. Two *opéras comiques* of his own survive, *Les talents à la mode* and *Colas, toujours Colas* (manuscripts in *D-Rtt*), and performances are recorded of a third, *La chercheuse d'esprit*, now lost. Together with Monsigny and Philidor he contributed to the pasticcio *La rosière de Salency*, which was performed before the French court and later publicly in 1769. Of his output of at least ten symphonies seven are known (manuscripts in *Rtt*), three of which appeared in print under Haydn's name (see Landon, 1955), and there was a performance of one of them as late as 1782 in a Vienna Augarten concert that also featured Mozart. The unpretentious little operas have a certain naive charm and colour, but the chief characteristics of the conservative, three-movement symphonies are tautology and paucity of invention.

As a composer van Swieten is insignificant; his importance lies in his activities as a patron. During his years in Berlin, presumably through Kirnberger and the circle around Princess Anna Amalia, he developed a taste for old music, especially J.S. Bach and Handel. From C.P.E. Bach, Princess Amalia's titular Kapellmeister though now resident in Hamburg, he commissioned the six symphonies for strings H657–62/W182 (1773). On his return to Vienna he was an active champion of these three composers, and in particular of Handel. The performance (in an arrangement by Starzer) of *Judas Maccabaeus* by the Tonkünstler-Societät in 1779 was surely due to his influence. In 1781 C.P.E. Bach dedicated to him his third set of *Sonaten für Kenner und Liebhaber*, evidently as a mark of thanks for van Swieten's promotion of his music in Vienna. At the regular informal meetings on Sundays in van Swieten's rooms at the library, Mozart excitedly made the acquaintance of the music of J.S. Bach and Handel in 1782–3.

Probably in the second half of the 1780s, van Swieten organized a group of aristocratic patrons known as the 'Associierten' to sponsor private performances of oratorios, and it was for these concerts that Mozart made his arrangements of Handel's *Acis and Galatea* (1788), *Messiah* (1789) and the *Ode for St Cecilia's Day* and *Alexander's Feast* (1790). This sponsorship continued throughout the 1790s and reached its peak in the promotion of Haydn's *Seven last Words* (choral version, 1796), *The Creation* (1798) and *The Seasons* (1801). In each instance the 'Associierten' paid Haydn a handsome honorarium and bore the costs of the performance (in the town house of Prince Joseph Schwarzenberg, one of the sponsors), and van Swieten was responsible for the text. In the case of the *Seven last Words* this amounted to little more than minor revisions to the earlier choral arrangement by Friebert (see Sandberger), but *The Creation* was a more substantial adaptation and translation from an English libretto (reputedly intended in the first place for Handel) brought back by Haydn from London, while *The Seasons*, though based on James Thomson's poem, is to a large extent van Swieten's own work. His manuscript librettos contained (probably at Haydn's request) marginal annotations as to musical effects (facsimiles in Landon, 1985), and his taste for the picturesque left its mark on Haydn's music. During van Swieten's final years Haydn relied heavily on his advice in dealings with publishers.

Beethoven was also taken up by van Swieten in his early years in Vienna and dedicated his First Symphony to him. Another dedication, recognizing van Swieten's role as an early representative of the Bach revival, was that of Forkel's biography of J.S. Bach (1802).

EDWARD OLLESON

Swift, Kay (*b* New York, 19 April 1897; *d* Southington, CT, 28 Jan 1993). American composer, lyricist, author and pianist. Born into a musical family (her father was the music critic Samuel Swift), she began music lessons at the age of seven. She studied the piano with Bertha Tapper and composition with A.E. Johnstone at the Institute of Musical Art (now the Juilliard School), then continued with Charles Loeffler (composition) and Heinrich Gebhard (piano) at the New England Conservatory. She also studied counterpoint and orchestration with Percy Goetschius. On graduation she became a pianist, accompanying singers and instrumentalists, and a member of a trio which toured the northeastern USA.

Swift has two claims to a place in American musical history: first, in the 1920s, among the massed ranks of Tin Pan Alleymen, she (along with the lyricist Dorothy Fields and a few others) was a rare female songwriter; second, as an intimate friend and a fellow composer, she was among George Gershwin's closest musical confidants apart from his brother Ira. Swift had classical credentials; Gershwin was best known as a song-plugger who had graduated to musical comedy. At one stage, she was writing a fugue a week; he was writing a song a day. She assisted his transition to the concert hall; he led her to Broadway and popular music.

Her first hit song was 'Can't we be friends?', interpolated into *The Little Show* in 1929. On paper, it looks busy and cluttered, but it swings with a breeziness that belies its musical surprises. The words were by 'Paul James' (her husband, the banker James Paul Warburg), who also collaborated on her next success, *Fine and Dandy* (1930), an enduring song combining a strong lyric thrust with an irresistible rhythmic device of a recurring syncopated fourth beat.

Swift was an early champion of *Porgy and Bess*. When Gershwin died, she and Ira Gershwin preserved and numbered his unused jottings and, over the years, began turning the best into new songs, for example in the score for the film *The Shocking Miss Pilgrim* (1946). Although Swift declined co-composing credit and insisted that every note was Gershwin's, in some cases she was taking two- or four-bar phrases and organizing them into song form. Like Ira Gershwin, she seemed content to neglect her own career to serve what she saw as Gershwin's genius.

Her second marriage, to a cowboy, prompted a quirky memoir, *Who Could Ask for Anything More!* (New York, 1943), and an Irene Dunne film *Never a Dull Moment* (1950), which she scored. Swift continued to compose for the theatre, writing her own lyrics for the musical *Paris '90* (1952). A number of her works were commissioned for special occasions, including *One Little Girl* (1960, composed for the 50th anniversary of the Campfire Girls), *Century 21* (1962, for the Century 21 Exposition, Seattle), and *Dr Rush Pays a House Call* (1976, for the American Medical Association). Her song cycle *Reaching for the Brass Ring* was continually developing, new songs being added to celebrate the birth of grandchildren and great grandchildren.

WORKS

Stage: 9:15 Revue (musical, P. James [J.P. Warburg]), New York, 11 Feb 1930; Fine and Dandy (musical, James), New York, 23 Sept 1930; Alma mater (ballet), New York, 1935, rev. 1974; Paris '90 (musical, Swift), New York, 4 March 1952
Vocal and orch: Reaching for the Brass Ring, song cycle, S, orch, 1953–; One Little Girl (D. Frankel), solo vv, chorus, orch, 1960; Century 21, suite, 1962; All about Elsie (J. Oliansky), S, S, Bar, chorus orch, 1964; Man have Pity on Man (U. Vaughan Williams), 1v, orch, 1972; Dr Rush Pays a House Call, 1976
Songs: Can't we be friends?, 1929; Can this be love?, 1930; Fine and Dandy, 1930; Up among the chimney pots, 1930
Chamber and pf: Theme and Variations, vc, pf, 1960; Off-beat Waltz Plus Four, pf, 1974
Full score: Never a Dull Moment, 1950

EDWARD JABLONSKI, MARK STEYN

Swift, L.E. *See* SIEGMEISTER, ELIE.

Swift, Richard (*b* Middlepoint, OH, 24 Sept 1927). American composer and theorist. After private studies in the 1940s, he was a pupil of Leland Smith, Grosvenor Cooper and Leonard Meyer at the University of Chicago (MA 1956). He then taught at the University of California, Davis (1956–91), where he received a special appointment as Faculty Research Lecturer in 1982–3. He has received awards from the NEA (1977), the American Academy and Institute of Arts and Letters (1978) and other institutions. Swift was active in the San Francisco Composers Forum and the New Music Ensemble, whose influence is reflected in improvisatory elements in his works of the 1960s. Most of his music is serial and in large part 12-note. He has written many articles on 20th-century composers for this dictionary and has contributed numerous reviews to *Notes*; he is also a consulting editor of *19CM*.

WORKS

Swing (i). A quality attributed to jazz performance. Though basic to the perception and performance of jazz, swing has resisted concise definition or description. Most attempts at such refer to it as primarily a rhythmic phenomenon, resulting from the conflict between a fixed pulse and the wide variety of accent and rubato that a jazz performer plays against it. However, such a conflict alone does not necessarily produce swing, and a rhythm section may even play a simple fixed pulse with varied amounts or types of swing. Clearly other properties are also involved, of which one is probably the forward propulsion imparted to each note by a jazz player through manipulation of timbre, attack, vibrato, intonation or other means; this combines with the proper rhythmic placement of each note to produce swing in a great variety of ways.

J. BRADFORD ROBINSON

Swing (ii). The name given to a jazz style and to a related phase of popular music that originated around 1930 when New Orleans jazz was in decline; it was characterized by a greater emphasis on solo improvisation, larger ensembles, a repertory based largely on Tin Pan Alley songs, and above all the more equal weight given to the four beats of the bar (hence the term 'four-beat jazz' occasionally applied to this style). This important change in jazz rhythm took place gradually between 1930 and 1935 as the tuba was superseded by the double bass (playing in the walking bass style) and the banjo by the rhythm guitar, and the basic pulse was transferred from the snare drum to the hi-hat or ride cymbal. The harmonic rhythm in swing was generally much faster than in New Orleans jazz, sometimes changing as often as twice a bar, and soloists were expected to improvise melodies freely over these 'changes'. There was a notable increase in instrumental virtuosity among soloists in this period; some of the most prominent were Henry 'Red' Allen, Roy Eldridge, Coleman Hawkins, Chu Berry, Benny Goodman, Johnny Hodges and Lester Young. At the same time instruments not previously regarded as suitable for solo work began to be given solo roles, including the drums (Gene Krupa and Chick Webb), double bass (Jimmy Blanton), vibraphone (Lionel Hampton and Red Norvo) and guitar (Django Reinhardt and Charlie Christian). The development of swing coincided with the emergence by 1932 of the 13-piece dance band or 'big band' which became the standard vehicle for this music. Such bands included those led by Duke Ellington, Fletcher Henderson, Count Basie, Jimmie Lunceford, Benny Goodman, Artie Shaw and Earl Hines. However, the musicians themselves often preferred to work in smaller groups, which allowed more scope for solo improvisation and whose repertory was not restricted to dance music. The swing rhythm section became an important element in rhythm and blues and hence in early rock and roll, and was also used by some traditional jazz groups from the early 1940s. Although in the late 1940s the swing style ceased to be the dominant movement in jazz, it continued to attract excellent young players and was still commercially viable in the 1990s.

See also JAZZ §5. Swing and Big Bands (1930–45).

J. BRADFORD ROBINSON

Swingle Singers. French vocal group. The eight academically trained singers were brought together in Paris in 1962 by Ward Lemar Swingle (*b* 1927) and Christiane Legrand (*b* 1930) to improve their sight-singing and musicianship. With their early origins in the Blue Stars, a jazz vocal group formed by Blossom Dearie, they developed a distinctive style with scat singing arrangements of Baroque and Classical instrumental music, adding a jazz bass and percussion as accompaniment, embellishing rhythmic sections and improvising solos. They toured Europe and the USA and made several successful recordings. In summer 1973 Swingle formed a new and smaller English group, Swingles II, to complement the original choir, which continued to tour. Using less scat singing, they performed a wider repertory including madrigals, early jazz and pop songs, and introduced new music by contemporary composers. They performed many works by Luciano Berio and gave the first performance of his *Sinfonia* in 1969.

RAYMONDE S. KRAMLICH/R

Swinnen, Peter (*b* Lier, 31 Jan 1965). Belgian composer. He attended the Brussels Conservatory from 1984 until 1992, then studied composition at the Muziekkapel

Konigin Elisabeth with André Laporte. He won the Flemish Youth and Music Prize in 1991 and a prize from the province of Antwerp in 1992. He teaches analysis at the Brussels Conservatory and works freelance for Belgian television. Swinnen, who closely follows Laporte's style, is a narrative composer in the sense that the title of a work is always a multiple reference to the contents; consequently the music is programmatic by definition. Making frequent use of quotations, his music is a synthesis of traditional and experimental techniques from the period 1950 to 1970. The traditional element consists in an internal logic based on the concept of the *modus* in its broadest sense. The melodic and harmonic development is built upon a versatile system of *modi*, where the major and minor scales, the twelve-note series, and archaic and non-western *modi* all find a place. Swinnen also likes to combine acoustical elements with tape, live synthesizer and live electronics.

YVES KNOCKAERT

Swiny [McSwiny], **Owen** (*b* Co. Wexford, 1676; *d* London, 2 Oct 1754). Irish impresario. He entered Trinity College, Dublin, in 1694. By 1703 he was established in London in association with Christopher Rich at Drury Lane, where in 1705 his comedy *The Quacks* (after Molière) was performed and in 1706 he produced the highly successful adaptation of Giovanni Bononcini's *Camilla*. The following season he became manager of the Queen's Theatre, the home of Italian opera in London, for which he recruited the castrato Nicolini. After a performance of Handel's *Teseo* in 1713 Swiny fled to France, leaving the singers unpaid. By 1721 he was settled in Venice, where he acted as agent for the Royal Academy of Music in London, recommending singers and librettos. He was responsible for bringing the soprano Faustina Bordoni to London in 1726. In 1729–30 he recruited singers for Handel's new opera company. During this period he was also involved in the commission and purchase of Italian art works for English collectors. He had returned to London by 26 February 1735, when he had a benefit at Drury Lane and obtained posts in the Custom House and the King's Mews.

ELIZABETH GIBSON

Switzerland (Fr. Suisse; Ger. Schweiz; It. Svizzera). A country in western Europe. It consists of a confederation of 22 cantons. Its musical culture owes as much to the church as to secular influences.

I. Art music. II. Traditional music.

I. Art music

Swiss musical history must be seen against the background of regional differences and of the circumstances which governed the formation of the country. Four languages are spoken, German, French, Italian and Romansh, and there are two religions, Catholic and Protestant. Switzerland was founded in 1291 when three small provinces – later to become the cantons Uri, Schwyz and Unterwalden – declared their limited independence from the Holy Roman Empire. Other cantons joined over the following centuries. During the Middle Ages, most of French-speaking western Switzerland was under the rule of the Savoy, then from 1536 to 1798, of Berne. The French invasion of 1798 precipitated the declaration of a Helvetic Republic of all Switzerland. This attempt at unification failed, however, and it was not until 1848, after a brief, relatively bloodless war between the conservative Catholic cantons and the liberal Protestant cantons that Switzerland took on its present form of a confederation, with Berne as its capital.

Under Roman domination the main centres held by the legions, such as Avenches and Vindonissa, practised whatever music was current in Rome. The abbeys of St Maurice (founded in 515) and Romainmôtier (5th century), the convent of Disentis (5th century), the monasteries Engelberg and Einsiedeln, and the bishops' palaces at Sion, Geneva, Lausanne and Basle were important cultural centres. The monastery of St Gallen (under Benedictine rule from 760) was the most important musical centre. In the 9th century Notker composed sequences there which were sung in Cluny and in England, Spain and Italy, and in the 10th century Notker Labeo wrote there the earliest known musical treatise in German; in the 11th century Ekkehard IV introduced Gregorian chant to the monastery. From the 13th century the cathedrals played a significant part in the development of ecclesiastical chant; organs were built in Basle and Einsiedeln (14th century), Sion (*c*1430), Fribourg, Lausanne, Zürich and other towns. Landmarks in this development included the appearance of polyphony in the liturgy (in Zürich in the late 13th century and in Geneva *c*1500) and the performance of Passion plays in the 13th and 14th centuries in Basle, Einsiedeln, Engelberg and Selzach.

During approximately the same period, troubadours and trouvères toured the country and songs by Swiss Minnesinger are found in German collections. From the 14th and 15th centuries onwards instrumental music was performed in the main cities, which maintained fife and drum bands for public holidays and official ceremonies; nevertheless, vocal music predominated.

With the Reformation the development of music virtually ceased. Zwingli in Zürich forbade all music in church, while Calvin in Geneva forbade the use of organs and other instruments during services, claiming that they

distracted the faithful. Calvin allowed only the singing of psalms, which were taught at school. Basle was less affected by these restrictions; its university taught music from its foundation (1460). Church music developed more there than elsewhere, particularly under French and Flemish influences. Instrumental music continued to be performed in the main centres, but Ludwig Senfl and Heinrich Glarean, who both lived mainly abroad, were the only composers who became widely known.

After the austerity of the Reformation, organs reappeared in churches in the 17th, 18th and 19th centuries, while monasteries remained important for church music and musical studies. By the 19th century music was practised at all levels of society. German influence began to be felt and from 1808 the Société de Musique Helvétique gave annual concerts with a large number of performers; in 1842 Mendelssohn's 'Lobgesang' Symphony was performed in Lausanne in the composer's presence with 182 instrumentalists and 533 singers, and in 1860 more than 500 people took part in performances in Basle of Handel's *Jephtha* and of Beethoven's Ninth Symphony. Inspired by Nägeli and others, unaccompanied male-voice choirs grew up in German-speaking Switzerland, heavily dependent on the German repertory.

In French-speaking Switzerland, French solo songs and folksongs were preferred, though German or Swiss-German conductors soon introduced their native chorales. Whether in the secular or in the religious spheres, the public preferred works for large choral and instrumental bodies and favoured events such as the Fête des Vignerons (held every 25 years at Vevey) and the Einsiedeln Passion Plays. The time spent by Wagner in Zürich and Lucerne, and by Brahms in Zürich, Winterthur and Thun, had a major influence on the activities of Swiss orchestras, many of which were founded at this time. From the late 19th century until World War I German-speaking Switzerland was culturally little more than a province of Germany. Many of the important figures in musical life were either German or of German descent. When touring in Southern Germany, major artists would visit the German-Swiss cities as a matter of course. In French Switzerland such musicians as Gustave Doret (who was also a writer on music) and Emile Jaques-Dalcroze, originator of eurhythmics, gradually directed the music of French Switzerland away from Germany and towards France.

Every large town has its own symphony or chamber orchestra, the most famous being the Orchestre de la Suisse Romande. Swiss conductors have included Ansermet, Sacher (conductor of the Basler Kammerorchester and the Collegium Musicum Zürich), Dutoit, Denzler and Desarzens. Such composers as Schoeck, Burkhard, Honegger and Martin are internationally known. Stravinsky, who lived in Montreux and Morges (1914–20), collaborated with C.F. Ramuz, whose scenarios he used in *Renard*, *Les noces* and *Histoire du Soldat*. Librettos by René Morax were used by Doret for *La servante d'Evolène* and by Honegger for *Le roi David* and *Judith*; Morax founded the Théâtre du Jorat in Mézières (near Lausanne), which opened in 1908 with Doret's *Henriette* and represented a new type of lyric theatre. Ansermet and Sacher conducted works by their contemporaries, including the first performances of works dedicated to them by Bartók, Britten, Stravinsky, Martinů and Malipiero. The major opera houses are in Zürich, Basle, Geneva and Berne. The Association Suisse des Musiciens organizes annual festivals largely devoted to Swiss music with Swiss performers. In large towns the proportion of concert-goers is one of the highest in western Europe, particularly for subscription concerts.

An active avant garde, of which the leading members were Klaus Huber, Holliger, Guyonnet, Moret, Wildberger and Kelterborn, grew up in the 1960s and included pupils of Boulez, who taught at Basle from 1960 to 1963. The operas of Heinrich Sutermeister have been produced all over Europe.

Journals such as the *Schweizerische Musikzeitung* (*Revue musicale suisse*; Zürich, 1861–1983) and the *Revue musicale de la Suisse romande* (Morges-Yverdon, founded 1948), *Dissonanz* (Zürich, founded 1984) and the *Schweizer Musikzeitung* (Zürich, founded 1998) reflect Swiss musical life. There are important festivals in Lucerne, Zürich, Montreux, Lausanne, Gstaad and other towns. The Eidgenössicher Musikverein, a confederation founded in 1862 to promote wind music in Switzerland, has over 2000 member societies with a total of 80,000 members, all amateur musicians. In some cantons nearly every village has a choir or a brass band: the large number of choirs is characteristic of Switzerland, and the Société Fédérale de Chant has 200 male-voice choirs with a total of 15,000 members. The Société Fédérale des Orchestres has some 3000 members. These large numbers of musicians make amateur performers of the great oratorios possible. Swiss radio plays an important role in the development of new music by broadcasting new works, although funding cutbacks in the 1980s have lessened its importance. Private patrons of the arts have long been of major importance. The government promotes and encourages music in Switzerland through the arts council Pro Helvetia. The main publishers of music and music books are Amadeus in Winterthur, although Hug in Zürich, HBS Nepomuk in Aarau and Kunzelmann in Adliswil are also active. The supermarket cooperative Migros generously finances MGB, the largest producer of CDs of Swiss music. Other CD firms such as Claves, Tudor, Guild Music and Jecklin have also been active in propagating music by Swiss composers, as has Swiss Radio International, which issues its own series of CDs.

Education is the responsibility of individual cantons and thus varies considerably. The Société Suisse de Pédagogie Musicale has some 5000 members, all qualified music teachers, and organizes diploma exams. 370 music schools belong to the Verband Musikschulen Schweiz. Jeunesses Musicales (with about 5000 Swiss members) organizes concerts, competitions and summer camps. There are conservatories at Geneva (founded in 1835), where Liszt taught, Zürich (the largest), Basle, Winterthur and other large towns.

II. Traditional music

According to its mode of transmission and cultural setting, Swiss folk music can be classed either as *Musikfolklore* (folk music in a narrower sense) or as *Musikfolklorismus* (folkloristic music). *Musikfolklore* embraces all those musical phenomena that belong to traditional culture and are still subject to the vagaries of oral transmission; such music includes the *Betruf* or *Alpsegen* (Alpine prayer or blessing), *Jützli* ('shout of joy'), *Jodel* (yodel), *Chuäreiheli* or *Löckler* (cattle calls), cradle songs, children's songs etc., which are all functionally related to traditional rituals, customs and work. By contrast, *Musikfolklorismus* refers to those phenomena that have become stereotyped, or are literary compositions: in both cases they are transmitted by means of notation and include yodelling songs, national songs, popular compositions, songs for festivals, folksong arrangements and songs composed in a folk style. They are mostly designed for public performances, chiefly by societies and associations.

Because of its linguistic and cultural diversity, Switzerland has maintained a lively reciprocal relationship with the musical repertory of neighbouring countries for centuries. This applies equally to the historical folksongs of the 16th century to the 18th (many of which circulated among Swiss mercenaries in foreign armies) and to the more recent song-tunes and instrumental pieces of the late 18th and early 19th centuries. 'We come to the conclusion that, in Switzerland as a whole, there is hardly anything in our treasury of traditional folksong that is characteristic of all Switzerland' (R. Weiss). Just as the Franco-Swiss folksong repertory is shared with that of Alsace, so German-Swiss music has much in common with that of Baden-Württemberg, Swabia and the Tyrol, and Rhaeto-Romanic and Ticinese music with that of Piedmont and Lombardy, because Switzerland's political boundaries straddle several different language groups.

1. History and research. Although there was a sporadic interest in folk customs during the Renaissance, it was not focused directly on folksongs or instrumental music. However, the following references give some idea of the nature and distribution of folk music at that time: the *Kühreihen* or *ranz des vaches* (herdsman's song) from Appenzell in Georg Rhau's *Bicinia* (Wittenberg, 1545); the Swiss dance *Der Sibentaler genandt* by Urban Weiss, in W. Heckel's *Lautten Buch* (Strasbourg, 1556, 2/1562); and scattered references to *Alpsegen*, dancing, singing at Easter and New Year, *Sternsingen* (Epiphany songs) and nightwatchmen's songs in Cyssat's *Collectanea chronica und denkwürdige Sachen* (1565; ed. J. Schmid, Lucerne, 1969–72). There are other brief references to folk music in similar sources, such as those by Thomas Platter the Elder (*Ein Lebensbild aus dem Jahrhundert der Reformation*, ed. H. Kohl, Leipzig, 1921) and Felix Platter (*Tagebuchblätter ... des 16. Jahrhunderts*, ed. H. Kohl, Leipzig, 1913); and the first detailed account of the alphorn and its use (Conrad Gesner: *De raris et admirandis herbis*, 1555). 15th- and 16th-century chroniclers showed interest in historical battle songs following the rise of the Confederation. However, these and other lesser sources tell little about the music itself. Johannes Hofer's medical dissertation, printed in 1688, refers to the homesickness experienced by peasants who served as mercenaries in foreign countries when they heard the 'Cantilena Helvetica'. This was the first of a long series of references to the effect of alphorn music or of the *ranz des vaches* on Swiss expatriates, particularly those engaged in foreign military service. During the 18th century, with the growth of Helvetian patriotism and Rousseau's advocacy of a 'return to nature', the *ranz des vaches*, whether sung or played (on alphorn or bagpipe), was increasingly regarded as the essence of Swiss *Nationalmelodie*. Since the 17th century, secular song had been shunned by the upper classes and censured by the authorities as 'frivolous', to be replaced by compulsorily introduced psalm singing. They aimed, in the words of M.P. Planta, 'to suppress vexatious and corrupting songs and introduce beneficial ones in their place' and were supported by men like J.J. Bodmer (1698–1783), J.K. Lavater (1741–1801) and their followers. They were offended by the real folksongs of the period: such genres as the *Kiltlieder* (wooing songs), cowherds' sayings and teasing verses were considered unworthy of attention. Later, in the 1812 edition of the *Sammlung von Schweizer-Kühreihen und alten Volksliedern*, there appears the regretful, ironic and self-accusing statement, 'Our old national songs are in part lost or extinct, in part spoiled and misrepresented'.

The ideas of the Enlightenment as proposed by Bodmer and Albrecht von Haller (1707–37) gained influence when applied to the 'return to nature' movement. Already in 1724 Bodmer and Laurenz Zellweger had searched for the famous *Kühreihen* and *Senenspruch* to prove that 'human nature is alike in all reasonable people' (Bodmer to Zellweger, 14 September 1724). Mountain life and customs were extolled in the poem *Die Alpen* (1729) by Haller, which had a far-reaching influence towards idealization of the herdsman's life from the view of the urban dweller. With Rousseau's musical notation of the *ranz des vaches* in the *Dictionnaire de musique* (1768), this interest found a scholarly basis (fig.1).

Before the publication of numerous (mostly) German travel accounts of Switzerland towards the end of the 18th century, the scholar and official scribe from Langnau, G.S. Studer (1761–1808), with the Kreis der Berner Bergfreunde (groups of Bernese mountain-lovers), started to collect and to document folksongs, *ranz des vaches* and herdsmen's songs from the Bernese Oberland, Appenzell,

1. Musical notation of the 'ranz des vaches' in Rousseau's 'Dictionnaire de musique' (1768)

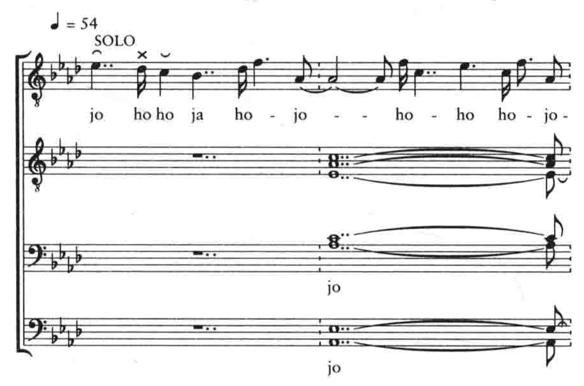
Uri, Schwyz and Unterwalden. This early collecting activity, inspired by Ossian and Haller, resulted in the first edition of a genuine folksong collection, the *Acht Schweizer-Kühreihen mit Musik und Text* (1805) by F.S. von Wagner. This was the foundation of Swiss folksong research, and by the fourth edition it included 76 songs with guitar or piano accompaniment. A few art songs by G.J. Kuhn and F.F. Huber were also inserted, for the aim was to offer the people new and 'better' folksongs as well as old ones. It was hoped to satisfy the 'townsman's longing for the idyllic' by reviving extinct customs and songs, and to inspire visiting tourists with an interest in Swiss folk life. There was also a political aspect to the pastoral festival at Unspunnen near Interlaken in 1805, for it marked the reinstatement of Berne as the 'directing canton' for that year, following Napoleon's Act of Mediation in 1803. By means of public exercises in alphorn playing, by singing and by Alpine contests, country folk were prepared for later self-glorification in the *ranz des vaches* and cowherd songs (*Küher*-and *Sennenlieder*) composed in popular style during the 19th and 20th centuries. Thus *Musikfolklorismus*, the use of traditional folklore to create and rationalize history, was established by the early 19th century.

Folksong collection and study first began in educated circles, among the followers of J.R. Wyss, F.S. von Wagner, G.J. Kuhn and F.F. Huber in Berne, and those of Martin Usteri, D.H. Hess and J.U. Hegner in Zürich. Isolated songs and airs soon appeared in calendars, weekly journals and almanacs, and individual collections also appeared, such as the *Allgemeines Schweizer-Liederbuch* (1825, 4/1838) and the *Schweizerisches Taschen-Liederbuch 'Alpenröschen'* (1859, 8/1913).

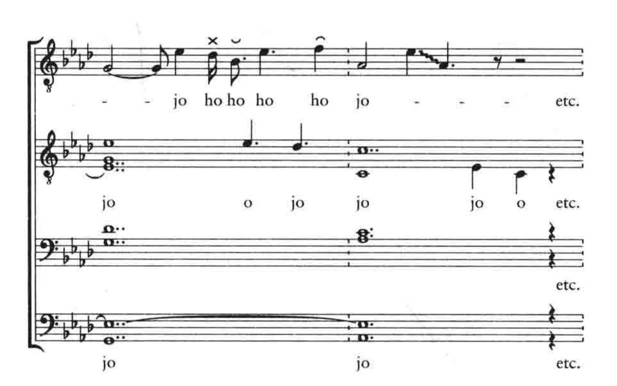
E.L. Rochholz's *Eidgenössische Lieder-Chronik* (1835), F.J. Schild's *Der Grossätti aus dem Leberberg* (1864–73) and Alfons von Flugi's 'Chanzuns popularas d'Engiadina' (*Romanische studien*, 1873) were important forerunners for the first scholarly edition of Swiss folksongs by Ludwig Tobler (1882–4). This collection of texts included, in addition to a general introduction, critical remarks on the historical, religious and secular songs that had been collected in libraries.

The attentions of the German Romantic literary movement introduced a philological approach. In addition to the models provided by Herder, Brentano, Liliencron, Erk and Böhme, the works of immigrants and scholars from Germany (Stolberg, Meisner, Sczadrowsky, Rochholz, J. Meier etc.) had a long-lasting impact. They paved the way for systematic collecting. Interests were still predominantly philological until the foundation of the Schweizerisches Archiv für Volkskunde. Conditions for music research improved from 1906 with the founding of the Volksliedarchiv (Basle), under the inspiration of J. Meier, firstly for collections of German-Swiss folktunes, then (from 1907) of French, and soon afterwards of Rhaeto-Romanic and Italian. Since then the research

findings of A. Tobler, H. In der Gand, O. von Greyerz, A. Rossat, G. Züricher, S. Grolimund, A.L. Gassmann, M. Maissen and many others have been published regularly in the *Schriften der Schweizerischen Gesellschaft für Volkskunde*. In the years between 1908 and 1925, Greyerz published *Im Röseligarte: schweizerische Volkslieder* in six volumes. Other well known collections include *Les chansons populaires receullies dans la Suisse Romande* (1917–31) by Rossat and Piguet, the *Scelta di canzoni popolari ticinesi* (1933) by In der Gand and the *Chanzunettas popularas rumauntschas* (1958) by G.G. Cloetta. The *Hausbuch der Schweizer Volkslieder* (Baumann, 1980) offers 220 traditional songs from all four language regions.



Scholarly research gradually declined because of the recession of the folksong movement after World War II. Only in the early 1960s did a new interest develop in the fields of history, folklore, musicology and literature, stimulated by the Swiss encounter with the Anglo-American 'folk scene'. Various scholarly studies have appeared since then, including those by Burdet, Baumann, Geiser or Bachmann-Geiser, Engeler, Bolle-Zemp, Collenberg, Zemp, Messerli and Buckhardt-Seebass.

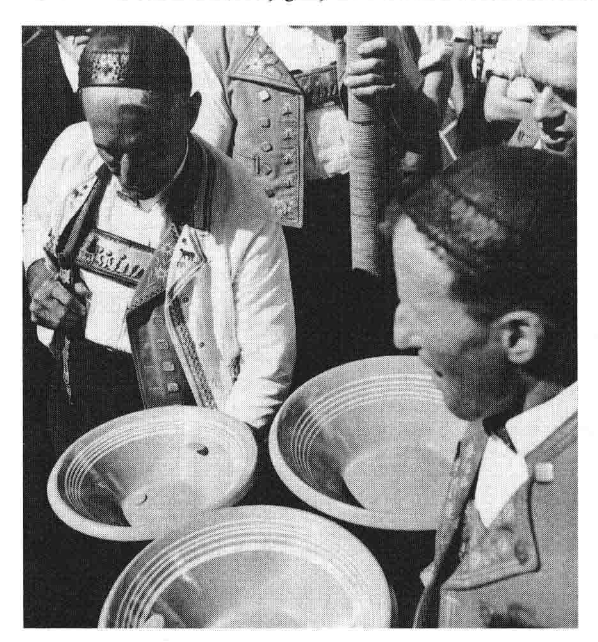


Building upon the work of In der Gand of 1937, Brigitte Bachmann-Geiser made an inventory of folk music instruments in Switzerland from 1971 to 1977 and published the results in the volume *Die Volksmusikinstrumente der Schweiz* (1981) as a part of the *Handbuch der europäischen Volksmusikinstrumente*. Some parts of this work have been documented on disc and television films. Bachmann-Geiser was also a co-founder of the Schweizerisches Museum, which opened in 1991, and the associated Institut für Volksmusik und Musikinstrumente in Burgdorf. There is at present no single degree programme in ethnomusicology at a Swiss university, although occasional lectures are given and classes held at the universities of Basle, Berne, Fribourg and Zürich.

2. General characteristics. Most traditional singing is for solo voice, except in western Switzerland where some songs have choral refrains. Songs connected with Christmas, New Year, Epiphany, mid-Lent, St Nicholas and other church festivals are similar to soldiers' songs, professional and vocational songs, in that they are sung in parallel 3rds and 6ths or, less often, in an improvised polyphonic style derived from the practice of schools and choirs. Partsinging of a pre-19th-century origin can be found in the area of the Ticino canton; according to Geering (1951, p.62) this 'is not just a degenerate form of art music' but the last 'offshoot of the practice of partsinging ... which predates written music'.

In the Appenzell canton there is another type of partsinging which is neither transmitted in writing nor deliberately rehearsed. Here a solo yodel or yodel-song is supported by an improvised vocal harmony based on the root position primary triads: thus the solo yodeller, often followed by a second singer, is given supporting resonance from sustained block harmony (ex.1). This kind of singing, known as *Gradhäba* ('that which sustains the notes evenly'), must have evolved from a 17th- and 18th-century homophonic psalm-singing style. This yodel is often accompanied by idiophonic timbres such as *Schellenschütteln* (the shaking of large cowbells; fig.2) and *Talerschwingen* (in which a coin is swirled around in an earthenware basin; fig.3). Similar multi-part *Naturjodel* are also found in Toggenburg, in central and upper Berne,

Ex.1 *Gradhäba* from Herisau, Appenzell canton (Baumann, 1976), p.192



in Emmental and also around Gruyères. Yodel duets and trios with independent part-movement are known principally in central Switzerland, especially in the Muotathal and Weggis regions. Yodels in the Schwyz region and in Appenzell, and the *ranz des vaches* and *Betruf*, frequently incorporate the 'alphorn-fa', that is, a sharpened fourth degree that sounds like the natural 11th harmonic of the alphorn. The *Naturjodel* proper, which is confined to the northern side of the Alps, can be classified into individual yodel dialects and yodel regions according to its use of free rhythm; its slow or swift and dance-like tempos; its

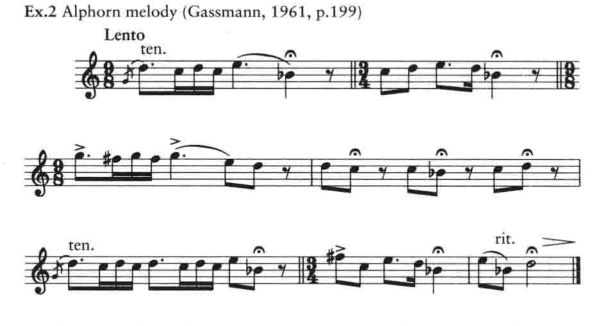
3. Yodellers accompanied by Talerschwingen (the swirling of coins around in earthenware basins)



use of the 'alphorn-fa' mode; and the various different conventions of extemporization. However, these characteristics still await basic study and classification.

A form comprising alternate solo yodelling and singing, known as *Jodellied* or *Gsätzli*, appeared with increasing frequency towards the end of the 19th century. Its development is most closely associated with the work of J.H. Tobler, F. Huber and F.W. Kücken, who accentuated the particularly Swiss element in their choral songs. F. Huber, A. Glutz of Solothurn and J. Lüthy concluded their songs with a yodel-like coda: such songs could be regarded as 'the forerunners of the yodelling songs much-beloved of contemporary folkloristic circles' (Zulauf). Because of the close association of the *Jodellied* with the 'stylised yodel' defined by A. Tobler (a yodelling melody whose vocables are replaced by words), and with the analogous type of *ranz des vaches* whose melody has also been given words, it is difficult to distinguish these song types in performance.

Under the influence of the Federal Yodel Union, which introduced 'structural rules' (*Rahmengesetze*) and standardized vocalization, the primarily extemporized form of the yodelling song became a kind of male-voice partsong for quartet, quintet, sextet or mixed choir. This kind of song, the 'new and composed yodelling song', is classed as folkloristic music.

The more monotonic *ranz des vaches* or *Kühreihen* (see fig.1) is usually distinct from yodelling. The earliest recorded use of the German term 'einem den kuoreien pfyfen' ('to pipe the *Kühreihen* to one') was in 1531. It is described variously as a 'driving-in song', *Chuedreckeler* (milking-song), or *Lockgesang* (calling or coaxing song). It generally uses no falsetto and is further distinguished from the wordless yodel by its pastoral text which expresses affection for the cows; it might also be introduced or ended with a yodel call. Some instrumental performances of *Kühreihen* have also been notated, and played on the alphorn (ex.2), the bagpipe and even the violin or *Schweizerpfeife* (Swiss fife). It is no longer

Ex.2 Alphorn melody (Gassmann, 1961, p.199)

performed by the peasantry: A. Tobler (1903), who described himself as the last singer of the traditional *ranz des vaches*, suggested that either the texts no longer appealed or the musical demands were too great. In recent years, in the context of the folk revival movement, the *kühreihen* or *ranz des vaches* is being performed once more.

Ex.3 *Viehlöckler* (cattle call) from Muotathal, Schwyz canton (Baumann, 1976, p.145)

Like the *Viehlöckler* (cattle call, ex.3) and the *ranz des vaches*, the *Betruf* (prayer call), also known as *Alpsegen* (Alpine blessing, ex.4), was once associated with the magical cults of shepherds and cattle drovers. Like the *Juchzer*, the ordinary yodel and the *Lockruf* (call-tune), the *Betruf* has no definite structure, being a type of Sprechgesang whose form depends on the verbal content. The psalm-like prayer requests the protection of the Virgin Mary and the individual patron saints of the stock farmers. To whatever distance the sound carries through the *Folle* (wooden or tin megaphone) the pastures are placed under the care of St Anthony, St George, St Gallus and St Wendelin, and evil is exorcised (fig.4). The *Betruf* has a wide distribution in Catholic areas and during summer pasturing it is still, to some extent, called every

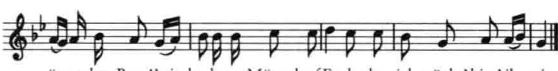
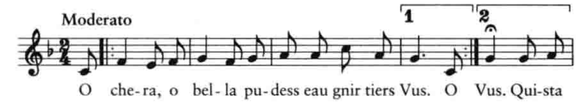
4. *The Alpsegen: woodcut by Joseph Balmer from 'Schweizerisches Kunst-Album' (1862)*



evening in the Obwalden and Uri cantons, in the St Gallen highlands, in Goms (Valais) and in Entlebuch.

The songs that survive in oral tradition are mostly associated with customs or religion. In addition to sacred and narrative songs the following, with few exceptions, are of 19th-century origin: Epiphany and Christmas hymns, May songs, songs sung in the spinning-room, children's songs, joking songs, patriotic songs and love songs (see exx.5 and 6). Alongside this folk heritage proper, songs in folk style or composed 'for the folk', known as *Schweizerlieder*, have a wide distribution. Hundreds of them came into circulation with the growth of national and patriotic consciousness after the French Revolution and through the activity of rifle clubs, gymnastic clubs and students' unions (e.g. the Zofinger songbooks, 1822 onwards). Historical sources suggest that only a few extant melodies predate the 18th century:

Ex.5 *Das Guggisberger Lied* (Swiss-German love lament), Wohlen, Aargau canton; known since 1741 (Baumann, 1994, p.86)



they include those of a few *Juchzer*, yodels, alpine blessings, incantations, nightwatchmen's songs, children's and cradle songs, religious and historical songs, mercenaries' songs and ballads (such as the Tannhäuser ballad).

Instrumental music includes fife and drum marches of the 'old Switzers', French marches and *Landesgemeindemärsche* (in the Graubünden, Obwalden and Valais cantons) and other fife and drum tunes for public processions and ceremonies in the Val d'Anniviers. Many of these date from the 18th century and are frequently of German, French or English origin. Noise-making customs known as *Lärmbräuche* include *Geisselknallen* (whip-cracking) during the feast of St Nicholas and *Rumpelmetten*, the noisy call to Mass which replaces bellringing during Lent. For the latter custom, rattles, including *Schnarren* (large cog rattles), *Klapperbretter* (clappers) and *Chlefeli* (a type of castanet) are used. The *Hackbrett* (dulcimer) and the zither are played in Valais, Appenzell, Emmental and Toggenburg. The *concerti* sounded in churches in the Italian-speaking Ticino canton and carillon playing in French-speaking Valais are two distinctive forms of church bell music.

From the end of the 19th century the mass media and the growing tourist traffic increased the influx of pan-alpine music characteristics. To some extent the adoption and adaptation of songs in non-Swiss dialects paralleled the intrusion of dialects from the Lower Rhine, Baden-Württemberg, Alsace and Swabia into the development of the spoken language. After World War II, a conservative trend towards purism set in and, within the more extreme nationalistic folkloristic circles, support was increasingly voiced for the 'Echt-Schweizerische' ('genuine Swiss spirit') as a construct of the past.

3. FOLKLORISTIC MUSIC. The publication of the *Acht Schweizer-Kühreihen* and the occasion of the Unspunnen festival in 1805 marked the first steps in the development of folkloristic music: such music was conceived as the transformation of the 'primitive' into the aesthetically pleasing, and traditional music was seen as taking on 'a new existence' with this change in its function. The alphorn, previously used for calling or calming cattle, or as a signal of threatening danger and sickness, came to be played as a spectacle for tourists. The Alpine blessing and certain folkdances were given similar treatment. At the Unspunnen festival the victors in the alphorn playing contest were decorated with a 'Spanish ewe, ram and lamb' and given a 'medal and a small cap made of English leather'. Folkloristic performances became more and more commercialized, although socio-economic problems were often the background to such activity, which included, for instance, horn blowing by beggars. Even so, folksong and folkdance arrangements, produced for domestic music-making in the alien surroundings of towns, supplanted traditional pastoral music, and the

Ex.6 *O chera, o bella* (Rhaeto-Romanic popular love song), Engadin, Graubünden canton (Baumann, 1994, p.70)

yodel and the *ranz des vaches*, performed by coloratura sopranos, resounded in concert halls. It was only a small step from the process of arranging folksong to that of imitating 'original' folklore. F.F. Huber and G.J. Kuhn had already imitated the *ranz des vaches* and the yodel in their own folk-style compositions. In contrast to the early *Schweizerlieder* with words by Lavater and melodies by J. Schmidlin and J.H. Egli (1770–87), some of these folk-style songs promptly became popular. These imitative products were originally supposed to lead the peasantry itself back to making its own local songs (*Dialektlieder*), but the movement took a new direction leading to the growth of musical societies in towns. At the end of the 19th century *Jodlerverbände* evolved from the gymnastic clubs (e.g. the Alte Sektion Zürich) and their singing, for all its urban surroundings, was chiefly in praise of the cowherd and his Alpine pastoral life.

In 1912 a Swiss yodel association was officially founded, comprising a number of yodel groups; in 1924 it became the Schweizerischer Jodlerverband and, in 1932, the Eidgenössischer Jodlerverband; in 1975 there were over 15,000 affiliated members and over 600 branches. By 1992 the number of members had grown to over 24,000. The repertory promoted by the Schweizerische Gesellschaft volkstümlicher Autoren, Komponisten und Verleger (an association of authors, composers and publishers, founded in 1922) consists of folkloristic compositions whose texts mostly glorify the peasantry in an idealistic and nationalistic manner. Yodel songs such as *Der Chüejerstand*, *Bhuurebluet*, *D'r Geissbueb*, *Alpaufzug* and many others proclaim as 'echoes of the homeland', in self-glorifying manner, the existence of an alien and completely different type of society in which employees and workers strive in their leisure time after a vanished rural way of life. Efforts are now being made, by extending the subject matter of the texts, to counteract the impression that townspeople sing the praises of a pastoral way of life that they know only from hearsay.

The Schweizerische Trachtenvereinigung (Swiss Folk-costume Society) is the leading society concerned with folk-costume and folkdances. Because they are organized and presented as theatrical spectacles, traditional dances are changing more and more. Folkdances include the *Allemande* (or *Alewander*) from Engadin and Obwalden; the widely distributed polkas, ländler, écossaises and mazurkas; the ritual *Klausjagen* (at the Rigi); certain carnival and masked dances such as the *Röllibutze*, *Nüsslet* and *Vogel Gryff*; and, most commonly, couple-dances (known in central Switzerland as *Gäuerle* and in Appenzell as *Hierig*). Traditional couple-dances have to some extent survived independently of folkloristic activities. Although published collections of Swiss folkdances mostly include more recent dances, older dances such as circle-dances (ribbon dances and wedding dances), *Coraules* (sung dances), the pantomimic dances known as *Picoulet* and *Vögelschottisch* and the couple-dances known as *Matelote* and *La champérolaine* feature prominently in folk-costume festivals, known as *Trachtenfeste*.

Dance music is provided by small ensembles comprising various combinations of the following: fiddles, clarinets, *Schwäfelpfeiffen* (a type of fipple flute), trumpets and *Schwyzer Örgeli* (accordions); a string bass usually accompanies these instruments. The *Hackbrett* (dulcimer) is still used in the ländler bands in Appenzell, Valais and the highlands of Berne. Less traditional bands include the piano and even the saxophone.

There are numerous organizations, including workers' associations and societies for wind music, concerned in different ways with maintaining the tradition of folkloristic music; among the more important ones not already mentioned are the Schweizerische Vereinigung für Volkslied und Hausmusik and the Jodler-Dirigenten-Vereinigung. The Arbeitsgemeinschaft Schweizer Volkstanzkreise, the Vereinigung Schweizerischer Volksmusikfreunde and the Gesellschaft für die Volksmusik in der Schweiz also play an important role in promoting and documenting folk music for practical purposes.

The conscious cultivation of native customs, costumes, dialects, folksongs and dances that emerged around 1905 from the *Heimatschutzbewegung* oriented itself increasingly over the years towards a backward-looking, 'intact' world view. With the transfiguration of the past, present reality was often suppressed or simply forgotten. Scarcely any songs critically addressed, for example, the effect of industrial development on the environment or social changes, except perhaps in cabarets. Since the 1960s, younger songwriters have been reaching back more often towards traditional songs, but in doing so consciously select suppressed protest songs and topics. Stimulated by the French chanson and the Anglo-American folksong movement, young singers created the contemporarily orientated *Mundartlied*. The new dialect songs of Mani Matter (*d* 1972) were first inspired by the chansons of Georges Brassens. From 1965 onwards, Matter in turn influenced the dialect song within the circle of *Berner Troubadours* and *trouvères* and gave important impulses to reflective discussion concerning the transmitted body of songs. Songwriters (*Liedermacher*) such as Fritz Widmer and Jacob Stickelberger from Berne, Toni Vescoli from Zürich and Dieter Wiesmann from Schaffhausen broke off decisively from the 'romance of the glow of the Alps'. Years earlier, songwriters such as Hans Roelli (1889–1962), the Swiss French chansonnier and poet Gilles (Jean Villard, 1895–1982), later Ernst Born of Basle, Walter Lietha of Chur and many others had prepared the way for the regional song of the 1970s and 80s. In the Rhaeto-Romanic Graubünden, *Trubadurs* and *Sursilvans* joined forces. Roberto e Dimitri and Marco Zappa in Ticino developed another individual style which made current a half-forgotten song repertory and at the same time brought Ticinese folk music closer to folk and pop music.

Many of the 'homemade' Lieder and chansons hold up a critical mirror to society and consciously confront and become engaged with current issues (e.g. Urs Hostettler: *Anderi Lieder*, 1979). Political events and citizens' initiatives concerning women's issues, nuclear reactors, highways and the protection of the environment often make an ideal podium for the *Liedermacher*. Sometimes new texts that address current events are performed to traditional melodies and are increasingly accompanied by folk music instruments such as the *Hackbrett*, zither, *Drehleier* and the *Schwyzer Örgeli*. In the process of reviving old folksongs and folk music instruments, music groups and songwriters are also sponsoring alternative festivals. Such gatherings are consciously contrasted with the festive occasions of the Swiss Folk-costume Society, of the Swiss Yodler Association, and of folk choruses. They focus, in a complementary way, on the contradictions present in

dealing with 'Heimat', and between traditional 'Heimatschutz' and modern 'Umweltschutz'.

PIERRE MEYLAN/CHRIS WALTON (I),
MAX PETER BAUMANN (II)

Swybbertszoon, Peter. Dutch organist, father of JAN PIETERSZOON SWEELINCK.

Swynford (*fl c*1400). English composer. Nothing is known of his life, though the coincidence of names with Catherine Swynford (stepmother to Henry IV and third wife of John of Gaunt) tempts conjecture. His sole surviving composition is a four-part Credo in the Old Hall Manuscript (ed. in CMM, xlvi, 1969–73; no.86), which is one of the more old-fashioned pieces in the manuscript. The text is telescoped between the top two and the third upper parts, and the tenor is freely isorhythmic. The musical style shows some signs of Italian influence.

For bibliography *see* OLD HALL MANUSCRIPT.

MARGARET BENT

Syberg, Franz Adolf (*b* Kerteminde, Fyn, 5 July 1904; *d* Kerteminde, 11 Dec 1955). Danish composer. He was the son of the painters Anna and Fritz Syberg, who were well known in Denmark. From 1922 to 1928 he lived in Leipzig, where he studied composition and theory with Sigfrid Karg-Elert at the Leipzig Conservatory and also privately with Werner Hübschmann. In 1928 he moved to Copenhagen, and studied the organ with Peter Thomsen

while attracting recognition as a composer, with, among other works, his music for the marionette play *Uffe hin spage* ('Uffe the Meek', 1929), which reflects his close contact with the radical cultural circles of the time. After passing the organist's examination in 1932 he became organist at Kerteminde, where he was isolated from the Copenhagen new music scene. In 1938, when his Quintet for flute, clarinet and string trio of 1931 was chosen to be performed at both the ISCM in London and during the Nordic Music Days in Copenhagen, Syberg's compositional inspiration and energy, after a silence of three years, were revived. In the next few years his works included his most outstanding composition, the Symphony (1939), which is saturated with colour, its orchestral structure tending towards chamber music. He stopped composing in 1942 and his work disappeared from the repertory. However, in 1990 seven of his compositions were performed to acclaim during the Musikhøst (Music Harvest) festival in Odense, and since then most of his sparse output has become available in print and has been recorded.

Characteristic features of Syberg's music are traits of German neo-classicism, particularly that of Hindemith, and a love of counterpoint and dense linearity, resulting in a harmonic world which is occasionally somewhat harsh and dissonant. In his mature works there are also unmistakable traces of Nielsen's influence.

WORKS
(*selective list*)

Stage: Uffe hin Spage [Uffe the Meek] (incid music to marionette play, S. Clausen), 1929; Leonce og Lena (incid music, G. Büchner), 1931; Ett drömspel (prelude, A. Strindberg), 1941–2

Orch: Music, ob, str, 1933; Sinfonietta, 1934–5; Adagio, str, 1938; Sym., 1939

Chbr: Str Qt, 1930; Qnt, fl, cl, str trio, 1931; Concertino, ob, str qnt, 1932; Str Trio, 1933; Qt, ob, str trio, 1933; Wind Qnt, 1940; Oct, wind, 1941

Org: Chaconne, 1933; Prelude, Intermezzo, Fugato, 1934

BERTEL KRARUP

Sychra [Sikhra, Sichra], **Andrey Osipovich** (*b* Vilnius, 1773 [?1776]; *d* St Petersburg, 21 Nov/3 Dec 1850). Russian guitarist, composer and teacher of Czech ancestry. Sychra holds a prominent position within Russia, where he is often referred to as the 'patriarch' of the seven-string guitar and also as its inventor, erroneous though that may be. Indisputably he was a major force in the development of Russian guitar music and one of its most prolific composers, as well as an important teacher who left behind a line of pupils.

Sychra first played the harp, on which he was reputed to have been a great virtuoso, before dedicating himself to the seven-string guitar. He moved to Moscow at the beginning of 1801, and became the dominant figure in the field and created a huge following. In 1812, perhaps because of Napoleon's campaign and the Moscow fire of that year, he moved to St Petersburg, where he remained for the rest of his life. In 1802 Sychra published in Moscow the *Journal pour la guitare à sept cordes*, and in 1813 in St Petersburg published a new journal, *Sobraniye raznogo roda p'ies*. He published another journal in 1818, advertised in the *Peterburgskiye vedemosti* as containing 50 pieces in each of its six issues. A further journal appeared in 1824. The most important of his journals, *Peterburgskiy zhurnal dlya gitarï*, first appeared in 1826 and was published, presumably monthly, for the next 12 years; 144 issues survive. He also published many single pieces. The Stellovsky-Gutheil editions alone contains 75 numbers, of which most consist of several compositions. Sychra published in all well over 1000 pieces for seven-string guitar, and left many in manuscript, including complete arrangements for two guitars of Glinka's *A Life for the Tsar* and *Ruslan and Lyudmila*, with which he was assisted by the composer.

Sychra wrote a large number of pieces for amateurs, including studies, folksong settings, operatic transcriptions and arrangements of Viennese waltzes by Strauss and Lanner, an output that may explain his dismissal by Soviet era musicologists as a mediocre composer. Among these compositions however are many that require the highest level of virtuoso technique, and which not only employ techniques not known in the West, such as the four-finger cross-string trill, but are also musically innovative. Much of Sychra's guitar music, especially the teaching pieces and studies, reproduces harp sonorities on the guitar, perhaps in response to his early career as a harpist. His magnum opus, the *Prakticheskiye pravila igrat'na gitare* (St Petersburg, 1817), which has long been esteemed by Russian guitarists, is only now beginning to attract international attention.

Sychra rarely appeared in concert, preferring to present his pupils to the public and participating only occasionally. Among his most important pupils were Semyon Nikolayevich Aksyonov, Fyodor Mikhailovich Zimmermann, Vasily Stepanovich Sarenko, Vladimir Ivanovich Morkov and Nikolai Ivanovich Aleksandrov, as well as the bass Osip Petrov.

MATANYA OPHEE

Sychra, Antonín (*b* Boskovice, 9 June 1918; *d* Prague, 21 Oct 1969). Czech musicologist and aesthetician. His musicology studies under Helfert at Brno University were interrupted by the closing of the universities under the Nazi occupation, during which he became a member of the underground resistance led by the Communist party. After the liberation he completed his musicology studies in Prague, where he was attracted by Jan Mukařovský's structuralist aesthetics, an analytical method he used in his doctoral dissertation at Prague (1946) on music and word in folksong. Before completing his doctorate he had begun working in the art department of the Education Research Institute in Prague and lecturing at the education faculty. In 1948 he was appointed lecturer at the Prague Academy (AMU), where he later became dean (1950) and professor (1951). He completed his *Habilitation* at Prague University in 1952 with a work on the semiotics of music,

becoming lecturer in the aesthetics and history of music. In 1959 he completed his DSc dissertation with a work on the aesthetics of Dvořák's symphonic works; from 1959 to his death he was director of the aesthetics department at Prague University. From 1945 he was one of the most enterprising organizers of Czech musical and musicological life, playing an essential part in its restructuring in accordance with the socialist cultural pattern. His influence was most evident in the Czechoslovak Composers' Union, where he held a number of important posts. He represented Czech musicology and aesthetics at many international organizations (e.g. as an IMS committee member, 1961–9).

Sychra's work was marked by his determined efforts at creating a Marxist musicology and aesthetics capable of shedding light on basic theoretical questions. His initial apologist stance, in response to the political and cultural demands of the time, alternated with more systematic work, in which he mastered and profitably exploited Soviet work, in particular Asaf'yev's intonation theory, several ideas from Czech structuralism, information theory and cybernetics. At the same time he never abandoned his Marxist approach and attempted to keep Marxist aesthetics, and in particular its musicology, an open system, capable of responding creatively to current theoretical and practical trends. He achieved fruitful results particularly in the field of musical semantics, which he elaborated in collaboration with the physiologist Karel Sedláček into a solid basis for experimental research.

JOSEF BEK

Sydeman, William (Jay) (*b* New York, 8 May 1928). American composer. He studied at the Mannes College (BS 1955) with Felix Salzer and Roy Travis and at the Hartt School (MM 1958) with Arnold Franchetti. Among his other teachers were Sessions and Petrassi. From 1959 to 1970 he was a member of the composition faculty of Mannes College; he then left New York and began a 12-year period of travel and study of philosophy and religion which took him to the southern California desert, England, Oregon, Hawaii and northern California. He taught at the Rudolph Steiner College, Fair Oaks, California (1980–82), and has continued his association with the school. Sydeman has won awards from the Boston SO, the Pacifica Foundation and the National Institute of Arts and Letters. He has received commissions from the Hopkins Center Festival at Dartmouth College, the Boston SO, the Chamber Music Society of Lincoln Center and the Sacramento SO.

Sydeman's music written between 1955 and 1970 uses linear, motivic material, intricately structured, with complicated and free rhythms. The works of this period are atonal; he also experimented with serial techniques and aleatory episodes, taped music and amplified sound. Between 1965 and 1970 he increasingly emphasized theatrical elements and included, even in instrumental works, spoken texts which he himself wrote or arranged. Satire and humour are found in *Malediction* (1970) and *Full Circle* (1971), the latter described by the composer as a 'mini-music-drama for three singers and electrified performers'. Works composed after 1980 are more lyrical and accessible while still retaining the compositional sophistication of the earlier music. Along with almost 200 pieces for diverse instrumental groups, they include vocal solos, choral works and orchestral pieces.

WORKS
(*selective list*)

Stage: Encounters, incid music (various authors), 1967; Songs of Milarepa (Tibetan Buddhist writings), vn, nar, dancer, 1980; Anti-Christ (Solovieff), incid music, 1981; A Winter's Tale (W. Shakespeare), incid music, 1982; Aria da capo (op, after E. St V. Millay), 1982

NANCY B. REICH

Sydney. City in Australia, capital of New South Wales and the site of the first European settlement in Australia. As well as being Australia's most populous city, it is the headquarters of many of its musical organizations, including the federal directorate of music in the Australian Broadcasting Corporation (ABC), the principal Australian chamber music organization (Musica Viva Australia), Opera Australia and the Australian Chamber Orchestra. It is also home to the Australia Council, whose music fund is the main source of federal governmental subsidy for a broad range of musical activities. The Australian Music Centre, the principal agency for the dissemination of information about Australian composers and their works, is housed in the city's historic Rocks area. Sydney is the most substantial supporter among Australian cities of concerts and opera through subscription series and ticket sales.

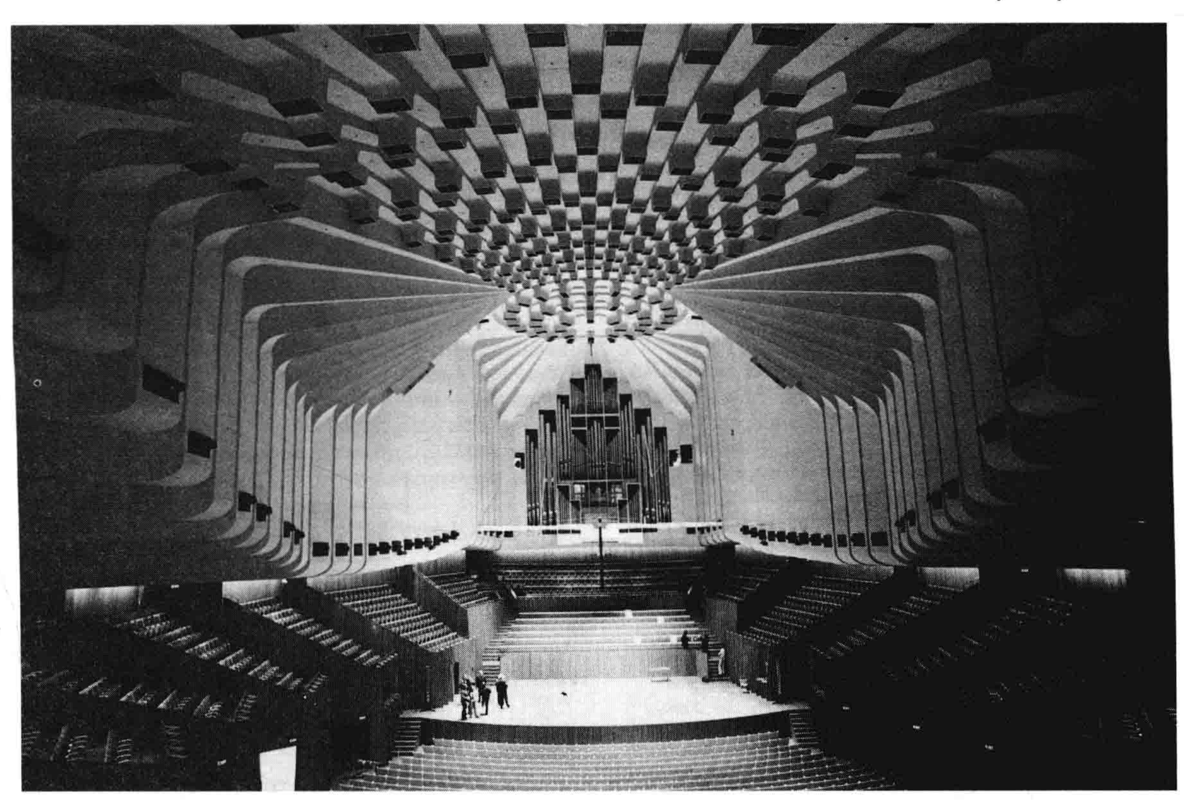
The first named piece of music known to have been played within the boundaries of the original settlement at Sydney Cove in 1788 was a lilting air known as *The Rogue's March*, traditionally played at the drumming-out of servicemen found guilty of failing in their duty. Its use on 9 February of that year was for the public disgrace of a sailor found in the tents of the women convicts. Military music, including the marking of significant stages of the day's routine by heavy drumming, was an appropriate signature of a settlement begun under military discipline and initially numbering far more convicts than free settlers among its population. The one certain link between metropolitan musical styles in Europe (among which Viennese Classicism was reaching its apogee at this time) and the rough exigencies of daily life in the new colony, with its struggle to survive inappropriate methods of cultivating the soil and herding cattle, was the transportation of a fortepiano in the first fleet's flagship, the *Sirius*, by its surgeon, George Bouchir Worgan. Worgan, a member of an accomplished London musical family, gave instruction on this instrument to Elizabeth Macarthur, wife of a man often seen in retrospect as one of the principal architects of the Australian wool industry, and left it with her when he returned to England. It is said still to exist in private hands.

Military and naval bandsmen, sometimes doubling on wind and string instruments in the early 19th century, provided music for civic and military ceremonies, church services, dances and theatrical performances and gave instruction in performance. Theatre music was available on a regular basis after Barnett Levey's opening of his Theatre Royal in 1833 and continued in the large Royal Victoria Theatre (opened in 1838). *The Currency Lass*, by a convict author, Edward Geoghegan, was the earliest Australian musical play (with 14 songs fitted to pre-existing tunes) and appeared at the Royal Victoria Theatre in 1844. Bandsmen arranged opera and ballet melodies and popular songs as sets of quadrilles and other dances and wrote marches in celebration of institutions, anniversaries, buildings, racehorses, newspapers and imperial military adventures. Private music teachers advertised in the colonial press. Choral societies typically began their activities with a performance of Handel, Haydn or Mendelssohn or some lesser composer of oratorios or cantatas. Touring opera (*see* AUSTRALIA, §II) became popular and important. Music regularly appeared in print under local imprints from the 1830s, although Isaac Nathan felt he had to set as well as compose his own music. At least one piano built in Sydney in the mid-1830s still survives. The firm of Beale & Co, established in Annandale, Sydney, in 1893, claimed by the 1920s to be the largest piano factory in the then British Empire.

In the earlier part of the 20th century Sydney's musical life was enriched by a network of music clubs which engaged instrumentalists and singers for annual series of locally presented recitals. Some of these clubs continue to function. Many of them have disappeared or declined, however, as a result of the competition for leisure time of major musical and theatrical subscription series and an erosion of local loyalties. The clubs offered younger musicians a means of developing their skills as soloists which has not been replaced so far by any other network.

A body of instrumentalists calling itself the Sydney Symphony Orchestra came into existence in 1908 but never matched in significance parallel developments in Melbourne. The ABC began serious professional maintenance and development of an orchestra in Sydney in 1932 as part of its broadcasting charter; this orchestra acquired the permanent name Sydney SO in 1946. Orchestral playing of distinction had flourished briefly under the Belgian Henri Verbrugghen, who became first director of the New South Wales Conservatorium in 1915 and vigorously formed and directed a NSW State Orchestra until 1922, soon after its funding ran out as a result of a change of NSW state government. The appointment of Eugene Goossens to the joint positions of principal conductor of the Sydney SO and director of the NSW Conservatorium in 1947 was part of a determined upgrading of the orchestra's size and quality and the city's musical ambitions. The Goossens era was an important formative period in the establishment of the city's postwar musical self-confidence; and it was Goossens, in his *de facto* capacity as principal musical adviser to the state

government, who suggested the building of a Sydney Opera House (along the dual opera–concert lines then obtaining at the San Francisco War Memorial Opera House) on Bennelong Point, then occupied by a tram depot. The eventual building of the opera house (opened in 1973), to a design by the Danish architect Jørn Utzon, and the fierce political and architectural controversies it inspired, helped Sydney to acquire an enhanced profile as a centre of musical performance (fig.1).



The arrival in Sydney before, during and after World War II of Europeans fleeing from religious and political persecution had, as one of its results, the formation in 1945 of the Musica Viva Society of Australia (now MUSICA VIVA AUSTRALIA) by Richard Goldner, a former Viennese-based musician and inventor who had contributed through his inventions to the Allied war effort. The organization now offers touring networks of exceptional size and stability to leading international and Australian-based chamber groups and vocal ensembles and manages a successful large-scale programme of school music visits by touring groups of young musicians.

In the wake of a report by a committee headed by K.W. Tribe recommending progressive disestablishment of the capital city orchestras from ABC control while retaining membership of a cooperative network, the Sydney SO, the largest of the Australian orchestras, has been constituted as a separate entity, with its own board and managing director, and was singled out, under the 'Creative Nation' programme put forward by a former Australian prime minister, Paul Keating, as the orchestra which should be regarded as the pace-setter of Australian orchestral practice. Partly as a result of this, the Sydney SO has been in the vanguard of developments designed to promote orchestral independence, size and quality and to supplement governmental funding with major private sponsorship. In 1999 it was nearing its objective of having a membership of 110 players, with improved provision for rotation and relief of principals, and dramatically improved salary levels and other conditions of employment, aiding its policy of recruiting local and international players at a high level. Its musical and artistic director, the Dutch conductor Edo de Waart, renewed his contract in 1998 to run to 2002. He has earned respect as a vigorous exponent of orchestra building and as a musician concerned for the general welfare as well as the artistic achievement of the orchestra's players. The Sydney SO's schedule includes on average nine series of subscription concerts (some of them with up to four parallel programmes) and a number of other special appearances. The subscription schedule includes two series of concerts orientated towards a predominantly young audience. Most of the concerts are given in the main auditorium, the concert hall, of Sydney Opera House (seating about 2750; fig.2). The opera house has replaced the town hall as the principal site of major Sydney concerts. The Sydney-based Australian Opera and Ballet Orchestra is, as its name suggests, the opera house pit orchestra for Opera Australia and Australian Ballet performances in Sydney; it also occasionally gives concerts in its own right.

Opera Australia (formerly known as the Australian Opera and, before that, as the Elizabethan Trust Opera) celebrated 40 years of activity in 1996. In Sydney, its home base, it performs in the second and smaller of the two main auditoriums, the opera theatre, of Sydney Opera House, a circumstance resulting from a politically motivated power struggle which caused the largest auditorium to be allocated primarily to concerts and to be deprived of the stage machinery originally designed for it. Opera Australia continues to appear regularly in Melbourne, where it has absorbed the former Victorian State Opera, and occasionally in other capital cities. Its winter (June–October) and summer (January–March) seasons in Sydney have offered the city approximately eight months of opera, with an annual repertory ranging between 15 and more than 20 works (and leaving most of the other

1. Sydney Opera House, exterior design by Jørn Utzon, opened 1973

2. *Interior of the Sydney Opera House concert hall*

third of the year for occupancy of the Opera Theatre by the Australian Ballet).

Although Opera Australia began its history in 1956, with effective musical leadership from Joseph Post, and appointed Karl Rankl as a musical director early in its career, its destinies have tended to be guided by theatrical producers acting as artistic directors (Stefan Haag and, from 1984 to 1999, Moffatt Oxenbould), with the notable exception of the period from 1975 to 1986 when the Australian conductor Richard Bonynge was musical director and established unusual and interesting seasons reflecting his own fondness for Italian bel canto and French 19th-century opera, taking advantage of the dazzling abilities of his wife, Dame Joan Sutherland. The Oxenbould regime can be credited with a fairly well-balanced and standard international repertory, including such works as Janáček's *Jenůfa*, Britten's *A Midsummer Night's Dream* and Handel's *Giulio Cesare*. The company's caution in producing new Australian works conforms to professional operatic policy in most centres. One of its novelties, Alan John's *The Eighth Wonder* (1995), deserves mention as being an operatic dramatization of the events and ideals that went into the turbulent history of the building of Sydney Opera House, the building in which the work was presented. Exploratory programming in new or neglected opera in Sydney was largely the work of University of New South Wales Opera from 1968 and, more recently, Sydney Music Theatre. Rockdale Municipal Opera was a sustained example of suburban enterprise in standard works.

The Australian Chamber Orchestra (ACO), founded in 1975, was originally intended for gifted young players who might prefer a more musically self-reliant alternative to joining the Sydney SO. It was under the tutelage of Robert Pikler and John Painter in its early years, making only a fitful impact under various leaders and guest directors until the arrival of Richard Tognetti as leader and, eventually, musical director. His direction has helped win this core orchestra of strings (with regularly recruited wind players as supplementary members) a loyal following in Australia and an international reputation. The heavy touring schedule of the ACO, including successive subscription concerts in most, sometimes all, of the state capital cities, tends to ensure that its membership remains predominantly young. The Australia Ensemble, resident at the University of New South Wales in Sydney, is a group of seven players that has been regarded since its formation in 1980 as the finest chamber ensemble in the country and has also won wide praise for its international and inter-state touring, and for its recordings of new Australian and standard repertory. Its four string players formed the Goldner String Quartet, which has earned a position of similar pre-eminence in its repertory. Part-time or ad hoc instrumental groups based in Sydney include the Australian Brandenburg Orchestra (using period instruments), the Sydney Wind Soloists, Synergy (percussion group), the Seymour Group (contemporary music), the Sydney Alpha Ensemble and the Renaissance Players (director-founder, Winsome Evans).

The Sydney Philharmonia choirs, which are the regular choral associates of the Sydney SO, include a large choir for oratorio, major cantatas and symphonic works and a motet choir for smaller-scale works and for performances of unaccompanied polyphony. Australia's only surviving professional vocal ensemble, the Song Company, also has its base in Sydney. It tours nationally and internationally.

Recent ventures include the establishment at Angel Place of a large-sized chamber music hall seating about 1200 and other smaller, supplementary halls. The inadequacy of the pit of the Sydney Opera House's opera theatre has caused entrepreneurs to look at reconstituted older theatres, notably the Capitol Theatre, as sites for orchestrally expansive operas, such as those of Wagner and Richard Strauss. Sydney's jazz community continues to use informal sites (pubs, restaurants, clubs) for its performances. Local pop is largely pub-based. Large-scale touring pop has mostly deserted the Sydney Entertainment Centre, once considered its appropriate venue, in favour of the largest possible open-air sites.

The city's principal training institution for musical performance is the Sydney (formerly New South Wales) Conservatorium, established in 1917 and now incorporated into the University of Sydney. Musicologically orientated departments of music, with provision for performance and compositional studies within music degree courses, operate at Sydney University, the University of New South Wales and the University of Western Sydney. Private teaching institutions with staff equipped to integrate practical and theoretical studies include the Australian Institute of Music, which offers a BMus degree.

ROGER COVELL

Sydsvenska Filharmoniska Förening [South Swedish Philharmonic Society]. Organization founded in 1902 in MALMÖ; its orchestra was active until 1915 and its choir into the 1970s.

Syfert, Paul. *See* SIEFERT, PAUL.

Sygar, John (*fl c*1500–14). English composer. A four-part setting of the *Magnificat* attributed simply to 'Sygar' survives incomplete in the Eton Choirbook (incipit in MB, xii, 1961, no.64); another setting, listed in the index to the choirbook, is lost. A probable identification is with John Sygar, chaplain of the choir of King's College, Cambridge, from 1499 to 1501 and again from 1508 to 1514, who was frequently employed in copying polyphonic music for use in the college chapel.

ROGER BOWERS

Sygietyński, Antoni (*b* Gosławice, 5 March 1850; *d* Warsaw, 14 June 1923). Polish writer and critic of literature, art and music. In 1874 he completed his studies at the Warsaw Institute of Music, where he learnt the piano with R. Strobel, harmony with Moniuszko and counterpoint with Żeleński; he continued his studies at the Leipzig Conservatory with Jadassohn and Reinecke. In Paris from 1878 to 1882 he attended lectures by Hippolyte Taine on aesthetics, and by Charles Blanc on art history. He won fame for his study of the contemporary French novel (*Ateneum*, 1881–3), and for a series of articles on literature and the arts (*Wędrowiec*, 1884–7). He also devoted himself to teaching music, conducting a piano class at the Warsaw Institute of Music (1882–1910). From 1896 to 1909 he contributed regular music criticism to the *Kurier Warszawski*, *Gazeta Polska*, *Goniec Wieczorny* and other journals. Sygietyński's son, Tadeusz (1896–1955), was a composer and the founder of the well-known folksinging and -dancing choir Mazowsze. (S. Jarociński: *Antologia polskiej krytyki muzycznej XIX i XX wieku, do roku 1939*, Kraków, 1955, pp.238–90)

STEFAN JAROCIŃSKI

Syllabic style. The setting of text with one note per syllable. In plainchant, this may be as a recitation tone or a fully developed melody (e.g. for the Credo of the Mass), and is contrasted with neumatic or group style (with mainly two to four notes per syllable) and melismatic style (characterized by florid groups of notes, each sung to one syllable). *See also* TEXT-SETTING.

□

Sylva, Andreas de. *See* DE SILVA, ANDREAS.

Sylva, Tristan de. *See* SILVA, TRISTÃO DA.

Sylvester, Michael (Lane) (*b* Noblesville, IN, 21 Aug 1951). American tenor. He studied at the University of Indiana with Margaret Harshaw, made his professional début in Verdi's Requiem (1975) and became a resident artist with Indianapolis Opera in 1979. In 1987 he made his European début in Stuttgart as Pinkerton and sang Pollione (*Norma*) at the Paris Opéra and Rodolfo (*La bohème*) for New York City Opera. He has appeared widely in Europe, and made his La Scala début as Pinkerton in 1990. His other roles include Radames, Florestan, Lohengrin, Bacchus, Don José and Samson, the role of his Covent Garden début in 1991. The same year he made his Metropolitan début as Rodolfo (*Luisa Miller*), followed by Don Carlos, which he has also recorded. In 1992 he sang Foresto (*Attila*) in Geneva, and made his début at San Francisco as Cavaradossi, returning in 1993 for Calaf, which he repeated in Santiago, Houston, Buenos Aires and at the Metropolitan. A powerful actor, Sylvester has a strong, bright-toned voice, with an authentic Italianate ring, heard to particular advantage in a role such as Verdi's Gabriele Adorno (*Simon Boccanegra*), which he has sung at Covent Garden, the Metropolitan and in Chicago.

ELIZABETH FORBES

Symbolism. *See* NUMBERS AND MUSIC.

Symon [Simon], **P.** (*fl* 1546–51). French composer. He might have been the Pellegryne Symon whose name appears in the records of the English Chapel Royal as a trombone player in 1526, 1538 and 1547. This is only a slight possibility, however, for Symon's first printed chansons came out in Paris as late as 1546.

25 chansons attributed to Symon survive in chansonniers printed by Attaingnant and Du Chemin between 1549 and 1551. Of these, more than half are settings of texts especially popular in the middle of the 16th century, having also been set around that time by Certon, Du Tertre, Gervaise, Goudimel and Janequin, among others. Symon's settings are not as a rule related musically to these other settings, but in most instances his was the first in print. So his chansons may have been well known

during the short period when they flourished, since they seem to have provided texts for composers of far greater reputation than Symon himself.

Symon's chansons are short homophonic pieces that demonstrate good part-writing and a clear sense of harmonic consciousness. Some of them are essentially homorhythmic; others deploy the brief and spasmodic imitative entries in short note values that are often used in the setting of narrative poetry; still others fall between these two poles, offering the judicious mixture of textures sometimes characterized as 'animated homophony' which is often featured in Parisian settings of lyrical poetry. His melodies rely heavily on the clichés of the Parisian chanson, and reflect the tripartite form, internal repetition, ternary interpolations and frequent cadences that are all characteristic of that genre. (All of his chansons are edited in CMM, lxxxii, 1978.)

IAN D. BENT

Symon le Breton. *See* SIMON, (1).

Sympathetic strings (Fr. *cordes sympathiques*; Ger. *Resonanzsaiten*; It. *corde di resonanza*). In string instruments, strings that are not played (i.e. not bowed or plucked) but nevertheless sound 'in sympathy' with the same note (or one of its partials) emanating from another sounding string, generally one activated by bowing. Consequently, sympathetic strings are generally, although not always, tuned in unison with the bowed strings, and they are used in varying numbers on such instruments as the viola d'amore, baryton, Hardanger fiddle, trumpet marine, *sitār* and *sāraṅgī*. A typically strung, large 18th-century viola d'amore, for instance, has six or seven bowed strings and, in addition, six or more (up to 14) 'sympathetic' wire or brass strings, strung from the tuning-pegs and thence underneath the fingerboard and running through holes in the middle of the bridge to pins securing the strings at the tailpiece (for illustration, *see* BRIDGE (i), fig.1*c*). These last-mentioned strings are not bowed but vibrate sympathetically in unison with the fundamental or partial of the bowed strings, creating a silvery resonance. The dozen or so sympathetic strings on a *sitār* are positioned to be accessible for plucking during performance, running to one side of the main strings and under the raised frets. Those on the baryton run under the fingerboard and may be plucked from behind the neck by the thumb of the left hand. Sympathetic strings are sometimes added to the highest register of the piano, and are called 'ALIQUOT strings'. Introduced originally (1873) into the upper registers of Blüthner pianos, they give an added resonance. The tendency of strings to vibrate sympathetically with each other is exploited to enhance the overall resonance of all string instruments (including those without extra sympathetic strings). This effect becomes especially prominent when 'open' SCORDATURA tunings are used, for example, by the LYRA VIOL (the sound of the LIRONE is also characterized by this resonance).

DAVID D. BOYDEN/R

Symphonia (i) (Lat., from Gk. *sumphōnia*: 'an agreement of sounds', 'concord', 'harmony'). In late Greek and medieval theory, consonance, as opposed to *diaphonia* or dissonance. The word *symphonos* also sometimes meant a unison as distinct from *antiphonos*, an octave, and *paraphonos*, a 4th or 5th.

□

Symphonia (ii). In the Middle Ages and later, *symphonia* was used to describe various instruments, including a kind of drum (Isidore of Seville, *d* 636: *Etymologiarum*, 3.22.14), but especially those capable of producing more than one sound simultaneously, such as the bagpipe (a usage possibly deriving from *sumpōnyā* in the Book of *Daniel*, an Aramaic word often translated as bagpipe; modern Romance language cognates like the French *sampogne*, Italian *zampogna* and Spanish *zampoña*, among others, are all used for the instrument), and, most notably, the hurdy-gurdy. A group of related medieval European vernacular words exists for the HURDY-GURDY, an instrument possibly of Western monastic origin developed as a kind of mechanized monochord to enable monks to learn the chant without a teacher: *symphonies* (Anglo-Norman, 12th century), *chiphonie* etc. (Old French, 13th century), *simfonia*, *çinfonia* etc. (Castilian, 13th century), *ciunfonie*, *sampogna* (Italian, 14th century), *sinfonye* (Middle English, early 14th century), *symfenyge* (Middle Low German, 15th century), *symphonien* (Middle High German, early 13th century), *simphonia* (Latin, early 13th century). In the 17th century, Praetorius (*Syntagma musicum*, 2/1619) called all string keyboard instruments 'symphony' (e.g. spinet, virginal and harpsichord or *clavicymbel*).

HOWARD MAYER BROWN

Symphonia (iii). A word used in the 17th century (along with the more common SINFONIA) to denote an orchestral piece, usually an introduction to an opera, a suite or a cantata. For further information *see* SYMPHONY.

Symphonic band. A type of mixed wind band, the principal function of which is concert giving. *See* BAND (i), §III.

Symphonic jazz. A term coined in the 1920s partly in connection with attempts, some of them sponsored by Paul Whiteman, to fuse jazz with classical forms, and therefore a predecessor of the term THIRD STREAM. The tendency emerged before jazz was identified as such, and there are a number of works such as Frederick Delius's *Appalachia* (1896, rev. 1903), subtitled 'Variations on an old Slave Song', which reveal a keen perception of specifically American song and dance idioms.

Perhaps symphonic jazz may be said to have begun with George Gershwin's one-act opera *Blue Monday* (1922), although a variety of comparable works appeared during the same period from both the classical and jazz camps, among them two ballets – Darius Milhaud's *La création du monde* (1923) and Cole Porter's *Within the*

Quota (1923, revived as *Times Past*, 1970). It was *Blue Monday*, however, that led Whiteman to commission *Rhapsody in Blue* (1924), undoubtedly the most famous piece of symphonic jazz. Other pieces by Gershwin followed, such as the Piano Concerto (1925) and the folk opera *Porgy and Bess* (1935), which may be considered the movement's peak.

Whiteman meanwhile obtained a considerable number of other pieces from both classical and jazz composers, such as George Antheil's Jazz Symphony (1925, rev. 1955) and Ferde Grofés *Metropolis* (*c*1928). These in turn were a stimulus for a variety of other works, notably in England. Indeed, though associated primarily with the 1920s, the tendencies embodied in symphonic jazz remained until the arrival in the late 1950s of third stream music. Later commissions by Whiteman included *The Blue Belles of Harlem* from Duke Ellington (1942) and *Scherzo à la russe* from Igor Stravinsky (1944).

Ellington had always been aware of the endeavours of his predecessors, and began to step outside the normal time limits and functional purposes of much early jazz with such multi-sectional works as *Creole Rhapsody* (1931, two versions), *Reminiscing in Tempo* (1935), and a number of other pieces. Classical music continues to be affected by jazz, notable instances being Stefan Wolpe's Quartet for trumpet, tenor saxophone, piano and percussion (1950) and Michael Tippett's Symphony no.3 (1970–72). Jazz likewise remains influenced by the large forms of classical music, examples including Carla Bley's opera *Escalator over the Hill* (1968–71), a latter-day *Porgy and Bess* and Charlie Haden's *Ballad of the Fallen* (1982). None of this later music should be described as symphonic jazz, yet it would have been considerably different without that movement's earlier examples of cross-fertilization.

MAX HARRISON

Symphonic poem (Ger. *symphonische Dichtung*; Fr. *poème symphonique*). An orchestral form in which a poem or programme provides a narrative or illustrative basis.

1. Introduction. 2. Origins. 3. Liszt. 4. The Czech lands. 5. Russia. 6. France. 7. Germany. 8. Other countries. 9. Conclusion.

1. INTRODUCTION. The form flourished in the second half of the 19th century and in the early part of the 20th and was generally in one movement; 'poematic symphony' is a name sometimes given to the kindred form in more than one movement. Although some piano and chamber works are effectively symphonic poems, the form is almost exclusively orchestral. Though related to opera and sung music in its aesthetic outlook, it is distinct from them in its exclusion of a sung text. In many ways it represents the most sophisticated development of instrumental programme music in the history of music. Like a number of other ephemeral forms, such as the madrigal and the concerto grosso, it had a relatively short life, lasting from its origins in the late 1840s until its rapid decline in the 1920s: it enjoyed the extreme favour of fashion and suffered consequent severe eclipse. It is thus typical of its period in a way that opera and symphony, for example, cannot claim to be, and it satisfied three of the principal aspirations of the 19th century: to relate music to the world outside, to integrate multi-movement forms (often by welding them into a single movement) and to elevate instrumental programme music to a level higher than that of opera, the genre previously regarded as the highest mode of musical expression. By fulfilling such needs it played a major role in the advanced music of its time, and was a vehicle for some of the most important works of the period.

2. ORIGINS. Programme music in the 19th century took a decisive step forward with such works as Beethoven's Pastoral Symphony and Berlioz's *Symphonie fantastique*, and most subsequent 'poematic' symphonies derive to some extent from these two works. The origins of the symphonic poem, however, can be seen more clearly in Beethoven's overtures, which display a concentration and expressive power characteristic of many later single-movement works. The *Egmont* and *Coriolan* overtures, for example, and the third *Leonore* overture, with its explicit enactment of dramatic events, show an independence of their theatrical origins which was to lead within a few years to the designation OVERTURE for purely concert works such as Beethoven's own *Namensfeier* (1814–15) and *Die Weihe des Hauses* (1822) and for more dramatic pieces such as Berlioz's *Waverley*, *Rob Roy* and *Roi Lear* overtures (1827–31). Though none of these three portrays an explicit sequence of action, all are related to their literary sources. Mendelssohn's *A Midsummer Night's Dream* overture (1826) is more strictly programmatic, with clear references to characters and incidents in the play, and his overtures *Die schöne Melusine*, *Meeresstille und glückliche Fahrt* and *Die Hebriden*, of a few years later, are direct prototypes of the Lisztian symphonic poem; indeed in 1884 Hans von Bülow described them as attaining the perfect ideal of the symphonic poem. Schumann's overture to *Manfred* (1848–9) and his three concert overtures of 1851, *Julius Cäsar*, *Die Braut von Messina* and *Hermann und Dorothea*, may also be seen as encapsulating a literary source within a single orchestral movement on lines followed shortly afterwards in innumerable symphonic poems. The closest Berlioz came to the narrative symphonic poem was in the 'Chasse royale et orage' in Act 4 of *Les Troyens* (1857), even though it calls for stage representation and has a part for chorus. Wagner's *Faust Overture* (1840, revised 1855) had an important formative influence on Liszt and indicates how closely Wagner's imaginative world might have approached the symphonic poem had he not devoted himself so single-mindedly to music drama.

3. LISZT. Liszt foreshadowed his own adoption of the symphonic poem in a number of piano works, especially in the *Album d'un voyageur* (1835–6), later published as *Années de pèlerinage*. *Chapelle de Guillaume Tell*, for example, is a portrait of the Swiss national hero, and both *Au lac de Wallenstadt* and *Vallée d'Obermann* bear literary quotations in the manner of the later orchestral pieces. *Après une lecture du Dante*, in the second book, is an extended paraphrase of a poem by Victor Hugo. Liszt's preference for one-movement form was already evident by the time he made his first ventures into orchestral music along similar lines, and his invention of the term 'symphonische Dichtung' indicates his desire that the form should display the traditional logic of symphonic

thought, even in one movement. Although his period at Weimar from 1848 to 1861 saw the composition of the *Faust* and *Dante* symphonies (1854–7), the B minor Piano Sonata (1852–3) and many other works, it is the series of 12 symphonic poems written between 1848 and 1858 that most clearly represents his style and outlook in this period and most vividly illustrates his far-reaching ambitions as a composer.

Liszt had an idealized view of the symphonic poem to which few of his followers aspired. He refrained on the whole from narrative and literal description, and although the meaning of individual passages is usually plain his imagination was more poetic than visual. He only rarely achieved in his symphonic poems the directness and subtle timing that narrative requires. *Mazeppa* (1851), one of the most descriptive of them even though it is an expanded version of an earlier étude illustrates Hugo's poem about the wild horse that carries the banished Mazeppa tied to its mane, until he is rescued by the Ukrainians and enthroned as their chieftain. *Les préludes* (1848) was not given its title, after Lamartine's poem, until after it had been composed. The first and longest, *Ce qu'on entend sur la montagne* (1848–9), named after a poem by Hugo, takes as its basic idea the contrast between the voice of Nature and that of Man and describes at the beginning the immense, confused sound out of which the voice of Nature is born. *Die Ideale* (1857) is based on Schiller's poem of that name, from which quotations are printed in the score at appropriate moments. *Hunnenschlacht* (1857) is vividly descriptive of the battle between Huns and Christians in 451, the victory of the Christians being symbolized by the appearance of the hymn *Crux fidelis*. This work, like the later *Von der Wiege bis zum Grabe* (1881–2), was inspired by a painting. *Héroïde funèbre* (1849–50) and *Festklänge* (1853) are occasional pieces, the one mournful, the other festive, neither with programmes. *Hamlet* (1858), one of the best of the series, includes a passage descriptive of Ophelia but is otherwise a general evocation of Hamlet's character. *Prometheus* (1850) and *Orpheus* (1853–4), which are also among the best of these works, are musical elaborations of poetic themes. In *Orpheus* the theme is the uplifting power of art, in *Prometheus* the suffering of creative genius. Both of these works, and *Tasso* (1849) too, can be seen as reflections of Liszt's own problems as an artist and his search for expressive truth.

Liszt's *Faust* and *Dante* symphonies adopt the same aesthetic stance as his symphonic poems, even though they are divided into separate movements and call upon a chorus. *Two Episodes from Lenau's Faust* (*c*1860) should also be considered with the symphonic poems. The first, 'Der nächtliche Zug', is closely descriptive of Faust as he watches a passing procession of pilgrims by night, and the second, 'Der Tanz in der Dorfschenke' (also known as the 'First Mephisto Waltz'), tells of Mephistopheles seizing a violin at a village dance. Narrative pieces such as these dictated their own forms, but the problem of organizing longer and more allusive pieces was considerable. Liszt relied on a loose episodic form in which sections follow one another without overriding musical logic, and he used motifs and their transformations in a manner akin to that of Wagner. Many of his dramatic gestures in the symphonic poems – for example the short drooping phrase with isolated chords that stress the angularity and expressiveness of the melodic line – are to be found both in Wagner and in the large corpus of music prompted by the example of Liszt himself. A forceful theme stated in the bass instruments, unaccompanied, is also a common mannerism, looking back to Berlioz's *Roi Lear* and beyond that to the opening of the finale of Beethoven's Ninth Symphony. Unequal in scope and achievement though Liszt's symphonic poems are, they looked forward at times to more modern developments and sowed the seeds of a rich crop of music in the two succeeding generations.

4. THE CZECH LANDS. Liszt's successors in the cultivation of the symphonic poem were more conspicuous outside Germany – in Bohemia and Russia on the one hand and in France on the other – than in Germany itself. These were the nations that took the symphonic poem most assiduously to heart, with the added potential, in the former case, of using it as a vehicle for the nationalist ideas that were then beginning to burgeon. Smetana visited Weimar in 1857, was befriended by Liszt and immediately embarked on a group of symphonic poems on literary subjects, *Richard III* (1857–8), *Wallensteins Lager* (1858–9) and *Hakon Jarl* (1860–61), after Shakespeare, Schiller and Oehlenschlaeger respectively. They clearly illustrate both his admiration for Liszt's music and a straightforward approach to musical description. A piano work of the same period, *Macbeth and the Witches* (1859), is similar in scope and bolder in style. Smetana's greatest achievement in this genre is his set of six symphonic poems under the general title *Má vlast* ('My Fatherland'), composed between 1872 and 1879; in thus expanding the form he created one of the monuments of Czech music. The cycle presents selected episodes and ideas from Czech history and embodies his personal belief in the greatness of the nation, which he also expressed in his opera *Libuše*. Two recurrent themes are used to unify the cycle, one representative of Vyšehrad, the fortress overlooking the river Vltava (whose course provides the material of the second work in the cycle), the other an ancient Czech hymn, *Kdož jste Boži bojovníci* ('Ye who are God's warriors'), which unites the last two of the cycle's poems, *Tábor* and *Blaník*. *Šárka*, relating a bloodthirsty episode from Czech legend, is the most narrative, *From Bohemia's Woods and Fields* the most lyrical. The whole cycle is a masterly application of new forms to new purposes and was succeeded by a profusion of symphonic poems from his younger compatriots in the Czech lands and Slovakia: Dvořák, Fibich, Janáček, Foerster, Novák, Suk and Ostrčil.

Dvořák's principal symphonic poems, dating from the 1890s, fall into two groups, the first of which forms a cycle after Smetana's example, with a single theme running through the three constituent pieces. Originally conceived as a trilogy, entitled *Příroda, Život a Láska* ('Nature, Life and Love'), they finally appeared as three separate overtures, *V přírodě* ('In Nature's Realm'), *Karneval* and *Othello*. The last has notes in the score to indicate incidents in the play, but the sequence and characters are scarcely Shakespeare's. Of the five works making up the second group, four – *The Water Goblin*, *The Noon Witch*, *The Golden Spinning Wheel* and *The Wild Dove* – are based on poems from K.J. Erben's *Bouquet of Folk Tales*. Dvořák intended incidents and characters to be clearly represented; indeed he arrived at some of the themes by setting actual lines of the poetry to music. By symphonic standards these works may seem diffuse, but

their literary sources define the sequence of events and the course of the musical action. *Heroic Song* is the only one of the group not to have a detailed programme.

Zdeněk Fibich and Vítězslav Novák were prolific composers of programme works of many kinds. Both, for example, wrote symphonic poems on the Czech tale of Toman and the Wood Nymph, and Fibich's *Othello* preceded Dvořák's by 20 years. Suk's *Prague* (1904) opened a series of works by him of increasing abstraction and personal significance. *Asrael* and *Summer's Tale* are descriptive symphonies in separate movements; *The Ripening*, completed in 1917, is an elaborate picture of the harvest as a projection of human life, written in a complex, advanced idiom, and *Epilogue*, although entitled 'symphonic poem', is a choral work, once again of great personal significance. Janáček's symphonic poems belong to his late creative flowering. His subject matter is more traditional than that of Suk, but the musical style is more original. In *The Fiddler's Child* (1912) he used individual instruments, violin and oboe, to depict the fiddler and his child in straightforward narrative, in *Taras Bulba* (1915–18) he turned Gogol's poem into an expression of Czech heroism in full orchestral dress, and in *The Ballad of Blaník* (1920) he returned to one of Smetana's subjects; he planned *The Danube* in four parts but did not complete it. Despite his attachment to the form it is hard not to see these works as overshadowed by the Sinfonietta and the operas of the same period.

5. Russia. The cultivation of the symphonic poem in Russia reflected that country's admiration for Liszt and a devotion to national subjects similar to that found among Czech composers. 'Virtually all Russian symphonic music is programmatic', wrote V.V. Stasov, and the Russians' great love of story-telling found wide expression in the symphonic poem. They regarded Glinka's *Kamarinskaya* (1848) as a prototype of descriptive orchestral music, despite his denial that it bore a programme; his *Taras Bulba*, had he completed it, would have been nearer to the spirit of the descriptive symphony and the symphonic poem, both of which Stasov and Balakirev embraced with ardour. Of Balakirev's three symphonic poems the most successful is undoubtedly *Tamara* (1867–82), closely based on a poem by Lermontov; it is full of atmosphere, well paced and richly evocative of the fairy tale orient. *In Bohemia* ('Overture on Czech themes', 1867, 1905) and *Russia* ('Second overture on Russian themes', 1884 version) are looser gatherings of national melodies without narrative content. Musorgsky's *St John's Night on Bald Mountain* (1867) and Borodin's *In Central Asia* (1880) are powerful orchestral pictures, each unique in its composer's output. Rimsky-Korsakov, perhaps surprisingly, wrote only two works that can be classed as symphonic poems, *Sadko* (1867–92, later reworked into the opera of the same name) and *Skazka* ('Legend', 1879–80), originally entitled *Baba-Yaga*; *Antar* (in its third version) and *Sheherazade* are both entitled 'symphonic suite' and are akin to these two works in conception. Baba-Yaga, the witch of Russian folklore, also provided material for symphonic poems by Dargomïzhsky and Lyadov. The latter's *Kikimora* and *The Enchanted Lake* (both 1909) again show a deep feeling for national subjects, as does Glazunov's *Stenka Razin* (1885).

Tchaikovsky, as in much else, stands a little apart from his compatriots. None of his symphonic poems has a Russian subject (*The Voyevoda* is on a Polish original). *Romeo and Juliet* (1869; rev. 1870, 1880) is entitled 'fantasy overture' and *Francesca da Rimini* (1876) 'symphony fantasia', but both are in fact highly developed symphonic poems in which the exigencies of musical form and of literary material are held in masterly balance. These are deservedly pillars of the orchestral repertory, and the fantasy overture *Hamlet* (1888), though less well known, is scarcely less powerful. Tchaikovsky's attitude to programmes was equivocal, but at least in these symphonic poems he had no doubts about the propriety of clothing literary material with music. In treating Byron's *Manfred* (1885) in four movements as a symphony he looked back more to Berlioz than to Liszt.

Of later Russian symphonic poems it must suffice to indicate Rachmaninoff's evident debt to Tchaikovsky in *The Rock* (1893) and the masterly independence of *The Isle of the Dead* (1909), inspired by Böcklin's famous painting. Stravinsky's debt is rather to his teacher Rimsky-Korsakov in his symphonic poem *The Song of the Nightingale* (1917), which he deftly extracted from his opera *The Nightingale*. Skryabin's *Le poème de l'extase* (1905–8) and *Prométhée* (1908–10) are the twin peaks of his orchestral output, remarkable in detail, in their advanced harmonic idiom and in their projection of an egocentric theosophic world unparalleled elsewhere in the symphonic poem. Since realism was applauded in Soviet aesthetics, programme music survived in favour in the USSR longer than in the West, as Shostakovich's symphonic poem *October* (1967) shows.

6. France. A tradition of illustrative music existed in France, especially in the music of Berlioz and Félicien David, before Liszt's ideas were taken up there, and César Franck had written an orchestral piece on Hugo's poem *Ce qu'on entend sur la montagne* before Liszt himself used it for his own first symphonic poem in 1848–9. The symphonic poem came to life in the 1870s, supported by the newly founded Société Nationale and its promotion of younger French composers. In the year after its foundation, 1872, Saint-Saëns composed *Le rouet d'Omphale*, soon followed up with three other symphonic poems, of which the best-known is the *Danse macabre* (1874) and the most ambitious – and the closest to Liszt in style – *La jeunesse d'Hercule* (1877). Niecks justly called Saint-Saëns's symphonic poems 'illustrations, not translations', for they attempt no deep penetration of their subjects. Saint-Saëns was followed by d'Indy, whose trilogy *Wallenstein* (1873, 1879–81), called 'three symphonic overtures', may be compared to Smetana's *Má vlast*. Significantly, he began it in the year, 1873, in which he visited Liszt. Duparc's remarkable *Lénore* (1875) introduced the warmth of Wagnerian harmony into French music, and it is here allied to a bold musical imagination. Franck returned to the symphonic poem in 1875–6 with the delicately evocative *Les Eolides*, and he followed it in 1882 with the step-by-step narrative of *Le chasseur maudit*, based like *Lénore* on a ballad by G.A. Bürger peculiarly well suited to musical illustration. *Les Djinns* (1884), on a poem by Hugo, uses a piano soloist in a manner similar to that found in Liszt's *Totentanz* and *Malédiction*, and the second part of *Psyché* (1887–8) includes a three-part chorus; he also applied the term 'poème symphonie' to his choral work *Rédemption*. The lesser composers of Franck's circle found the symphonic poem much to their liking, and they often displayed a penchant for mythological subject matter in deference to

Wagner. Chausson's *Viviane* (1882) is a good example, and among the others are the numerous symphonic poems of Augusta Holmès, several of which, for example *Irlande* (1882) and *Pologne* (1883), have national themes.

Three works hold a special place in French music in this genre. Debussy originally intended his *Prélude à l'après-midi d'un faune* (1892–4), drawn from Mallarmé's poem, as a triptych. In his own words the music is 'a very free illustration … a succession of settings through which the Faun's desires and dreams move in the afternoon heat'. It is explicitly decorative, not narrative, and the originality of its idiom, its tonal ambiguity and the delicate, fragmented orchestral style look forward to a new world of musical expression. By contrast Dukas' *L'apprenti sorcier* (1897) is a brilliantly executed example of the narrative type of symphonic poem, with distinctive musical material and an assured orchestral style. Third, Ravel's 'poème chorégraphique' *La valse* (1919–20) is parody of the highest order, a portrait of Vienna in an idiom no Viennese would recognize as his own.

Two French composers carried the symphonic poem well into the 20th century. Roussel's first major orchestral work was a symphonic poem on Tolstoy's novel *Resurrection* (1903), and he soon followed it with *Le poème de la forêt* (1904–6), which is in four cyclically related movements. *Pour une fête de printemps* (1920), originally conceived as the scherzo of his Second Symphony, is an unusually reflective celebration of spring. Koechlin wrote several symphonic poems, extending in time from *En mer, la nuit* (begun in 1899) to as late as the 1940s. *La cité nouvelle* (1938) is called a 'dream of the future'; part 2 of *Le buisson ardent* (1938) is related to Romain Rolland's novel *Jean-Christophe*. There is a group of three symphonic poems, *Le livre de la jungle*, after Kipling; the third of them, *Les bandar-log* (1939), is a satirical sketch of 20th-century musical styles and is probably Koechlin's most familiar work.

7. GERMANY. Although Liszt, working in Germany, and Strauss represent respectively the inception and the culmination of the symphonic poem, the form was cultivated less enthusiastically in Germany than in other countries. The reason for this lies in the domination of German music at that period by Wagner and Brahms, neither of whom – though for opposite reasons – wrote symphonic poems. Single-minded devotion to music drama on the one hand and to symphonic thought on the other led them away from Liszt's brilliant compound of the two. Bruckner and Mahler also ignored the form. Thus, apart from the work of Strauss and numerous programme overtures by lesser figures, there are only isolated examples by German and Austrian composers, among which should be mentioned Bülow's *Nirwana* (1866), Wolf's *Penthesilea* (1883–5) and Schoenberg's *Pelleas und Melisande* (1902–3). Schoenberg's *Verklärte Nacht* (1899), in which there is a clear structural relationship between poem and music, is a symphonic poem for string sextet and thus a rare non-orchestral example of the form.

Strauss's symphonic poems brought orchestral technique to a new level of complexity and treated subjects that had previously been considered ill-suited to musical illustration. He extended the boundaries of programme music, taking realism to unprecedented lengths as well as widening the imprecisely expressive functions of music. In the years before World War I these works were held to be in the vanguard of modernism, an indication of how rapidly the symphonic poem had taken hold of public imagination within half a century.

Strauss began to write programme music under the direct influence of Alexander Ritter – who himself composed six symphonic poems of Lisztian mould – and arrived at the form of the symphonic poem through a descriptive symphony, *Aus Italien* (1886). His first essay, *Macbeth* (1886–8), is a bold, characterful work with little more than a hint of sonata form, yet it is overshadowed by the series of masterpieces that followed: *Don Juan* (1888–9), *Tod und Verklärung* (1888–9), *Till Eulenspiegels lustige Streiche* (1894–5), *Also sprach Zarathustra* (1895–6), *Don Quixote* (1896–7), *Ein Heldenleben* (1897–8) and *Symphonia domestica* (1902–3). The range of subject matter is wide and embraces literature, legend, philosophy and autobiography. The seriousness of *Tod und Verklärung* contrasts sharply with the high spirits of *Till Eulenspiegel*, while *Don Quixote* cleverly captures Cervantes's worldly vision behind the ridiculous exploits of his knight. *Also sprach Zarathustra* attempts to give musical expression to eight selected passages from Nietzsche's philosophical poem rather than to the poem as a whole. Strauss said of the work: 'I meant to convey in music an idea of the evolution of the human race from its origin, through the various phases of development, religious as well as scientific, up to Nietzsche's idea of the *Übermensch*'. This ambitious idea may seem to have been tempered when he turned to himself as subject, yet in *Ein Heldenleben* he attempted to give his own existence a higher significance, portraying himself as the archetypal hero-artist in conflict with his enemies. But it has too an unmistakably personal element in the character of the wife and in its mellow contemplation (at the age of 34) of the hero's past achievements. For all its musical interest and expertise the *Symphonia domestica* has been bedevilled by its unashamed treatment of the trivial in domestic life, although Strauss believed that the very universality of family life makes such scenes of interest to everyone. In the portrayal of character, however, it is with the legendary figures, Don Juan and Don Quixote, rather than in the projection of himself, that Strauss succeeds best.

In his handling of form Strauss called upon his abundant skill both in the transformation of themes and in interweaving one with another in elaborate orchestral counterpoint. The variation form of *Don Quixote* is specially felicitous; *Till Eulenspiegel*, though described on the title-page as in rondo form, is in fact as episodic as the story it depicts, with a single, compressed recapitulation, the whole neatly enclosed in a prologue and epilogue of touching simplicity. *Tod und Verklärung* resembles Liszt's *Tasso* in presenting glorification as an ecstatic musical goal. Strauss liked to use a simple but descriptive theme – for instance the three-note motif at the opening of *Also sprach Zarathustra*, or striding, vigorous arpeggios to represent the manly qualities of his heroes. His love themes are honeyed and chromatic and generally richly scored, and he is fond of the warmth and serenity of diatonic harmony as balm after torrential chromatic textures, notably at the end of *Don Quixote*, where the solo cello has a surpassingly beautiful D major transformation of the main theme.

The vividness and descriptive power of these works is directly due to the virtuosity of the orchestration. In the

first place Strauss usually requires a large orchestra, with extra instruments such as the quartet of saxophones in the *Symphonia domestica* or the offstage brass of *Ein Heldenleben*. Secondly, he used instruments for sharp characterization, best exemplified by Don Quixote's cello and Sancho Panza's tenor tuba or by the shrill woodwind of the critics in *Ein Heldenleben*. The portrayal of sheep with *cuivré* brass in *Don Quixote* is deservedly famous for its uncanny skill. Strauss had the confidence, the effrontery even, of a composer whose mastery of technical means was complete, and he succeeded best in those works, such as *Till Eulenspiegel* and *Don Quixote*, where his pretensions were less exalted and where wit and imagination were of more value than profundity.

Strauss wrote one more programmatic work, *Eine Alpensymphonie* (1911–15) – actually a symphonic poem. The orchestral requirements are immense, the scoring brilliantly imaginative and the picture of alpine scenery magnificently captured. In form it over-extends itself, and many fine passages are spoilt by Strauss's reluctance to bring them to an end. But by now he had outgrown the symphonic poem, having contributed a unique body of great works to its repertory.

8. Other countries. The symphonic poem did not enjoy as clear a sense of national identity in other countries as in the Czech lands, Russia and France, even though innumerable works of the kind were written elsewhere, for example by William Wallace, Bantock, MacCunn, Mackenzie and Bax in Great Britain, Loeffler, MacDowell and Howard Hanson in America, and Pizzetti, Respighi and Malipiero in Italy. Elgar's *Falstaff* (1913) is an exceptionally fine orchestral portrait, and was preceded by three programme overtures, of which *Cockaigne* (1900–01) is the most distinctive. As a portrait of London it makes an interesting comparison with, say, Suk's *Prague*, Ravel's *La valse* and Delius's *Paris* (1899). Delius later wrote a number of descriptive orchestral pieces closely allied to the symphonic poem and to the Impressionist style of Debussy. Frank Bridge was similarly drawn to nature painting, as in his symphonic poems *Summer* (1914) and *Enter Spring* (1927).

Sibelius, with well over a dozen symphonic poems and a number of similar, shorter orchestral pieces, showed exceptional dedication to the form. These works span his whole career, from *En saga* (1892) to *Tapiola* (1926), and express more clearly than anything else his identification with Finland and its mythology. The *Kalevala* provided ideal episodes and texts for musical setting, and his natural feeling for symphonic concentration is clearly demonstrated by the taut, organic structure of many of these works, *Tapiola* especially. *Pohjola's Daughter* (1906) – called 'symphonic fantasy' – is the most closely dependent on its programme but has at the same time a sureness of outline that was rare in other composers. Yet it is surpassed by the powerful landscape of *Tapiola*, composed at a time when Sibelius's own creative life was coming to an end and when the symphonic poem as a form was rapidly disappearing from view.

9. Conclusion. The decline of the symphonic poem in the 20th century may be attributed to the rejection of Romantic ideas and their replacement by notions of the abstraction and independence of music. The expressive function of music came under widespread attack, and the assumptions that had made the symphonic poem such a satisfactory vehicle for musical expression were swiftly supplanted. It should be said too that the problem of matching music and literature was, in the end, insoluble and that both had made severe sacrifices in attempting the compromise of fusion. For the natural architecture of music is not that of poetry; music's instinctive need to recapitulate and balance itself with repetition has no equivalent in narrative, with its inescapable forward movement. Sonata form, for example, is a conception with no real application outside music, and yet symphonic poems constantly attempted to reconcile classical formal principles with external literary concepts. Perhaps the nearest the symphonic poem came to finding a satisfactory form to match narrative was the long and gradual growth of an idea in pace and intensity, leading to a climax or solution, perhaps in triumph, perhaps in despair. Dukas' *L'apprenti sorcier* is a good example of this continuously developing form. The apt use of variation in *Don Quixote* has already been mentioned. The element of contrast implicit in sonata form was sometimes usefully adapted, as for example in Liszt's *Hamlet*, where masculine and feminine elements are clearly placed in opposition. An even clearer case is d'Indy's *Max et Thécla* (1881 revision of *Les piccolomini*, part of the Wallenstein trilogy), whose virile first theme portrays Max and the contrastingly supple second theme represents Thécla. But in general, rather than embracing balance and repetition, symphonic ideas were confined to the development of musical material, with a predilection for short malleable thematic elements. Indeed, Strauss firmly called his symphonic poems 'Tondichtungen' to avoid any symphonic implication, and 'tone poem' enjoyed considerable currency as the English term at the beginning of the 20th century.

From the point of view of its subject matter the symphonic poem was as successful in depicting imprecise ideas, such as heroism, lamentation, creativity and so forth, as in narrative, for too detailed a programme may burden or distract the listener. In general the dramatic poetry of Goethe, Bürger, Lenau and Hugo provided excellent material, and no source was as frequently drawn upon as Shakespeare's plays. Legends, historical events, cities, countries, seasons, philosophical concepts and much else besides were subjected to musical illustration, and the wide acceptance of some kind of linguistic equivalence between music and ideas resolved the aesthetic problem of how such pieces should be interpreted. The elaborate conventions of programme music, developed to a high point in the late 19th century, supplied the composer with working material and the listener with an immediate point of reference. Once the validity of these conventions had been called in question, the symphonic poem was bound to lose its vitality and popularity. Yet its flowering was spectacular and its fruit includes some of the finest and most enduring works in the orchestral repertory.

HUGH MACDONALD

Symphonie (i) (Fr.). *See* SYMPHONY.

Symphonie (ii) (Fr.). *See* HURDY-GURDY; *see also* SYMPHONIA (ii).

Symphonie concertante (Fr.; It. *sinfonia concertante*). A concert genre of the late 18th and early 19th centuries for solo instruments – usually two, three or four, but on occasion as many as seven or even nine – with orchestra. The term implies 'symphony with important and extended solo parts', but the form is closer to concerto than symphony.

1. Definition and description. 2. Terminology. 3. Early history. 4. Flowering. 5. Social basis. 6. Later developments.

1. DEFINITION AND DESCRIPTION. The symphonie concertante flourished from about 1770 to 1830, during the high Classical and early Romantic eras. Symphonies concertantes were primarily intended for performance in public concert halls by virtuoso soloists. Solo instrumentation varied: during the early years of the genre's popularity, two principal violins was the most frequent, then other pairs (wind or mixed strings); later, three or four instruments became common, with steadily increasing wind participation. Unusual combinations abound, for example keyboard, four hands (Theodor von Schacht); harpsichord, violin and piano (J.-F. Tapray); piano, mandolin, trumpet and bass (Leopold Kozeluch); harp, basset horn and cello (J.G.H. Backofen); violin, solo voices, choruses and large orchestra (C. Wagner); flute, oboe, clarinet, two bassoons, horn and cello (J.C.M. Widerkehr); and two violins, two violas, two oboes, two horns and cello (J.C. Bach).

The symphonie concertante is a genre of the Classical period in style and structure, but has a character of its own. It has often been likened to the Baroque concerto grosso, but the resemblance is superficial; each calls for a solo instrumental group and an orchestra, but there the similarity ends. The symphonie concertante places the solo group at the forefront, assigning to it most of the important thematic material, and often extended cadenzas, while usually relegating the orchestra to a primarily accompanying function except during the initial statement. The number and variety of solo instruments is often greater in the symphonie concertante than in the concerto grosso and the number of tutti-solo alternations fewer; and the solo instruments are assigned more themes unrelated to the orchestral material. Further, the major mode heavily predominates: about 50% of concerti grossi are in the minor as against 0·5% of symphonies concertantes (there are only two or three known symphonies concertantes in minor keys). This extreme difference exceeds considerably the fundamental Baroque-Classical ratio; about 2·5% of Classical symphonies, for example, are in minor keys. The almost total absence of minor-key symphonies concertantes is a reflection of their special mood and function.

The symphonie concertante resembles the lighter Classical genres, such as the serenade and divertimento, in character. Melodic variety is its hallmark. Although a symphonie concertante may include a poignant Andante, the prevailing mood is usually relaxed, gracious and happy, rarely dramatic, never sombre or intense. Although similar in length and form to the symphony, which it often replaced on concert programmes, the symphonie concertante did not develop into a vehicle for the expression of intense or profound emotion. There are occasional traces in the earlier works (notably those of J.C. Bach) of the Baroque ritornello form, but the structure of the first movement is generally similar to that of the Classical concerto with its orchestral statement followed by an exposition for soloists and orchestra, though there tends to be less motivic development or bold modulation in the symphonie concertante. About half the works are in two movements, lacking a slow movement; virtually all the rest have three, and there are almost never four or five. Even the three-movement works contain nothing slower than an Andante; an Adagio is virtually unknown. The last movement in both two- and three-movement works is most often a rondo, or occasionally a theme and variations (these two forms provide maximum opportunity for solo display) or a minuet and trio.

In the period from about 1767 to 1830, some 570 works specifically entitled 'symphonie concertante', 'sinfonia concertante' or simply 'concertante' were written by about 210 composers. About half of these were written by some 70 French composers (including a few foreigners settled in France); the remainder were produced by about 140 composers from the rest of Europe. The French emphasis is even greater than the figures indicate. Some of the most prolific non-French composers of symphonies concertantes wrote their works in the 1770s and 80s while in Paris. Thus in the first two decades of its existence the genre was primarily a French and specifically a Parisian one, though significantly influenced by second-generation Mannheim composers. Its popularity spread fairly quickly to other large cities in western Europe, more gradually to German towns and courts. The French preferred two- rather than three-movement form by more than two to one; in other centres the three-movement form was favoured.

The significance of the term 'symphonie concertante' as the name for a specific genre is demonstrated by the fact that it was used about three times more frequently than titles like 'Concerto for two [three, four etc.] instruments'

during the period cited. As is suggested below (§5), the new name became established because the genre it represented was fulfilling a specific function in a specific locale and thus needed to be differentiated from the old-fashioned concerto terminology. In 1771 Nicolas Framery urged that the 'insipid sonata' and the 'overlong concerto' should be replaced by the 'innovation of the symphonies concertantes', a genre ideal for the Concert Spirituel which had the most gifted virtuosos available (*Journal de musique*, March 1771).

2. Terminology. The French name 'symphonie concertante' was used with sufficient frequency and consistency in the late 18th and early 19th centuries to warrant its being accepted as a genre in its own right rather than as a hybrid form. Attempts to replace the name with terms that were never or rarely used at the time can only create confusion. Among the terms that have been suggested are 'Koncert-Sinfonie', used by Scheibe (*Critischer Musicus*, 1745, p.629, meaning a symphony with obbligato rather than 'filler' wind); 'sinfonia concertata', used by Koch and Schilling in their music dictionaries but hardly ever found elsewhere; 'concerted symphony' or 'ensemble concerto', used by a few writers seeking to anglicize the term; teutonizations such as 'Gruppenkonzert' (Blume, *Syntagma musicologicum*, 1973, p. 694), 'Concertantes' or 'Konzertierendes Quartett' (the work attributed to Mozart, KAnh.*9*/*297b*/Anh.C.14.01, Breitkopf & Härtel edition), or even the legitimate 18th-century term 'Concertierende Sinfonien für verschiedene Instrumente' (used by André in Offenbach in his edition of the A major work of J.C. Bach first published by Sieber in Paris as *Simphonie concertante à plusieurs instruments*). 'Symphonie concertante' is historically as valid as the terms 'concerto grosso' or 'divertimento', about which some terminological confusion also exists; on the other hand, it would be adding anachronism to misnomer to apply the name either to Baroque works which originally bore the title 'concerto grosso' or 'concerto a più stromenti' (as has been done with compositions by Handel, G.B. Sammartini and others) or to later works for a single solo instrument and orchestra (as has been done by various 20th-century composers), or which have no fully-fledged soloists at all.

The French form of the name is clearly favoured over the Italian by both contemporary usage and historical considerations. The French name was used all over Europe (sometimes with different French spellings, such as 'simphonie concertante', or 'sinfonie concertante', a standard French form although 'sinfonie' is also a German spelling), infinitely more often than the Italian. Mozart, writing from Paris, preferred the French spelling, a fact obscured by current practice (e.g. Emily Anderson's translation of his letters). He used the common French form 'sinfonie concertante' in five of six separate references in his letters to the work for four wind instruments (flute, oboe, bassoon and horn, K297*B*) written in Paris in 1778, and Leopold's response also uses a French form, 'synfonie concertante' (the sixth edition of Köchel's catalogue retains the Italian spelling for the lost autograph). There are no references in the letters to the violin and viola work, K364/320*d*, of which the autograph is also missing. The autograph of the fragment Anh.104/320*e*, written in the Italianate atmosphere of Salzburg in 1779, is headed 'Sinfonia concertante a tre stromenti violino, viola e violoncello'.

Related terms of the time include 'concertino' and 'concertone', meaning, roughly, small and large concerto respectively. The first was quite common, being applied to the most diverse kinds of piece; the second is very rare and closely approximates to the symphonie concertante. Composers who have used 'concertone' include Sarti, Gherardeschi and Mozart. Other terms used by composers and publishers include: Duet concertino (P.J. Lindpaintner), Duetto concerto (Anton Stamitz), Trio concertante (G.S. Mayr), Fantasie concertante (C.H. Meyer), Divertimento concertante (Adalbert Gyrowetz), Quartet Concerto (Spohr), Concerto concertant (H.-J. Rigel) and Konzertant Konzert and Grand Concerto Concertant (Beethoven, Triple Concerto: autograph of the piano part and first edition of the instrumental parts respectively). All these special titles taken together represent a very small proportion of the works for soloists and orchestra, especially before about 1810.

Attempts at explicating the term 'symphonie concertante' have foundered on two counts: first, on the confusion between the adjective 'concertante', loosely employed in the 18th century, and the noun-complex 'symphonie concertante', which refers to a specific genre; and secondly, on the difference between works called 'symphonie concertante' and those, also with more than one solo instrument, called 'concerto for two [three, four] instruments'.

As a substitute for the two-word grouping, the word 'concertante' has been used as a noun, especially in England and Germany. After 1790, Pleyel's *Sinfonie concertante à neuf instruments* (Paris, 1788) was published by Preston in London as *A Favorite Concertante in E flat*. The Arnold edition of Handel's works of 1787–93 used 'Concertante' as the title of the C major Concerto Grosso (Händel-Gesellschalt, xxi, p.63). Haydn called the work he wrote in London for solo violin, cello, oboe, bassoon and orchestra 'Concertante' (H I:105). A German example is Simrock's publication (Bonn, *c*1795) of Josef Reicha's *Concertante pour violin et violoncelle avec toutes les parties d'orchestre*, op.1. As an adjective applied to an instrument, the word 'concertante' cannot easily be distinguished from related and overlapping terms, such as 'solo', 'obbligato', 'récitant' and 'principale'.

There seems to be little or no difference between a symphonie concertante and a concerto for two or more instruments; indeed, the terms were often interchanged. Most multiple concertos, whatever title they may have been given by their composers or publishers, were almost inevitably called 'symphonie concertante' by the French, even well into the 19th century (Fétis did so consistently). In Germany and England, the terms 'concertante' or 'concerto' (for two or more instruments) became increasingly prevalent. 166 works from 1767 to 1830 have been identified with such titles as 'Concerto for two instruments'; almost all were written outside France. An analytical and historical comparison between this corpus of 'multiple concertos' and the 570 known 'symphonies concertantes' would be necessary to clarify any stylistic and national differences. Mendel and Reissmann (*Conversations-Lexikon*, 1870–79, vols.ii and ix) attempted to define both terms but without shedding much light on the distinctions between them (see McCredie, 1975). Mozart, however, made a distinction when he called the two works of this type that he completed in Paris in 1778 by different names: the one for four visiting Mannheim

wind virtuosos, designed for public performance at the Concert Spirituel, was called 'sinfonie Concertante', the salon piece for the Count of Guines and his daughter, both amateurs, and intended for private performance, was referred to as a concerto for flute and harp (K299/297*c*). The distinction did not take hold, but it has intriguing sociological implications.

3. EARLY HISTORY. The concertato principle – the opposition of contrasting and not too unequal forces – had been observed throughout the Baroque period, back to the time of its greatest practitioner, Giovanni Gabrieli. By 1750 its main vehicle, the concerto grosso, had become outmoded, and the developing Classical symphony with its different stylistic objectives could not provide the proper context for the concept; more appropriate were the lighter orchestral forms (serenade, cassation), the multiple concerto and, around 1770, the symphonie concertante.

The use of the adjectives 'concertante' and 'concertata' is common throughout this period; the specific term 'symphonie concertante' is not met until the late 1760s, though there is a French periodical reference to an otherwise unidentified 'Symphonie-concert del Signor Wagenseil' performed at the Concert Spirituel in February 1759. Haydn anticipated the symphonie concertante in his triptych 'Le matin', 'Le midi' and 'Le soir', Symphonies nos.6, 7 and 8 (1761), which abound in extended and difficult solo passages that detach themselves from the orchestral fabric. 'Le soir' is sub-titled 'a più stromenti concertandi'. But these are symphonies with solo parts, in which the relationship of solos to tutti is flexible and unformalized, unlike that of the later true symphonie concertante. Several recent descriptions of the genre, like Blume's – 'the new form of the three-movement orchestral symphony that projected occasional solo sections from within itself and thus produced a cross between the symphony and the solo concerto' (in D. Mitchell and H.C.R. Landon, ed.: *The Mozart Companion*, 1956, p.209) – apply in some contexts, for example to these Haydn works.

Two earlier works, published in France, the music of which is lost, may indicate a significant intermediary phase between concerto grosso and symphonie concertante. The first is a set of pieces by Louis-Gabriel Guillemain (1705–70) advertised in the *Annonces, affiches et avis divers* of 17 January 1753 as *Simphonies d'un goût nouveau en forme de concerto, pour les musettes, vielles, flûtes ou hautbois avec accompagnement de deux violons et basse* op. 16. The second, announced in the *Mercure de France* of March 1757, p.182, by Papavoine (*c*1720-?1793), is entitled *Grandes symphonies en concerto pour deux violons, alto et violoncelle obligés et deux autres violons et basse, que l'on peut supprimer*. Known contemporary works by Guillemain (e.g. 6 Concertinos op.7, 1740) and Papavoine (e.g. 6 Symphonies op. 1, 1752) are conventional three-movement symphonic pieces for orchestra in early Classical style. G.B. Sammartini provided an example of an intermediary phase in his Concerto in E♭ (London, 1756): it called for 'two violins & two hautboys obbligato' with two horns and strings. The lineage of this work may be traced back to Tartini (Blume: *Syntagma musicologicum*, 1973, p.694), but it is more Classically orientated.

In Vienna, Wagenseil and Dittersdorf (see the Breitkopf Catalogue, 1766, p.34) were among the earliest composers of pieces, called concertos, which resembled the symphonie concertante in character while not using the term itself. The two-word complex may first have been used in print in May 1767 for works published in Paris by Venier: *Sei sinfonie concertanti o sia quintetti per due violini, due viole, e basso dell Sig. Misliwecek detto il Boemo*, op.2. These are quintets rather than symphonies concertantes since they have no orchestral accompaniment. Similarly titled sets of works by Cannabich (op.7), announced by Venier in November 1768, and by Schiesser, published by La Chevardière in 1772, demonstrate a terminological vagueness which was soon clarified. Appearing in December 1767 and listed in the Venier catalogue as no.37 in the category *Sinfonies periodiques* is a 'Sinf concertante' by Ricci. No copy is known, but if it is one of the works in Ricci's *Trois simphonies concertantes* op.9 published by Van Laack (The Hague, *c*1773), it may be the first published symphonie concertante in both name and fact.

4. FLOWERING. Around 1770 the symphonie concertante began, with extraordinary rapidity, to enjoy enormous popularity. Its success reflected profound social changes: the advent of bourgeois audiences, public concert halls, larger orchestras. Musically, it embodied the tastes of these audiences: an increasing fascination with virtuoso display, a fondness for big sonorities, and particularly an all-pervading enthusiasm for the pleasing melodic line. Not only were large numbers of symphonies concertantes written, performed and published, some in many editions and in arrangements from other genres or popular airs, but in Paris at least this output soon exceeded that of the solo concerto and of the conventional symphony.

With a few exceptions, such as J.C. Bach, F.P. Ricci and Gaetano Brunetti, the earliest composers were Mannheimers and Parisians, and the first symphonie concertante publishers were almost all French. A perusal of French publishers' catalogues provides striking proof of its rapid rise: the new rubric appeared suddenly and the number of listings under it increased steadily (see Johansson, 1955, facsimiles 104–17). Waldkirch's claims for Mannheim composers' primacy do not stand up to examination: in any case, many of the Mannheim works he referred to were composed in Paris; this is certainly true of the two symphonies concertantes of Cannabich.

Significant French symphonie concertante composers include François Devienne (7), F.J. Gossec (5), I. J. Pleyel (6), J.B. Bréval (10), the Chevalier de Saint-Georges (10), J.C.M. Widerkehr (14), J.-B. Davaux (13) and G.M. Cambini (82). Other composers of smaller output but of equal or greater talent include Isidore Bertheaume, N.-J. Chartrain and Simon Leduc. To judge by the number of performances recorded in the contemporary press and by their favourable critical reception, Davaux, though second to Cambini in output, was easily first in popularity. Of greater intrinsic merit are the works of Bréval and the Chevalier de Saint-Georges, whose symphonies concertantes are among the most charming in the repertory. Cambini, an Italian who spent half a century in Paris, and a shrewd judge of popular taste, established a monthly subscription for the sale of his assembly-line production of symphonies concertantes. Mozart suspected that Cambini was responsible for the suppression of his own symphonie concertante for four wind instruments intended for the Concert Spirituel.

The most important Mannheim composers of symphonies concertantes are Cannabich (one from *c*1766–7, one

from 1771–2, both possibly written in Paris; also the quintets referred to above), Franz Danzi (4, including one for flute, oboe, clarinet and bassoon in E♭ with interesting resemblances to the work for the same combination ascribed to Mozart as KAnh.9/297*b*/C.14.01; see Stoltie, 1962), Anton Stamitz (4) and Carl Stamitz (over 30, second only to Cambini). Carl Stamitz's works, written in the French manner, mainly in two movements, were issued regularly in the 1770s by French publishers. His third symphonie concertante is unusual in being in a minor key (D minor). His solo group is generally made up of two string instruments (violin and cello, violin and viola or two violins).

In London the scene is dominated by J.C. Bach. His 15 concerted symphonies (not 31, as listed by Terry), written for his own Bach-Abel concerts and for the Concert Spirituel in Paris, expansively composed, are among the finest works in the genre. Ten are in three movements, five in two. The solo group is usually made up of three or more instruments, varied in composition: e.g. oboe, violin, cello and piano (B♭), flute, oboe, violin and cello (C), and once a unique grouping of nine instruments: two violins, two violas, two oboes, two horns and cello (in E♭, with orchestra of two violins and bass). This solo group approaches the size of an orchestra, suggesting a possible relationship between Bach's symphonies for double orchestra (op. 18) and the symphonie concertante. In the Hummel edition of the *Concert ou symphonie à deux violons obligés* (Amsterdam, *c*1775) the curious title is doubtless the publisher's; the work was first issued by Sieber (Paris, 1773) as *Simphonie concertante no. 2 à plusieurs instruments*.

The Italian contribution to the genre was very limited. The number of works actually written or published in Italy is extremely small and few manuscripts are to be found in Italian libraries; Italian composers using the form mostly worked outside their homeland. The leading ones (excluding Cambini, considered with the French group) are F.P. Ricci (3), Ignazio Fiorillo (5), Prospero Cauciello (3), G.B. Viotti (2) and especially Boccherini and Brunetti (5 each). All but one of Brunetti's, dated between 1769 and 1794, were for two 'violons principaux'; they remained unpublished in his lifetime. Boccherini's works were published for the most part in Paris and Lyons in the 1770s and 1780s under such headings as: *Simphonie concertante à 8 instruments obligés, Serenade, Concertino a più stromenti concertanti* and *Grande symphonie*.

Composers in Habsburg lands who produced a modest number of variously titled but significant works included the Bohemians Mysliveček, Kozeluch, Wranitzky and Gyrowetz. The Viennese composer G.C. Wagenseil wrote seven concertos for two keyboards and small orchestra; some date from the 1760s and are among the first examples of early Classical multiple concertos. Other Austrians include Vanhal, Dittersdorf, Pichl and Hoffmeister with three or four works each. Haydn's role in the development of the concertante principle in Classical music can hardly be over-estimated; his originality is everywhere apparent, for example in his *Six divertissements à 8 parties concertantes* op.31 (Vienna, 1781; H X:1–5, 12) and in more than a third of his symphonies. He wrote only a single fully-fledged symphonie concertante, his op.84 in B♭ for violin, cello, oboe and bassoon,

Title-page of Carl Stamitz's 'Deux simphonies concertantes' op.18 (Paris: Bailleux, c1776)

written in 1792 for the Salomon concerts in London (H I:105).

Mozart's first concertante piece was written in 1773 and called *Concertone*, K190/186*E*. It is a scintillating *galant* work in C with solos for two violins, oboe and cello. Both Leopold Mozart and the flautist Wendling referred to it as 'just the thing for Paris'. During his 1778 stay in Paris and in the year immediately following, Mozart was spurred to attempt no fewer than six symphonies concertantes. In addition to the one for four wind instruments K297*B* (see Levin, 1986), he wrote two others in E♭: the masterwork for violin and viola, K364/320*d*, and another for two pianos, K365, as well as the Concerto for flute and harp in C. Two other works of magnificent promise remain only as fragments: one in D for piano and violin, KAnh.56/315*f* and one in A for violin, viola and cello, KAnh.104/320*e*.

Germany, aside from Mannheim, presents no unified picture. Composers were dispersed in many different cities (Berlin, Dresden, Hamburg, Leipzig, Munich, Darmstadt) and courts (Ludwigslust, Württemberg, Regensburg, Donaueschingen, Harburg), each a separate unit. Few wrote more than one or two works, and these usually bear the title 'concerto' rather than 'symphonie concertante' or 'concertante', terms which were not used until the late 1780s and 1790s. The numerous concertos for two keyboards (W.F. Bach, C.P.E. Bach, C.H. Graun) or two flutes (J.J. Quantz, J.F. Kleinknecht etc.) seem designed for the private salon rather than the public concert hall. In Beethoven's generation and later, the situation changed considerably. Many large-scale virtuoso concertante pieces were written, e.g. by J.B. Moralt, G.A. Schneider, C.H. Meyer, J.J.B. Martinn, F. Westenholz,

P.J. Lindpaintner, H.A. Hoffmann, Franz Weiss etc. (see McCredie, 1975). Isolated examples of the concertante genre may be found elsewhere in Europe, for example in Sweden by Bernard Crusell and in Denmark by Schall.

5. Social basis. The symphonie concertante came into being in response to external social forces rather than to internal musical imperatives. It is only from a sociological vantage point that one can explain why, for example, the symphonie concertante came into fashion so precipitously around 1770, why it flourished so brilliantly and why it virtually burnt itself out in a few decades: the answers relate to the genre's function in the musical life of the time, to the changing social status of the musician and to the changing natures of concert life, concert audiences and means of music dissemination.

At the onset of the high Classical era, around 1770, there was a notable expansion in public concert life and with it an increase in the dissemination of music. Instrumental virtuosity came to be more and more prized. The symphonie concertante provided a vehicle for the instrumental composer and performer to display his wares and profit from his talent.

It was no accident that the focal point for the development of the genre was Paris, which provided a hospitable climate for the composer-performer of instrumental works pleasing to the large concert-going public. The symphonie concertante was designed for this milieu. Musicians were able to improve their status and augment their income by performing their own and each other's works, dazzling the public with melodious, scintillating and instrumentally varied pieces. These men were not for the most part travelling virtuosos but first-rate local musicians, some of whom had no aspirations to a soloist's career. Their participation as symphonie concertante principals, however, sufficed to place their names before the public, helping them to secure additional pupils, wider sales of their printed works and better contracts with publishers. Composers who wanted to build their careers in the commercial world found that the new appeal of the symphonie concertante helped them. Similarly, extra-musical factors in the early 19th century help explain the decline of the genre. The symphonie concertante no longer had a valid function in concert life, especially after the Napoleonic wars when the cult of the individual became a guiding consideration. The glamour of the travelling virtuoso replaced the concept of 'concerted' action by local composers and performers working together.

6. Later developments. The popularity of 'symphonie concertante' as the name of a piece declined considerably in the second and third decades of the 19th century. The word 'concertante' used as a noun persisted, as did the title 'concerto for two [three etc.] instruments'. But the symphonie concertante as a genre virtually disappeared. Multiple concertos came to be called fantasy, rondo, potpourri, variation or Konzertstück as well as concerto, concertino and concertante. Such works were extremely varied in character and appeared sporadically, often as *pièces d'occasion* or for specific soloists. Among the most important works for several soloists and orchestra written after Beethoven's Triple Concerto are Mendelssohn's two youthful concertos for two pianos, Spohr's five concertantes and one quartet concerto, Schumann's Konzertstück for four horns, Brahms's Double Concerto and Bruch's concertos for clarinet and viola and for two pianos.

20th-century composers have occasionally used the term 'symphonie concertante' or its cognates usually more as an exotic title or for works of a symphonic rather than concerto-like character with a single solo instrument, rather than as a reincarnation of the 18th-century genre. Examples include Szymanowski's Symphonie concertante for piano and orchestra (1932), Jongen's Symphonie concertante for organ and orchestra (1926), Enescu's Symphonie concertante for cello and orchestra (1901), Rubbra's Sinfonia concertante for piano and orchestra (1934) and Prokofiev's Symphony-Concerto op. 125 for cello and orchestra (1950–52). A more legitimate use of the title was made by Hiiding Rosenberg who wrote a Symphonie concertante for violin, viola, oboe, bassoon and orchestra (1935) and by Frank Martin with his Petite symphonie concertante for piano, harpsichord, harp and strings (1945).

Symphonion. A trade name for various types of mechanical instrument, notably the disc-playing MUSICAL BOX made by the Symphonion Co. of Leipzig.

Symphonische Dichtung (Ger.: 'symphonic poem'). A term coined by Liszt to describe 12 works he composed between 1848 and 1858 – the first of them *Ce qu'on entend sur la montagne*, the last *Hamlet* – and generally adopted in Germany for orchestral works in this form. Richard Strauss, however, preferred to use the term 'Tondichtung'.

See SYMPHONIC POEM.

□

Symphony (Fr. *simphonie, symphonie*; Ger. *Sinfonie, Symphonie*; It. *sinfonia*). A term now normally taken to signify an extended work for orchestra. The symphony became the chief vehicle of orchestral music in the late 18th century, and from the time of Beethoven came to be regarded as its highest and most exalted form. The adjective 'symphonic' applied to a work implies that it is extended and thoroughly developed.

The word 'symphony' derives from the Greek *syn* ('together') and *phōnē* ('sounding'), through the Latin SYMPHONIA, a term used during the Middle Ages and the Renaissance. It is essentially in this derivation that the term was used by Giovanni Gabrieli (*Sacrae symphoniae*, 1597), Heinrich Schütz (*Symphoniae sacrae*, 1629) and others for concerted motets, usually for voices and instruments. In the 17th century the term 'symphony' or (more commonly) 'sinfonia' was applied to introductory movements to operas, oratorios and cantatas (*see* OVERTURE, §2–3), to the instrumental introductions and ritornellos of arias and ensembles (*see* RITORNELLO), and to ensemble works that could be classified as sonatas or concertos. The common factor in this variety of usage was that sinfonias or symphonies were usually part of a larger framework, such as another composition, an 'academy' or a 'church service. (For a fuller discussion *see* SINFONIA (i).)

The immediate antecedent of the modern symphony is commonly considered to be the opera sinfonia, which by the early 18th century had a standard structure of three sections or movements: fast, slow, and fast dance-like movement. That form was extensively used by Alessandro Scarlatti and his contemporaries and was widely adopted outside Italy, particularly in Germany and England (less in France, where the FRENCH OVERTURE held sway). The terms 'overture' and 'symphony or 'sinfonia' were widely regarded as interchangeable for much of the 18th century.

I. 18th century

1. INTRODUCTION. To understand the development of the Classical style there is no better exercise than to follow the long evolution of the 18th-century symphony. Firstly, the symphony was cultivated with extraordinary intensity throughout most of the century: the *Catalogue of 18th-Century Symphonies* (see LaRue, 1959, 1988) contains over 13,000 distinct works. In Europe at the time there was hardly a princely, ecclesiastical, civic or even private musical establishment that did not possess a stock of symphonies. Valuable collections have been discovered from Finland to Sicily and from Kiev to Salem, North Carolina. The leading area of symphonic production was no doubt Vienna and the rest of the Habsburg Monarchy, followed by Germany, Italy, France and England; but significant activity also took place in the Low Countries, Scandinavia, Spain, Poland and Russia. A second important aspect is the continuity of the symphony's development, beginning in the late 17th century with the skeletal necesssities of instrumentation, texture and tempo contrast and leading ultimately to the balanced array of procedures that epitomize the Classical style. Finally, the characteristically large-scale, public nature of the symphony, together with the fact that it did not depend on soloistic virtuosity to achieve its effect, gave it a weight and significance that seemed to call for a composer's best efforts. The increasingly prominent position accorded the symphony during the 18th century appears tangibly in both the importance it occupies in publishers' catalogues and the conspicuous role it plays in writings of the time, including those of Scheibe, Riepel, Burney, Schulz, Koch and many others.

2. SOCIAL ASPECTS. The symphony pervaded a broad spectrum of 18th-century life. It provided an important element of state, civic and institutional functions, from installations and other official ceremonies to banquets and receptions. Symphonies were also a standard component of Catholic church services, the usual practice being to distribute the various movements throughout the Mass as substitutes or accompaniments to items of the Proper such as the gradual, offertory and communion (Zaslaw, 1982).

The most characteristic use of the symphony, however, was as part of one of the varied types of occasions we lump together under the rubric 'concerts'. One type of concert was the 'academy' or private concert in a palace, monastery or private residence. In contrast to the later image of the concert as a primarily aesthetic experience, aristocratic academies generally featured tea and card-playing, and descriptions of the time make clear that there was much moving about and conversation as a counterpoint to the music: Spohr recalls in his autobiography that as late as 1799 the Duchess of Brunswick insisted that the orchestra always play softly when she was present so that the card-playing should not be disturbed. Of burgeoning importance throughout the century was the public concert, ranging from ale- and coffee-house concerts and the many amateur series to the formal subscription and benefit concerts common in the second half of the century.

Whether it was a private academy or a public concert, the principal fare of such occasions during the period was nearly always music that featured soloists, both instrumental and vocal. Programmes of the time show that the most common role of the symphony was to open the concert, an introductory function not unlike that of an overture. Either another symphony or one movement of the opening symphony might then close the programme. The growing prestige and aesthetic significance of the symphony in the course of the century may be seen in the

prominence given to Haydn's latest productions during both his London stays: whereas a symphony (still known in England as an overture) by another composer would most often begin the concert, Haydn's newest work was usually placed at the start of the second half, where it would presumably receive greater attention – and not suffer from, or be missed by, latecomers.

3. SOURCES. The enormous number of 18th-century symphonies mentioned above obviously implies an even more enormous number of sources. A well-known symphony by Pleyel, for example, may be found in as many as 50 libraries, and its popularity extended even to remote locations; for instance, the records of the Philharmonic Society of Breslau (now Wrocław) show performances of Pleyel's op.30 extending to 1833. Copies of symphonies by Gossec and van Maldere appear in provincial church archives in lower Slovakia; many Italian overtures found their way into Russian libraries; and a Russian symphony/overture by Berezovs′ky is extant in the Doria-Pamphili collection in Rome.

Symphonies during the 18th century were usually transmitted in parts rather than score, and manuscripts were much more common than prints. The copying of manuscripts was a standard obligation of musicians at courts, monasteries and other institutions. In addition, manuscripts could be obtained commercially from such copying shops as the well-known ones of Vienna. Firms such as Breitkopf in Leipzig and Ringmacher in Berlin (see Brook, 1966, 1987) even issued incipit catalogues from which one could obtain manuscript copies (though Breitkopf offered more and more prints for sale over the years). After about 1750 the symphony became so popular that publishers in Paris, Amsterdam and London issued them on a periodic basis, as in Robert Bremner's famous series 'The Periodical Overture in 8 Parts', begun in 1763 and intended 'To be continued monthly'; such publications were especially popular with amateur music societies and for domestic use. It should also be noted that neither prints nor manuscripts of the 18th century normally bear dates, so that determination of chronology typically rests on circumstantial evidence alone.

Symphonies in the 18th century appear under a large number of different titles in addition to 'sinfonia' and its cognates, such as overture (also introduzione, intrada, prelude), sonata, trio, quartet or quadro, quintet, concerto, concertino, parthia, divertimento, cassation, serenade and pastorale. Thus, to identify them according to a 'semantic principle' (such as that adopted by W.S. Newman in his books on the sonata, i.e. to include only works bearing some form of the title 'sinfonia') would result in a skewed and highly incomplete survey. A related question of 'when is a work a symphony?' arises with regard to the use of operatic overtures as concert symphonies, a practice that reached its peak about 1760 and then tapered off as the stylistic distinction between the two genres became clearer. In general, the present survey will take account of overtures only when necessary for contextual purposes, as when they provided important models or avenues of innovation for the symphony proper.

Two final problems with symphony sources concern anonymous works and misattributions. The widespread problem of non-attribution has plagued librarians since the inception of the symphony; it may result from loss of the cover page carrying the attribution, from carelessness on the part of a copyist or librarian, or from myriad other causes. A majority of anonymous symphonies can be linked to a composer by use of the 'Thematic Identifier' volume of the *Catalogue of 18th-Century Symphonies* (LaRue, 1988) or, when it is completed, *RISM*, but a frustratingly high percentage represents unique sources for which no attribution has been discovered.

Regarding misattributions, while frauds relating to Haydn may receive the widest publicity, equally severe problems affect countless composers of less importance and may lead to equally severe misunderstandings of their output and style. Such mistakes can occur under the best of auspices, as shown by the publication in a respected monumental edition (DTÖ, xxxi, Jg.xv/2) of a symphony in an obviously later Classical style under the name of the early Viennese composer M.G. Monn (1717–50). This work had troubled three generations of writers attempting to explain the Viennese symphony, for stylistially it did not fit at all with the modest instrumentation, figural melodic style and short phrase-lengths of Monn's other symphonies. But use of the 'Thematic Identifier' revealed that it was in fact a later work by F.X. Pokorny of Regensburg, and study of the manuscript itself showed that the attribution to him had been erased and changed to Monn. Misattributions of this sort affect about 7% of 18th-century symphonies. Though the Thematic Identifier (and eventually *RISM*) can bring such conflicts to the surface, the task of determining the correct composer may still be almost insoluble; there are several symphonies attributed to no fewer than five different composers.

4. INSTRUMENTATION. The earliest concert symphonies are scored for an orchestra of strings alone, with harpsichord and often bassoon assumed as part of the continuo group. Though four parts are the norm (two violins, viola and bass, the latter comprising at least cello and double bass), trio-symphonies for two violins and bass are quite common in the early phases of the symphony. Symphonies *a 4* continue to be cultivated until late in the century, especially by composers working at smaller provincial centres but also under special circumstances by such well-known figures as C.P.E Bach, whose six symphonies for string orchestra of 1773 were written for Gottfried van Swieten.

Beginning about 1730 one begins to find symphonies *a 6* for strings and a pair of horns or (less often) oboes, and slightly later the standard *a 8* overture instrumentation of strings plus a pair of oboes and a pair of horns. The latter combination should be regarded as the standard orchestra for the symphony from *c*1740 to approximately the 1770s. Horns could be replaced by or augmented by pairs of trumpets and timpani. Similarly, oboes could be replaced by flutes, either for the entire symphony or for the slow movement alone. Bassoons increasingly took on a more concertante role, and clarinets began to make their appearance in symphonies in the 1750s. However, the expansion of the orchestra to full late Classical size (strings plus two each of flutes, oboes, clarinets, bassoons, horns, trumpets and timpani, with harpsichord often assumed even with this large a group) was erratic rather than consistent, and the whole development is closely linked to local contingencies. For instance, the best-known early example of this instrumentation, Mozart's Symphony K297 of 1778, was written for the large orchestra of the Concert Spirituel in Paris.

5. KEY, FORM. The great majority of 18th-century symphonies are in a major key, only rarely going beyond four sharps or three flats. Only about 7–8% of these works are in the minor, though as we shall see, certain composers of the period evinced a special fondness for it. With respect to large-scale form, the fast–slow–fast (or fast–slow–moderate) movement sequence familiar from the Baroque concerto and overture furnished the basic pattern for the early symphony, and it continued to appear prominently throughout the period, especially outside the Viennese sphere of influence. Second movements of early symphonies are generally in the relative or tonic minor, the dominant, or the tonic, with the subdominant coming to the fore after about 1750.

A familiar question arises over the introduction of the minuet and trio into the symphony as the third movement of four, for which priority has been claimed on behalf of both Mannheim and Vienna. Isolated precedents for this usage appear in works of the suite tradition and in G.M. Monn's famous D major symphony of 1740. However, the latter work is the composer's only four-movement symphony, and the penultimate movement lacks a trio (see below, §10). Credit for the sustained use of four-movement form must therefore go to the Mannheim composer Johann Stamitz, over half of whose symphonies incorporate a minuet and trio as the third movement of four (see below, §9). In conjunction with this expansion, Stamitz and others sought to give the finale greater substance, often placing it in 2/4 and marking it Presto or Prestissimo so as to end the symphony with a flourish. It may be noted here that the argument that the four-movement symphony resulted from the addition of such a movement at the end of a fast–slow–minuet cycle cannot be maintained: the 'minuets' of the majority of early symphonies correspond to the faster Italian type, without trio, not the more stately French type with trio found in Stamitz's four-movement symphonies from the mid-1740s. The genesis of the four-movement cycle is better explained by reference to the Austro-German parthia (see Koch, 1802; *see also* PARTITA *and* SUITE) as well as to hybrid symphony-suites of a type common in Germany (see §§8–9, below), genres that by definition unite abstract and dance movements.

Another addition to the basic plan of the symphony was the slow introduction, which not only added length and stylistic variety, but also freed the composer to use a wider variety of primary themes to begin the Allegro, especially lyrical or folk-like themes that might have seemed too lightweight as the initial gesture of a symphony. Slow introductions evidently first appeared in three-movement symphonies of the 1750s, and after *c*1760 they begin to be found as part of the normal four-movement cycle, in both cases in works by Austrian composers. (On this and other variants of the symphonic cycle see below, §§10 and 14(i).)

First movements (and many finales) of 18th-century symphonies generally conform to one of two basic plans, as already recognized by J.A. Scheibe in his extensive discussion of the symphony in *Der critische Musikus* of 1739. Most important is some version of large-scale binary form, whether of the simple, asymmetrical, rounded (i.e. with full recapitulation) or sonata type. Both parts of such a movement are normally repeated, though after about 1770 the repetition of the second part (development and recapitulation) is frequently dropped. From the 1740s on, however, many symphonic fast movements, especially within the Mannheim orbit, omit both repetitions, a more processive approach doubtless derived from the Italian opera overture and, ultimately, ritornello structure.

In contrast to these binary or binary-based plans, some of the earliest symphonies, as well as large numbers of symphonies in more conservative centres until late in the century, employ a more continuous type of structure, without double bars and repeat signs, that is related to the ritornello structure of the concerto (including the ripieno concerto; see below, §6). In the simplest and most common of these types, designated here as tri-ritornello structure, an opening section moves from the tonic to the dominant (or, in minor, the relative major); after an elision, a second related section, beginning with the same thematic material, moves from the dominant to a related (usually modal) degree, often cadencing there; and the third section essentially parallels the first but now remains in the tonic. Obviously, except for the omission of repetitions, a tripartite form of this type bears a strong resemblance to a rounded binary or early sonata form without repeats, the second section corresponding to the 'development' section, the third to the recapitulation.

Sonata form as found in the 18th-century symphony should be understood as encompassing a wide range of variants; indeed, it is less a form than a flexible collection of characteristic procedures and techniques. These include contrast and directional modulation between tonic and dominant or other related key areas; differentiation and functional specialization of thematic material; slowing of harmonic rhythm to articulate and stabilize thematic areas; development involving modulation and changes in material; recapitulation; and orchestration and textural differentiation that selectively enhance these procedures.

Three particular variants of sonata form should be mentioned here. One is a type of binary in which the return to the tonic for the recapitulation is marked by the return of the secondary rather than the primary theme. Here labelled binary-sonata form, this type was especially common in the early symphony. It was also the preferred form at Mannheim (typically without repetitions), where the occasional return to primary material after the reappearance of the secondary theme may give the impression of a 'reversed' or 'mirror' recapitulation. However, this is not as common as often stated, and in any event the rearrangement of material in a Mannheim recapitulation often goes far beyond a mere reversal of the primary and secondary themes. Conversely, many early sonata forms that begin with the return of the primary theme in the tonic then drastically abbreviate the material that had appeared subsequent to it in the exposition, so that the result may nonetheless approach a symmetrical binary form. It should also be noted that even into the 1770s many composers began part 2 (after the central double bar, if there is one) by modulating quickly from the dominant back to the tonic (the latter frequently marked by a restatement of the primary theme) before moving on to other keys and, eventually, the recapitulation; though 'textbook' sonata form would not condone this procedure, it was considered appropriate and even desirable by theorists of the time (e.g. Riepel, 1755).

A second variant is the movement type in which the recapitulation begins in a key other than the tonic,

normally the subdominant. Familiar from isolated movements by Mozart and Schubert, this technique is often found in symphonies by the Viennese composer F.L. Gassmann (for a fuller discussion of this technique *see* SONATA FORM, §3(iii)). A third variant, ubiquitous in opera overtures after *c*1735 and occasionally found in symphonies, is 'exposition-recapitulation' form, consisting simply of an unrepeated exposition followed by an unrepeated recapitulation, without development but frequently with a retransition connecting the two sections (as in Mozart's overture to *Le nozze di Figaro*). In a further variant, a slow movement may be inserted between the two sections (as in Mozart's overture to *Die Entführung aus dem Serail*). The latter procedure is, in turn, one version of a da capo or related cycle in which some or all of the first movement returns after the slow movement. Such designs are found in opera overtures throughout the period and occur from time to time in concert symphonies.

Although many characteristic features of the Classical style occur in isolated contexts in earlier works, no mere collection of traits can generate its full character, which results from a higher-level synthesis that may be termed 'concinnity' – a skilful and elegant arrangement and mutual adjustment of the various elements or parameters. Once this central technique had been mastered, composers of symphonies could turn to other characteristics: at the phrase level, a weighted hierarchy of punctuation necessary to clarify their increasingly more complex phrase, sentence and paragraph structures; at the section level, a differentiation and eventual specialization of material according to function (primary, transitional, secondary and closing); and at the movement level, a sophisticated set of techniques for the development of thematic material, both within and outside the development section. Thus, by comparison with the relative homogeneity of the Baroque style, the first movement of a Classical symphony may signal the contrast between the primary and secondary groups not merely by changes in melody but also by changes in dynamics, orchestration, texture, rhythm (both harmonic and surface), register and phrase length. This kind of coordination is both a defining characteristic of the mature Classical symphonic style and a major source of its power.

With respect to the remaining movements of the symphony, the formal structure of second movements spans a wide range, from various binary and ternary types to the sonata, variation, rondo and refrain forms characteristic of the latter part of the century. Early finales are usually dance-like 3/8 or 3/4 movements or (less commonly) a variety of 2/4 types, all normally in some sort of binary form. In the course of the century finales took on greater weight and breadth, often incorporating full sonata forms comparable to those found in first movements. Of a number of alternate types, including the fugal finale and the theme and variations, the most important are those based on the rondo principle. The earliest such examples seem to be the finales *en rondeau* found in certain French symphonies before mid-century, while in Vienna and related centres rondo finales began to appear in the 1750s, sonata-rondo finales in the 1770s.

6. PRECURSORS. The traditional explanation for the genesis of the symphony, found in countless textbooks and more specialized studies, has been that the three-movement Italian opera overture or sinfonia of the type attributed to Alessandro Scarlatti was simply transplanted from the theatre to the chamber, where it took on independent life as the 'concert' symphony. Research on the early symphony beginning in the 1950s has, however, challenged this overture-transfer theory in favour of a broader and more inclusive approach, one that gives equivalent attention to such independent instrumental genres as the sonata and concerto in their manifold forms (e.g. Churgin, 1963; Wolf, 1983, 1995).

Of the many genres that furnished models for the early symphony, the Baroque sonata da chiesa has generally been dismissed owing to its association with the four-movement Corellian type, which alternates pathetic slow movements with fugal Allegros. Yet church sonatas *a 3*, *a 4* and larger in such northern Italian centres as Bologna, Brescia and Venice in the second half of the 17th century frequently begin with a fast movement; in the case of the brilliant works for trumpet and strings popular in Bologna, these movements are even in a mostly homophonic style and are known to have been played with doubled parts. As a matter of fact, beginning as early as Maurizio Cazzati's op.35 of 1665 it is not uncommon to find trio (and larger) sonatas in the three-movement pattern later associated with the concerto, overture and symphony. A more direct model for the symphony was the 'neutral' trio and quartet sonata characteristic of the period after about 1700, suitable for either church or chamber; these are often in three homophonic movements and thus clearly adumbrate the early symphony, especially when the opening movements are in some type of binary form.

The sonata da camera and other types of suite, especially for orchestra, provided an obvious source for the binary forms that came to predominate in the symphony. Particularly interesting in this regard is a type of trio sonata popular in northern Italy in the late 17th and early 18th centuries that begins with a balletto, a dance in fast or moderate tempo, related to the allemande, that generally displays few overt dance traits. The abstract instumental style of such movements, homophonic and in binary form, provides an obvious parallel to the opening movement of a symphony.

Even more directly related to the symphony is the little-known genre designated variously as the ripieno concerto (i.e. 'concerto for the ripieno'), *concerto ripieno* (Vivaldi's own term) or *concerto a 4* or *a 5* (the latter grouping usually including a second viola part; see Wolf, 1983). These are orchestral works (i.e. with doubled parts), generally for strings and continuo alone, that despite the designation 'concerto' have no solo parts (or purely negligible ones). The term is thus being used in its standard early meaning of 'work for an ensemble', with no connotation of opposition or contrast between solo and tutti. While many of these concertos resemble the Corellian church sonata in form and style, the majority anticipate the first symphonies in their preference for brilliant homophonic writing and shorter formal cycles beginning with fast movements (most often fast–slow–fast). A fair number of opening movements after 1700 are even in large binary forms, though ritornello types are more common (see above, §5).

The earliest known ripieno concertos are the six *concerti a 4* in Giuseppe Torelli's op.5 of 1692. These were followed in 1698 by the ten in Torelli's *Concerti musicali* op.6, which firmly established the three-movement fast–slow–fast pattern as the norm for the genre, and the three

in G.L. Gregori's *Concerti grossi* op.2. The next few decades saw the appearance of many new sets of ripieno concertos. Soon, however, the genre merged more or less gradually with the symphony *a 4*; after the 1730s, works that might formerly have been called concertos are generally called symphonies, the former term now being reserved primarily for works featuring tutti–solo contrast.

A final important progenitor of the symphony is the Italian opera overture. De-emphasis of the overture as the unique parent of the symphony does not mean that it did not take a prominent part in the creation of the latter genre: it was the probable source of the label 'sinfonia' (though the same term appears frequently in northern Italy as an alternative designation for trio sonatas *da chiesa*); it is orchestral; and it favours rapid, brilliant movements in homophonic style, after *c*1700 generally within standard three-movement form. (Alessandro Scarlatti's *Tutto il mal non vien per nuocere* of 1681 is often cited as the first opera with a three-movement overture; but it is only the revised version, *Dal male il bene* of 1687, that has such an overture in extant sources. An earlier example, therefore, is G.A. Perti's overture to *Oreste in Argo* of 1685. In any case, as already noted, three-movement form was by no means exclusive to the overture.) Moreover, there exist early examples of the transfer of overtures to the chamber and of 'chamber' works (sonatas, concertos, sinfonias) to the opera house, for example in the music of Vivaldi and G.B. Sammartini. But such transfer was relatively rare before about 1740, and it was only after that date that many elements of the overture – in particular its use of a larger orchestra (with woodwind and brass) and concomitant simplification in style and stress on dynamic effects – began to manifest themselves strongly in the symphony proper (see below, §7).

It is also relevant to note that the overture in the period before about 1740 spans an enormous range from the stylistic standpoint: overtures can be found that match each and every type described in the foregoing survey, including many three-movement works with binary first movements. Hence the influence of the overture was anything but monolithic and is accordingly all the more difficult to delineate with precision. At the same time, the theory that the opera overture was the principal basis for the symphony has as one of its weakest points the fact that the two genres were intended for quite different venues and kinds of audience, whereas the circumstances of performance and the social function of ripieno concertos and (in many cases) sonatas were precisely those of early symphonies.

7. Italy. Writing from Italy in 1739, President Charles de Brosses of France commented that although Naples had the finest conservatories and Bologna the best school of singing, 'Lombardy excelled in instrumental music'. He was probably referring at least in part to the spate of works produced in and around Milan by the two most important and prolific early symphonists, G.B. Sammartini (1700/01–75) and Antonio Brioschi (*fl* *c*1725–*c*50). Each of these composers wrote symphonies that can be dated to the early 1730s: one movement of a Sammartini symphony also appears as the 'Introduzione' to Act 2 of his opera *Memet* of 1732 (the overture to that opera also circulated as an independent symphony), and a symphony by Brioschi appears as the overture to a Hebrew cantata of 1733, and two independent symphonies by him exist in sources dated 1734 (in *I-CMbc*). As the style of these works is already rather advanced as compared with other early works of these composers, it seems likely that both were already writing symphonies by the late 1720s.

This conclusion is supported by the publication in 1729 of Andrea Zani's op.2, containing six 'sinfonie da camera' *a 4* and six violin concertos. Zani's publication provides both the earliest explicit date for works that are unquestionably part of the symphonic tradition and one of the earliest known uses of the term 'sinfonia' by a composer to designate such a work; until the 1740s sources for the 'symphonies' of Sammartini and Brioschi are just as likely to label them overtures, sonatas or even 'concerti a 4' (as in four Milanese manuscripts of Brioschi symphonies in *CZ-Pnm*). That Zani was from Lombardy (Casalmaggiore, near Cremona) strengthens the claim of this region to be the most important early centre of symphony composition. This is important not only intrinsically but also because Lombardy during most of this period was ruled by Austria, providing a long-term basis for the transfer of works, styles and practices between the two areas. Other early symphony composers from Milan include Ferdinando Galimberti (*fl* *c*1730–50), G.B. Lampugnani (1708–1788) and Count Giorgio Giulini (1717–80).

With one or two possible exceptions, Sammartini's approximately 20 symphonies from before *c*1740 and all of Brioschi's over 50 extant symphonies are in three movements and are scored for strings alone (*a 4* or, less often, *a 3*). Though several first movements by each composer make use of ritornello-based plans, without double bars, the great majority are in some type of binary form; both composers show a strong preference for large rounded binary or early sonata forms, generally with extended 'development' sections and full (though often reformulated) recapitulations. By comparison, four of the six first movements of Zani's op.2 symphonies make use of ritornello procedures of the type common in the ripieno concerto, while two are in binary form (one simple and one rounded). Thus even in its early phase the Milanese symphony demonstrated a commitment to the basic formal design that the mainstream symphony was to favour throughout the century. It was only after about 1740, however, that clearly differentiated and demarcated secondary themes became standard in the concert symphony, somewhat later than in the overture.

The evolution in Sammartini's symphonies during his early period from a basically late Baroque idiom reminiscent of Vivaldi's ripieno concertos to his individual version of the early Classical style shows how various traits characteristic of the earlier era could be redirected for Classical purposes. The powerful beat-marking rhythms of the earlier style moved to the bass, so that the upper voices could articulate larger phrase units; counterpoint – still a prominent element of both Sammartini's and Brioschi's style, seen especially in the independence of their second violin parts – submitted to coordinated cadences lest it obscure the main melodic line; the superb Baroque motivic development survived and flourished, both within and outside development sections; and the deft elisions and overlaps so common in the high Baroque now functioned to prevent loss of momentum between the more heavily punctuated phrases and sections. Sammartini's slow movements are often quite extended and

make use of highly expressive (sometimes almost eccentric) chromaticism, both harmonic and melodic. He also seems to have grasped the importance in a concert symphony of a substantial finale, developing compact sonata forms that require the listener's full attention.

That the symphony in Italy was not exclusive to Lombardy even in its earliest phase is implied by two sets published posthumously by Boivin and Le Clerc in Paris in the early 1730s, each consisting of 12 symphonies *a 4*; these are by the rather mysterious composer Alberto Gallo, who is said in the first of these prints to have 'died young'. Gallo is further identified as being 'da Venezia' in manuscripts dated 1724 in the Estense collection in Vienna (*A-Wn*), a geographical connection supported by the fact that this collection originated in the Veneto (near Padua). The works in one of the 1724 manuscripts, a set of nine 'sinfonie' with parts for two violins, cello and violone, may well have been intended for ripieno performance; if so, Gallo's use of the term 'sinfonia' – in this case for trio symphonies – antedates Zani's in op.2 by five years (see above). All Gallo's symphonies, in a late Vivaldian style, are in three movements, usually with a brief and often purely transitional slow movement. Similarly, with the exception of six movements from the 1724 set that use ritornello procedures, all Gallo's first movements follow a normal binary plan (both simple and rounded, even in the 1724 set). South of Milan and Venice, in Bologna, the early symphony is represented by the 24 symphonies of Padre Martini, extending from 1736 to 1777. Perhaps surprisingly, the symphonies of the great contrapuntist are in a generally homophonic style, though they still tend to reflect the Baroque motivic tradition.

During approximately the period just discussed, an important new generation of Italian opera composers, including such Neapolitans as Leonardo Vinci, Leonardo Leo and G.B. Pergolesi, were making strides in creating a new style for opera, both *seria* and *buffa*. The overtures to their operas were similarly influential, not only in that they were circulated as concert symphonies but also in that many of the techniques and practices they developed were eventually adapted for use in independent concert symphonies (see Hell, 1971). These works demanded large orchestras, often with trumpets and timpani, which were skilfully employed to create brilliant and striking dynamic effects. Both Vinci's overture to *Artaserse* (1730, Rome) and Pergolesi's to *Olimpiade* (1735, Rome) call for an orchestra *a 11* and begin with unmarked but unmistakable crescendo passages that rise gradually through more than an octave. Indeed, throughout the entire first movement of both these pieces the extremely homophonic texture, combined with block-like rather than linear treatment of the woodwind and brass, creates a massive effect perfectly suited to the large theatres for which these works were intended.

The first movement of Leo's overture to *Lucio Papirio* (1735, Naples) is an early example of a formal type that was to remain the norm for the Italian overture for much of the century: a clear exposition-recapitulation form (see above, §5) in which primary, transitional, secondary and closing material is fully differentiated and demarcated in each half. The next generation of opera composers, including most notably Nicolò Jommelli and the Venetian Baldassare Galuppi, adopted this basic plan in most of their overtures of the 1740s and 50s, though naturally with the expanded phrase dimensions and increasing thematic specialization characteristic of that period. Jommelli and Galuppi rely extensively on dynamic effects, among them, beginning in the late 1740s, explicitly marked crescendo passages. According to J.F. Reichardt (1774–6), 'When Jommelli first introduced [the crescendo] in Rome, the listeners rose from their seats during the crescendo, and only at the diminuendo noted that it had taken their breaths away. I myself have experienced this phenomenon in Mannheim'. This passage is often cited as a description of a Mannheim crescendo, omitting any reference to Jommelli.

Though it was in fact Mannheim that showed the most overt interest in adapting this new overture style to the concert symphony (see below, §9), few composers in Europe remained completely aloof from it. Sammartini's symphonies after about 1740, for example, call for an orchestra *a 6*, with horns or trumpets, or *a 8*, with oboes and horns. The wind tend to function not as linear doubling but as a separate textural bloc, often providing a sustained chordal background or rhythmic punctuation. Other changes in Sammartini's style after *c*1740 include regular use of clear secondary themes, expansion of the phrase dimension to a full four- and eight-bar hierarchy and further slowing and differentiation of the harmonic rhythm combined with increased use of pedal points. Similar innovations characterized the evolution of the symphony at mid-century in all but the most conservative centres.

The next generation of Italian symphonists included two fine composers, Luigi Boccherini and Gaetano Brunetti; but both spent most of their careers in Spain rather than Italy (see below, §13). The reverse situation is represented by the early symphonies of J.C. Bach, who was in Italy from 1754 to 1762, and later by the prolific Czech composer Václav Pichl (1741–1805), composer to the Austrian governor of Milan from 1777 until 1796. Of Italians resident in Italy one may mention Gaetano Pugnani (1731–98), F.P. Ricci (1732–1817), P.M. Crispi (*c*1737–1797) and Gaudenzio Comi (*fl c*1775–85). Pugnani's over 40 symphonies, the majority in four movements, are typical for their sometimes bland lyricism; cantabile ideas pervade even the primary sections. For the most part it seems fair to say that Italian composers of the second half of the century failed to realize the potential that Sammartini had initiated, possibly because of a disinclination towards the 'serious style' implicit in the evolution of the symphony. Yet in the supreme works of Haydn and especially Mozart there is rarely a movement that does not by some touch of cantabile line or rhythmic spark pay tribute to the Italian background.

8. Dresden, Berlin and German Protestant centres. Of the two most important courts in north Germany, that of the Elector of Saxony in Dresden (and for part of this period Warsaw) seems to have fostered relatively few independent symphonies. Among the principal instrumental composers at court, including J.D. Heinichen (1683–1729) and J.G. Pisendel (1687–1755), only J.B.G. Neruda (*c*1711–1776) produced more than a handful of symphonies. Of four works of Heinichen that come into question as possible concert symphonies, two are called sonatas but have doubled string parts, while a third is untitled. All include full wind parts and consist of a through-composed first movement, a brief connective Adagio or Largo and a binary finale. Each opening movement ends

with a surprise elision connecting it to the succeeding Adagio or Largo, a device learnt from the Neapolitan overture and found in many later north German symphonies. The fourth work, called 'sinfonia', is a symphony-suite of a type fairly common in central and north Germany: it appends a series of French dances to a normal three-movement cycle. If these works are not simply detached overtures, as are three others by Heinichen extant in Dresden, they would number among the earliest concert symphonies (Heinichen died in 1729).

The pre-eminent Dresden court composer, J.A. Hasse (1699–1783), apparently wrote no independent symphonies, although his overtures appear as separate works in collections throughout Europe. These influential works illustrate many of the basic formal and stylistic characteristics of the north German symphony until the last decades of the century. All are in three movements, often elided or otherwise connected. Hasse's first movements exhibit the clear ritornello forms (usually of the tri-ritornello type) that he had learnt in the 1720s and 30s in Italy, combined after about 1740 with a more up-to-date approach to thematic differentiation. Stylistically they are relatively conservative, frequently falling into repetitious, motivic rhythms particularly unfortunate at this time of stylistic change. In the high Baroque style even the most note-repetitive themes gain relief from the rapid chord changes, sequential modulations and textural activity; but in the emerging Classical style the stabilized harmony and balanced subphrases often turn Hasse's potentially vigorous ideas into arid repetitions. In other respects he showed some originality, for instance in seeking new forms (the minuet-rondo finale of the overture to *Asteria*, 1737) and new tone colours (two english horns in the overture to *Il trionfo di Clelia*, 1766, Vienna; the use of english horns, found also in Haydn's Symphony no.22 of 1764, was a Viennese tradition).

The principal Dresden contribution to the early concert symphony came not at the electoral court itself but in the private Kapelle of the powerful Saxon privy councillor and cabinet minister Count Brühl, who employed J.S. Bach's eventual successor Gottlob Harrer (1703–55) from 1731 until the latter's departure for Leipzig in 1750. During this period Harrer produced over two dozen symphonies, 19 of which are still extant in score (mostly autograph, in *D-LEm*). Of these 13 bear dates ranging from 1732 to 1747, earning them a place among the earliest concert symphonies. Worth noting in these scores is the composer's consistent use of the title 'Sinfonia'. As remarked above, Italian symphonies of the same period use a wide variety of titles; but Harrer's usage (and other evidence) suggests that Germany preferred the term 'sinfonia' from the beginning. Harrer's symphonies range from small pieces for strings alone to large suite-related works that call for oboes, flutes and three horns in evocation of the hunt. Once again the general style is for the most part italianate (Harrer had studied in Italy in the 1720s) and the first movements are ritornello-based.

The other principal court of north Germany was that of Frederick the Great in Berlin. Frederick's Kapellmeister, C.H. Graun (1703/4–59), devoted himself primarily to opera, but his overtures, like Hasse's, were widely distributed as independent works. His brother J.G. Graun (1702/3–71), Konzertmeister at the Prussian court, provides another example of a German composer whose style was formed in Italy in the 1720s and retained its basic character from then on; in this respect it was not unlike Frederick's taste in music. Graun's nearly 100 concert symphonies are important both for establishing the symphony as a central genre at Berlin and for their quality. While they outwardly resemble the overtures of Hasse and of his brother, Carl Heinrich, they are more contrapuntal in style and show a firmer sense of Classical balance, whether at the phrase level or in the well-planned climaxes of their development sections. Graun's basic approach was followed by other composers at court who wrote fewer symphonies, most notably Franz Benda (1709–86).

The 18 symphonies of C.P.E. Bach (1714–88) are divided fairly evenly between the eight written for the Berlin court (one in 1741, the remainder in 1755–62) and the ten composed after his move to Hamburg in 1767. Of the latter, four are string symphonies written for Gottfried van Swieten in 1773, while the other six, for large orchestra, were written in 1775–6 and published in 1780 in Leipzig. Bach's symphonies, surprisingly consistent in style for works that span three and a half decades, occupy a somewhat enigmatic position in the history of the symphony. Few of them achieved wide distribution, and since his contemporaries seemed unable to adopt or adapt Bach's idiosyncratic style, his influence, though often intense, was selective.

The fundamental enigma of that style results from a sometimes almost bewildering combination of Baroque, Classical and pre-Romantic traits. The presence of his father can be felt in C.P.E. Bach's frequent polyphonic textures, whether ingenious, casual imitation or serious fugato. Equally Baroque are his passages in undifferentiated rhythm, often combined with melodic sequence. By contrast, his motivic treatment has evolved beyond simple linear continuation to a process of significant change and growth that is fully Classical in character. In similar fashion, the structure of even the latest of Bach's first movements, though often described as sonata form without repeats, is squarely rooted in the older tri- or quadri-ritornello schemes that characterize the majority of north German symphonies; yet his mastery of the development process, including development by fragmentation or permutation, contrapuntal combination and new harmonic or orchestral colouration, leads beyond his contemporaries towards Haydn and Beethoven. Parallel with this redefinition of motivic play, Bach also deepened the function of ornaments, turning them from charming appliqués into affective vehicles of the *empfindsam* style, capable of reflecting every nuance of feeling yet fully integrated into the melodic line. His chromatic or dissonant ornaments and sudden dynamic shifts concentrate one's responses on brief episodes of violent feeling that sometimes seem deliberately shocking. Neither these Romantic moments nor the Baroque details of rhythm and ornamentation requires a large musical unit, and thus even Bach's longer movements do not necessarily achieve the kind of breadth generally associated with the Classical symphonic style.

One reason for this is that, in the symphonic style, original and colourful moments of the kind common in C.P.E. Bach may interrupt the flow or disrupt the balance of the larger design. Bach's approach may be illuminated by a comparison between his use of surprise and Haydn's. For Bach, surprise seems to have been important in and of itself, for its direct emotional impact. For Haydn, too,

it created emotional excitement, but that excitement is generally related in some manner to structural considerations, deriving from and enhancing the awareness of a total, unfolding design. This difference in emphasis implies no lack of understanding of Classical continuity or articulation on Bach's part, and his acute sensitivity to harmonic tension and excursion went far beyond the conventional tonal patterns of the day, including the use of remote keys for slow movements and as developmental goals. Among numerous other originalities are the dramatic connection of movements by devices such as deceptive cadences, an extension of a familiar north German ploy; the use of unusual instrumental colours, ranges and textural distributions; the exploitation of new chord types and dissonant combinations; and a command of dynamics that, like other aspects of his style, influenced the coming century more than his own.

In addition to Dresden and Berlin, numerous smaller courts of central and north Germany maintained superior musical establishments that after about 1740 cultivated the symphony, often (at least initially) in a form incorporating elements of the Baroque suite. Of these one may mention Zerbst, in Saxony, where J.F. Fasch (1688–1758) wrote at least 19 symphonies – seven in a unique form with an *alla breve* movement, usually fugal, as the third movement of four – in addition to his nearly 100 French overtures; Hesse-Kassel, represented by the symphonies of Fortunato Chelleri (*c*1690–1757) and the Swedish-born J.J. Agrell (1701–65; from 1746 in Nuremberg); Rudolstadt in Thuringia, whose Kapellmeister C.G. Scheinpflug (1722–70) left 25 symphonies in autograph score (now at *D-RUl*); Bückeburg, where J.S. Bach's third-youngest son J.C.F. Bach (1732–95) wrote a total of 20 symphonies – ten early in his career, ten in the 1790s – of which only four from each period have survived; and Saxe-Gotha, where Georg Benda (1722–95), better known for his pioneering melodramas and other vocal works, also composed some 30 symphonies.

At the ducal court of Mecklenburg-Schwerin to the north, two generations of the Hertel family produced a notable corpus of symphonies. Until recently these had all been attributed to Johann Wilhelm Hertel (1727–89), but research has now shown that 24 of them still extant at Schwerin (*D-SWl*) are by his father, Johann Christian Hertel (1697–1754; see Diekow, 1977). These are generally of the Graun-Hasse type and range from string symphonies to festive works with three trumpets and timpani. With the attribution of the works in an earlier style to his father, J.W. Hertel's symphonies can now be seen as the examples of fully developed Classical style that they are, well constructed and with thematic material that is nicely profiled and differentiated. Equally up-to-date in orchestration, Hertel often added flutes and obbligato bassoons to the standard complement of strings, oboes and horns.

In south-western Germany there were several other important Protestant courts that actively cultivated symphonic composition and performance, particularly in the early decades of the period. Their composers included Christoph Graupner (1683–1760) and J.S. Endler (1694–1762) at Hesse-Darmstadt and J.M. Molter (1696–1765) at Karlsruhe, whose 170 symphonies make him the most prolific symphonist of the 18th century. Just as at the closely related smaller courts to the north, these composers often combined the symphony and suite to produce a hybrid form, appending one or more dances to a standard three-movement cycle or otherwise incorporating dance movements within the cycle. As one would expect, these works generally have a pronounced Baroque flavour, both stylistically and in their use of instruments. At the same time, music at these courts could not escape the influence of the dominant Catholic courts of the region (notably Mannheim and Stuttgart), especially after *c*1760.

9. Mannheim and other German Catholic courts. While Habsburg Vienna presents a truly imperial diversity of symphonic activity, Mannheim stands at the opposite pole in its concentration of talent and energy in a single electoral court, a single orchestra and, at least initially, a single individual, Johann Stamitz (1717–57). Stamitz was a musician of exceptional drive and innovatory talent who gathered an orchestra of virtuosos and trained them to a pitch of discipline that astounded all listeners. The vaunted Mannheim orchestral effects, such as the famous crescendo and *sforzando-piano*, were actually more Italian than Palatine in origin (*see* Mannheim style). But the expert ensemble of the Mannheim Kapelle, particularly when playing Mannheim symphonies specifically composed to exploit these effects, created the strong impression that Mannheim was the centre of a new and distinctive style.

The sheer volume and wide distribution of the symphonies produced at Mannheim played a part in its prominence. The virtuosos that Stamitz assembled were nearly all active composers, and his tireless efforts provided both motivation and a successful model. Beginning in the 1740s, and capitalizing on advances made by such Italians as Jommelli and Galuppi, Stamitz worked out several basic Classical procedures that left early Viennese symphonists like Monn and Wagenseil temporarily far behind. First, he perceived that larger Classical dimensions required broader contrasts, which in turn required clearer stabilization of the main tonal areas as a foundation for those contrasts; in earlier works neither melodic nor rhythmic contrasts could have their full effect against the hyperactive Baroque harmony and bass line. Similarly, stabilization in small dimensions – slowing down of the chord rhythm, the use of radically simpler chord progressions – was a prerequisite for contrast at the phrase level. At the same time, as if sensing the dangers of too much stability, Stamitz typically constructed musical ideas with rhythms that created momentum, or with connective features such as thematic upbeats and matching activity in other parts, so that each phrase seems impatient to launch into the next. This quality of overall rhythmic élan and the homogeneity of this type of material implies a certain degree of interchangeability, and in fact Stamitz often developed ideas more by permutation or reassembly of phrases and subphrases than by actual variation. Using these principles in conjunction with his ever-exciting exploitation of the orchestra, Stamitz was able to create an unusually high proportion of effective symphonies.

From the formal standpoint, Stamitz and most of his colleagues and successors at Mannheim preferred a type of binary-sonata form to sonata form with full recapitulation. Expositions in all but his earliest symphonies are generally well differentiated. The outer movements until approximately the late 1740s all have double bars and repeat signs. Thereafter, however, probably under the influence of the Italian opera overture, Stamitz began to drop the repeats in fast movements in favour of a more

volatile move directly into the development section. While the latter section is often intensively 'developmental' in the later sense, Stamitz apparently felt no need thereafter to return to the primary material in the tonic, which is usually marked instead by the return of the secondary theme. As if by way of compensation, Stamitz and the other Mannheimers often add weight towards the end of the movement, for example by inserting a final quasi-ritornello of the opening material or recalling a striking crescendo passage. However, as already noted, the impression of a true 'reverse' or 'mirror' recapitulation is neither so frequent nor so straightforward at Mannheim as is commonly assumed.

As discussed above (§5), Johann Stamitz deserves the principal credit for expansion of the symphony to four movements by insertion of a minuet with trio before the finale (see Wolf, 1981). Beginning in the mid- to late 1740s, most of his symphonies adopt this plan, at least in authentic sources (somewhat oddly, the earliest French prints of his symphonies usually excise the minuets). Nor is it generally recognized that the second generation of symphonists at Mannheim abandoned the use of a minuet and trio movement in the 1760s, returning to the older three-movement plan.

The first generation of Mannheim symphonists included two figures older than Stamitz, F.X. Richter (1709–89) and Ignaz Holzbauer (1711–83). Both came to Mannheim as well-established composers, Richter in 1749 from southern Germany, Holzbauer in 1753 from Vienna and Moravia via Stuttgart. It is important to note that both composers contributed significantly to the earliest phases of the symphony long before they arrived in Mannheim: Richter had already published 12 symphonies *a 4* in Paris by 1744, while a large body of symphonies by Holzbauer still exists in Czech and Austrian libraries, some of them probably dating from his early years in Moravia during the 1730s, others from his Vienna period before 1750.

Richter's symphonies written at Mannheim are the more conservative of the two, featuring motivic rhythms, imitative textures, compact miniature forms and unadventurous orchestration. His generally regressive orientation did not, however, exclude imaginative harmonic details, and he frequently made use of surprise, most commonly in the form of abrupt pauses and unexpected rhythmic twists. On occasion Richter adopts a quite up-to-date style for his opening themes, only to lapse after a few phrases into undifferentiated rhythm and motivic sequential techniques; even in the 18th century he was criticized for his reliance on sequence. Richter cannot have found Mannheim particularly congenial, and he left in 1769 to become Kapellmeister of Strasbourg Cathedral, henceforth devoting his talents to sacred music. By contrast, Holzbauer was Kapellmeister for the theatre at Mannheim, and his primary compositional responsibilities were in the realm of vocal music, especially *opera seria* (he made several trips to Italy early in his career). Thus it is not surprising that his symphonies are often italianate (especially Venetian) in style while also having recourse to Viennese formal designs and Mannheim melodic and rhythmic mannerisms.

The second generation of Mannheim symphonists were all pupils of Stamitz, and thus their works show more consistency than those of the older composers just considered. The Bavarian cellist Anton Fils (1733–60) has in the past been grouped with the first generation owing to his early death, but his date of birth and the progressive, somewhat stereotyped style of his symphonies clearly place him with the younger composers. Fils's natural, sure-footed movement, accessible melodic style and uncomplicated textures led to early popularity. Yet the immediate appeal of his music often hides a subtly irregular phrase structure that is all the more interesting because concealed. For example, a Symphony in A published in Paris in 1760 (DTB, iv, Jg.iii/1, 135) opens with a crescendo passage underlined by accelerating surface rhythm, rising line, expanding texture and the gradual addition of instruments. Less immediately noticeable is his parallel acceleration and eventual deceleration in phrase rhythm: 2 + 2, 2; 2 + 2, 1; 1 + 1, 1 + 1, 1, 2 (1 + 1), 2. As if to balance this refined art, Fils frequently drew upon folk idiom not only for his minuets and trios but also for his outer movements.

Stamitz's successor as leader of the Mannheim orchestra was Christian Cannabich (1731–98), who maintained and even raised its level of performance and discipline. Cannabich's 73 symphonies were strongly influenced by the overtures of Jommelli, with whom he studied. Until fairly late in his career they are stereotyped and rather pedestrian, relying heavily on dynamic effects and on standard Mannheim melodic clichés such as the turn. In the 1780s and early 1790s, however, after removal of the court to Munich in 1778, Cannabich produced a number of larger, more complex works of considerable melodic appeal and developmental ingenuity. As might be expected, Cannabich's treatment of the orchestra is exemplary; the wind are given ample solo material, notably the clarinets, which had already appeared in Stamitz's late symphonies. Formally, Cannabich's symphonies changed in a number of ways in the course of his career. His early works are in four movements, but in the early 1760s he shifted abruptly to the use of three. Many of the Mannheim composers made regular visits to Paris, and French influence may account for the sharp rise in the number of three-movement symphonies in the works of the second generation. Cannabich's first movements are mostly of the binary-sonata type until the 1770s, when full sonata form becomes more prevalent; clear secondary themes are virtually always present, and development sections tend to be short in all but the late works. Finally, double bars and repeat signs occur until the mid-1760s, after which, like Stamitz a generation earlier, he turned to the more continuous effect of a movement without repetitions.

The modern editions of the symphonies of Cannabich's co-Konzertmeister at Mannheim, Carl Joseph Toeschi (1731–88), include a cautionary example of the slanting of evidence: Hugo Riemann, concerned to prove that the four-movement symphony originated at Mannheim, selected one of only one or two such works by Toeschi among his 80-odd symphonies (DTB, xiii, Jg.vii/2). Moreover, this symphony is representative of only a small group of early works characterized by motivic thematic material, frequent imitative textures and lack of sectional contrast. Elsewhere Toeschi wrote in an uncomplicated, smoothly lyrical style with generally simple textures, clearly punctuated themes and effective orchestration, the latter notable for its difficult violin parts.

Several other composers often associated with the second generation of Mannheim symphonists actually had only limited connection with the electoral court.

Franz Beck (1734–1809), known for the impulsive originality of his symphonies, was born there and evidently studied with Stamitz, but he seems to have left as a young man and was never employed by the court; most of his career was spent in Marseilles and Bordeaux. Similarly, Stamitz's sons Carl (1745–1801; see §11) and Anton (1750–between 1796 and 1809) left Mannheim in 1770 and spent the most important part of their creative lives in Paris. Nor was the violinist, bassoonist and composer Ernst Eichner (1740–77) ever directly associated with Mannheim, but until 1772 with the closely-related court of Zweibrücken and from 1773 with Berlin. His 30 extant symphonies, written only from 1769 on, are very well-crafted, especially in their orchestration and sense of formal balance; unlike those of the Mannheimers, they consistently employ full sonata form, with clear specialization of all thematic functions, in both opening movements and finales.

The numerous courts of Bavaria also proved fertile in their cultivation of the symphony. On this count the electoral court at Munich seems to have been most active in the early part of our period. One important body of symphonies was produced by the chamber composer Joseph Camerloher (1710–43), whose works have continually been confused with those of his younger brother Placidus. However, recent research has shown him to be the composer not only of the 12 symphonies attributed specifically to him but of the great majority of some 40 others attributed to 'Camerloher' without given name (see Forsberg, 1984). These works show a clearly Baroque melodic, rhythmic and textural profile, with much use of imitation and other contrapuntal devices. By contrast, the symphonies of his brother Placidus von Camerloher (1718–82), Kapellmeister to the Bishop of Freising, are generally homophonic and show a clear tendency towards Classical thematic treatment. Another body of early symphonies at Munich comprises the 26 extant works by Wenceslaus Wodiczka (between 1715 and 1720–74; Konzertmeister from 1747). 24 survive in a single set of parts bearing the date 1758, half of them with trumpets and timpani; nine of these are in a single movement and were probably intended for use in church. In the decades before the arrival of the Mannheim court in 1778, however, Munich seems not to have favoured the symphony as a genre, perhaps owing to the overwhelming interest in Italian opera there.

Of the many other musically active courts in the region, two in northern Bavaria should be singled out, those of Oettingen-Wallerstein and Regensburg. One of the most prolific symphonists of the Classical period, F.X. Pokorny (1729–94), was active at both, moving from the former to the latter in 1766. His works for Oettingen-Wallerstein contain some of the most difficult horn parts of the period, composed for the outstanding group of hornists resident there. Other prominent later symphonists at Oettingen-Wallerstein were the court intendant Ignaz von Beecke (1733–1803), two of whose symphonies in minor contain noteworthy pre-Romantic traits, and the gifted Antonio Rosetti (*c*1750–1792), whose style combines Mozartian, Haydnesque and individual touches. The symphony at Regensburg during the same period is represented by the court intendant Theodor von Schacht (1748–1823), who produced over 30 symphonies between *c*1770 and 1792. Further west, on the Rhine north of Mannheim, the courts of two archbishop-electors bear mention: that of Mainz, where Johann Zach (1699–1773) and later J.F.X. Sterkel (1750–1817) were active, and Koblenz, where J.G. Lang (1722–98) matched his important output of keyboard concertos with 40 rather italianate symphonies, six of which were published in Augsburg in 1760.

10. The Habsburg monarchy: Vienna, Salzburg. The traditional position of Vienna as a crossroads in European civilization stimulated a host of special achievements. In the 18th century the web of cultural influence spread unusually wide, owing to the vast reach of the Habsburg Monarchy, and the resulting confluence of talent brought an incomparable richness of ideas and creative activity to bear on the evolution of the symphony. Mannheim and Paris may have exceeded Vienna in brilliance of musical performance, but the imperial capital drew together an unprecedented number of musician-composers, attracted by an unsurpassed degree of patronage: in addition to the Habsburg court, literally hundreds of noble families supported musical establishments, generally dividing their time between Vienna and their ancestral estates in Austria, the Czech lands, Hungary and farther afield. The aristocracy also provided the principal audience for public concerts in Vienna, which grew ever more important during the second half of the century. In such a climate of opportunity every talent could prosper, every musical genre flourish.

The early Viennese symphony reveals the potent influence of three genres identified strongly with the Austrian Baroque. The first of these is opera and such related types as the serenata. Viennese opera overtures in the period 1700–40 cover a vast range of types, including French overtures of various kinds, polychoral works with as many as eight trumpets, concerti grossi, one- and two-movement overtures, and standard three-movement Italian types. It is the latter that furnished, together with the northern Italian symphony, the principal model for the concert symphony in Vienna. While the majority of such overtures have first movements that use ritornello procedures, without repeat signs, a substantial minority have binary first movements, providing a near-perfect parallel with the early Viennese concert symphony; a well-known example is Francesco Conti's overture to *Pallade trionfante* of 1722, one of his ten overtures with binary opening movements. During the 1740s and 50s this type of overture became especially frequent, for example in the works of Wagenseil (see below); this tended to encourage their transfer from opera house to concert. In a more general sense as well, the influence of Italian opera persisted in Vienna throughout the 18th century. The characteristic Viennese feeling for recapitulation surely owes something to the long exposure to operatic ritornello and da capo. Equally important, the operatic aria had made important advances in the development of Classical melodic and phrase structure. And finally, many Viennese symphonies after *c*1760 represent either wholly or in part an adaptation of *opera buffa* style to a work for orchestra; one is reminded of the close connections between Mozart's *Le nozze di Figaro* and the Prague Symphony K504, to give only one example.

Two other genres important to the early Viennese symphony were the church sonata and the parthia or partita and related types (see Larsen, 1994). The former, often played with doubled parts, was the one of the sources (together with the French overture) for the many fugal movements in Austrian symphonies, as well as of

four-movement cycles beginning with an Adagio or Largo; while the latter, which mixed abstract and dance movements and could be soloistic or orchestral, provided a model for the insertion of dance movements within the normal overture cycle, leading eventually to the four-movement symphony.

Interestingly, the 25 symphonies *a 4* of one of the earliest Viennese composers of symphonies, the court organist W.R. Birck or Pirck (1718–63), follow precisely the typology just outlined: they consist of diminutive three-movement symphonies (in all but one case with binary first movements), church-sonata types with fugal second movements, and three early examples of the standard four-movement cycle with minuet and trio. More uniform are the many symphonies of Ignaz Holzbauer written before his departure from Vienna in 1750 (see above under Mannheim, §9) and those of his slightly younger contemporaries M.G. Monn, G.C. Wagenseil and J.P. Ziegler. As already pointed out in the discussion of the four-movement symphony (see above, §5), a work by Monn (1717–50) including a minuet and dated 1740 has been treated as a turning-point by scholars supporting Austrian primacy. But the score, an autograph, does not in fact label the work a symphony (it is so designated only in a notation by Aloys Fuchs, who owned the manuscript), and the extensive wind solos, the placement of all the movements in one key and the inclusion of a dance movement relate the work more closely to the Austrian parthia or serenade tradition than to the remainder of Monn's symphonies, all of which are in three movements. While generally conservative, Monn's symphonies show a sensitivity to line and a notable feeling for harmony, both in his choice of unusual tonalities and his expressive use of dissonance. Sonata forms predominate in the first movements, sometimes with clear, moderately lyrical secondary themes in the dominant minor that are then recapitulated in the tonic minor (a characteristic Viennese trait from the 1740s to the early 1760s, borrowed from the Italian opera overture); but numerous variants occur as well, such as ritornello or binary-sonata forms.

Wagenseil (1715–77), a prolific composer more in touch with the full spectrum of Viennese musical life, began his career in the mid-1740s as a composer of Italian operas for the Viennese court. Their overtures and, later, Wagenseil's independent concert symphonies were published both in France and England. With one or two possible exceptions, all are in three movements, though still small in dimension, mostly with a fast 3/8 or 'Tempo di Menuet' finale. Wagenseil's first movements, though still small in dimension, are typically Viennese in their firm grasp of the principle of recapitulation. Rhythmic vigour and a strong sense of continuity give an immediate appeal to many of his symphonies, but he rarely escaped the emphases characteristic of works of the period: his snap rhythms, frequent syncopations, sweeping upbeats and quick turns enliven the individual beat, but the grouping of beats into larger units – sub-phrases and phrases – lacks profile and may involve merely a chain of repeated beats without differentiation. This combination of small-scale, repetitious motivic material and strong rhythmic continuity tends to work against thematic contrast, and many of Wagenseil's expositions, though clear in tonal-textural outlines, lack a correspondingly clear thematic organisation.

The second generation of Viennese symphonists begins with Karl von d'Ordonez (1734–86), who composed more than 70 symphonies, a substantial majority (about 75%) in three movements. Four of the latter open with a slow introduction connected to a following Allegro; these may be related to a four-movement symphony of his in the Göttweig monastery (*A-GÖ*), dated 1756, which begins with a slow movement (ed. in Brown, 1979). The second movement of the 1756 symphony (marked Allegro molto), like several of the first movements from Ordonez's early period, could be considered formally either a ritornello-influenced variant of sonata form without repeats or, perhaps less anachronistically, a tri-ritornello structure with clearly contrasting secondary material. Otherwise, his opening movements rarely depart from standard Viennese sonata procedures, including in the earlier works the frequent placement of the secondary theme in the dominant minor. Stylistically Ordonez's symphonies tend to rely more upon rhythmic activity than melodic suavity, and contrapuntal texture, including imitation at the outset of a work, is not uncommon. As an orchestrator, Ordonez can claim credit as one of the few symphonists of the 18th century to give a prominent solo passage to the viola (with pizzicato accompaniment), the cantabile opening theme of a slow movement from the early 1760s (Brown B♭ 6).

The slightly older composer F.L. Gassmann (1729–74) made his reputation as an opera composer in Venice and later served as Kapellmeister to the Viennese court. In Gassmann's concert symphonies, all or most of which date from the 1760s, more of the operatic lyricism carries over than in Wagenseil, even affecting vigorous fast movements. Gassmann experimented constantly with first-movement form, using shapes ranging from binary-sonata forms to rather sophisticated thematic plans in which the transitional, secondary and closing materials are each variants of the primary theme yet at the same time preserve their characteristic functions. Also exemplifying this fluid conception of form are a number of works with recapitulations beginning in the subdominant or submediant.

In other details of style Gassmann's most striking talent is his control of rhythmic outline, both as a means of creating a smooth rise and fall of activity in the phrase and as a way of building excitement when approaching a point of climax. His management of orchestration and texture, especially his careful deployment of partial tuttis and mixed groups with cello or even viola serving as the bass, reflects an awareness of the broad objectives of each movement. Another composer worth mentioning in the Ordonez-Gassmann generation is the violinist and ballet composer Franz Asplmayr (1728–86), who composed over 40 symphonies.

Apart from Haydn and Mozart, the highest achievements in the Viennese Classical symphony – an opinion shared, incidentally, by Charles Burney (*BurneyGN*, 124) – were those of a trio of prolific, gifted composers who were nearly exact contemporaries: Leopold Hofmann, Carl Ditters von Dittersdorf and J.B. Vanhal. The sources for the symphonies of Hofmann (1738–93), most of whose output falls into the 1760s, are second in number only to those of Haydn and Pleyel in European archives – a significant measure of contemporary popularity. Like Haydn during this period, Hofmann employed a wide variety of movement cycles. While about half of his

approximately 50 symphonies are in normal three-movement form, at least 20 turn to the four-movement pattern that was soon to become standard in Vienna; several of the latter date from at least as early as 1759–60, making him one of the first Viennese symphonists to adopt this plan. Notable among the four-movement works are two with slow introductions, one of which is dated 1762 in the Göttweig catalogue; together with Haydn's Symphonies nos.6–7 of 1761, these are the earliest known instances of standard four-movement symphonies with slow introductions. Other cycles found in both Hofmann and Haydn, already seen in Ordonez, include three movements with slow introduction and four movements in the slow–fast–slow–fast pattern of the church sonata.

Though only slightly younger than Gassmann and Ordonez, Hofmann matured at the right time to exploit the new internal coordination and larger phase units characteristic of the full Classical style. As a result, his sonata structures and thematic types leave an impression of both clarity and a firm sense of functional differentiation. Much of his music has a pre-Mozartian smoothness, extending even to lyrical allegro themes. In view of his convincing style and the wide distribution of his music, there is little doubt that Hofmann's four-movement symphonies exercised a strong influence on the evolution of the symphonic form.

Dittersdorf (1739–99) was the most prolific symphonist of the second half of the century; he wrote over 120. Although one expects (and finds) many recurrent formulae, there is also much genuine invention and instinctively good structure. The large-scale movement of his line is convincing, and he was equally skilful in a brisk Allegro or a sophisticated cantabile with smoothly balanced phrases. There are many small niceties of thematic relationship and development, using techniques such as imitation (never long pursued), diminution, augmentation and recombination of motifs. On occasion, like Haydn, he could simulate (or perhaps remember) a catchy peasant tune to fit a rustic mood. Also like Haydn, Dittersdorf introduced many touches of the specialized musical humour that results from phrase extensions or truncations, displaced accents or other bar-line manoeuvres. On the other hand, there is often a lack of rhythmic variety in the lower parts, and the bar-to-bar harmony is rarely imaginative.

Possibly because of his success in dramatic music, Dittersdorf began early on to give descriptive titles to symphonies, including a seven-movement work describing the humours of mankind (before 1771) and a series based on Ovid's *Metamorphoses* (*c*1782). Though these can be considered remote ancestors of the 19th-century programmatic symphony, they contain scarcely more actual description than the touches that gave Haydn's Paris symphonies their nicknames – Actaeon, transformed into a stag, jumping in a 6/8 'tempo di caccia', or the croaking of the farmers changed into frogs. From the musical standpoint these are among Dittersdorf's least interesting works; more successful is a *Sinfonia nazionale nel gusto di cinque nazioni* (1767) with movements intended to reflect German, Italian, English, French and Turkish taste.

Dittersdorf's contemporary, Vanhal (1739–1813), with symphonies published in London, Paris, Berlin, The Hague and Amsterdam as well as a large corpus of manuscript sources, was unusually popular in northern Europe. All his symphonies were composed in the period *c*1760–80. Although they are soundly constructed, with attractive, well-contrasted themes and skilful formal techniques, the real reason for their popularity may be their frequent quality of pathos, as reflected in their exceptional number of minor tonalities and their broad spectrum of expression, which ranges from melancholy introspection to fiery tragedy. Five of Vanhal's minor-key symphonies call for four horns – as in Haydn's Symphony no.39 and Mozart's G minor Symphony K183, tuned a minor third apart as a means of coping with the modulation to the relative major – and another adds a fifth horn tuned a perfect 5th above the tonic. With this exception, Vanhal was not particularly experimental, and he made no particular contribution to the evolving symphonic convention. But more than Hofmann or Dittersdorf, he seems to parallel Haydn in the ability to make his music move in a tight process of continuation, with each phrase containing, as it were, the genetic code for its successor. There is also a kinship with Mozart in the italianate lyricism of his later works and in the occasional use of gentle, retrospective closing themes that interpolate a moment of quiet before the entry of the cadential trumpets.

In addition to Haydn and Mozart, the most important and prolific composers of symphonies in Vienna from *c*1780 to 1800, the date of Beethoven's First Symphony, were the composer and publisher F.A. Hoffmeister (1754–1812) and the two Bohemians Paul Wranitzky (1756–1808) and Adalbert Gyrowetz (1763–1850). For the most part their works are content to represent the high Classical tradition of Mozart in well-wrought, melodically accessible works rather than to break new or controversial ground.

The prince-bishopric of Salzburg has only recently gained attention as a centre of symphony composition, both for its intrinsic importance and for its role in Mozart's compositional development (Eisen, 1994). Among symphonists active in Salzburg, the most important during the middle decades of the century was Leopold Mozart (1719–87), who arrived in 1746 as a court violinist and became Vice-Kapellmeister in 1763. Both formally and stylistically his symphonies trace the same overall evolutionary path as those of the imperial capital. However, he had begun using a four-movement cycle on occasion by about 1750, earlier than in Vienna; his preferred sequence of movements placed the minuet and trio in second rather than third place, a practice found in most of Haydn's quartets from op.9 through op.33 and in five of his symphonies. Leopold's symphonies are also up-to-date in their use of clearly differentiated secondary themes; like the Viennese, during the same period, he often places them in the dominant minor, recapitulating them in the tonic minor.

Leopold Mozart evidently wrote few if any symphonies after his promotion in 1763, which was also the date at which Joseph Haydn's younger brother Michael (1737–1806) arrived in Salzburg as Konzertmeister and court composer. Trained in Vienna, where he may have written a few of his earliest symphonies, his style belongs more to that school than elsewhere. Yet as with Leopold Mozart, there are certain qualities that set him apart. In the first place, in many of his works there is an almost Baroque rhythmic continuity with many similar note-values – bar after bar of quavers, for example; in similarly

continuous and undifferentiated passages, his brother Joseph would typically find ways of punctuating and regulating the flow by harmonic or textural means. Another somewhat old-fashioned characteristic in Michael's music is both welcome and more successful in the Classical context: the frequent use of contrapuntal textures and devices, which lend unusual interest to many of his movements. Even his latest symphonies, from 1788–9, contain several fugal finales (as the last movement of three). Michael's music is also impressive for the richness of its harmony, which features not only unusual modulations and the dramatic placement of remote chords, but also sinuously chromatic lines reminiscent of passages in Mozart; it is difficult to know who influenced whom.

Any discussion of the symphony in Austria should also refer to the active role of the great Austrian monasteries such as Göttweig, Melk, Kremsmünster and Lambach in fostering both the performance and composition of symphonies (see Freeman and Meckna, 1982), a role magnificently illustrated by the huge collections of instrumental music extant at each. Of numerous monks who composed symphonies, the most important was probably Amandus Ivanschiz (*fl* 1755–70), whose 20-odd symphonies from approximately the 1760s generally reflect contemporaneous Viennese trends, including clear sonata forms (in this case with or without repeats) and the frequent use of four movements.

11. PARIS. In the second half of the 18th century Paris was the leading European centre of musical performance and publishing, but not of symphonic composition. The surprising total of more than 1000 works compiled by Brook must be seen in the light of his inclusion of works in the SYMPHONIE CONCERTANTE form, a type of multiple concerto rather than a symphony in the modern sense of the term.

The earliest French symphonies show an obvious, and often acknowledged, debt to Italian symphonists such as Sammartini and Brioschi, whose works were well known in Paris in both manuscript and printed form; the famous Fonds Blancheton, for example, a large collection of manuscript instrumental music assembled *c*1740, contains dozens of works by each composer (La Laurencie, 1930–31). The publication in 1740 of *VI simphonies dans le goût italien en trio* op.6 of L.G. Guillemain (1705–70) places the beginnings of the native Parisian symphony in a chronology closely parallel to that of Vienna and Mannheim. The 'Italian taste' mentioned in this title (and repeated in Guillemain's op.14, 1748) probably refers to the use of a three-movement cycle and to the insistent quality of beat-marking quaver and semiquaver rhythms in a texture that moves freely between homophony and quasi-contrapuntal three-part writing. In addition, while the consistent one- and two-bar units give a less motivic feeling than in early works of Monn and Wagenseil, the exact *piano* repetition of many bars evokes the tutti-solo echoes of the Baroque concerto. These retrospective details, however, do not outweigh the generally up-to-date impression contributed by the relatively clear differentiation of primary, secondary and closing material (with matching punctuation provided not only by rests but by slower chord and surface rhythm); by the fresh treatment of derived material in developments, which are occasionally longer than their respective expositions; and by the full, literal recapitulations.

A decade later François Martin (ii) (1727–57) published six works with a title as suggestive as that of Guillemain, his *Simphonies et ouvertures* op.4 (1751). Here the *ouvertures* are French overtures with slow introductions followed by fugal allegros, while the symphonies are of the usual three-movement Italian type. This raises doubts as to whether, as Landon and others have suggested, the slow introduction of the Classical symphony derives from the opening Grave of the French overture. As Martin's (and others') usage shows, there is a clear separation between the two genres and little chronological continuity between the French overture at its height and the mature symphony with slow introduction. Indeed, the few slow introductions in French symphonies of the period sound quite unlike the opening sections of French overtures.

The long, productive life of F.-J. Gossec (1734–1829), the most important composer of the Parisian group of symphonists, did much to establish and maintain the strength of the French symphony. In his first six works, op.3 (1756), Italian influence is evident in snap rhythms and obvious triadic themes; all these symphonies are in three movements, and all but the last, which adds two oboe parts, are scored for strings *a 4*. By op.4 (*c*1758) Gossec had assimilated most features of the mature Classical symphony, including Mannheim dynamic effects and the use of a four-movement cycle, the latter with well-planned sonata form in many slow movements and finales as well as first movements. Here and in op.5 (*c*1761–2) he paralleled Viennese developments in the clear divisions and explicit thematic contrast of his sonata forms. However, his fast movements generally omit double bars and repeat signs, a procedure that again shows the influence of the Mannheim symphonies popular at the time in Paris (and was later adopted by Mozart in his Paris Symphony K297).

With the broad sweep of his melodic lines and the telling use of warm harmonic touches, particularly diminished 7ths, Gossec created a personal style recognizable even among the hundreds of contemporaneous works. His frequently asymmetrical treatment of phrasing brought charges from the critics that he imitated Haydn. In other respects as well, Gossec's symphonies maintained a high level and serious tone, noticeable in the large proportion of works in minor keys and in the frequency of well-worked textures with clean-lined counterpoint. On these points his works stand out against the characteristically facile tone of many later Parisian symphonies. Beginning with op.6 (*c*1762), he moved away from the four-movement plan and frequently introduced unusual instrumental combinations and unconventional designs, including the use of fugal movements.

In the bustling cosmopolitanism of Paris, it was difficult for the French symphony to maintain a strong national identity in the second half of the century. First came the invasion from Mannheim, whose virtuosos brought the brilliantly effective new style to Paris on their visits; as already noted, it found a congenial reception in the symphonies of Gossec. As the capital of the performing world, Paris continued to attract countless foreign musician-composers, many of them respectable symphonists. In addition, the flourishing Parisian publishing industry found that the most marketable composer of symphonies was Joseph Haydn. Although in the latter part of the century a separate French style cannot often be recognized, the excellent models available to Parisian composers and

the stiff competition from foreign talent led to many works of high quality.

The Italian influence noted in early Parisian symphonies received further impetus from the arrival of the Roman flautist-composer Filippo Ruge (*c*1725–after 1767), who not only composed but brought numerous Italian works with him. His symphonies contain early examples of programmatic titles (op.1 no.4, finale, 'La tempesta', 1756). A more important immigrant composer was Henri-Joseph Rigel (1741–99), whose 14 extant symphonies show notable thematic inspiration and strong harmonic pathos in slow movements. Born in Germany and influenced by the Mannheim group, he wrote three-movement symphonies that typify the Parisian style about 1770. Opening with appealing, neatly articulated melodies, the movements unfold smoothly owing to the composer's mastery of phrase formation and connection. The range of thematic types in each work adds a vitality that easily explains his popularity at the time.

Another prominent foreign composer in Paris was Carl Stamitz (1745–1801), Johann's eldest son. Carl moved to Paris in 1770 from Mannheim, producing a massive amount of instrumental music there before eventually departing in the early 1780s. Born nearly at mid-century, he inherited the full range of Classical structural procedures, from advanced thematic specialization in his sonata forms to a fully developed phrase syntax. His thematic material combines soundly balanced line and rhythm with a less easily described melodic charm. Probably owing to his rapid rate of production, Stamitz occasionally fell victim to an overuse of clichés such as the ubiquitous 'sigh', yet even the presence of clichés does not spoil the polished succession of phrases and periods. Some of his finest expression comes in his slow movements, where he managed to introduce a surprising amount of counterpoint without distracting attention from his long, singing upper line.

After about 1770 the symphonie concertante occupied the principal attention of many native Parisian composers, many of whom wrote almost exclusively in the new genre. One who did not was Simon Le Duc *l'aîné* (1742–77), but he lived too short a time to develop his early promise, leaving only three symphonies (1776–7) in addition to three earlier orchestral trios. Like Gossec he commands attention first by his rhythmic force, but he goes beyond the older composer in his more highly developed ability to support rhythmic fluctuations with appropriate orchestration and chord rhythm. At a higher level, the variety of Le Duc's phrase rhythms recalls Haydn's imaginative treatments.

A Haydn pupil, Ignace Pleyel (1757–1831), became the outstanding composer of the last phase of the Parisian symphony, with a large body of works extending from the early 1780s to the first years of the 19th century. Pleyel reintroduced the four-movement cycle, often with slow introductions (also found in a few late works of Gossec). He also made several notable innovations, such as the insertion of a quick episode in a slow movement or the addition of a short bridge between trio and returning minuet (as in Haydn's Symphony no.104 and others). Exceedingly facile in generating thematic variants, he sometimes expanded a development to as many as three episodes. His orchestration invariably fits the musical material aptly, and he approached strings, woodwind and brass not merely as blocks of sound but as flexible combinations, for example using a single woodwind with strings or viola as bass for a thematic woodwind passage.

12. London. Until about 1760 the history of the symphony in England is almost exclusively the history of the overture, which was routinely detached for performance and publication from the vocal work it preceded. Indeed, until the end of the century 'overture' was the routine term for what elsewhere was known as a symphony. From the end of the 17th century the French overture had provided the model for most overtures, and Handel's preference for that type in both his operas and oratorios was a strong factor in its continued use. Charles Cudworth's research has shown that, beginning with the overture to Francesco Mancini's *Hydaspe fedele* of 1710, the fast–slow–fast pattern of the Italian sinfonia gained ever-increasing significance. Yet of T.A. Arne's *Eight Overtures in 8 Parts*, published in 1751, six are still in French-overture form. Similarly, in William Boyce's *Eight Symphonys in Eight Parts* op.2 (1760, but including works dating back to 1739), five of the first movements are in French overture form or a form obviously derived from it. Only in these composers' works of the 1760s, especially the independent symphonies of Arne's *Four New Overtures or Symphonies* (1767), do *galant* tendencies begin to manifest themselves in any substantial fashion.

Through many centuries London had enriched its musical life by offering hospitality to continental musicians, and again it was two émigrés who made the most substantial contributions to the English symphony, at a time when Paris was also experiencing a wave of foreign influence. C.F. Abel and J.C. Bach arrived in London in 1759 and 1762 respectively, soon joining forces to produce the Bach-Abel concerts, a series decisive for the development of Classical orchestral music in England. Abel (1723–87), best known as a viola da gamba virtuoso, published six extremely popular sets of symphonies, all in three movements, some with minuet finales of the mid-century Italian type. A careful craftsman, he wrote symphonies with energetic movement, clearly punctuated form and deftly woven texture. His advanced thematic construction, with well-balanced statement–response phrases, led to greater differentiation and more logical development. Though Abel's symphonies often sound more competent than inspired, in his slow movements there are some beautiful long lines and graceful chromatic appoggiaturas of a kind later called 'Mozartian'.

J.C. Bach (1735–82) was scrupulously trained by his elder brother Emanuel and by Padre Martini. His symphonies also reflect a wealth of his own operatic experience – gained in part in Italy before his arrival in London – in the exceptional lyricism of both his Andante movements and many of his Allegro themes. No one before Mozart seems to have understood as well as he how to underline the curve of a superb melody with a suitable ebb and flow of harmony and surface rhythm. At the same time, many skilful small imitations in the bass or inner parts lend added charm to the texture, again recalling Mozart's effortless devices. Even more important, Bach used this control to make small connections between subphrases, phrases and sentences, developing the musical equivalents of commas, semicolons and full stops (though his phrase hierarchy may nonetheless seem four-square when judged by the standards of later Mozart). Bach's combination of imagination and technical

mastery made possible a wide variety and subtle gradation of thematic ideas, which he then distinguished according to expositional functions: even out of context his themes sound like primary, transitional, secondary or closing material.

The younger generation of mature British composers started out well with the *Six Symphonies* op.1 (1761) of Thomas Erskine, Earl of Kelly (1732–81), probably the first independent concert symphonies to be published in England. Erskine, a pupil of Johann Stamitz, had obviously learnt something of his mentor's rhythmic drive, dynamic orchestral treatment and use of thematic contrast. John Collett's op.2 (1766) contains the only English four-movement symphony of the time; but before the minuet a note is printed stating, 'Either or both of the following movements to be played', a clear indication of the insecure status of the four-movement cycle in England. The small works of William Smethergell (op.2, *c*1778; op.5, *c*1790) recall at times the symphonies of the second Mannheim generation, especially in their opening gestures, but his forms are too brief to take full advantage of the Mannheim achievements. Perhaps the ablest of the younger British composers was J.A. Fisher (1744–1806), whose *Six Simphonies in Eight Parts* (1772), again extremely short, show sensitive and knowledgeable orchestral writing, including bassoon solos and an early use, for printed music, of triple *piano*. John Marsh (1752–1828) moved away from the small proportions characteristic of his contemporaries, later writing several four-movement symphonies and considerably enlarging the individual movements; his inventive *Conversation Sinfonie* (1784) exploits the idea of a dialogue between two small orchestras, doubtless in imitation of the three double-orchestra symphonies of J.C. Bach's op.18. However, the native production of symphonies in the latter part of the century remained slim. The major contribution of London at the time may be considered not symphonies as such but the London audience of 'connoisseurs and amateurs' whose appreciation and support drew forth the greatest works of J.C. Bach and Haydn.

13. OTHER CENTRES. The rapid growth of the symphony as a central orchestral genre may be seen in the speed with which it gained popularity in more peripheral areas such as the Netherlands and Sweden. Amsterdam, for example, was treated to a public concert as early as 1738 that included symphonies by Sammartini and Agrell. (There is no evidence, however, for the frequent claim that this concert was conducted by Vivaldi; see Rasch, 1993.) A notable early composer of symphonies identified with various cities of the Netherlands was the somewhat elusive figure A.W. Solnitz (*c*1708–1752/3), who published 12 symphonies *a 4* in Amsterdam *c*1739 and another set of six in the 1750s. These show many *galant* traits but no influence of the Mannheim style (as has been asserted). Somewhat later the vigorous concert life and music publishing trade of the Netherlands attracted the peripatetic symphonist Friedrich Schwindl (1737–86), who was active not only in The Hague but also in Germany, Zürich and Brussels. In turn, Brussels fostered the extensive symphonic output of Pierre van Maldere (1729–68), violinist-composer to Charles of Lorraine, who wrote symphonies good enough to be confused with Haydn's.

Like the Netherlands, Sweden boasted a lively concert life in addition to the musical activities of the court. In part for that reason it, too, was an early centre of symphonic production in the form of some 30 symphonies by J.H. Roman (1694–1758). Most are for strings alone, though some are *a 6* or *a 8*. Three movements are standard, but four-movement works in successions such as fast–slow–fast–fast are also common. Roman's symphonies, possibly dating from as early as the late 1730s, are in a solid, well-crafted late Baroque idiom that nonetheless admits many *galant* characteristics. Later in the century Sweden was host to J.M. Kraus (1756–92), who emigrated from Germany to become the greatly admired Kapellmeister to Gustavus III. His symphonies, many of which are lost, rank with some of the best of the time and were greatly admired by Haydn. They are particularly notable for their rich harmony and texture, which contribute to their often deeply expressive character; outstanding examples are his *Symphonie funèbre* on the death of Gustavus III and his Symphony in C♯ later extensively revised (see Brown, 1990).

Finally, two outstanding Classical symphonists lived in Madrid: Luigi Boccherini (1743–1805) and Gaetano Brunetti (1744–98). The symphonies of both fall almost entirely into the period 1770–90. The attractions of Boccherini's melodies have led many writers to overlook his fine control of other musical opportunities: his handling of rhythmic details as well as phrasing gives a sophisticated impression of both vigour and wit. His themes may reflect familiar italianate lyricism, but he often adds intensity by use of large-scale linear planning that embraces several four- or eight-bar phrases; and in his concern for the inner parts he seems to have inherited his compatriot Sammartini's understanding of coordinated polyphony as a way of enhancing texture without losing thematic control. In the realm of large-scale form, several of his symphonies make use of cyclic procedures, for example the quotation of material from the opening movement in subsequent ones or the enfolding of one movement within another.

Brunetti's highly original symphonies present a rather different picture: they include a number of stormy works with an unusually high proportion of minor tonalities matched by abrupt rhythms and jagged melodic lines. His music is effective in performance and appealing for its Haydnesque rhythmic verve and taut continuity. After six early three-movement 'overtures' from 1772, his symphonies use a unique four-movement plan in which the third movement reverses the usual minuet–trio–minuet sequence, consisting of a woodwind 'quintetto' (usually not in minuet style) followed by a contrasting section for full orchestra and then a return of the quintetto. This scheme adds interest to the penultimate movement of the cycle, perhaps a bit whimsically, and lends the first tutti of the finale an additional impact.

14. HAYDN AND MOZART. Because of the long span of time that Haydn and Mozart each devoted to symphonic composition, as well as the number, quality and scope of their works, the symphony must certainly be considered one of the most important and representative genres that they employed. Their achievements go far beyond those of any of the local groupings suggested above, but in curiously opposite ways. Mozart assimilated procedures from many sources besides Austrian ones, most notably from Italy and Mannheim, elevating, enriching and often expanding the original idea or scheme. Haydn, although he spoke of playing other music to stimulate his own ideas, in fact extended and intensified his own procedures

more than he developed or refined processes gleaned from others.

(i) Haydn. With nearly 40 years of composing symphonies, Haydn exceeds most other composers of the period in seniority. His symphonies are now generally considered to number 106: the usual 104 plus two early works now designated as nos.107 and 108. (The traditional numbering, dating from 1907, is often highly inaccurate chronologically, especially for the early works; for the most authoritative recent treatment of the dating of Haydn's symphonies see Gerlach, 1996.) It is difficult to arrange Haydn's prodigious output in periods, because the similarities between chronologically adjacent symphonies often seem less noteworthy than their differences and individualities. In general, his works reflect the circumstances of their composition. As a young man he worked for small establishments, with only modest orchestral forces at his disposal; this is reflected in his earliest symphonies, although his basic approach can already be perceived in the overture-like no.1, dating from *c*1757–8. During this period and in the years just after his appointment at the Esterházy court in 1761, Haydn wrote in more different symphonic types and styles than at any other time, including works with extensive concertante elements, canon, fugal finales and suggestions of the church sonata in their tempo arrangement or use of cantus firmus technique. These different styles should not be regarded merely as experiments but as responses to changing requirements, probably including performance in church. In later years, too, Haydn responded to special challenges with unusually imaginative solutions, as in the hilarious 'Il distratto' (no.60, *c*1774), whose six movements were originally written as incidental music for a comedy, or in the 'Hornsignal' (no.31, 1765), a brilliant example of concertante (and incidentally cyclic) treatment that incorporates various horn calls (the title, like most such titles in Haydn, did not originate with the composer).

Haydn's earliest symphonies show a preponderance of three-movement cycles, though from the beginning he gave his symphonic finales more weight and interest than those of the typical opera overture. In the course of this period Haydn began increasingly to use four-movement plans of the types already noted in other Austrian symphonists: fast–minuet/trio–slow–fast (nos.32, 37 and 108 of *c*1757–62, and later nos.44 and 68; see also no.15, with a composite slow–fast–slow movement in place of the opening fast movement); slow–fast–minuet/trio–fast (nos.5, 11, 21, 22 and 34 of *c*1760–64, and later no.49; see also no.18 of *c*1757–9, with the sequence slow–fast–Tempo di Minuetto); and finally the standard later cycle, fast–slow–minuet/trio–fast (beginning with nos.3, 6–8 – the trilogy 'Le matin', 'Le midi' and Le soir' – and 14, 20, 33 and 36 of *c*1758–62). Nos.6–7 are among the earliest known four-movement symphonies to incorporate a slow introduction, that of no.6 ('Le matin') representing a rather abbreviated sunrise (see also no.25 of *c*1760–61, in which the extended slow introduction, obviously related to the independent opening Adagio movements of the same period, precedes a three-movement fast–minuet/trio–fast cycle). However, Haydn did not use this pattern again until the 1770s (nos.50, 53, 54, 57 of 1773–4; nos.71, 73, 75 of *c*1778–81), and it did not become standard for him until after 1785. Later in Haydn's career came various large-scale refinements and innovations that were important for later composers. These include the introduction of thematic links between the slow introduction and the following fast movement (nos.90, 98, 102–3); the development and exploitation of a wide range of variation forms in slow movements, including alternating or double variations (beginning with nos.53, 63 and 70 in the late 1770s) and effective combinations of the variation, rondo and sonata principles (see Sisman, 1993); the connection of minuet and trio by means of a transition after the trio (nos.50, 99, 104); and the extensive use of sonata-rondo finales (the best-known examples are those of nos.88, 94, 99 and 101–3).

Haydn's position with Prince Esterházy required a steady production of symphonies for immediate performance, providing a unique opportunity for creation and self-criticism. Within the general framework just described, Haydn now began an internal expansion, enlarging his thematic ideas, working out new means of development, evolving more remote tonal excursions and extracting the most effective and varied sounds from a group that often numbered less than 20. The remarkable number of fine symphonies that resulted show numerous characteristic procedures, among them the construction of much of the exposition from a single thematic idea, with contrast often deferred to the closing area; the constant exploitation of the unexpected, unpredictable because the source of surprise changes in each work; and the creation of a clear zone of climax to lend profile and character to the development section. Especially important are two seemingly opposed processes. The first is phrase extension ($a\ b\ b^1\ b^2$ etc.), so that four bars may become seven or eleven. The second is compression by means of phrase elision, which causes the new phrase to arrive a bar earlier than expected; clear examples from early and late in Haydn's career are the primary themes of the first movements of no.8, based on a Gluck *ariette* in praise of tobacco (see Heartz, 1984, 1995), and no.104. These opposite processes, extension and compression, both serve to induce a state of rhythmic tension or uncertainty that contributes substantially to Haydn's sense of movement.

Numerous biographers have identified a period of 'Sturm und Drang' in Haydn's life in the second half of the 1760s and the early 1770s. Storm and stress can certainly be recognized in the powerful minor-mode symphonies of the period (nos.26, 39, 44, 45, 49 and 52), but this colourful interpretation neglects the fact that works in the minor still represent a distinct minority during this period. Moreover, the implied relationship (causal or otherwise) between the symphonies in question and the German literary movement known as the *Sturm und Drang* rests on shaky chronological grounds, since the latter is associated primarily with the mid-1770s and later, after Haydn's (and others') principal contributions to this style.

Beginning in 1776, probably because of his heavy new operatic responsibilities, Haydn's activity in the symphony seems to have reached a temporary plateau; his rate of production declined somewhat, and a number of these works seem somewhat neutral in character despite their mastery of the symphonic idiom. Though some writers have viewed this period in a negative light (e.g. Landon, 1955), it was during precisely this time that Haydn shaped many of the characteristic features of his late symphonic style, including the use of variation slow movements, rondo finales, and sophisticated new approaches in the

realms of texture, harmony, form and orchestration. These symphonies also show numerous direct connections with stage or opera: nos.50, 53, 60, 62, 63, 73 and possibly 67, for example, incorporate movements from Haydn's opera overtures (Fisher, 1985).

The culmination of Haydn's achievements as a symphonist came in the years 1785–95. A Paris commission of 1785 resulted in six new symphonies (nos.82–7, the 'Paris' Symphonies) for the Concert de la Loge Olympique, followed by nos.88 and 89 (the 'Tost' symphonies, 1787) and 90–92 (the 'Comte d'Ogny' or 'Oettingen-Wallerstein' symphonies, 1788). In these works Haydn reached new heights of ingenuity, humour and unpretentious intellectuality, the last chiefly in matters of development and thematic relationship (see especially no.88). Later the London trips of 1791–2 and 1794–5 each yielded two series of six symphonies, nos.93–8 and 99–104, that equal those of the preceding groups in all those qualities and exceed them in breadth of conception, melodic appeal, orchestral brilliance and magisterial but never pompous dignity.

Haydn was an innovator in all directions. Nearly every symphony contains ideas of a variety that defies categorization. Two recurrent but constantly changing procedures give some insight into his methods. First, by treating the phrase less as a goal in itself than as a part of larger rhythmic groupings (sentence, paragraph), he generated an unusually broad rhythmic control, to which his frequent elision techniques also contributed. Second, by extending the developmental process to encompass both the exposition and recapitulation, the latter often substantially recomposed rather than merely restating the material of the former (see Wolf, 1966), he demonstrated revolutionary potentialities in sonata form. These ideas exercised a major influence on Beethoven.

The scope of Haydn's imagination can only be hinted at by reference to a few representative examples. His famous dynamic surprises (e.g. the *ff* tutti entrance in the slow movement of the 'Surprise' Symphony, no.94, or the characteristic 'thunderclap' repetitions of primary themes) go beyond mere effect to delineate structure and vitalize rhythmic flow, goals also identifiable in details such as the frequent use of cross-accents – another technique appropriated by Beethoven. Similarly, the famous 'dwindling' conclusion of the Farewell Symphony, no.45 (1772) – anticipated eight years earlier in the *pp* ending of no.23 – exemplifies among other things Haydn's concern with the coherence of the symphonic cycle (see Webster, 1991). This concern also appears in the cyclic recall of material from earlier movements in the finales of nos.31 and 46. As an orchestrator Haydn used many fresh sounds, including an opening drum-roll (no.103), english horns in place of oboes (no.22), solo double bass (trios of nos.6–8, finales of nos.72 of 1763, 31 and 45), janissary instruments (no.100) and four concertante horns (nos.72, 31; compare also nos.13 and 39, also with four horns, and the slow movement of no.51, with horn solos at both extremes of range). The many solos for strings and wind were considered exemplary by critics even in the epicentre of the symphonie concertante, Paris itself.

Haydn's range of symphonic tonalities is the broadest of any 18th-century composer: in contradiction to the myth of the 'cheerful' Haydn, he actually wrote a larger proportion of works in minor keys than most 18th-century symphonists (exceptions are Vanhal, Beck and Gossec), and no.45 is the only known symphony of the 18th century in F♯ minor. Tonal relationships between movements are less adventurous than in his piano sonatas and chamber music, although the G major second movement of no.99 in E♭ must have been surprising in its time. Within movements, however, modulations often explore daringly remote tonalities by new pathways, especially various types of 3rd relationship; here Haydn clearly anticipated Beethoven and Schubert.

Haydn's attention to structure may account for his apparently lesser emphasis on melody in its own right: despite many themes of great appeal, he often impresses more with motivic evolutions than through the originality or beauty of his initial material. Many of Haydn's themes begin the process of motivic accretion and development even at their first appearance. Indeed, the folklike quality commonly associated with his themes may in certain cases result less from true folk influence than from this developmental intent, which requires thematic material that is simple in both melody and rhythm in order to leave room for later manoeuvres. Haydn's extended and forceful transition sections also include considerable development, and his frequent 'monothematic' expositions, in which the secondary theme restates or is derived from the primary theme, may also be regarded as examples of this developmental principle.

(ii) Mozart. Mozart began writing symphonies in England in 1764, more than a quarter of a century before Haydn's visits. With this very early start, at the age of eight, Mozart's composition of symphonies spans nearly 25 years; but his activity was sporadic, resulting from the needs of a variety of circumstances rather than, as with Haydn, the steadier requirements of a permanent appointment. This led to a somewhat heterogeneous instrumentation and style that do not necessarily reflect Mozart's own preferences or stylistic development. The friendly contact with J.C. Bach and Abel in London furnished Mozart with an enduringly significant model: a warmly italianate style of compelling lyricism and graceful rhythmic movement, to which his Austro-German background added harmonic depth, textural interest, subtlety of phrasing and orchestral virtuosity.

Mozart's early symphonies are beset with numerous problems of authenticity and chronology. The earliest works, written in London and the Netherlands in 1764–6 during the Mozart family's first grand tour, are now considered to include K16, the recently discovered 19*a*, 19, 22 and 45*a* (Zaslaw, *Mozart's Symphonies* 1989). All are in three movements with a 3/8 finale. Each first movement is in binary-sonata form, in which only the second half of the exposition, beginning with the secondary theme, is recapitulated; the only anomalies are the omission of double bars and repeat signs in K19 and 22 (as in most Italian overtures and many Mannheim symphonies) and in K22 the return of the primary theme at the end to round off the movement (again as in many Mannheim symphonies). Though these symphonies are routinely described as Italian in style, it requires only four bars of K16 to observe the stylistic blending mentioned earlier. It opens with a bustling operatic triad theme in unison, but beginning in bar 4 there are held chords, with suspensions, in all parts except the bass (which moves in an offbeat crotchet figure); the effect is that of a Fuxian counterpoint exercise. After a repetition of both phrases, the scurrying turns and tremolos of the transition return

us to the opera house. Either or both of the two slightly later works K19*a* and 19, usually assigned to London, may have been written after the Mozarts' departure for the Netherlands in September 1765 (Zaslaw, *Mozart's symphonies*; however, Gersthofer, 1993, considers K19 the earlier of the two and assigns it to London). The opening of K19*a* recalls J.C. Bach's singing-allegro style, while that of K19 is a statement-and-response cliché obviously patterned on the main theme of an Abel symphony Mozart had copied. Though these movements contain a number of sophisticated touches, they often sound four-square owing to their abrupt rhythms and a general lack of linear direction. In the Andantes, however, the leisurely italianate lines sometimes stretch to unexpected lengths, and the slow movement of K22 (The Hague, December 1765) introduces both more counterpoint and more chromaticism than most such movements of the time, in the latter case foreshadowing the characteristic touches of harmonic pathos in Mozart's later works.

With the little symphonies K43, 45 and 48 of 1767–8, written in Vienna, Mozart made a seemingly sharp turn towards the four-movement Viennese model. More important than the number of movements, however, is the continuing blend of German and Italian traits. Almost every transition brings the familiar Italian tremolos; trill, snap and turn figures activate many themes; and there are cantabile Andantes and 3/8, 6/8 and 12/8 finales. But one also finds rather squarely phrased slow movements (K48), plodding divertimento-style triplet lines (K45, minuet and trio) and themes like remnants of counterpoint exercises (opening of K45). Arguably the best of this group is K48, whose 'affinity with such works as Haydn's Symphonies Nos.3 and 13 is quite obvious' (Larsen, 1956, p.162); in the opening movement this can be recognized in the sweeping primary theme, the strong rhythmic drive, the sharp dynamic contrasts and the omission of a clear secondary theme (otherwise virtually *de rigueur* in Mozart's first movements), not to mention the surprise cadence in the closing section. The presence of these Haydnesque elements, however, also draws attention to Mozart's development as a symphonist: though using highly rhythmic material, he maintains his identity with the characteristically orderly punctuation between phrases and theme groups, the italianate lines and chromaticism in the slow movement and the brashness of the minuet, which after four sober opening bars explodes in violin semiquaver scales that rush up two octaves in two bars. The first-movement forms show a continuing diversity: among these supposedly Viennese-modelled works, the first movement of K43 maintains the binary-sonata design of the early symphonies, and K45 omits repeats, anticipating its re-use as the overture to *La finta semplice*. Although Mozart must have heard many full sonata forms by Viennese composers such as Hofmann and Dittersdorf, only K48 has a convincing reprise of primary material.

The 1769–71 period includes two trips to Italy, separated by a return to Salzburg. The symphonies associated with the first journey strongly reflect familiar Italian usages such as three-movement cycles (K74, 81, 84), linking of the first and second movements (K74, 95), omission of repeat signs, and even exposition-recapitulation forms (with the two halves connected by a transition over a dominant pedal; first movements of K74, 84). By contrast, a symphony written while back in Salzburg in July 1771, K110, illustrates a growing fusion of styles: the German background entails the presence of four movements, with full sonata form (including repeats) in the first movement, a vigorous minuet with a near-canon between violins and bass and a rousing finale (also with a hint of violin-bass imitation at the beginning) that includes a well-developed episode in the relative minor. In the slow movement, however, a leisurely italianate melody betrays thoughts far from rainy Salzburg, though here again the well-schooled Germanic texture includes a clever dialogue between violins as well as other attractive inner lines and brief imitations. Back again in Milan, K112 (November 1771) falls less under the Italian spell than the symphonies of the first journey. In the secondary section a charming dialogue between the oboes (doubled at the octave by divided violas) and the violins immediately evokes an *opera buffa* argument by its snap rhythms. Similarly, the 3/8 finale begins like a typical curtain-raiser; but subsequently the stress falls on a balanced unfolding of ideas, an attitude already apparent in the development of the first movement (in full sonata form, with repeats) and the well-crafted slow movement. In sum, Mozart's symphonies of 1771 begin to exploit the contrast between German and Italian styles, inexhaustible sources of colour and balance that were to become the main underlying characteristics of his personal style. By this time he was moving towards an effectively integrated style, and many phrases contain evidence of originality, charm and strength. On the other hand, segmentation often tends to interrupt the basic movement, forestalling the development of a broader continuity.

The highly productive period in Salzburg from December 1771 to August 1772 yielded at least eight symphonies. There are still stylistic mixtures not yet fully assimilated: the first movements of K133 and 134, for example, still use the type of sonata form in which recapitulation of the primary theme is withheld until near the end (to be followed in K134 by a coda – so labelled – featuring a crescendo passage). As representatives of Mozart's most evolved and expansive style to date, however, works such as K132 and 134 deserve more frequent revival: K132 shows how Italian high spirits can be applied in a fully developed sonata form (here without repeats), and K134, which contrasts a driving 3/4 Allegro – Haydnesque except for its formal structure – with a spacious early version of the Andante cantabile mood and opening melodic gesture of 'Porgi amor' from *Le nozze di Figaro*.

After a third trip to Italy for the production of *Lucio Silla* in November 1772–March 1773, Mozart again set about composing symphonies, producing four in the space of one and a half months. The strongly italianate orientation of these works is evident both in their overall style and in such formal traits as the omission of minuets and trios, the presence of transitions to connect each movement in K184/161*a* and 181/162*b*, and in the second of these works the use of exposition-recapitulation form in the first movement. Yet contrapuntal touches such as the double fugato that opens the finale of K199/161*b* remind us that Mozart was now, doubtless to his chagrin, back in Salzburg.

Autumn 1773 marks the beginning of Mozart's maturity as a symphonist. When he returned to Salzburg at the end of September from a ten-week stay in Vienna, he began writing works in a more fully realized style that resolved earlier conflicts and imbalances while at the same

time increasing the size and expressive range of every movement. The design of first movements follows the full sonata pattern, emphasized by stronger punctuation between sections and sharper thematic contrast, both melodically and orchestrally. Now there are no static lines, no dead spots, no loose ends. From this period stems the first of his only two minor-mode symphonies, K183 in G minor (dated 5 October 1773), a work of precocious feeling with an opening in syncopated octaves that recalls Haydn's 'Lamentatione' (no.26 in D minor, written some five years earlier). Balancing this darker part of the spectrum, the genial symphony K201 in A (dated 6 April 1774) contains two of the most hilarious passages anywhere in Mozart. The first occurs at the end of each half of the minuet, where unison oboes and horns add two bars of dotted musical parody. The second occurs in the finale, where a rising whirlwind scale appears out of nowhere in the violins at the end of the exposition, development and recapitulation; left up in the air each time, it is only brought down to earth at the last possible moment by the closing chords of a brief coda. Mozart had already assimilated the strategy of Haydn's long-range structural question marks.

After these works of 1773–4 Mozart essentially had no call to compose symphonies until the 'Paris', K297 (June 1778), written after his extended stay at Mannheim in 1777–8. Both this and the three he composed after his return to Salzburg in early 1779 (K318, 319 and 336) reflect his experiences in Mannheim and Paris, as seen in their orchestration (including clarinets for the first time in K297), use of three movements, and omission of double bars and repeat signs in the opening movements. The choice in K318 of a type of da capo overture form (see above, §5) has led to speculation that it was originally written as the overture to one of Mozart's vocal works of the period.

Mozart's composition of symphonies was even more sporadic after his move to Vienna in 1781, but the works he did produce are, of course, among the masterpieces of the symphonic literature: K385, the 'Haffner' (no.35 in the traditional numbering, 1782), originally intended as the core movements of a serenade; K425, the 'Linz' (no.36, 1783); K504, the 'Prague' (no.38, 1786; 'no.37' is a symphony by Michael Haydn with a slow introduction by Mozart); and the great trilogy of summer 1788, consisting of K543 in E♭, K550 in G minor and K551 in C, the 'Jupiter' (nos.39–41). In addition to the extraordinary expansiveness, originality, emotional depth, sophistication and craft of these works, the last four in particular may be seen as consummate examples of the different expressive characters a work by Mozart may evince: vivacious *buffo* style in no.38, italianate lyricism and warmth in no.39, an often disturbing 'Sturm und Drang' in no.40 and transcendent brilliance – including contrapuntal brilliance – in no.41.

Mozart's own natural gifts, especially his feeling for colour and balance, set the pattern for a number of specific differences between his symphonies and those of Haydn. His sensitivity to colour produced more regular assignments for the wind instruments and, often, a more idiomatic style of writing. It was this colour sense, too, that called forth his rich chordal vocabulary and his ingenious and far-ranging, but always smoothly executed, modulations. One might even relate Mozart's highly variegated rhythms to a sense of colour, at least if 'colour' is equated with variety and contrast. In a sense his remarkable rhythmic vocabulary is a by-product of contrast on a still larger scale, namely the strong characterization of structural areas by the creation of special thematic types: as with J.C. Bach, one can usually recognize the precise expositional function of a Mozart theme even when it is removed from its context.

This concern for colour also appears in Mozart's handling of development sections. The reliance on modulation, often without significant thematic alteration, has caused some writers to consider Mozartian developments less substantial and 'serious' than Haydn's. Yet the character of Mozart's expositions to some extent demanded his own special solutions later in the movement: elaborate motivic development might blur the characteristic thematic personalities that had been so carefully distinguished in the exposition, and in any event a perfectly formed phrase of exquisite lyricism may not lend itself easily to fragmentation. Thus Mozart's development sections typically maintain interest by refreshing one or more of his established thematic types with a trip through unfamiliar orchestral and harmonic territory, so that the tonic reprise can be recognized as its proper home. In the same way, Mozart rarely rewrites his recapitulations to the extent that Haydn does, though he frequently appends a coda, as implied already.

The word 'symmetry', sometimes too casually applied to Mozart's music, usually expresses qualities of coordination and balance. In any single phrase-unit in Mozart the activity of each musical element is typically coordinated to an unusual degree, a characteristic that in turn makes possible meticulous balances in activity between phrases. At the opening of no.41, for instance, the strong rhythmic activity of the first two bars is offset by lesser melodic and harmonic action; this leads to a balancing pair of bars in which melody and harmony take the lead while rhythm is relatively quiescent. These shifting priorities, also carefully adjusted between the larger sections of a piece, provide one explanation for the convincing flow of Mozart's music, a motion very different from Haydn's driving motivic development and broad tensions.

Two final characteristics of Mozart's mature symphonic style may be worth noting. First, some aspects of his rhythmic control, though less noticeable on the surface than Haydn's motivic drive, often contribute significantly to the fundamental movement. For example, the progress of the harmonic rhythm, especially as reflected in the rate of chord change, can effect a compelling climax. Thus in the first bars of no.40 the chord rhythm accelerates in an almost geometric progression: one four-bar chord, two two-bar chords, seven one-bar chords, six half-bar chords, and four crotchet chords, pausing finally on a two-bar dominant. A second point, also generally overlooked, concerns Mozart's development of an ending that included both serenity and brilliance. Between the usual *forte* cadential themes he sometimes introduced a *piano penultimo*: a quiet, reflective theme that enhances the brilliance of the final cadential bars (see for example the first movement of no.40). This heightened contrast in the closing area lends a special conviction and definitive repose to a Mozartian conclusion, noticeable in embryo as early as the first movement of K134. In perfecting other parts of the movement, he had attained a superb balance of phrases, thematic areas and main divisions; now, for

the end of a movement, he discovered the means to a totally satisfying finality.

II. 19th century

1. The essence of the genre. 2. Beethoven. 3. Beethoven's contemporaries. 4. The crisis of the 1830s. 5. Germany and Austria, 1840–1900. 6. Other countries, 1840–1900. 7. Mixtures with other genres.

1. The essence of the genre. For all its outward variety, the 19th-century symphony exhibits remarkable coherence as a genre, from the early symphonies of Beethoven up to the middle-period symphonies of Mahler. The genre's identity rests in part on external criteria of size and structure: composers consistently designated as a symphony a work for a medium- or large-sized orchestra, usually consisting of three, four or five movements (most commonly four). These movements generally follow the pattern of (1) an extended opening movement, often in sonata form, sometimes preceded by a slow introduction; (2) a lyrical slow movement, typically in sonata form, *ABA*, or theme and variations; (3) a dance-inspired scherzo movement, in triple metre; and (4) a fast finale. The order of the two middle movements was sometimes reversed, and there were of course other exceptions to this pattern in practice, but they remain exceptions.

By these external criteria alone, however, one could legitimately define a symphony as a 'sonata for orchestra', whereas in fact the differences between the two genres are profound. Throughout the late 18th and 19th centuries critical commentary on the symphony repeatedly emphasized distinctive qualities: an essentially polyphonic texture and a 'public' tone. The symphony was consistently valued for its unique ability to unite the widest possible range of instruments in such a way that no one voice predominates and all contribute to the whole. Although chamber music could lay similar claim to an essential equality of voices, its timbral resources were necessarily limited and it was performed before a relatively small, elite audience (if indeed before any audience at all). The concerto, in turn, although decidedly public in nature, never enjoyed the prestige of the symphony because of the genre's aesthetically suspect propensity towards virtuoso display.

Performed by a large number of players on a diverse range of instruments and projected to a large gathering of listeners, the symphony came to be seen as the most monumental of all instrumental genres. The all-embracing tone of the symphony was understood to represent the emotions or ideas not merely of the individual composer but of an entire community, be it a city, a state, or the whole of humanity. As reflected in the writings of such critics as Paul Bekker, Arnold Schering and Theodor Adorno, this perspective continued into the 20th century, yet by the end of the century it was all but lost. It nevertheless constitutes one of the essential elements in perceptions of the symphony throughout the 19th century. Indeed, the essence of this perspective is evident as early as 1774 in Schulz's entry on the Symphony for J.G. Sulzer's *Allgemeine Theorie der schönen Künste*, where Schulz likened the symphony to a 'choral work for instruments', in which no single voice predominates but in which, rather, 'every voice is making its own particular contribution to the whole'. It was specifically in this latter connection that Schulz compared the symphony to a Pindaric ode, a work written to be sung in communal celebrations by a large chorus and expressing the ideas of an entire community, as opposed to those of the poet alone. Schulz went on to take three prominent composers of his generation to task for writing symphonies that sounded too much like arias performed on instruments: he declared certain (unspecified) movements by J.G. Graun, C.H. Graun and J.A. Hasse to be 'feeble' in their effect in spite of – or rather, precisely because of – their melodic beauty. Only occasionally, according to Schulz, did these composers succeed in achieving the 'true spirit of the symphony', which is to say, a predominantly polyphonic texture in which all voices contribute more or less equally.

This perception of the symphony as an expression of communal sentiment grew throughout the 19th century. According to Koch (1802), the symphony 'has as its goal, like the chorus, the expression of a sentiment of an entire multitude'. Fink, a generation later (1834–5), amplified this by declaring a symphony to be 'a story, developed within a psychological context, of some particular emotional state of a large body of people'. It is by no means coincidental that so many programmatic interpretations of seemingly 'absolute' symphonies conjure up images of large groups rather than of individuals. Momigny's analysis (1803–6) of Haydn's Symphony no.103 is typical: here, a large gathering prays for relief against the terrors of thunder, rejoices at the arrival of sunny weather and cowers collectively at the sudden and unexpected return of the thunder towards the end of the movement. Momigny's analysis of a chamber work, by contrast, Mozart's String Quartet in D minor K421, focusses on Dido's anguish at Aeneas's departure from Carthage: the grief expressed here is personal, not collective. The many programmatic interpretations of Beethoven's Seventh Symphony, in turn, evoke images of some kind of communal gathering, such as a peasant dance or wedding (first movement), a priestly ceremony (second movement), a dance (scherzo) and a bacchanal (finale). However naive such interpretations may strike us today, they reveal a fundamental disposition towards hearing in a symphony the sentiments of a multitude as opposed to those of a mere individual.

Throughout the 19th century this relationship of individual voices to the orchestra as a whole was frequently compared to the relationship between the

individual and the ideal society or state – that is, to an essentially democratic, egalitarian society in which no single figure predominates and in which individuals can fully realize their potential only as functioning members of a much larger society. Individual voices are 'melted to become discrete single elements within the whole', as one anonymous writer put it in 1820, thereby reflecting 'the universality of humanity'. In this regard, Beethoven's Ninth Symphony lies very much within the tradition of the genre, in spite of its external novelty of adding voices. Schiller's text extols the ideals of utopian brotherhood and social equality, precisely those characteristics that contemporaneous writers associated with the genre of the symphony itself.

The distinction between sonata and symphony extended to the audience as well, which in turn had important ramifications for symphonic style. Until the second quarter of the 19th century the sonata was essentially a domestic genre, to be performed either for the pleasure of the performer alone or at most for a small circle of friends. The symphony, by contrast, had to fill increasingly larger spaces and appeal to a diverse audience, particularly from the late 18th century onwards. Accordingly, the symphony was perceived as a genre that by its very nature had to use broader gestures and simpler themes than were either feasible or desirable in a sonata. Symphonic themes – particularly those found in the opening of a first movement – could not be too introspective or rely on refinement and embellishment to make their effect. On hearing the bold unison opening of Brahms's D minor Piano Concerto at a concert for the first time, Bruckner is reported to have said in a loud whisper: 'But this is a symphony theme!'. Whatever the veracity of the anecdote, it illustrates the underlying assumption about the nature of symphonic themes and the symphonic genre in general (Bruckner presumably did not know at the time that Brahms's concerto had in fact been conceived as a symphony).

By the late 18th century, then, but particularly in the wake of Beethoven, the symphony emerged as an institutional projection of the beliefs and aspirations of composers, performers and audiences alike. Mahler's much-quoted remark in the early 20th century that a symphony must be 'like the world' echoes a long tradition that viewed the symphony as the most cosmic of all instrumental genres.

This tendency towards the cosmic is most immediately evident in the ever-increasing size of the symphonic orchestra. At the beginning of the 19th century standard scoring for a large ('grosse') symphony called for strings, double woodwind (flutes, oboes, clarinets, bassoons), two horns, two trumpets and timpani. New instruments were steadily introduced over the course of the century. Trombones, traditionally restricted to the realms of church and theatre, appear in the finale of Beethoven's Fifth Symphony, the 'Storm' movement of his Sixth and the finale of his Ninth. The piccolo, double bassoon and certain percussion instruments, such as the bass drum, triangle and cymbals, previously reserved for special effect (e.g. Haydn's Military Symphony and the finale of Beethoven's Ninth) become increasingly common during the second half of the 19th century, with the symphonies of Mahler constituting a veritable compendium of orchestral instruments. That Mahler should use such unlikely instruments as cowbells and anvils speaks not only to his own personal style but also to the broader tradition of the symphony as an all-encompassing genre. The introduction of valved brass instruments in the 1820s and 30s dramatically increased the useful range and timbre of horns and trumpets. By the end of the century the norm for a large orchestra had grown to triple woodwind (with third players doubling on an additional instrument) and up to 20 brass instruments, in addition to an ever-increasing number of strings. As concert halls grew in size, so did the ensembles performing there.

Beyond these purely technical changes, and partly as a result of this expansion of orchestral possibilities, timbre itself became a distinctive feature for symphonists. Quite aside from issues of form, harmony or thematic construction, the timbre of Berlioz's symphonies is distinct from that found in the symphonies of Bruckner, which in turn is altogether different from that found in symphonies by Brahms, Tchaikovsky or Mahler. Every major symphonist of the 19th century felt a certain obligation to create a distinctive orchestral sound within the genre. This timbre, in turn, represented something far more basic than an additional 'layer' imposed on a composition's essential part-writing. Here again, the contrast between sonata and symphony is particularly evident: 19th-century critics consistently distinguish true symphonies from 'orchestrated sonatas' by the nature of the orchestral writing. A true symphony was perceived as a work whose very essence emerged from the polyphonic web of all instrumental parts and their distinctive colours.

Because of the symphony's aesthetic prestige, and because of the sheer technical demands of writing one, this genre was almost universally acknowledged as a touchstone of compositional prowess as early as the first quarter of the 19th century. It was widely felt that a composer could not (or at least should not) step forward with a work in this genre until he had shown sufficient mastery of smaller, less demanding forms of composition. The symphony was seen as a means of achieving fame but not fortune, for in spite of its prestige the genre as a whole remained economically unprofitable for composers and publishers alike. Symphonies were difficult to compose, demanding to perform and expensive to publish. Printed scores, moreover, had little appeal beyond a relatively small market of affluent connoisseurs. It was rare for a symphony before Beethoven's time to be published in score. Indeed the first Beethoven symphony to be published in score on the Continent – the Seventh – did not appear until 1816, and his Fifth and Sixth were not published in score until 1826. Arrangements, particularly for piano, were distributed more widely, but here again the market was fairly limited. Kirby's survey (1995) of symphonies published in German-speaking lands during the 19th century, including piano arrangements, shows that only 122 symphonies were issued between 1810 and 1860 – that is, only two or three works each year. These numbers increased somewhat in the later decades of the century but remained relatively small even in comparison with other large genres like the oratorio or opera. In an odd way, the poor economic incentives of symphonic composition helped add to the genre's aura as the highest form of instrumental music. Anyone composing a symphony, after all, could scarcely be accused of pursuing commercial gain.

Ironically, the number of performance venues for symphonies began to increase exponentially in the third and fourth decades of the 19th century, even as the

production and dissemination of new works in the genre declined. Symphonies, along with oratorios, constituted the central repertory of the many music festivals that sprang up in Germany during the first half of the 19th century. The emergence of a canonic repertory centred on the late symphonies of Haydn and Mozart and the nine of Beethoven helped further the growth of civic orchestras and standing concert series in Germany and elsewhere during the second quarter of the century. Yet this same canonic repertory also made it more difficult for new works to find acceptance.

2. BEETHOVEN. Beethoven's First Symphony appeared on the musical scene at a time (1801) when instrumental music in general, and the symphony in particular, was beginning to enjoy an unprecedented rise in aesthetic status. By the last decade of the 18th century the symphony had already established itself as the most prestigious of all instrumental genres, yet because it lacked a clearly perceptible object of representation, it was typically received (along with all other forms of instrumental music) as a means of entertainment rather than as a vehicle of social, moral or intellectual ideas. In his *Critique of Judgment* (1790), Kant echoed the general sentiment of his time in dismissing instrumental music as 'more pleasure than culture' on the grounds that it could not incorporate concepts and must therefore be judged according to the pleasure emanating from its form alone. Any associative content of thought in the mind of the listener, according to Kant, was merely 'accidental'. Instrumental works that did attempt to 'represent' a specific event or object, in turn, were routinely scorned as naive and aesthetically inferior.

Within only a few decades, Kant's views on this matter had been thoroughly supplanted, at least in Germany, where instrumental music was cultivated with special intensity. This is due in part to the growing recognition of the symphonic achievements of Haydn, Mozart and Beethoven in the early 19th century, and in part to a broader change in attitudes towards instrumental music in general. Around 1800 the perceived defect of instrumental music – its lack of a text and a definite object – began to be seen as a virtue. A number of influential critics argued that music without a text was actually superior, on the grounds that it was freed from the mundane strictures of semantics and syntax. With this change in aesthetic perspective came the premise that in addition to purely musical ideas, a work of instrumental music could now embody moral, philosophical and social ideas as well.

Of all musical genres, the symphony was the greatest beneficiary of this new aesthetic. In reviews dating from 1809 and 1810, E.T.A. Hoffmann declared the symphony to be the 'opera of instruments' and likened it to the drama. Such assertions reflect not only the symphony's implicitly dramatic qualities, but also its aesthetic status and its ability to incorporate broader ideas beyond the purely musical. Beethoven was of course by no means single-handedly responsible for the emergence of the symphony as a vehicle of ideas: the origins of this transformation are already evident in the late 18th century, even before he had begun to make a name for himself as a symphonist. Beethoven nevertheless played a central role in transforming the genre at a crucial moment in its history, and his direct impact would continue to be felt by several subsequent generations of symphonists. Particularly from the 'Eroica' onwards, Beethoven was seen to have explored a variety of ways in which instrumental music could evoke images and ideas transcending the world of sound. The notation of a 'poetic idea' has been a central constant in the reception of Beethoven's instrumental music from the composer's own day down to the present, and nowhere is this understanding more evident than in the reception of the Fifth Symphony. Long before Anton Schindler had related Beethoven's putative comment about the work's opening – 'Thus fate knocks at the door' – E.T.A. Hoffmann and others had perceived in this symphony an idealized trajectory of struggle leading to victory. Symphonies with programmatic titles or movement headings, such as 'Eroica' or 'Pastoral', pointed the way all the more openly towards such extra-musical interpretations.

The nature of these interpretations has of course varied widely. To have equated a symphony like the 'Eroica' with a specific individual beyond the most general level would have been seen, even in Beethoven's day, as an exercise in triviality. At the same time, to have perceived this work as an exemplar of 'pure' music, with no connection to the outer world whatsoever, would have been unthinkable. The aesthetic of 'absolute' music, necessarily defined in terms of what it was not, began to emerge only in the middle of the 19th century. Although elements of this outlook are certainly evident towards the end of the 18th century in the writings of such figures as Wackenroder, Tieck and Hoffmann, the idealist aesthetic of the time perceived instrumental music as the sonorous reflection of a higher, abstract ideal. Critics of the early 19th century could thus posit a connection between music and ideas without feeling compelled to deliver any detailed explication of what those ideas might actually be.

From a more technical perspective, Beethoven's symphonies explore a wide range of compositional approaches to issues that would similarly occupy at least several generations of later composers. Indeed, Beethoven's innovations in formal design are so consistently extraordinary, at the level of both the individual movement and the multi-movement cycle, that it is impossible to single out any one of his symphonies as 'typical'. His integration of vocal forces into the finale of the Ninth Symphony is merely the most obvious of the many ways in which he explored fundamentally new approaches to the genre. The Third Symphony, with its evocation of ethical and political ideals and of death ('Marcia funebre') substantially extended the bounds of the earlier 'characteristic' symphony and explicitly opened the genre into the realm of the social. The Fifth Symphony is an essay in cyclical coherence through thematic transformation and inter-movement recall. The Sixth ('Pastoral') considers the intersections of man and nature and in so doing explores the pictorial potential of instrumental music in ways that range from the vague (with the first movement heading, 'Awakening of Happy Thoughts upon Arriving in the Countryside') to the astonishingly specific (the birdcalls, labelled by species, that close the slow movement). The Seventh Symphony, perhaps the most popular of all Beethoven's symphonies in the 19th century, eschews programmatic headings but explores orchestral sonorities and rhythms with unparalleled intensity.

Among Beethoven's symphonies, the 'Eroica' nevertheless stands out as a work of singular historical significance, both for its emotional content and technical innovations.

Beethoven extended the size and emotional scope of the first movement to unprecedented lengths (even without a slow introduction, its 691 bars dwarf any comparable previous movement); introduced the 'functional' genre of the march into the slow movement; produced a through-composed scherzo of novel length and speed; and provided a proportionately substantial finale that is at once both readily apprehensible and profound, integrating variations on a simple theme with a later countertheme and extended passages of highly sophisticated counterpoint. The work as a whole, moreover, follows an overarching emotional trajectory that has often been described as approximating a process of growth or development. The similarity in the opening themes of the two outer movements is scarcely coincidental and contributes to a broader sense of a dramatic psychological trajectory in which the finale does not merely suceed the previous movements but effectively represents a culmination of all that has gone before. Critics have necessarily resorted to metaphor in describing this emotional trajectory, and although these metaphors have varied widely in their level of detail they have almost invariably been associated with the idea of struggle followed by death and culminating in rebirth or rejuvenation. That Beethoven's music could evoke such imagery so consistently and enduringly reflects the continuing power of his music and of the new aesthetic of instrumental music that emerged around 1800.

The Fifth Symphony also stands out as a work of unusual historical importance, particularly as regards the question of cyclical coherence. With its overt manipulation of a single motive across multiple movements, its blurring of boundaries between the two final movements, and the extended return to an earlier movement (the third) within the course of its finale, the Fifth brings to the surface strategies of cyclical coherence that had long been present but rarely made so obvious. The Fifth is also significant for the emotional weight of its finale, which reintroduces and resolves issues and ideas left open in earlier movements. Beethoven thereby placed unprecedented weight on a symphonic finale in a manner that was immediately palpable. The finales of other symphonies, like the Seventh and Eighth, affirm a more traditional function; as a whole, these works also re-establish the use of more subtle connections among their respective four movements, placing greater reliance on the principle of complementarity, by which contrasting units create a coherent whole.

The historical impact of the Ninth Symphony is considered in §4, below.

3. Beethoven's contemporaries. The generation of symphonists working during Beethoven's lifetime remains in many respects the most obscure of any in the entire history of the genre, for these composers laboured not only in the shadow of Beethoven but of Haydn and Mozart as well. Indeed, the symphonies of the two earlier composers provided the most important models for Beethoven's contemporaries; not until the 1820s did Beethoven begin to assume his singular importance as the genre's paradigmatic composer, and even then only gradually. As late as 1840, Robert Schumann was bemoaning the plethora of living composers who could imitate 'the powdered wigs of Haydn and Mozart but not the original heads beneath those wigs' and write symphonies 'as if Beethoven had never existed'.

Even symphonies by well-known composers of the early 19th century, such as Méhul, Rossini, Cherubini, Hérold, Czerny, Clementi, Weber and Moscheles were perceived in their own time as standing in the symphonic shadow of Haydn, Mozart, Beethoven, or some combination of the three. These works remain little-known today. Czerny and Ferdinand Ries, in particular, were seen as imitating Beethoven all too directly. Peter von Winter's *Schlacht-Sinfonie* of 1814 uses a concluding chorus a full decade before Beethoven's Ninth; in its essentially one-movement form, however, this occasional work stands outside the generic tradition of the symphony. New symphonies by other composers, including Paul Wranitzky, Adalbert Gyrowetz, Friedrich Witt, Franz Danzi, Friedrich Fesca, Franz Krommer, Johann Wilms, Andreas and Bernhard Romberg, Joseph Küffner, Norbert Burgmüller and Johann Wenzel Kalliwoda were greeted with respect and sometimes pleasure, but rarely with enthusiasm.

Spohr, the best-known symphonist among Beethoven's contemporaries, followed the model of Mozart in his early symphonies but began to experiment boldly with the genre after Beethoven's death. His 'Die Weihe der Töne' (1832) is an instrumental work based on a poem of the same name, which Spohr asked to be distributed or read aloud before every performance (the full title of the work reads 'The Consecration of Sound: Characteristic Tone-Painting in the Form of a Symphony, After a Poem by Carl Pfeiffer'). Spohr's Sixth, the 'Historical Symphony' (1839), was written 'In the Style and Taste of Four Different Periods', representing the generations of Bach and Handel (first movement), Haydn and Mozart (second movement), Beethoven (scherzo) and the present day (finale); it is revealing that a number of critics, including Schumann, could not tell whether this finale was merely a weak movement or an ironic parody of what was then the latest style. The three movements of Spohr's Seventh Symphony, written for double orchestra and subtitled 'The Earthly and the Divine in Human Life' (1841), follow a trajectory from the 'World of Childhood' through the 'Age of Passions' to the 'Final Triumph of the Heavenly'.

Schubert, too, wrote his early symphonies following the generic norms of Haydn and Mozart but soon came to recognize an inner need for a new approach. He admired Beethoven's symphonies and confessed to a friend in 1824 that he was himself working his way towards a large-scale ('grosse') symphony by composing string quartets. At the time, in fact, he had already completed the two remarkable movements of his Unfinished Symphony in B minor D759 and sketched portions of the third, but had apparently abandoned the work out of doubts about an appropriate finale. In the last year of his brief life, Schubert completed his celebrated Symphony in C major D944, the 'Great', a masterpiece that points towards a remarkably distinctive approach to the genre, one based not so much on principles of thematic manipulation and artful counterpoint, but on melody, colour and large-scale harmonic design. From a historical standpoint, however, both the Unfinished and the 'Great' remained essentially unknown until their rediscovery and first public performances in 1839 and 1865, respectively.

4. The crisis of the 1830s. When surveying the history of the symphony for the first edition of *Grove's Dictionary* in 1889, even as sober a critic as C. Hubert H. Parry (who

had already written several symphonies of his own) felt it necessary to justify extending his narrative beyond 1827, on the grounds that 'it might seem almost superfluous to trace the history of Symphony further after Beethoven'. Given the prominence of such subsequent composers as Berlioz, Mendelssohn, Schumann, Raff, Liszt, Rubinstein and Brahms within the concert repertory of the day, Parry's apologetic tone seems remarkable, yet it is altogether representative of mainstream musical thought over the last three-quarters of the 19th century. The challenge of composing a symphony was particularly acute in the years immediately before and after Beethoven's death. The dilemma, simply put, was that Beethoven could be neither copied nor ignored.

The key issue was never really one of style – few composers attempted to imitate Beethoven directly in this regard – but rather of generic conception. Beethoven's Third to Seventh Symphonies had substantially expanded the boundaries of what a symphony could be, and his Ninth had effectively redefined the genre. In the wake of such works, a symphony was no longer considered merely a matter of entertainment, but a vehicle of moral, philosophical and even political ideas. And by introducing text and voice into what had been a traditionally instrumental genre, Beethoven had implicitly brought into question the aesthetic superiority of instrumental music over vocal music at a crucial juncture, just when the former was established as a category of equal if not superior rank. Subsequent generations were sharply divided on the implications of the Ninth's finale: Wagner saw it as manifesting the limits of purely instrumental music and thus marking the end of the symphony as a vital genre; other composers were reluctant to imitate the model directly yet uncertain how to extend the genre through purely instrumental means.

In this respect, the Ninth Symphony was the catalyst for what can only be called a crisis about the very nature of the genre. By 1830 an intense debate on the future of music was in full progress and it was the symphony, the most ambitious of all instrumental forms, that stood at its centre. Critical commentary from the ensuing decade betrays a pronounced crisis of faith about the continuing viability of the genre. Schumann, in his celebrated review of Berlioz's *Symphonie fantastique*, pointed out in 1835 that after Beethoven's Ninth there had been legitimate reason to believe that the 'dimensions and goals of the symphony' had been exhausted. After summarizing the most significant recent works of this kind, Schumann declared Mendelssohn to have won 'crown and sceptre over all other instrumental composers of the day', but noted that even he had 'apparently realized that there was nothing more to be gained' in the symphony and was now working principally within the realm of the concert overture, 'in which the idea of the symphony is confined to a smaller orbit'.

Although Schumann may not then have realized it, Mendelssohn had in fact abandoned, rejected or withheld no fewer than three essentially complete symphonies during the first half of the decade. He had repudiated both his First Symphony op.11 (1824) and his Reformation Symphony (1832); allowed only a few performances of the Italian Symphony in the mid-1830s; and delayed completion of the Scottish Symphony for almost a decade in the 1830s and early 40s. Mendelssohn, moreover, was but one of several composers who had taken up the genre of the symphony in the early 1830s only to abandon it. Schumann himself, after repeated unsuccessful attempts, would complete his own First Symphony only in 1841. Liszt, too, had similarly given up work on a Revolutionary Symphony around 1830 and did not return to the genre for another two decades. Wagner, who had used Beethoven as a model (particularly the Second and Seventh Symphonies), for his youthful Symphony in C (1832), abandoned his next essay in the genre two years later and subsequently declared that the symphony had exhausted itself with Beethoven's Ninth.

Many composers, to be sure, continued to write symphonies during the 1820s and 30s, but there was a growing sense even at the time that these works were aesthetically far inferior to Beethoven's. A competition in 1835 for the best new symphony, sponsored by the Viennese publisher Tobias Haslinger, elicited no fewer than 57 entries from across the Continent, but even the winning entry (by Franz Lachner) was greeted with mixed reviews from critics and the public alike. Beethoven's legacy was of course only one of many factors affecting symphonic output of the 1820s and 30s, and it would be simplistic to attribute any change (or lack of change) within the genre to his influence alone. Clearly, the symphony did not and could not have ceased with the work of any individual composer. The real question was not so much whether symphonies could still be written, but whether the genre could continue to flourish and grow as it had over the previous half-century in the hands of Haydn, Mozart and Beethoven. On this count, there were varying degrees of scepticism but virtually no real optimism.

The only composer in the 1830s able to grapple successfully with Beethoven's legacy was not a German, but a Frenchman. Berlioz was widely acknowledged during his own lifetime, particularly in Germany, as the true heir to Beethoven's symphonic legacy. In each of his three concert symphonies, Berlioz addressed generic challenges laid down by Beethoven. His *Symphonie fantastique* of 1830, which gained considerable renown through Liszt's piano arrangement (1834) and Schumann's lengthy and much-discussed review of that arrangement (1835), represents almost a mirror image of the Ninth Symphony. The finale's 'Dies irae', an implicitly vocal melody, serves as a dark counterpart to Beethoven's 'Ode to Joy' theme, and in Berlioz's 'Dream of a Witches' Sabbath', the forces of evil triumph over the forces of good. The same pattern holds true in Berlioz's next symphony, *Harold en Italie* (1834). Again, the hero is in fact an anti-hero and the soloist, who represents the protagonist of Byron's *Childe Harold's Pilgrimage*, fails to triumph in the end not because he is vanquished, but because he runs away. Berlioz's 'Symphony with Chorus', *Roméo et Juliette* (1839), reserves the crucial scenes of Shakespeare's drama not for the voices, but for the orchestra. The brilliance and originality of Berlioz's orchestration, his fresh approach to the 'cosmic' nature of the genre and his ability to blend music and narrative, both with and without recourse to words, all inspired subsequent composers to seek new approaches to addressing the metaphysical in the realm of the symphony and to extend the spirit of Beethoven's originality without directly imitating him. The symphonies of Liszt and Mahler, in particular, are deeply indebted to the legacy of Berlioz.

5. Germany and Austria, 1840–1900. The recovery of Schubert's C major Symphony in 1839 and the quick successes of Mendelssohn, Schumann and Niels Gade in the genre in the early 1840s brought at least a temporary halt to speculations about the demise of the symphony. Without changing the essential character of the genre as cultivated by Beethoven, all three composers were able to create a more lyrical, less monumental type of symphony, and all three at various times also incorporated the idea of nationalistic colour into the genre: Mendelssohn in his Italian and Scottish Symphonies, Schumann in his Third ('Rhenish') and Gade in his First, whose outer movements use a folklike song of his own composition.

The reduced intensity of the debate surrounding the future of the symphony was also due in part to the growing prominence of a different vehicle for large orchestra, the concert overture. By the 1840s more and more composers were turning to this genre as an outlet for orchestral composition. Inspired by the overtures of Beethoven, particularly *Coriolan* and *Leonore*, no.3, composers cultivated this more compact form as a vehicle within which to blend musical, narrative and pictorial ideas. Mendelssohn's overtures *A Midsummer Night's Dream* (1826) and *The Hebrides* (1830) provided a model for many subsequent would-be symphonists to write for a large orchestra without actually having to write a symphony. Most of Liszt's 12 symphonic poems, which grew directly out of this tradition, appeared in rapid succession over a nine-year period beginning in 1848.

These works soon became the focus of a polemical debate between musical 'progressives' and 'conservatives' about the relationship of musical sounds to 'extra-musical' ideas. To some extent, these polemics centred on questions of degree rather than of kind for the symphony, more than any other form of instrumental music, was already perceived as an all-embracing, cosmic genre that transcended the realm of sound alone. It is thus by no means paradoxical that in the midst of writing (and writing about) his symphonic poems, Liszt should also have produced two significant symphonies that integrate traditional formal elements of the genre with the programmatic character of the symphonic poem. The *Faust-Symphonie* of 1854 (revised 1857) consists of three 'character pieces' reflecting the three central characters of Faust, Gretchen and Mephistopheles. In this work, Liszt used what would later come to be known (in connection with Wagner's music dramas) as 'Leitmotifs'. The motifs associated with Faust in the first movement, for example, become palpably softer and gentler in Gretchen's movement, mirroring Faust's own emotional transformation through love; Mephistopheles, in turn, has no significant theme of his own but instead consistently warps themes heard in earlier movements. The symphony concludes with a brief section for tenor and chorus based on the closing scene of Goethe's *Faust*, Part II. Liszt's *Symphonie zu Dantes Divina commedia* of 1856, also in three movements, similarly concludes with a brief vocal section that culminates a trajectory leading from struggle (*Inferno*, *Purgatorio*) to paradise. The test is taken from the Magnificat. Liszt's followers, notably Joachim Raff and Felix Draeske, continued to cultivate the symphony along similarly programmatic lines. Raff's popular 'Leonore' Symphony of 1872, the fifth of his 11 works in the genre, is based on the well-known 18th-century ballad by Gottfried August Bürger that traces the fate of two ill-starred lovers who in the end are united in death.

With the growing importance of overtly programmatic music around the middle of the century, a pronounced dichotomy of thought began to emerge about the nature of instrumental music's 'content'. Wagner helped polarize the division between 'formalists' and 'contentualists' by introducing into the debate the implicitly pejorative term 'absolute music' (as in 'absolutely detached'). But the opponents of Liszt and Wagner soon appropriated this term as a positive (as in 'absolutely transcendent'). Throughout his writings, Wagner pointed out that his own theory of the music drama was deeply indebted to the dramatic qualities inherent in Beethoven's symphonies. But by emphasizing the historical roots of the symphony in dance, Wagner sought to deny the moral, social and philosophical content accorded the genre not only by tradition but also by a great many of his contemporaries. Wagner nevertheless remained deeply ambivalent towards the genre of the symphony to the end of his life. His repeated pronouncements about its death are contradicted by his continuing ambitions to write one.

Beethoven's Ninth Symphony played a central and highly problematic role within the ideological debate on the nature and future of music. As the composer's final work in the genre, the Ninth had taken on a special aura as Beethoven's last word on the symphony, and by the second half of the 19th century conservatives and progressives alike claimed it as part of their heritage, even if the latter camp considered the genre itself to now be outmoded and largely academic. It was within this highly charged polemical atmosphere that Brahms introduced his First Symphony in 1876. This work used the traditional sequence of four movements, eschewed all overt programmatic indications in the score, and employed a remarkably old-fashioned orchestra (the horn parts, for example, could easily be played on the natural horns of Beethoven's time). In addition to his more obvious struggles with the legacy of Beethoven, Brahms was also compelled to address – in music – more recent debates about the viability of the symphony. As in Beethoven's case there is no 'formula' to Brahms's symphonies: each takes a different conceptual approach to the genre. In general, Brahms sought to avoid making the symphony even more monumental than it had already become. The relatively diminutive inner movements of the First serve almost as interludes to the outer movements, while the finale of the Second departs from the idea of a grandiose, 'culminative' finale. The imposing passacaglia-based finale of his Fourth Symphony, on the other hand, stands well within a tradition set down in the 'Eroica'.

Other German composers whose first symphonies appeared in the third quarter of 19th century include Carl Goldmark (two, 1860 and 1887); Robert Volkmann (two, 1863 and 1865); Joseph Rheinberger (three youthful symphonies, followed by the 'Wallen' and 'Florentine' symphonies of 1866 and 1887 respectively); Max Bruch (three, written between 1870 and 1877); Carl Reinecke (three, between *c*1870 and *c*1895); and Friedrich Gernsheim (four, between 1875 and 1896). Still, many later composers of note avoided the genre altogether or abandoned it early on after a few youthful works. Richard Strauss, for example, wrote two early symphonies (1880 and 1884) but never returned to the genre. His *Symphonia domestica* (1903) and *Alpensinfonie* (1915), in spite of

their names, stand firmly within the tradition of the symphonic poem.

Anton Bruckner's 11 symphonies, composed between 1863 and 1896 (the Ninth remained unfinished at his death), occupy a curious position in the polemics of the mid- and late 19th century. Although Bruckner himself took no part in the debate between progressives and conservatives, his symphonies were often allied with the Wagnerian camp on the grounds of their extended harmonic language, massive orchestral forces, imposing length, and the composer's open veneration of Wagner (the dedicatee of Bruckner's Third Symphony). Bruckner's symphonies are nevertheless remarkably independent in their generic conception. Building on the traditional four-movement design, they are monumental in scope and orchestration, combining lyricism with an inherently polyphonic design. In contrast with the more typical techniques of thematic manipulation and metamorphosis, Bruckner favoured an approach to large-scale form that relied more on large-scale thematic and harmonic juxtaposition. Over the course of his output, one senses an ever-increasing interest in cyclic integration that culminates in his masterpiece, the Symphony no.8 in C minor, a work whose final page integrates the main themes of all four movements simultaneously.

The early symphonies of Gustav Mahler, in turn, take these ideas of monumentality and cyclic integration to new extremes. Using orchestral forces of unprecedented dimension, Mahler juxtaposed the lyrical with the polyphonic, the monumental with the miniature, the sentimental with the grotesque. All four of his symphonies written in the 19th century strive towards a kind of utopian finale, and in this sense, his debt to Beethoven's Ninth is obvious. But in his Third Symphony, the instrumental finale follows two vocal movements, and in his Fourth the vocal finale is sung by a solo soprano, without chorus. In this sense, Mahler stands at the end of one tradition – the monumental, heroic symphony – and at the beginning of another, one with a more circumspect, ambivalent tone. Both traditions were to continue into the 20th century.

6. OTHER COUNTRIES, 1840–1900. For all practical purposes, the 19th-century symphony was for many decades an essentially German genre, not only by virtue of the nationality of its outstanding practitioners, but indeed by its very nature. For much of the century, non-German composers typically looked to Beethoven and other later Germans for their models. In the latter part of the century, however, the broader phenomenon of musical nationalism – the idea that music could draw on indigenous melodic, harmonic, rhythmic folk idioms – provided an important impetus to the symphony.

Such tendencies are most clearly evident in the nationalities of eastern Europe. Antonín Dvořák, who was trained and worked within an essentially German environment, began to draw on dance rhythms and melodic inflections of popular music from his native Bohemia in his later symphonies, in particular. In his last work in the genre, subtitled 'From the New World' (1893), he incorporated musical impressions from his various tours to the USA. In Russia, Anton Rubinstein also worked within an essentially German tradition but in so doing provided an important model for subsequent symphonists from his native land, including, most prominently, Tchaikovsky. Rubinstein's six symphonies, spanning the years 1850–86, enjoyed considerable popularity in their time across the entire continent, particularly his 'Ocean' Symphony (1851, revised 1863 and 1880). The 1860s witnessed the première of first symphonies by an impressive array of Russian composers, including Rimsky-Korsakov (1865), Tchaikovsky (1866), Balakirev (1866) and Borodin (1867). Later Russian symphonists of note include Sergey Lyapunov (two symphonies, 1887 and 1917), Alexandr Glazunov (the first of whose eight symphonies was premiered in 1882), Serge Rachmaninoff (three symphonies, the first from 1895), and Reyngol'd Glier (three symphonies, the first from 1900). Unlike Rubinstein, these later composers were more prone to incorporate into their symphonies such nationalistic elements as modal inflections and folk-inspired rhythms. Their orchestration also tends to reflect the rich tradition of the Russian brass ensemble.

Although the symphony continued to play an important role in the curriculum of the Paris Conservatoire, most of the more notable French composers who cultivated the symphony after Berlioz were inclined to write only a few works in this genre. A number of these nevertheless represent important contributions to the symphony. These include Saint-Saëns, who completed his First Symphony in 1853 and whose last symphony, the Third (1886), incorporates a substantial part for organ; Gounod (two symphonies, from 1855 and 1856); and Bizet, whose vivacious Symphony in C major (1855) was written when the composer was only 17 but remained essentially unknown until its recovery in the 1930s. Bizet's other symphony ('Roma', also in C, 1868, revised 1871) reflects the composer's memories of his time in Italy. D'Indy's unpublished *Symphonie italienne* dates from 1872, while his popular *Symphonie sur un chant montagnard français*, incorporating a prominent part for piano, was given in 1886; he finished two later symphonies in 1903 and 1918. Other notable French composers include Edouard Lalo (a single work from 1886; his *Symphonie espagnole* represents an ingenious hybrid of symphony and violin concerto); Ernest Chausson (a Symphony in B♭ from 1890, with sketches for a Second Symphony from 1899); and Paul Dukas (a single symphony, in C, from 1896). The Belgian César Franck, whose youthful *Première grande symphonie* of 1840 was followed almost 50 years later by the hugely successful Symphony in D minor (1888), also belongs within this tradition. Franck's D minor Symphony blends advanced chromatic harmonies with rich orchestration and an almost obsessive devotion to thematic cyclicity.

With rare exceptions, Italy remained largely indifferent to the symphony in the 19th century. Neither its musical culture nor its institutions were favourable to the development of instrumental music for large ensembles. Indeed, the first performance of Beethoven's Ninth in Italy did not take place until 1878.

Throughout the 19th century England, for the most part, remained under the direct influence of Germany. Cipriani Potter (ten symphonies, written between 1819 and 1832) and William Sterndale Bennett (six, between 1832 and 1864) produced well-crafted works that extended the traditions of Haydn, Mozart and early Mendelssohn. Later composers such as Frederic Cowen (six symphonies, between 1869 and 1898), the Irish-born Charles Villiers Stanford (seven, between 1875 and 1911), and Hubert Parry (four symphonies, all in the 1880s) took the later works of Mendelssohn and Schumann as

their principal models. In his Third and Fourth Symphonies (Scandinavian, 1880, and Welsh, 1884), Cowen attempted to incorporate nationalistic – albeit personally foreign – elements into the genre. Later, more personal, applications of this strategy are evident in Stanford's Irish Symphony of 1887 and Parry's English Symphony of 1889.

In Scandinavia, the most prominent exponent of the symphony was the Dane Niels Gade, whose eight works in the genre span almost three decades, between 1842 and 1870. After the youthful First, however, none of Gade's subsequent symphonies achieved anywhere near the same degree of acclaim, and he gradually retreated from his espousal of weaving nationalistic elements into music. Franz Berwald, in turn, laboured in comparative obscurity while producing four symphonies in the years 1842–5; only one of these, the First, was performed during his lifetime, and his others remained unknown for all practical purposes until the early 20th century. Grieg's sole contribution to the genre was a student work written under the eye of Gade in 1864; he later suppressed (but did not destroy) this symphony. Although Johan Svendsen's two symphonies (1866 and 1877) attest to the influence of Norwegian harmonies and rhythms, a distinctively Scandinavian symphonic tone emerged only at the very end of the 19th century and the early 20th in the works of such later composers as Nielsen and Sibelius.

In the USA, émigré composers provided an important impetus in both the composition and performance of such symphonies. The understanding of the symphony as a genre reflecting the aspirations and ideals of a larger community is amply evident in the work of A.P. Heinrich, who emigrated to the USA from his native Bohemia in the first decade of the 19th century. In his *Columbiad: Grand American National Chivalrous Symphony* (1837), he incorporated such tunes as 'Yankee Doodle' and 'Hail, Columbia'. Like Dvořák many decades later, Heinrich was also much taken with Amerindians and their music, as is reflected in his *Manitou Mysteries, or The Voice of the Great Spirit*, subtitled 'Gran sinfonia misteriosa-indiana' (1845), which in spite of its distinctive title follows the traditional four-movement format, with a rondo finale. L.M. Gottschalk's First Symphony, *La nuit des tropiques* (1859), on the other hand, is a two-movement work that integrates rumba and fugue towards the end of its finale. And in spite of its title, Gottschalk's later *À Montevideo: Symphonie romantique pour grand orchestre* (1868) incorporates 'Hail, Columbia' and 'Yankee Doodle'. G.F. Bristow's five symphonies span some six decades between 1848 and 1893; his last, subtitled 'Niagara', uses vocal soloists and chorus in its finale, along the lines of Beethoven's Ninth, but incorporating such extant tunes as 'Old Hundredth' and a portion of the Hallelujah Chorus from Handel's *Messiah*. Charles Ives, whose most important symphonies fall within the 20th century, built on all these traditions and more.

In the second half of the 19th century, ironically, native-born American composers were more likely to travel to Germany for their advanced musical training and follow in the more or less conservative tradition of the Leipzig school as exemplified by Mendelssohn and Schumann. These composers include John Knowles Paine (two symphonies, 1875 and 1879); George Whitefield Chadwick (three symphonies, between 1881 and 1894); and Horatio Parker, whose sole symphony (1885) was a student work that received its première in Munich. The Gaelic Symphony by Amy Beach (1896), who received her training entirely in the USA, uses Irish melodies.

7. MIXTURES WITH OTHER GENRES. Mixtures with other genres are evident throughout the century; Beethoven's Ninth Symphony opened the door to such generic cross-breeding. Outstanding examples include hybrids with the concerto (Berlioz's *Harold en Italie*, Lalo's *Symphonie espagnole*); cantata (Mendelssohn's *Lobgesang*, Félicien David's *Le Desert* and *Christoph Colombe*, the latter two designated as an *ode-symphonie*); opera (Berlioz's *Roméo et Juliette*); and even the symphonic poem (Liszt's *Faust-Symphonie*). The 'symphonic' character of many pieces that nominally lie outside the genre is evident in works such as Rimsky-Korsakov's *Sadko* ('Symphonic Pictures') and Debussy's *La mer* (1898), subtitled 'Three Symphonic Sketches', in which the remnants of symphonic form are still clearly discernible (a slow introduction to a fast opening movement, followed by a scherzo and a fast, culminative finale). Symphonic form and breadth are also frequently evident in concertos, even when not indicated in titles. The concertos of Schumann, Brahms and Dvořák, for example, all show a tendency towards a fuller integration of soloist and orchestra and turn away from an aesthetic of virtuosity for virtuosity's sake, preferring instead a depth of tone more typically associated with the symphony. The symphony exerted demonstrable influence on the orchestral suite as well. This genre enjoyed a brief but vigorous revival in the second half of the century at the hands of Volkmann, Brahms, Dvořák and Tchaikovsky. Also of note is the phenomenon of the organ symphony, as cultivated by Charles-Marie Widor.

III. 20th century

Just as the first decade of the 19th century had seen the crystallization, in Beethoven's middle period, of a new type of symphony, so the first decade of the 20th brought that type to its fullest maturity and also effectively to its end. Not until then did the purely formal attempt to cast a Romantic symphony in a Classical mould give way once more to symphonic forms arising directly from the nature of their materials. Though the recovery was, for historical reasons, short-lived, it was to have important consequences.

1. 1901–18: Mahler, Sibelius, Nielsen. The most important symphonists before World War I are Mahler, Sibelius, Elgar and (though his greatest symphonies came later) Nielsen: to these may be added Skryabin, and Schoenberg if the decided chamber character of his *Kammersymphonie* no.1, op.9 (1906) is allowed to be outweighed by its masterly deployment of heterogeneous instrumental and musical means within a single, extended and closely argued movement. Its four-movement-in-one design is already prophetic of a vital tendency towards complete fusion of contrasting elements in the modern symphony, whereas the one-movement form of Skryabin's later symphonies (*La poème de l'extase*, 1905–8; *Prométhée, le poème du feu*, 1908–10) springs rather from something static in the music's harmony, notwithstanding its heady rhythmic and contrapuntal activity. These works are symphonic poems, as are Strauss's enormous *Symphonia domestica* (1902–3) and the picturesque *Alpensymphonie* (1915), neither of them distinguished by either compression or rigour of thought. One of the most beautiful works in this genre is the third of Szymanowski's four symphonies, a vocal-orchestral work subtitled 'Song of the Night' (1916). Its ecstatic tone reveals the influence of both Skryabin and Debussy.

By the turn of the century Mahler had completed his first four symphonies. They form a group related to the early song cycle, *Lieder eines fahrenden Gesellen*, and to the *Des Knaben Wunderhorn* songs, examples of which appear as independent movements. Remarkable though these symphonies are at the imaginative level, they hardly achieve a true symphonic fusion of their diverse ingredients. When Mahler told Sibelius in 1907 that 'the symphony must be like the world; it must be all-embracing', he was merely echoing the instinctive Romantic feeling that all products of the one imagination enjoyed *ipso facto* a sufficient unity, the test being only one of quality. However, his own last five completed symphonies (nos.5–9, of which all but the last were completed before the meeting with Sibelius) retreat significantly from this position. The Fifth (1902), Sixth (1904) and Seventh (1905) form a second group, distinguished from the first not only because they are purely orchestral but because of a new discipline in the thematic and formal craftsmanship. No doubt the two points are related. But Mahler's orchestral music after 1900 still alludes to contemporary vocal works (for instance, the various references to the *Kindertotenlieder* and Rückert songs in the Fifth Symphony) and moreover he still evidently saw the symphony in narrative theatrical terms. All three begin with marches of a funereal or tragic character, and the hero either overcomes his troubles (in the exuberant rondo finales of nos.5 and 7, both of which end in keys other than that in which the work began) or confronts them in a stern spirit of acceptance (no.6). On the other hand, these symphonies are designedly more Classical in method than their predecessors. The four-movement plan of the Sixth appears to be a conscious attempt to reassert the autonomous musical form of the Classical symphony. Its stringent motivic procedures are in the greatest possible contrast with the loose assemblage of picturesque themes

in the vast first movement of no.3. Similarly in the Fifth, though the form appears more random, its operation is precise, direct and economical. The adumbration of the rondo's jubilant climax at the end of the otherwise anguished first part is a master stroke that enables the finale to clinch the whole design in a way both musically and psychologically apt.

But Mahler's attempts to restore the conventional quadripartite form of the Classical symphony had to contend with a critical problem of late Romantic music: namely that if musical ideas were to be the direct arbiter of form, the separation of the slow movement from the mainstream of symphonic argument could no longer serve a useful purpose. Large-scale Adagio movements in fact do not occur in Mahler's middle symphonies. When they reappear, in *Das Lied von der Erde* (1907–9) and the Ninth Symphony (1909), they are on a massive scale as finales. The first movement of the incomplete Tenth is likewise an immense Adagio, while the first movement of the Ninth is also predominantly slow. There are signs here of a tendency to fuse the traditional ingredients of the symphony. But Mahler, still perhaps in the grip of his Romantic theory of universality, did not live to follow this tendency to its logical conclusion.

That his Scandinavian contemporaries Sibelius and Nielsen did, however, follow it up was not simply because they lived longer. Something decidedly anti-Romantic in their temperaments, a certain objectivity of stance, prompted them to refine and compress to the point where the fusion of contrasting elements assumed much greater importance than the insistence on their individual or picturesque nature. In the light of what happened after World War I this was a prophetic attitude. In the Third (1907) and Fourth (1910–11) Symphonies of Sibelius the anti-rhetorical streak in his nature already brought a new economy of gesture and form which only helped increase the force, energy and ultimately even the epic stature of what was said. Their prophetic character can be seen if they are compared with other symphonies of the decade before the war, not only those of Mahler and Skryabin, but Suk's massive *Asrael Symphony* (1905–6), Rachmaninoff's sumptuous but very indulgent Second (1907), and Elgar's two completed symphonies (1908 and 1910). Elgar was at the height of his powers when he wrote these works, and they are rightly admired for their uninhibited Romantic invention, their subtle ambivalence of tone and their brilliant orchestration. But symphonically they are weakened by rhapsodic elements which stretch them out to an extravagant length not justified by a consistent musical impulse. The peremptory grandeur of Sibelius's Fourth might be a direct rebuttal of everything that Elgar's Second stands for. Yet linguistically Sibelius is hardly in advance of Elgar. The change is primarily one of attitude. The artist's time-honoured *amour propre* is subjected to ruthless scrutiny, and everything spurious, pretentious or solipsistic is thrown out.

After the war Sibelius continued to develop his technique until, in his Seventh and final symphony (1924), he arrived at the point where large musical conflicts could truly be resolved in a single-movement symphony of 20 minutes' duration. The Seventh is a masterpiece as compact as it is varied and inspired. Its exact status as a symphony can moreover be tested against another one-movement masterpiece Sibelius wrote soon afterwards, the tone poem *Tapiola*. Though in one sense more unified than the symphony, since all its material comes directly from the initial theme, *Tapiola* precisely for that reason lacks the dialectical and dynamic force of the symphony. As a descriptive and imaginative work *Tapiola* is a considerable achievement. But it can hardly be denied that the symphony, in satisfactorily resolving more complicated issues within the same time-span, is musically and intellectually the more substantial work.

Nielsen, like Sibelius, started by writing four-movement symphonies along fairly traditional lines. On his first three works in the genre the influence of Dvořák and Brahms is apparent. But already in no.1 (1890–92) a new direction is taken. Though the work is 'in' G minor, it ends in C, and the composer acknowledged this ambiguity by opening the symphony with a chord of C major; what follows is, conceptually speaking, a struggle to affirm an initially doubtful proposition. But what is most significant is the exuberance and energy Nielsen brings to that struggle. Here at last is a composer whose ability to develop his musical ideas is not crippled by introspection or a gratuitous emotionalism. But it was some years before Nielsen realized all the implications of this early work. His Second Symphony (1901–2) keeps the four traditional movements, while admitting that the arrangement has become a purely external matter by naming them after the four temperaments of medieval physiology. As late as the Fourth Symphony (1914–6) Nielsen was still paying formal court to a quadripartite sequence, though the work is continuous, with a powerful thrust towards a clinching tonality which is other than the starting key. A subtitle, 'The Inextinguishable', alludes to what the composer called 'the elemental Will of Life'. This life force eventually triumphs graphically in the Fifth Symphony (1921–2), which represents the forces of destruction in a famous side-drum cadenza improvised against the main second theme, and the triumph of will in two masterly fugues in which order is finally and conclusively imposed on the material.

That Nielsen's and Sibelius's culminating symphonies were both written after the war is of some importance, since it emphasizes that their affirmations were, so to speak, properly informed. It would have been better still if they had been able to go on in the same spirit. But Nielsen's last symphony, no.6 (1924–5), is a distraught, embittered work, and Sibelius wrote nothing of significance after *Tapiola*.

2. France and Germany after 1918. As it is, the shock effect of the war is as well illustrated in the symphony as in any other artistic medium. Indeed, in the subversive and unstable atmosphere of the 1920s it was the symphony that seemed to stand most for pre-war individualism and moral certainty, values that the New Art set itself to undermine. Avant-garde composers either did not write symphonies or they wrote symphonies in which received standards were deliberately outraged. Milhaud's six chamber symphonies, written between 1917 and 1923, are as tiny, emotionally neutral and formally inconsequential as Mahler's had been vast, romantic and complex. In 1920 Stravinsky composed his *Symphonies of Wind Instruments*, using the plural form to disarm the inevitable criticism that the work was not a symphony at all but an experimental arrangement of dissociated sound-blocks. And in 1924 Prokofiev, whose Symphony no.1 (the so-called 'Classical' of 1917) had charmingly aped the courtesies of Baroque dance music,

snapped back at his Parisian audience with a dissonant and fearsomely contrapuntal Second Symphony, piquantly modelled on Beethoven's C minor Piano Sonata op.111. In Germany, the former home of the symphony, the genre went through its dimmest phase. Almost the only notable symphonies composed there in the 1920s and early 30s were Pfitzner's First (1932), the earlier of Weill's two interesting and well-wrought symphonies (1921) and, in Austria, the Third Symphony (1927–8) of the romantically inclined Franz Schmidt and Webern's exquisite 12-note Symphony for nine instruments (1927–8), which must, for the purposes of this article, be regarded as a chamber work. This list speaks for itself. It contains not a single name of importance in the history of the symphony. The Weill piece, an eclectic one-movement work influenced by Busoni and the two principal Modernists of the day, Stravinsky and Schoenberg, almost inevitably substitutes academic solidness for compelling structural energy (unlike his more assured neo-classical Second Symphony of 1933). Schmidt's late symphonies illustrate in a different way the dilemma of German music in the postwar years. His long, tragic, hauntingly beautiful Fourth (1932–3) yearns nostalgically for the age of Mahler, Reger and the young Strauss. The year of its composition is thus as significant as the year of Schmidt's death, 1939.

3. STRAVINSKY; FRANCE AFTER 1930. In France, as in Germany, many leading avant-garde figures of the 1920s made their peace with the symphony, but the truce was never more than partial and always apparently contingent on some compromise of their modernity. In France the reconciliation started soon in the 1930s. Stravinsky's *Symphonie de psaumes* (1930), though fully choral and in no way formally indebted to the symphonic tradition, has nevertheless the force of a symphony in its combination of a strong formal thrust with a deep unity of material. What it does not attempt is any conventional symphonic process of conflict or resolution. The substance of things hoped for is already, for Stravinsky as for St Paul, faith; and it is the music's neo-Baroque religious symbolism, its fugues and spiralling ostinatos, that supply both the power and, ultimately, the stability. The work is a masterpiece *sui generis*, as is a later and more massive symphony of a quasi-religious character, Messiaen's *Turangalîla-symphonie* (1946–8), one of whose musical ancestors is Stravinsky's *Symphonies of Wind Instruments*. *Turangalîla* is a difficult work to place in the history of the symphony, being devoid of the dialectical properties one instinctively associates with the genre, though by no means without development, thematic extension or indeed drama. Its later companions, *Et exspecto resurrectionem mortuorum* and *La Transfiguration de Notre Seigneur Jésus-Christ*, no longer carry the generic designation. Stravinsky's own later orchestral symphonies, in C (1938–40) and in Three Movements (1945), are a clear attempt to revive the symmetries and contrasts of the high Classical symphony. Their technical and imaginative brilliance may tend to conceal the fact that their specifically symphonic procedures (such as the sonata form of the Symphony in C first movement) are as allusive as the Baroque elements in *Dumbarton Oaks*. So far from the procedures arising from the nature of the material, they form part of the material itself. Whether, as some think, this rules them out of the history of the symphony or alternatively invites us to redefine it is a question that it may still be too early to answer. They are certainly among the finest 20th-century works to carry the generic title.

Among Stravinsky's French or French-based contemporaries, Milhaud and Honegger both turned to symphonic writing proper in the 1930s. Like so much of his music, Milhaud's 12 symphonies display the essentially conversational character of his talent, and where they aspire to conventional symphonic 'stature' they clearly overstep the plausible limits of their content. In any case, Milhaud's style remained static, picturesque, anecdotal, perhaps modestly hieratic.

Honegger wrote five symphonies between 1930 and his death in 1955. As a group they show how irrelevant this serious-minded German-Swiss composer's association with the subversive Parisian Six had been. His symphonies are tensely argued, harmonically crabbed essays, at first still dependent on the chugging rhythms of orthodox neo-classicism, later adopting a more polyphonic style propelled with a certain diabolic energy. As music they are more determined than inspired, and certainly lack the combination of variety and finesse that still brings the third and fourth symphonies of Roussel (1929–30 and 1934) the occasional performance. Roussel's Third was composed for the same occasion – the 50th anniversary of the Boston Symphony Orchestra – as Honegger's First, with which it has superficial points in common. But Roussel's eclecticism was broader, more urbane and productive than Honegger's, incorporating something of that burlesque humour which had always been so alien to Honegger, along with more orthodox ingredients of the traditional symphony. At its best Roussel's symphonic writing is lucid and exhilarating, though it can seem artificial and melodically insipid. Roussel is probably best seen as a modern descendant of that classic French 19th-century type, the academic symphonist, for his mastery of procedure generally outstripped his imaginative flair.

4. HINDEMITH. While the symphony in France thus struggled back to life, in Germany and Austria it must have seemed quite dead; here more than anywhere one can see how the erosion of secure social values had undercut the received forms of art. Thus Schmidt's Fourth Symphony, weary in style and content, was a fitting epitaph to an old order. Strauss and Pfitzner, Germany's two most distinguished composers, were symphonically spent. Of the younger figures, Hartmann and Blacher were delayed by Nazism, while Krenek, having produced three noisy and dissonant symphonies in Berlin in the early 1920s, retired to his native Vienna on the proceeds of the opera *Jonny spielt auf* and came under the influence of Schoenberg.

The one shining light in the darkness was Hindemith, and it is apt that the darkness comprehended him not. Hindemith's avant-gardism in the 1920s had mainly been of an academic rather than ideological cast, and by the early 1930s he was at work on an opera, *Mathis der Maler*, which specifically argued that the artist should concern himself above all with art and not interfere in politics. For reasons not directly connected with its subject, this opera was obstructed by the Nazis. However, in 1934 Furtwängler conducted a three-movement symphony excerpted from it, and this was to be the first of a line of symphonic masterpieces in which Hindemith re-established his place in the classic line of German instrumental composers. Like Stravinsky, Hindemith

drew heavily on Baroque phraseology, but his symphonies (eight in number if the *Symphonic Metamorphosis* and the *Sinfonietta* are included) are traditional in that they basically follow Classical and 19th-century formal procedures, and modern in that they are entirely true to Hindemith's personal manner of expression, from which they derive their vitality. Of the later symphonies the most notable are the Symphony in E♭ (1940) and the symphony from the opera *Die Harmonie der Welt* (1951). Hindemith's symphonies are tonal, with an admixture of 4th-based harmony, and indeed are energetically so. In the *Mathis der Maler* symphony (1934), for instance, the first movement derives much fuel from the tension between G major and its relative Lydian C on the one hand, and D♭–F♯ on the other, D♭ being the key both of the introductory chorale and of the final apotheosis, while the second subject of the first movement is in F♯. Hindemith's writing is rhythmically sometimes stereotyped, but he handled counterpoint like a master, in which respect his ancestry can be traced directly from the last great classical German symphony, Brahms's Fourth.

5. THE USA. Like many contemporary composers, Hindemith spent World War II in the USA. This exodus, while culturally damaging for Europe, was undoubtedly of immense benefit to America. There the absence of a truly indigenous musical tradition had the initial effect of encouraging not the invention of new formal prototypes but, on the contrary, the adoption of established European types. Thus for example Henry Cowell, whose outrageous cluster technique influenced Bartók and through him a whole younger generation of European composers, wrote some 21 symphonies, though their naive, primitive exoticism is far from the European idea of symphonic style. That the academic tradition of the symphony was, from the 1930s, embodied substantially in American music is beyond question.

Cowell himself was influenced by Ives, whose biographer he was. But it has to be remembered that, in the main, Ives's music was not known before the late 1920s, and not widely known until long after that. His tumultuous Fourth Symphony, one of the earliest examples of pluralism and collage in music, was completed in 1916 but not heard in full until 1965. After World War I the main impulse towards a new American music came, paradoxically, from Paris, where Copland, Harris and Piston all studied with Nadia Boulanger. Copland remained the most cosmopolitan, and that is perhaps precisely why he wrote the fewest symphonies. The Third (1944–6) is an imposing work of epic-romantic proportions, but the so-called 'Short' Symphony (no.2, 1932–3) is by a long way the more interesting: a rather anti-heroic work that draws attention to small symphonic processes and eschews rhetoric.

Copland would certainly have been the last composer, on this form, to use the symphony to embody the 'American Dream'. That was left instead to Roy Harris, whose seven orchestral symphonies seem to express the pioneer's religious faith in his mission, its honest purpose and sure outcome. His one-movement Third (1937) is famous and outstandingly the best. It remains the locus classicus of that muscular prairie romanticism which subsequent American symphonists took over with such effortless self-confidence. The strength of this manner is best shown in the tremendous diatonic thrust of Harris's piece, and in Piston's more sophisticated and technically correct symphonies. Its limitations loom balefully in Harris's own later symphonies, especially the Fifth (1942), whose primitivism is forced and therefore pointless, and in the nine symphonies of his pupil, William Schuman, where the muscle-flexing has moved into the boardroom and been transformed into a glib and polished oratory somewhat out of touch with the plain morality that once justified it. Schuman never cured a tendency to bully the ear. But his symphonies are expertly assembled and still show the benefit of that formal compression which Harris and Copland took with them from Europe.

The above are, broadly, the tonal school of early 20th-century American symphonists. To them one must add Barber, whose brilliant if slightly bombastic First Symphony (1936) in one movement shares the unbroken momentum of Harris's Third; the younger Bernstein, Mennin and Persichetti; the gifted Mexican Carlos Chávez, whose *Sinfonía India* (1935–6), also in one movement, is one of the best adaptations of exotic folk materials to a symphonic form; and finally the Czech-born, Paris-trained Martinů, whose six symphonies were all composed in the USA after his emigration there in 1941. In Paris, Martinů picked up a liking for brisk motor rhythms. But the essentials of his style are Czech: the eloquent string cantilenas, the chattering ostinato motivic fabric and the drifting cross-rhythms, which are both Martinů's trademark and, at times of failing inspiration, his mannerism. Like Dvořák he wrote nostalgically about his native Bohemia from distant New York, and like Dvořák he owed much to Brahms (see for instance his use of orchestral antiphony in the Fourth and Fifth Symphonies) as well as something to his adopted American compatriots.

About the American tonal symphonists in general there is perhaps a certain excess heartiness. It may be that in the last resort the most interesting American symphonist is the subtle and introspective Roger Sessions. Sessions's First Symphony, written in Europe in 1926–7, is neo-classical with some flavour of jazz. But thereafter his symphonies are increasingly chromatic, atonal and (from 1953) dodecaphonic. Unlike Riegger, whose Fourth Symphony (1956) tries to crystallize a tonal sense from 12-note ingredients, Sessions always accepted the consequences of his style, though it rapidly took him into areas where the traditional idea of symphonic writing – so basic for Harris, Piston and Schuman – could hardly function. Since the Second (1944–6), all Sessions's symphonies have had an inward-going as well as onward-going character, and sometimes their density of texture and equivocal sense of direction may call to mind the later music of Elliott Carter. But with Sessions line and pulse, though shifting, are always clear, and shape is never obscured by detail. The fact that the shape itself does not culminate in the traditional way is a modern but not necessarily unsymphonic quality; in the Eighth Symphony, for example, the concluding reprise of the opening music has the effect not of invalidating the intervening discourse but of setting it in a new dimension – one familiar from opera, where an aria may hold up the action in order to detail a character's feelings without endangering the general sense of continuity.

6. BRITAIN. Britain has also had atonal symphonists, but they have not in the main evolved forms that arise properly from the special character of the materials and procedures. Searle's five symphonies suffer from stereo-

typed gestures that belong to a Romantic idiom; Bennett and McCabe, among younger composers, have written symphonies of much surface brilliance, while in the symphonies of Fricker, Goehr, Hoddinott and Frankel there is solid and coherent invention. But perhaps the most impressive figure in this category is the underrated William Alwyn, whose dark but forthright neo-Romanticism gives his symphonies something of the sweep of the American tonal school, though the basis of his style is strictly speaking atonal. Alwyn certainly has little in common with Sessions (more perhaps with Piston), whereas a Schoenberg pupil, Roberto Gerhard, who was born in Spain but lived in England after the Civil War, is like Sessions at least in having evolved an autonomous and self-contained symphonic style out of dodecaphony, though the glittering surface of his third (1960) and fourth (1967) symphonies, with their skilful, extrovert arrangement of block textures and collage and their coruscating instrumentation, may conceal little of a more searching nature.

By contrast the tonal symphonic tradition has a secure base in the music of Elgar and of Vaughan Williams, whose nine symphonies astonishingly span the years 1910 to 1957. Vaughan Williams's popularity, and his quasi-paternal status, have tended to obscure the unevenness of his output. But the central block of four symphonies, from the *Pastoral Symphony* (no.3, 1921) to no.6 (1944–7), are sufficient witness to his originality and visionary power. It was once fashionable to praise the bellicose Fourth (1931–4) and Sixth at the expense of the other two. Indeed they are fine achievements, and the desolate epilogue to the Sixth particularly exemplifies the ambivalent, enigmatic strain that Vaughan Williams shared with Holst, and which has proved the least imitable aspect of both (compare, for example, the tortuous reflectiveness of another 'post-Tudor' symphonist, Rubbra; and, on the other side of the coin, the blatant tub-thumping in the finale of Walton's First (1935), an otherwise compelling and individual score influenced in sound rather than method by Sibelius). But the Third and Fifth (1938–43) are surely bolder and more remarkable. The *Pastoral Symphony*, while indebted to French influences achieved a private, mystical rural vision which could well support the music's superficial monotony of harmony and movement. In the Fifth Vaughan Williams placed this achievement on a specifically spiritual plane by allusion to Bunyan's *Pilgrim's Progress* (there are superscriptions from Bunyan in the score, and some of the music later reappeared in Vaughan Williams's opera on the subject); here again static harmonies and flowing, unvarying rhythms serve an essentially contemplative end.

That such qualities are not to be mistaken for dullness may be seen by comparing these two symphonies with the once-admired seven by Bax. Bax also strove for a mystical union with nature, but through a language of a distinctly neurotic character, in which unsettled harmonies lead the music not towards any clearly envisaged destination but into rambling byways from which Bax was often apparently powerless to extricate himself or his listeners. A more emphatic symphonist of that generation is Havergal Brian, who lived to the age of 96 and completed 32 symphonies, all but 11 of them after his 80th birthday. Brian's idiom is more compact and functional than Bax's, though his earlier symphonies are on a large scale. Its rhetorical gestures have a certain force, without, however, concealing that Brian's creative technique is defective in various respects: for instance, his development of ideas is often shortwinded, and certain types of music seem beyond his grasp (a 'gritty' Allegro and a menacing or elegiac tone prevail). At his best, however, in for instance the Sixth Symphony (1947–8), he merits attention, if not the ludicrous panegyrics he once attracted.

One of his admirers, Robert Simpson, was himself the author of 11 fine symphonies, influenced at first by Nielsen, later by a more direct wish to restore the formal, harmonic and above all spiritual values of Beethoven. Curiously, the same preoccupation underlies Tippett's vocal Third Symphony (1970–72), here masked by an irony absent from its two very different predecessors (1945 and 1957), and also the compact, single-movement Fourth (1976–7). From the first Tippett was a pathfinding genius, whereas the ambitions of his contemporaries, Rawsthorne and Berkeley, each the author of three finely crafted symphonies, were always more modest. Even Britten, however, generally fought shy of the symphony, though his two unequivocal essays in the genre, the *Sinfonia da requiem* (1939–40) and the *Symphony for Cello and Orchestra* (1963), both show mastery of the difficult art of manipulating symphonic materials over a large canvas and in purely abstract terms, while the kaleidoscopic *Spring Symphony* (1949) is more in the nature of a choral–orchestral song cycle. Of a younger generation only the Australian-born Williamson has shown, in his highly original modal–serial Second Symphony (1968–9), any serious desire to reconcile modern non-directional procedures (influenced by Messiaen) with traditional symphonic form.

7. Scandinavia after Nielsen. In Scandinavia, likewise, the main tendency since the 1920s has been to support the traditional status of the symphony rather than to transplant it to a wholly new aesthetic. This is in keeping with the achievements of Sibelius and Nielsen themselves, and it evidently incurs the risk of epigonism, which only the strongest personalities have survived. In Finland, Sibelius has dominated the prevailing style to such an extent that among local symphonists only Kokkonen has produced much of distinctive character (his Third Symphony of 1967 has a Sibelian economy but is gesturally original). In Sweden and Denmark, on the other hand, Sibelius has had a more helpful impact, while Nielsen has been relatively less copied. This is chiefly for methodological reasons. Sibelius's austere motivic devices could be adapted, in theory at least, to any musical idiom, whereas Nielsen's more expansive formal procedures could be sustained only by a style as rhetorical as his own, which seems to have been generally thought inappropriate and was certainly hard to copy without plagiarism. In Denmark the first outstanding symphonist after Nielsen was a Sibelian, Vagn Holmboe, whose symphonies brilliantly invest the master's rigorous thematic methods with a pulsating energy that obviously springs from neo-classicism and yet sounds quite fresh and personal. Holmboe's Eighth Symphony (1951–2) exemplifies his muscular and for the most part sparing way of developing short themes which often act, though never purely mechanically, as ostinatos.

Of the Swedish symphonists the most notable active around the mid-century were Hilding Rosenberg and K.-B. Blomdahl. Both are eclectics, as is their lesser compatriot Wirén. Rosenberg was influenced for a time

by Schoenberg, and his style is at once denser and more lyrical than Holmboe's, though still often recalling both Sibelius and Nielsen. His six symphonies vary enormously in scale. Blomdahl flirted with more up-to-date influences, but not always so discriminatingly. His last symphony (no.3, 'Facets', 1948) is a reasonably compact piece with arresting moments rather than compelling momentum.

8. THE USSR: SHOSTAKOVICH. While the poverty of symphonic writing in France and Germany between the wars reflected the general social instability as much as a confusion over aesthetic values, the rise of the symphony in the USA and Scandinavia has a mainly artistic background. Where music was shallow-rooted it needed careful and traditional husbandry. In the USSR, by contrast, the symphony, though associated with a discarded past, nevertheless survived but under new colours – those of the ideological programme symphony, a genre that skirts the disputed borderlands of the cantata, the symphonic poem and the 'pure' symphony. That a totalitarian regime should be suspicious of abstract music is to be expected; but the Russian preference would in any case be for a documentary type of symphony, and the really damaging aspect of Soviet interference in music was its insistence on popularistic styles and unremitting optimism of content.

The baleful history of socialist realism is redeemed almost solely by the genius of Shostakovich and the honesty of Myaskovsky. They appear to be the only Soviet symphonists who struggled to reconcile a personal expressive impulse with the declared needs of a society to which they acknowledged allegiance. To them must be added Prokofiev, whose last three symphonies (nos.5–7) were composed after his return to the USSR in 1933. But Prokofiev, a lyrical melodist of Tchaikovskian stamp and a brilliantly original orchestrator, had no difficulty in reverting to an accessible idiom (he probably did so with relief), while his international fame allowed him comparative freedom of genre until the Zhdanov purges of 1948, from which no composer of talent was exempt.

Myaskovsky, though not a composer of the first rank, is an interesting eclectic figure whose 27 symphonies do not all deserve neglect. A pupil of Glier, he was influenced also by Liszt, Skryabin and Mahler, and his early symphonies productively, if too remorselessly, counterpoint an excitable sensibility with a rhetorical revolutionary optimism, which in the 1920s must have seemed a highly satisfactory channelling of creative energy. But Myaskovsky was troubled by a pessimistic cast of mind, which comes out in the perfunctory (but Tchaikovsky-like) Symphony no.21 (1940) and its Lisztian companion, the so-called Symphonic Ballad (no.22, 1941), whose triumphant ending has a decidedly spurious air. From such dilemmas Myaskovsky retreated into a folksy academicism, though even that was not colourless enough for Zhdanov.

Shostakovich, by contrast, kept up to the end the struggle between his personal introspection and pessimism and the official cultural dogma of clarity, simplicity and optimism. His 15 symphonies come from both sides; yet not one of them is without interest and there is never any abject sacrifice of quality, though the output is inevitably unequal and sometimes contains misjudgments. The documentary symphonies are nos.2 and 3 (1927 and 1929), which belong to the early revolutionary period before the denunciation of the opera *Lady Macbeth of Mtsensk*, and are still modernistic in character; no.7 (1941), the so-called 'Leningrad', which Bartók parodied in a famous passage of his Concerto for Orchestra; and nos.11 and 12 (1956–7 and 1959–61), which describe respectively the revolutions of 1905 and 1917. That Shostakovich was genuinely engaged with these subjects is repeatedly shown by the quality of the music (for instance in the wonderfully atmospheric first movement of no.11). His most personal symphonies, however, are no.1 (1924–5), a brilliant student work influenced by Hindemith, Prokofiev and perhaps Bartók; no.4 (withdrawn in 1936 but released for performance in the early 1960s); nos.6 and 10 (1939 and 1953); and the vocal–orchestral symphonies nos.13 and 14 (1962 and 1969). The other scores (including the popular Fifth of 1937) – 'a Soviet composer's answer to just criticism' after his withdrawal of no.4 – come somewhere in between, in that they are abstract works that nevertheless show certain effects of state ideology. Technically it might even be said that nos.5 and 8 (1943) are (with no.10) Shostakovich's best works. But they do not exactly define his position as a modern symphonist.

It was once tempting to see Shostakovich as the natural successor to the great post-Romantic intellectual symphonists, Sibelius, Nielsen and Mahler. But this is borne out by neither the technique nor the philosophy of his most original music. The influence of Mahler has been much remarked in his large symphonies, but a movement like the first of no.10, perhaps his most completely successful, is closer to Nielsen in its slow but inexorable linear build-up to a powerful dramatic climax. There is a comparable effect in the first movement of no.6. But Shostakovich was often unsuccessful in achieving such sustained tension by purely contrapuntal means, and when he did so one is left with a feeling of exhaustion quite different from the exhilaration and transcendence of Nielsen's best work. Moreover, such movements are slow-moving in Shostakovich. For him, quick music usually fulfilled either a cathartic or a satirical function, or followed the purely conventional Prokofiev 'motor' scherzo. This raises the important question of his musical philosophy. Where Nielsen was, broadly, an epic composer, and Sibelius was more or less neutral over such questions, Shostakovich was unquestionably, in himself, anti-heroic, sceptical and pessimistic. The parodistic tone of the First Symphony, the strangely whimsical finale of the Sixth, the witty, classical Ninth coming at a time when a 'Victory' symphony was expected (1945), the enigmatic, quicksilver finale of no.10, and the barely relieved sardonic pessimism of the Babiy-Yar Symphony, no.13: all these fascinating works show that for Shostakovich there were no clear solutions or final triumphs, only tragedy, irony, moral uncertainty and, in the song cycle no.14, death.

9. EASTERN EUROPE. That Shostakovich never lost his sense of artistic truth under the most trying personal circumstances stands to his credit. His achievement is all the greater in the light of the almost complete failure of other gifted composers to survive the final ideological battering administered through Zhdanov by Stalin. Outside Russia, in the smaller eastern European countries, music went through its bleakest phase after World War II. The specific stylistic données of socialist realism, coupled with the loss of contact with new music in western Europe, stifled original creative work, and continued to do so for some years after the general

liberalization in the middle and late 1950s. The point may be illustrated by comparing the Polish composer Lutosławski's First Symphony, which had its first performance in 1948, with its epoch-making successor. Though the earlier work is skilful and effective, it lacks the exploratory power, brilliance and intellectual conviction of the Second, completed in 1967 – a score that dazzlingly combines aleatory procedures (admittedly of a comparatively controlled type) with clear and forthright dialectical thinking. The Second Symphony's distinctive two-movement form – an episodic, almost anti-symphonic movement, with virtually no developmental inclination, followed by a more conventionally symphonic, forward-driven argument – was taken and adapted (with the addition of an introduction, epilogue and coda) for the Third (1981–3) with if anything even more powerful results. And if the melodic breadth of the epilogue's *cantando* theme and the increased harmonic clarity evident in the work as a whole was read by some as portending a move in the direction of neo-romanticism, such suspicions were dispelled by the Fourth (1988–92), which yields nothing to its predecessor either in terms of formal innovation or the sophistication of its technical arsenal. The other noteworthy Polish symphonist of Lutosławski's generation, Panufnik, produced just one acknowledged essay in the genre, the entertaining if eccentric *Sinfonia rustica* (1948), before fleeing to England in 1954. His nine further symphonies – the geometric and precisely chiselled *Sinfonia sacra* (1963) and *Sinfonia di sfere* (1976) as much as the later, more Romantic Ninth (1986, revised 1987) and Tenth (1988, revised 1990) – benefit eclectically from a wide range of influences.

In the other east European countries there have been many symphonists but few of note. The Hungarian Kadosa has composed eight symphonies of which the last four, written in the 1960s in a quasi-serial idiom, are more impressive than their predecessors. Kodály's solitary late Symphony in C (1961) is by comparison a feeble essay in an evidently uncongenial form and neo-classical style. The three symphonies of the Czech composer Iša Krejčí, especially the witty Second (1956), are much more successful and likable. Kabeláč has written symphonies of a relatively ambitious cast, but lacking subtlety or true originality.

10. Germany after World War II. That composers in the communist bloc should have begun to take in advanced technical and stylistic influences without completely slipping their traditionalist anchors is heartening, but perhaps less so than the modest postwar revival of the symphony in the countries where it once seemed completely moribund, above all Germany (but also France, where Dutilleux produced two fine, somewhat balletic symphonies). In Germany the renascence was initiated, significantly, in 1940 by Karl Amadeus Hartmann, in a vocal–orchestral symphony, *Versuch eines Requiem*, to poems by Whitman. Hartmann seems to have opposed the Nazis with some courage, and his style, even during the war, shows openness to influences regarded as anathema by the cultural authorities, notably Mahler and Berg. After the war Hartmann wrote seven more symphonies, always in a complex but translucent atonal style animated now and then by the influence of Stravinsky and Bartók, and later that of Henze's Italian period, with its saturated counterpoint. Henze's own first five symphonies are no less eclectic, though the fusion of serial and neo-classical ingredients which they share with Hartmann is in the end quite personal (it shows, however, the influence of Henze's teacher Fortner, whose own Symphony (1947) made a big impact in West Germany after the war). But Henze lacks the intellectual rigour of the born symphonist, and the best of these earlier works, the Fourth Symphony (1955, but largely taken from the opera *König Hirsch*), is successful because its music is intoxicatingly beautiful rather than because its single half-hour movement has a really strong formal impulse. Soon after his turn to communism (in about 1966) Henze wrote a Sixth Symphony (1969), also in a single movement and with a large orchestra deployed as two distinct chamber orchestras; again the work depends as much on imaginative exuberance as on any real binding together of its heterogeneous materials, which include Cuban popular dance. With his Seventh (1983–4), which followed after almost a 15-year gap, Henze returned to a more traditional, Classical formal conception, but in far from a carefree neo-classical spirit: not even the opening allemande is free of violent outbursts, and the final movement, an 'orchestral setting' of Hölderlin's bleak and pessimistic late poem 'Hälfte des Lebens', reaches a truly terrifying climax. Henze's next two works in the genre followed an outwardly Beethovenian trajectory: an Eighth (1992–3) that is both shorter and lighter in mood (inspired by scenes from *A Midsummer Night's Dream*) followed by a choral Ninth (1995–7). The latter, predictably, is no 'Ode to Joy', its libretto based on Anna Segher's novel about fugitives from Third Reich, *Das siebte Kreuz*. But it nonetheless provides further confirmation of the nature of Henze's traditionalism, which is not at all the cultural rigor mortis of which the 20th century saw too much, but a feeling for history as a living and continuing process.

11. The survival of the symphony. By no means all the composers who rose to prominence in the 1950s and 60s shared Henze's belief in the symphony. To composers forging a brave new language in the aftermath of World War II the traditional preoccupations of symphonic writing – thematic development, tonal focus and unified architecture – seemed obsolete and irrelevant. And, as a result, many significant composers of the later (as of the earlier) 20th century chose to neglect the medium altogether. One of the most significant developments of the 1970s and 80s, however, was the turn to the symphony by a number of composers hitherto identified with the avant garde. With the hegemony of modernist aesthetics now challenged, the attractions of the genre became increasingly evident to composers of a neo-romantic persuasion. By no means all the fresh converts were adherents of the 'new tonality'. Others explored the symphony's formal possibilities in new and innovative ways, aiming to revive its developmental potentialities using a post-tonal language that employed individual strategies for creating pitch focus and centricity. Still others, meanwhile, sought to harness it once more as a programmatic vehicle, or as a medium for political or other forms of public statement.

The first symphonies of Penderecki and Górecki, the two most significant Polish exponents of the genre after Lutosławski, were uncompromisingly modernist in orientation. With his Second, the 'Christmas' Symphony (1979–80), however, Penderecki fully embraced an austere, monumental tonal idiom, with allegiances to Bruckner and occasionally Mahler. Górecki's output saw no

such sudden stylistic rupture: nonetheless his Third, the *Symphony of Sorrowful Songs* (1976), is marked by a new melodic directness, connected with the use of authentic Polish folk melodies in the outer movements, and a sparing use of orchestral forces which stands in sharp contrast to the massed orchestral effects of his first two symphonies. Like Górecki, the Finnish composer Rautavaara passed through a personal 12-note idiom, eventually arriving at a visionary neo-romantic language that featured elements of modal archaism (stemming ultimately from Orthodox chant) occasionally coupled with a discreet use of aleatory and sonoristic techniques. Other symphonists who have achieved a highly personal stylistic synthesis include the Estonian Arvo Pärt, whose Third Symphony (1971) provided one of the first manifestations of the austere spirituality that would characterize his later, predominantly vocal output, and the Georgian Giya Kancheli, who unlike Pärt never experimented with serialism but instead turned to his emotionally direct idiom after training in the lingua franca of official Soviet music. His five symphonies of the 1970s (nos.2–6) are unconventional in form, and draw on Georgian folk music and Orthodox chant.

In Russia the composer widely regarded as Shostakovich's natural heir was Alfred Schnittke. Written around the same time as Shostakovich's Symphony no.15 (1971), with its disruptive quotations of Wagner and Rossini, Schnittke's First Symphony (1969–72) was one of his earliest experiments in what he later dubbed 'polystylism'. The work sets fragments of Haydn, Beethoven, Chopin and others alongside jazz and improvisational episodes, but in a spirit of anxiety and despair rather than celebration. While these polystylistic excesses were revisited in the Third Symphony (1980), the Second (1979) and Fourth (1983), both choral symphonies, sought a more thoroughgoing absorption of their diverse musical sources, in the latter case drawn from Jewish, Lutheran and Orthodox traditions. The later, purely orchestral symphonies (nos.7–9) draw closer to Austro-German models, Bruckner and Mahler especially, but here the debt is apparent more in instrumental gesture than in actual borrowed material.

The overwrought intensity of much Russian polystylism has a tone distinctly remote from the disengaged and objective attitude that characterized European and American brands of stylistic pluralism in the 1970s and 80s. The restless experimentation apparent in the nine symphonies of Ib Nørholm composed up to 1990 resulted in abrupt discontinuities both within and between individual works. The Fourth Symphony of Jonathan Lloyd (1988) and the First of Poul Ruders (1989) likewise operate within a wide frame of reference that stretches in the former to Latin American dance rhythms and in the latter to American minimalism. An important European precursor for these polyglot displays had been the third movement of Berio's *Sinfonia* (1968–9), which pastes a variety of musical quotations (from Beethoven to Stockhausen) onto a stripped-down version of the scherzo from Mahler's Second Symphony, creating a self-reflexive musical commentary on the genre and its history to parallel the (largely Beckett-derived) spoken commentary of six amplified vocalists. But whereas the outer movements of *Sinfonia* leave no doubt as to the nature of the composer's own authentic (and still essentially modernist) musical voice, the all-pervading presence of allusion and quotation in such works as Rochberg's Symphony no.3 (1966–9) and Bolcom's more recent Symphony no.5 (1990) effaces any such sense of a personal stylistic idiom. Or else the personal idiom is itself impersonal, close enough to pastiche to allow quotations to be woven in with minimal sense of stylistic rupture.

To other composers, the notion of a 'pure', absolute symphonic discourse has retained its appeal. For Nørgård in his Second (1970) and Third (1975) Symphonies the pursuit of such a discourse involved a preoccupation with highly personal constructivist processes, notably those associated with the 'infinity' series, whose compositional deployment through multiple layers of an orchestral texture yields remarkably lucid and compelling results. In 1978 Peter Maxwell Davies produced the first example of his new, characteristically atmospheric but essentially abstract symphonic language. Davies, who had consolidated his reputation in the previous decade with a series of aggressive and expressionistic music-theatre works, continued to employ the constructivist techniques of melodic transformation (of plainchant especially) that had characterized those earlier works. But the seven numbered symphonies he had produced by 2000 aimed above all to re-create a formal dialectic in the tradition of Beethoven and Sibelius, one in which the conflict of opposed pitch centres plays a pivotal role. Ultimately, though, Davies's still essentially post-tonal harmonic language fails to provide sufficiently potent means with which to establish these tonal centres and their functional roles, and the symphonic argument forfeits much of its dynamism and momentum as a result. Ironically perhaps, what was arguably the most persuasive example of sustained symphonic writing from an English composer in these years was not formally designated a symphony at all: Maw's *Odyssey* (1972–85), at just under 100 minutes in length, stakes a plausible claim to be the longest unbroken movement for orchestra ever composed.

While some have continued to grapple with the kinds of formal questions traditionally regarded as symphonic, others have applied the generic title to works which subvert just about all, including more recently established, expectations of the genre. The characteristically ascetic Fourth (1985–7) and Fifth Symphonies (1989–90) of Galina Ustvol'skaya are scored not for orchestra but for small instrumental ensemble and solo voice (a contralto in no.4, a speaker in no.5). And while Gubaydulina's expansive 12-movement symphony *Stimmen . . . verstummen* (1986) embodies at its centre a portion of gracefully animated silence in the form of a cadenza for conductor alone, a number of the eccentric aleatory essays (many additionally designated 'orchestral diary sheets') of Leif Segerstam dispense with the conductor altogether. The symphonies of Glenn Branca (11 composed by 1998) are among the few to make extended use of electronic instruments and non-standard tunings. Other composers have used the symphonic medium for different kinds of 'extra-musical' statement, whether personal (Corigliano's Symphony no.1, 1988–9, an elegy for victims of AIDS) or ceremonial (Tan Dun's *Symphony 1997*, commemorating the return of Hong Kong to Chinese sovereignty). Again the designation of symphony is often loosely applied; and, with the occasional pieces, the risk as always is that they will fail to outlive their immediate purpose.

That many symphonies of the late 20th century, even those devoid of consciously ironic intent, seem to mimic

rather than genuinely re-create a truly dialectical symphonic discourse may be a symptom of compositional weakness. Yet it may also be a symptom of the jadedness of commentators and listeners amid the omnipresence of a 'permanent literature' whose gestures have become all too familiar. The symphony finds itself in an increasingly contested market-place, one of commercial recordings as much as live performances, in which the new has always to contend with the old, and even the not so old: the appetite for neo-romanticism in the 1980s was fed not only by new works but also by the revival of music from earlier in the century, such as that of Allan Pettersson (championed in Germany as much as in his native Sweden), the Estonian-born Eduard Tubin and in England Robert Simpson and, more controversially, George Lloyd. As was emphasized by Alexander Goehr in his BBC Reith lectures of 1987, the 'survival of the symphony' is ultimately bound up with the survival of the institution that has nurtured it, the symphony concert. And while that institution remains, at bottom, inherently conservative, it cannot be guaranteed that this mutual dependence will be entirely positive in its consequences.

Symposium [comissatio] (Lat.; from Gk. *sumposion*). In ancient Greece and Rome, a drinking party, often with musical entertainments, after the *deipnon* or evening meal; weddings, birthdays, victors' feasts and the arrival and departure of friends were typical occasions on which a symposium would have been held. The order of events generally followed a prescribed plan; they included libations (drink-offerings) and a paean sung to the accompaniment of the aulos each time a fresh *kratēr* of mingled wine and water was brought. There were numerous entertainments: the guests might sing *skolia* (*see* SKOLION) or solo drinking-songs; female aulos players were generally in attendance (although women of good character and children were most often excluded); and dancers, either professionals or individual guests, could perform individually or in groups. Other entertainments included games and puzzles. Later, when the popularity of the symposium increased, the mime and the pantomime were an important part of the entertainment. The occasion might end as a KŌMOS, from which the symposium was not always sharply distinguished, or, alternatively and more informally, as a brawl.

Music was inseparably associated with the symposium: even when some writers attacked the usual pastimes of

the symposium as frivolous, suggesting that wiser people might entertain themselves with serious conversation, the topic thus discussed seems often to have been music (as it was by Aristoxenus, according to Athenaeus, xiv, 632a–b). Plato's *Symposium*, Plutarch's *Symposium of the Seven Sages* and his nine books of *Table-Talk*, and Athenaeus's *Sophists at Dinner* convey a sense of the range and nature of the topics pursued at the symposium.

Synaesthesia (from Gk. *syn*: 'union' and *aisthesis*: 'sensation'). The perception of one mode of sensation aroused by the stimulation of another sense. True synaesthesia meets at least four of the following five criteria: it must be involuntary but elicited, projected, durable and discrete, memorable, emotional (Cytowic, 64–5). It is not known how frequently synaesthesia occurs in the population. Estimates differ widely, from 1 in 25,000 (Cytowic, in Baron-Cohen and Harrison) to 1 in 500 (Emrich and Trocha). The most usual form of synaesthesia consists of hearing a sound or a piece of music in terms of colours, a phenomenon known as 'colour-hearing' (Ger. *Farbenhören*; Fr. *audition colorée*). It is important to distinguish from synaesthesia two similar but distinct phenomena. The first is intermodal-construction, aroused by questions, which is a voluntary coupling of different senses (Behne). The second is pseudo-synaesthesia, such as that which occurs in associative thinking, daydreams, fantasies and spoken metaphors. These relating of senses are voluntary and not necessarily triggered (Baron-Cohen and Harrison).

The neurological definition of the term should be distinguished from the artistic dimension (for which *see* FARBLICHTMUSIK and COLOUR AND MUSIC). The term 'synaesthesia' is used in a wider sense in the artistic context, and generally refers to the *Gesamtkunstwerk* involving several senses. The relationship of synaesthesia to the *Gesamtkunstwerk* and the significance of synaesthesia in art and music have not yet been thoroughly studied.

Synclavier. A polyphonic digital SYNTHESIZER developed by Sydney Alonson and Cameron Jones with the composer Jon Appleton and manufactured since 1976 by the New England Digital Corporation of White River Junction (originally Norwich), Vermont. After moving to nearby Lebanon, New Hampshire, in 1990, the company ceased operating in 1992; in 1993 its assets were purchased by an owner's group, as The Synclavier Company. *See* ELECTRONIC INSTRUMENTS, §IV, 5(iii). For illustration *see* SYNTHESIZER, fig.2.

□

Syncopation. The regular shifting of each beat in a measured pattern by the same amount ahead of or behind its normal position in that pattern; in polyphonic textures this may occur in some or all of the parts. Syncopation usually occurs in lines in which the strong beats receive no articulation. This means either that they are silent, as in ex.1 (in this connection, *see also* OFF-BEAT), or that each

Ex.1 Beethoven: Sonata in A♭ op.110, 3rd movt

note is articulated on a weak beat (or between two beats) and tied over to the next beat, as in ex.2. Because any

Ex.2 Bach: Two-Part Invention no.6, opening

syncopated musical line can be perceived as contrary to the pulse established by the organization of the music into bars, syncopation is related to, and sometimes used as a synonym for, CROSS-ACCENT, AGOGIC accent and CROSS-RHYTHM; the term has also been applied, though mistakenly, to the superposition of polyphonic parts in conflicting metres (*see* POLYRHYTHM). A texture in which every part conflicts with the sense of the prevailing metre, or even overcomes it, is also called syncopated (an example occurs in the first movement of Beethoven's Third Symphony at bars 248–80). Phrasing or articulation may be called 'syncopated' if regularly shifted ahead of or behind the beat to create tension against the established pulse.

Syncopation was the defining feature of RAGTIME, which influenced popular music and jazz; these have drawn in addition on analogous rhythmic characteristics in South American and African music.

See also RHYTHM.

□

Syncretism. This term is used most prominently in the study of the history of religion, where it designates the fusion of two or more systems of beliefs and practices to form a new religion in which features of both source religions remain in evidence in the new one. Anthropologists and ethnomusicologists have encountered religious syncretism primarily in New World religions such as *Santeria*, *Candomble* and *Vodoun*, the products of contact between Roman Catholic hagiolatry and the pantheons of traditional African religions. Musical syncretism was first discussed by Richard Waterman (1948, p.26) with respect

to the 'syncretic process' in the 'blending' of African and European music in America. He hypothesized that 'the degree of musical syncretization' would depend on the similarities between the two styles. Syncretism, one possible result of culture contact, became a hallmark of world music in the 1990s, facilitated by the global market in music recordings.

Synemba kai teleia. Pair of signs used in Byzantine EKPHONETIC NOTATION.

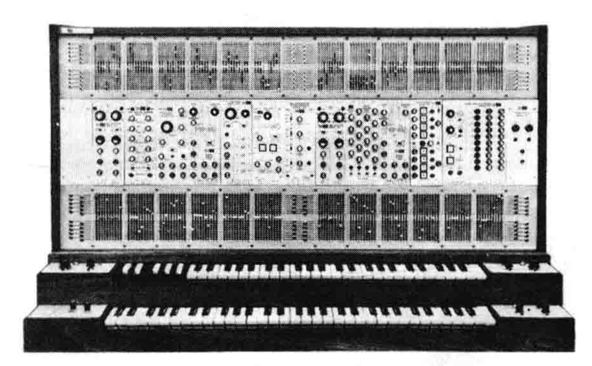
Synergy. A media marketing strategy that creates cross-promotional opportunities between, for instance, a film, a soundtrack album, a video and other merchandise. *See* ADVERTISING, MUSIC IN.

Synket. A synthesizer designed and constructed in 1964 by Paolo Ketoff, an Italian engineer. The Synket generates and modulates frequency, timbral spectrum, amplitude and duration. It has a console that permits pre-setting of sound combinations, and three keyboards that may be used for live performance. The composers John Eaton, Jerome Rosen and William O. Smith have written music using the Synket as a solo instrument. *See also* ELECTRONIC INSTRUMENTS and SYNTHESIZER.

RICHARD SWIFT

Synnet. *See* SENNET.

Synthesizer [synthesiser] (Fr. *synthétiseur*; Ger. *Synthesizer*; It. *sintetizzatore*). An electronic instrument, usually incorporating a keyboard, capable of producing more complex sounds than other electronic instruments that directly imitate traditional acoustic equivalents. As yet no standard form has developed, since synthesizers are mostly used for performing rock music and jazz which is specially composed, arranged or improvised. Several stages can be observed in the evolution of the synthesizer, each seeing the demise of existing companies and the rapid growth of new ones. Some earlier electronic instruments that were called 'synthesizer', such as the RCA Electronic Music Synthesizer (1951–2) and the Siemens Synthesizer (1957–9) are better classified as composition machines, as their sounds are not produced in real time (*see* ELECTRONIC INSTRUMENTS, §IV, 5(i)).



The earliest instruments that anticipated aspects of the synthesizer were developed from the late 1940s onwards, principally by HARALD BODE and HUGH LE CAINE. Sound-generating and -processing devices, assembled from heterogeneous sources in newly founded electronic music studios (such as the oscillator or sound generator, FILTER and RING MODULATOR), were specially designed as parts of a single unit or as individual modules within a console; for the first time such devices had standardized electrical characteristics, enabling certain of their functions to be operated remotely by means of VOLTAGE CONTROL. The first commercial synthesizers were marketed in 1964 by BUCHLA and ROBERT A. MOOG; in the same year Paolo Ketoff in Rome produced the Synket. They were followed in 1968 by the Putney or VCS-3 (EMS, London) and the first Japanese synthesizer (by the company now known as KORG), and in 1970 by the ARP 2500 synthesizer. These early modular synthesizers were designed primarily for use in electronic music studios.

In 1970, to meet the need of an instrument designed for concert perfomance, and in the face of increasing competition in a limited field, Moog launched the Minimoog, a small console containing a monophonic keyboard and a fixed combination of 'hard-wired' modules. This appealed to rock musicians; it was soon followed by ARP's 2600 and Odyssey (both 1971). The first polyphonic synthesizers appeared in the mid-1970s, ranging from the electronic organ-like Polymoog (1976) to the more flexible Oberheim Two-, Four-, six- and Eight-Voice synthesizers (1974–5).

Digital synthesis was pioneered in 1971 in the Allen electronic organ. Previous electronic instruments had featured a selection of timbres created by means of filters or other circuitry, each accessible like a pipe organ stop with the operation of a switch or a potentiometer; digital synthesis permitted the programming of timbres ('voices' or 'patches') in the instrument's software. In the 1980s manufacturers began increasingly to commission patches from external musicians. Some companies provided the user with programming facilities, or offered additional timbres for sale on one of the variety of existing removable storage media, including cassettes, floppy disks, data cards and plug-in microchips, RAM and ROM cartridges.

The introduction of MIDI (Musical Instrument Digital Interface; *see* MIDI) in 1983 initiated a more wide-ranging digital replacement for voltage control, whereby instruments and other devices from different manufacturers could be interconnected. The first successful digital synthesizer with MIDI was Yamaha's DX7 (1983). From the mid-1980s a new generation of microcomputers like the Apple Macintosh, Atari ST and PC models could be linked to MIDI synthesizers, and software was written to give users greater flexibility in programming their own timbres.

In the early 1980s some of the most expensive synthesizers, such as the second versions of the Fairlight CMI and Synclavier, offered not only digital synthesis but also the possibility of digitally recording external sounds, a technique known as 'sampling' (*see* SAMPLER). The E-mu Emulator (1981) was the first 'dedicated' keyboard sampler, and in 1985 the Ensoniq Mirage brought the keyboard sampler within the range of many musicians' pockets for the first time. Since then sampling has become the principal method of creating timbres on all types of electronic instruments. Today an enormous selection of timbres from instruments from all over the world,

1. ARP 2500 modular analogue synthesizer, 1970; interconnections between the modules are made by means of the matrix switches at the top and bottom of the console

2. *Synclavier II digital synthesizer, 1981; three units are shown, the keyboard console, monitor and the alphanumeric keyboard*

including 'vintage' electronic instruments, as well as non-musical sounds, are available for use in synthesizers and samplers, supplied mostly on CDs with substantial storage capacity.

Synthesizers like the DX7 were entirely digital, even though this meant that they lacked such simple analogue devices as a low-pass filter for shaping the final sound. The greater precision of digital electronics caused many musicians to feel a nostalgia for the rougher, more individual character of analogue synthesizers, a trend that is still reflected in the prices of second-hand instruments, which have increased, often substantially, since 1990. In parallel with the increasing sophistication achieved by the designers of digital equipment in creating more realistic sounds that mimic those produced by acoustic instruments, during the 1990s several combinations of the most effective aspects of both analogue and digital synthesis were established: hybrid combinations of both types of circuitry; digital instruments furnished with the multiplicity of controls found on the consoles of analogue instruments; a new generation of analogue instruments benefiting from the experience of digital circuitry; and 'virtual analogue' digital instruments based on more accurate analysis of analogue sound generation called 'physical modelling'. Some of these only became possible through the increased speed and processing power of digital signal processing (DSP) microchips.

HUGH DAVIES

Syria [Syrian Arab Republic] (Arab. Jumhuriya al-Arabya-as-Suriya). Country in the MIDDLE EAST. The territory of modern Syria, with an area of 185,180 km², extends from the Mediterranean coast on the west to the desert on the Iraqi border, and from the Turkish chains of mountains on the north to the Jordanian and Iraqi borders on the south and south-east. The population is estimated at 16·13 million (2000).

1. INTRODUCTION. Syria has a very ancient civilization, with human presence in the region dating back one million years. The prehistoric period ended in the 4th millennium BCE with the establishment of an agricultural and urban society in which flourished various activities – diplomatic, economic and artistic – basically related to those of Mesopotamia. Ugaritic writings, using the first alphabet discovered in this part of the world, reveal the Semitic names of the *'ūd* (short-necked lute), *kinnāra* (lyre) and *ṭb* (*ṭabl* drum), which survive today.

Syria can be divided into three regions (fig.1). A vast area, forming the northern and western parts of the Fertile Crescent, extends from the Golan and Hauran highlands on the border with Israel and Lebanon to Mesopotamia, encompassing Damascus, Homs, Hama and Aleppo. This north-south axis forms the heart of Syria proper (*bilād al-shām*: 'the country of sham').

This area gave birth to the classical musical traditions of Syria, Lebanon and Palestine. Also included in this part are the alluvial plains of the Euphrates and the steppes around the Tigris valley, a region particularly bathed in Mesopotamian culture and now dominated by Bedouin Arabs. Kurds, Assyrian Christians, Yezidis and some Turkoman tribes inhabit the northern parts of this region. The western region, along the Mediterranean coast, has

1. *Map of Syria*

vast plains and parallel mountain chains. Though the musical culture is of Bedouin origin, the region has developed a particular style with characteristics shared with Lebanon and Palestine.

The central part of the country, covering 58% of the territory, is a desert/semi-desert and dotted with some green oases. Its population of Bedouin nomads and camel-breeders practises transhumance across Syria, Iraq, Jordan and the Arabian peninsula.

Modern Syria is an Arabo-Islamic country similar to all Middle Eastern countries in its ethnic and religious diversity. The majority of the population is Sunni Muslim. A Shi'a community inhabits the south, and members of the Shi'a 'Alawi sect inhabit the mountains (*jabal 'alawiyyīn*) overlooking the Mediterranean. Christianity is the second religion of the country, and the Syrian Christians form one of the oldest Christian communities in the world (*see* SYRIAN CHURCH MUSIC). Heterodox Islamic sects include the southern Druze and northern Yezidi (for Druze music *see* LEBANON, §2(iii); for Yezidi music *see* KURDISH MUSIC, §5).

2. CLASSICAL MUSIC TRADITIONS. Two prominent and specific classical traditions dominate Arab West Asia: the Iraqi and Syrian. The latter originates from the two ancient cities of Damascus and Aleppo and also covers Lebanon and Palestine.

(i) Music and society. Classical music has traditionally been performed at evening social gatherings of musicians and friends (*maghna* or *sahra*), in which the poetic texts are as important as the music itself. Numerous circles for performing and discussing music have long existed in Damascus, Aleppo and Homs; recently they have diminished in number. Syrian classical traditions spring from continuous interchange and mutual influence between the secular and religious spheres.

With the exception of a small tradition of light songs (*uhzūjāt*), the musical traditions of Damascus are religious in orientation. Their historical centre is the 8th-century Umayyad Great Mosque of Damascus. Even on secular occasions, the city organizes its famous religious evenings (*sahrāt dīniyya*) in which religious genres are performed alongside secular Aleppan forms accompanied by musical instruments. The city of Aleppo, the other important centre of musical traditions, combines a strong religious culture with an important tradition of secular music. In any performance both repertories can be combined. In other words, in Syrian classical music, major vocal genres are easily transferred from one context to another with suitable adjustments. The same rhythmic formulas (*usūl*s) and melodic modes (*maqām*s) are employed, but the occasion, text, form and some aspects of interpretation are significant indicators of difference.

Religious occasions, celebrated as such in the Syrian Islamic society, are limited to *al-isrā' wal mi'rāj* (the ascension of the Prophet Muhammed), the nights of Ramadan, particularly *laylat al qadr* (the night in which the skies open) on the 27th of Ramadan, the night of *mid Sha'bān*, and finally the first day of Muharram which marks the Islamic new year. On these occasions, the classical repertory, even from the secular sphere, is performed with texts adapted to the occasion.

Conversely, engagements, marriages and (to a lesser degree) circumcisions are generally celebrated at home. Recently, for lack of space, these have also been celebrated in mosques. Qur'anic recitation inaugurates and closes the suite of *qaṣīdas* (odes), *muwashshaḥ ghazal*s (love poems) and a section (*ḥuṣṣa*) from the *mawlid nabawī* (see §(ii) and (iii) below).

The Sufi *dhikr* rituals are religious ceremonies performed on a regular weekly basis within the different Sufi orders, and also at particular private occasions. The ritual represents a meeting-ground for the sacred and secular realms through its use of *muwashshaḥ ghazal*s (love poems), which Sufis interpret in mystical terms, while many secular *muwashshaḥ ghazal*s derive originally from the Sufi orders.

(ii) Vocal art forms. The main metric forms of Syrian classical music are MUWASHSHAḤ and *qadd*, while *qaṣīda* and *layālī* are free improvisational forms.

(a) Muwashshaḥ. One of the most widespread poetic forms in Syria, the *muwashshaḥ* originated in Muslim Spain and is one of seven post-Classical poetic forms that spread throughout the Arab world. It is performed on both secular and religious occasions and combines classical metres with new ones arranged in strophes. Each poem is divided into an indefinite number of units (*abyāt*, sing. *bayt*), each containing a varied number of poetic lines. Musically, a *muwashshaḥ* is performed by a solo singer alternating with responsorial, antiphonal or collective singing in unison, depending on the performing group. In Syria, it is passed on through oral transmission by acknowledged masters, both secular and sacred, though recently it has even been taught in some musical institutes. The performance of this difficult art, composed by specialists, demands a mastery of both *maqāms* (modes) and *usuls*, the complicated rythmic patterns of Arabic music.

Its formal and musical aspects have evolved in many ways, and today a musical *muwashshaḥ* is not necessarily based on a literary one. It can even use a *qaṣīda* text. Its large repertory includes some very old compositions of Andalusian or Egyptian origin, as well as more recent pieces by Syrian composers. Previously, the *samāḥ* dance used to accompany the *muwashshaḥ* in religious contexts, during the *mawlid nabawī* and the *dhikr*. Religious use of the *samāḥ* has disappeared, but it is being reintroduced in secular *muwashshaḥ* performances, mainly by new ensembles.

Today some performers distinguish between different *muwashshaḥ* types according to performance context. In religious settings they call it *tawshīḥ*; if the text glorifies the Prophet, it is *madīḥ* ('praise', pl. *madāih*) or *muwashshaḥ nabawī* ('of the Prophet'); if addressed to God, mentioning his qualities and asking his forgiveness, it is *ibtihāl*; when concerned with (sacred or secular) love, it is *muwashshaḥ ghazal*.

(b) Qaṣīda. This form, the next most common poetic form, is widely used on secular and sacred occasions. The text, in literary Arabic, follows the strict rules of classical prosody. Musically, it is performed in an improvised or semi-improvised manner. During the 1940s Aḥmed al-Ubarī (1895–1952) attempted a complete concordance between melody and text according to the historical conventions of *al ghinā' al mutqan* ('perfected song'; *see* ARAB MUSIC, §I, 2(iii)). The *qaṣīda* had to be sung in rhythms corresponding to the rhythm of the poetry. Like many other experiments, these composed *qaṣīda*s were mainly appreciated by radio audiences; they did not gain popularity at the lively evening social gatherings.

(c) Qadd. *Al qudūd* (sing. *qadd*) are popular urban songs that form part of the classical performance. They are based on well-known or old melodies to which any new text respecting the metre of the melody can be added designated as *qadd al-laḥan* (in the size of the melody). Thus many religious melodies were chosen to be sung with secular texts and conversely. *Al qudūd* are better known as *qudud ḥalabiyya* ('from Aleppo'), in reference to what the Syrians consider as their place of origin. However, this paternity is also claimed by the city of Homs. During the performance of both secular suite (*waṣla*) and the religious cycle (*fāṣil*), a number (five to six) of *qudūd* may be sung one after another with increasing speed, encouraging audience participation in collective singing.

(iii) Cyclical forms. All urban classical music is organized in cycles, each composed of an indefinite number of parts. Secular cycles are termed *waṣla* (literally 'piece'). Religious and Sufi rituals called *fāṣil* or *nawba* are also performed within cycles.

(a) Waṣla. In Syrian music this term has two basic meanings. First it implies a succession of up to four or five *muwashshaḥ*s (*waṣlāt muwashshaḥāt*) or a similar number of *qudūd* (*waṣlāt qudūd*). These successive pieces must belong to the same *maqām*; they are performed with accelerating tempo, usually in secular contexts within a large cycle also known as *waṣla*.

The second designation of *waṣla* as a larger cycle is based on a succession of various instrumental and vocal forms that have in common the unity of the *maqām*. Theoretically the order of musical forms within a *waṣla* is unfixed, but an accepted order is generally followed. A *waṣla* comprises the following forms: an instrumental rhythmic composition such as *samā'ī*, *bashraf* or *dūlāb*; a small *waṣla* of *muwashshaḥ*s (originally accompanied by the *samāḥ* dance); *qaṣīda*s and *layālī*s; one or two *dawr*s (an improvised form originally from Egypt sung in Egyptian dialect); an instrumental *dūlāb*; and a *waṣlāt qudūd*, which includes a *mawwāl* (improvisational singing in colloquial Arabic, see §3 below).

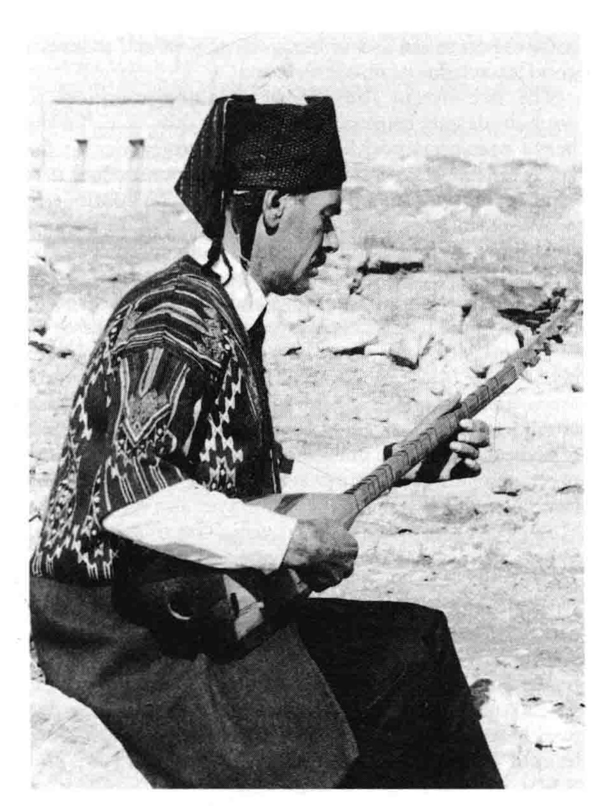
(b) Religious cycles. Religious music is presented within the following large cycles: *al adhān* (call to prayer), *al dhikr* (Sufi ritual invocation of names of God) and *al mawlid nabawī* (Prophet's birth ceremony).

Adhān. Depending on the region, time of prayer and school of interpretation, there are many styles of *adhān*, which, with Qur'anic recitation, is the main religious vocal form. The Umayyad Great Mosque in Damascus preserves the unique tradition of collective *adhān* based on the teachings of 'Abdul Ghanī al-Nablusī (1641–1731). The act of prayer is practised with the recitation of a succession of parts or sections. Each is designated by a name and has a particular religious significance. At the main Friday noon prayer the first *adhān* follows a succession of *ibtihāl*s (*muwashshaḥ*s addressing God); then comes a type of choral singing (*ṣamadiyya*, from the eternal) performed three times; then a second *adhān*; then the Friday sermon divided in two parts, ritual prayer, *takbīr* (recitation of God's attributes); and, finally the supplication (*tawassul*). During Ramadan, relief prayers (*tarāwīḥ*) are also sung. The order of the successive parts can change depending on the occasion of the prayers. The use of *maqām*s depends on the taste of the performer.

Dhikr. The Sufi *dhikr* ritual is performed in a suite called FĀṢIL whose order and general content theoretically is fixed. (Some specific *dhikr*s are performed in cycles termed *nawba*.) Unlike the secular *waṣla*, the unity of the *maqām* is not compulsory. The only fixed features are the rhythmic patterns and constant repetition of texts naming God. A *dhikr fāṣil* consists of several of the following: *muwashshaḥ*, *qaṣīda*, *tawshīḥ* and two types of *madīḥ*, *madadīyāt* and *istighāthāt* (prayers of help).

The number of *fāṣil* suites varies within the different Sufi orders. The Hilāliyya, a conservative Qādirī order in Aleppo, maintain two types of suite: five fixed *fāṣil*s (like the five prayers and five 'pillars of Islam') and more than 50 unfixed ones. The fixed ones are performed every week, whereas unfixed ones are performed only during summer, when outdoor performances extend into the night. Each week then, only one unfixed *fāṣil* is performed, but given the great number of *fāṣils*, none is repeated within a given season.

Up to the end of the 19th century it was usual to meditate in Sufi sanctuaries for up to 40 days, with a daily performance of a *fāṣil*. But the *munshidīn* (poetic reciters) and *dhākirīn* (those who repeat the name of God during the *dhikr*) have forgotten many of these *fāṣil*s. Only one religious *fāṣil*, called *fāṣil isqī al-'iṭāsh* ('give water to the thirsty'), has been adopted into a secular context and is performed with musical instruments. It was originally a prayer sung during dry spells imploring God to send rain.



Mawlid nabawī (Prophet's birth ceremony). As elsewhere in the Arab world, *mawlid nabawī* cycles are performed on any happy or sad occasion, as well as on the birth and death anniversaries of the Prophet. The suite contains the following: *wird*, *tasbīḥāt*, *ḥuṣṣat mawlid* (part of the birth story), prayers for the Prophet, *qaṣīda nabawiyya*, religious *muwashshaḥ*s (*tawshīḥ* or *madīḥ*) sometimes with frame drums (*duff*), an optional part of a *dhikr* and finally the *mubāya'a* (election of the Prophet).

3. FOLK MUSIC TRADITIONS. The folk styles of eastern Syria are based on the Bedouin vocal art common to Jordan, Iraq and many parts of the Arabian peninsula. Syria also shares rural and mountainous traditions common to Lebanon and Palestine. Folk singing styles performed by the sedentary tribes on the Euphrates in eastern Syria are the same as those practised on the other side of the border in Iraq.

The *maymar*, *molayyia*, *abū m'anna* and other poetic forms provide the basis of metric songs for collective *dabka* dances accompanied by the folk clarinet (*mizwaj*) and drum (*ṭabl*). In the north-east, at community festivities on the Khabur river, the *nāyel* and *swehlī* vocal genres are generally sung by Gypsies. The vocal *gesīd* and *hujeīnī* are performed by nomadic Bedouins, accompanied by *rabāba*.

The main and most popular poetic vocal genre in the region is the *'atāba*, which attracts a very large audience throughout Syria including urban centres, where it is included in both secular and religious classical performances. Known as *'atāba sharqiyya* or *'atāba 'irāqiyya'* ('eastern' or 'Iraqi' *'atāba*), it is sung in a solo melismatic style by the semi-sedentarized and sedentarized Bedouin poet (*shā'ir*), generally during the sheikhs' open social sessions (*madhāfa*).

Another type, the *al 'atāba gharbiyya* ('western *'atāba*'), predominates in the western coastal and mountainous region. Its free, melismatic solo singing is usually followed

2. *Kurdish ṭanbūr (long-necked lute, also known as sāz), Syria*

by the *mijāna*, a rhythmic metric song that invites solo or group dancing. New dance groups led by Lebanese musicians perform both the western *'atāba* and the *mijāna* within the current trend for folklorization.

ZAJAL is the other predominant poetic singing genre of the western region, performed at socially important improvisation contests involving two or more poets. The poetry, in colloquial Arabic and based on specific meters, is then sung combining or alternating syllabic singing with free melismatic passages. *Zajal* meetings are popular, important social events encouraged by an audience of aficionados.

The MAWWĀL, one of the most widespread poetic singing genres in the entire Arab world, is very popular throughout Syria, especially in Homs, Ḥama and Aleppo. On account of its historical origin, the form popular in Syria is known as *mawwāl baghdādī* or *shargāwī* ('Baghdad' or 'eastern' *mawwāl*). It is composed of a number of poetic units, each including seven lines in the colloquial Arabic commonly used between Iraq, Syria, Jordan and Palestine. Musically, the *mawwāl* is performed in free improvisatory style at popular gatherings and urban secular and religious concerts. Passionate aficionados collect its poetry: two centuries ago, when Syrian sheep merchants used to walk to Baghdad, they were famous for coming back with the latest *mawwāls*. (*See also* IRAQ, §I, 3(i).)

Syrian cities have their own popular songs. The best known are the Damascene metred song (*shāmī*) and songs from Ḥama (*ḥamaouī*).

During the first ten days of the month of Muharram, the Shi'a community of the south, between Damascus and al Suweida, performs and recites the passion of al Hussayn. In the suburbs of the capital, around the shrine of Sayyida Zeinab, the granddaughter of the Prophet, ceremonies, invocations and even *dhikr* and plays are performed for this same occasion in the streets.

4. MUSICAL INSTRUMENTS. All Syrian classical and folk instruments are found elsewhere in Arab Middle Eastern traditions. As in other Arab countries, chordophones are the most important instruments of urban and classical music.

The *'ūd* is the most popular and widespread instrument. It usually has five courses, but the addition of a single sixth string has become common. Various shapes can be seen in Syrian *'ūd* workshops. The Aleppan *'ūd* (*'ūd ḥalabī*), with its 61·5 cm string length, is the longest and most slender, famous for its perfect octave harmonics. The Damescene *'ūd* (*'ūd shāmī*) has a larger soundbox. The Egyptian *'ūd* (*'ūd maṣrī*), characterized by its angular shape, has a weak upper octave. The Turkish *'ūd* (*'ūd turkī*), with strings 59 cm long, is the shortest of this family. The *nash'at kar*, a half-size Turkish *'ūd* with guitar pegs and six courses, used to be played mainly by amateurs; like other relics of Turkish influence, it has almost disappeared. Syrian manufacturers test the solidity of the different lute boxes by putting them on the ground and standing on them. Different kinds of experiments are regularly made on the *'ūd*, sometimes on the request of users.

Aleppan *qānūns* (trapezoidal table zithers) are famous all over the middle East. They have ten ditals (*'urab*) as compared with the five to seven ditals of the Egyptian *qānūn*.

Among folk chordophones, long-necked lutes are popular, usually with two or three double courses and a variable number of movable frets. The *buzuq*, *ṭanbūr* and *sāz* are played in northern Syria, especially by non-Arabs. The term *sāz* is used either as an alternative for *ṭanbūr* or to differentiate a particular type of long-necked lute. Gypsies (*nawar*) and Kurds in the villages around Aleppo play the *buzuq* to accompany Kurdish and Arabic songs. Kurds in Jebel Akrad and near the Turkish border (in Kamishli and Hasakah) play the *ṭanbūr* (or *sāz*; fig.3). Its wooden soundbox is usually made in Aleppo but may also be imported from Turkey. Aleppans also play the *buzuq* or the *sāz*, but prefer instruments with many frets (up to 29 on the Aleppan *sāz*, up to 36 on the *buzuq*). The *jumbush*, another long-necked lute, with six double courses and a metallic container as a soundbox, is used by the Armenians of Aleppo, who introduced it into their ensembles along with violins and percussion instruments.

The monochord *rabāba* is the only type of local fiddle. It is played by Bedouins in the central desert/semi-desert region between Dar'a and Ḥama, and by Gypsies, who introduced the petrol can as a soundbox (fig.3). On the Mediterranean coast, the waisted wooden *rabāba* accompanies improvisational poetic contests (*zajal*).

The *nay* (flute) is the main classical aerophone, but curiously it is losing favour and has almost disappeared. *Nay* players have always been badly paid, and instrument-makers refuse to make new flutes or transmit their professional secrets. The few remaining players now import bamboo from Egypt and make their own instruments. Among folk flutes, the *shabbā*, made from metal or bamboo is played by shepherds in rural areas. It accompanies collective community dancing in Dar'a (in

3. *Gypsy musician playing a spike fiddle made from an oil can (rabāba galan), Ḥama, 1977*

the south) and Manbij (in the north) and is also used in the Euphrates region.

Single and double clarinets (*mizwaj*) are played in almost all regions by shepherds, either as solo instruments or along with the *ṭabl* (cylindrical drum) to accompany the communal *dabka* dance. The shawm (*zurna*) and *ṭabl* drum form the well-known instrumental duo *ṭabl wa zurna*, which enlivens folk festivities and communal gatherings. The frame drum (*dūff*) is widely used in many contexts, including by women.

The local traditional urban ensembles, *al takht*, are composed of the *'ūd* (short-necked lute), *qānūn* (trapezoid table zither), *nāy* (end-blown flute), *darbūka* (goblet drum) and *daff* (frame drum). This is now augmented with violins and other Western instruments, thus creating a large orchestra.

Traditional instrument-makers have diminished in number since the first half of the 20th century. The spread of the electronic organ in the 1980s and 90s was a real blow to trade. Some manufacturers now use machines to boost production, but some good craftsmen committed to hand-built work are still to be found in the cities. Some of the latter instrument-makers, including many engineers and other specialists, inherited the traditional craft from their families and others.

5. Music education and modern developments. Musical life and its performers of the old school (1850 to *c*1950) are extremely well documented in Syrian writings. Biographies of hundreds of musicians (al-Jund, 1958) reflect their status, their cultural backgrounds and their musical life. Biographies of more recent male and female musicians are found in Dhureil (1989) and Sharīf (1991).

Traditional musicians, who until the present have basically been craftsmen, merchants and even government officials, learn and teach through oral transmission. At the beginning of the 20th century, Syrian musicians were in close contact with the musicians of Iraq, Egypt and Turkey and frequently travelled throughout these countries to learn and exchange knowledge.

Traditional musicians were (and still are) expected to master Arabic language and grammar, to know a substantial part of the Arabic poetic repertory by heart, to be expert in the arts of *maqām* and *uṣūl* and to have a good knowledge of *muwashshaḥs*.

The rich Syrian Arab music tradition continues to flourish, despite centuries of Ottoman influence and the heavy pressure towards modernism exerted during the French mandate period (1920–44). At the start of the 21st century, individuals and specialist ensembles continue to provide teaching and sources of transmission. In Damascus alone, Qur'anic and religious reciters are organized into two guilds, whose members (mostly merchants) are available to celebrate weddings and anniversaries and to perform *mawlid nabawī* ceremonies upon demand.

In the 1940s Arab music began to be taught in modern classrooms. In Aleppo, Fu'ād Rajā'ī, a dentist, important musician and patron, opened a private institute, which later (1950s) had a section for girls directed by his sister, a medical doctor and musician. It became one of the most prestigious music institutes in the Middle East, attracting famous teachers such as the *nay* player and musicologist 'Alī al-Darwīsh, Nadīm al-Darwīsh, 'Omar al-Batsh and Shukrī al-Antakī. However, private and traditional teaching continues to be the backbone of traditional music. Nowadays a great number of Syrians (especially young people) take private lessons with individual teachers or at institutes.

Although the best music flourishes in traditional spaces, official organizations also play their part. There are weekly music programmes on the radio and television, both of which have their own Arab orchestras. Films and videos are made about Arab music. The Ministry of Tourism promotes traditional music in restaurants, grand hotels, various cultural centres and even cabarets. The prestigious historical cities of Busra, Palmyra and Aleppo have annual music festivals organized around a specific theme with juries and prizes. The two large national troupes, Firqat Umayya and Firqat Zenobia, present dances and music from all parts of the country.

The Syrian government, represented by its Ministry of Culture and Education, is the only serious patron of Western art music, promoting numerous concerts of symphony orchestras, chamber music and solo performances by Syrian musicians. The Western-trained musician Solhi al-Wādī created state-supported conservatories in Damascus (1961) and Aleppo (1963) and the Advanced Conservatory of Damascus (1990), where Western music is taught, including *'ūd* and *qānūn* in a Western idiom.

Since the 1980s, Western musical life has become regular and very active in Damascus and Aleppo. In 1996 alone, about one hundred concerts of symphonic orchestras, chamber music and solo performances were given by Syrian musicians and students playing all the instruments that form a symphony orchestra. Syrian soloists participate in international competitions, and Damascus has become one of the main platforms in the Middle East for the performance of Western musicians.

SCHEHERAZADE QASSIM HASSAN

Syrian church music. There are essentially four ancient Christian liturgical traditions that can be counted as Syrian, but the practitioners of these traditions belong to a bewildering variety of religious denominations, with diverse theological, historical and organizational loyalties. They share in common the Syriac language, an allegiance to the See of Antioch, the Syriac Bible and Syriac hymns and theological literature.

1. INTRODUCTION.

(i) Syriac language. Syriac is a North-West Semitic tongue, closer to Hebrew than to Arabic, that developed in the city of Edessa (now Urfa, Turkey). As a dialect of Aramaic (the official language of the ancient Assyrian empire to 200 CE), Syriac is related to the Palestinian Jewish Aramaic that was the mother tongue of Jesus and the first disciples as well as of many rabbinic authorities of the Talmudic period. For this reason modern Syrian Christians frequently call Syriac 'Aramaic'; Western scholars before modern times often called it 'Chaldean'.

Only a minority of Syrian Christians can still speak Syriac; for most it is a theological and liturgical language, like Latin in the West. The major vernaculars are now Arabic (in the Near East), Malayalam (in India) and English (in India and North America), all three of which are increasingly replacing Syriac in liturgical services.

(ii) See of Antioch. Antioch (now Antakya, Turkey, near the border with Syria) was the city where 'the disciples were for the first time called Christians' (*Acts* xi.26). Before the Muslim conquest Antioch was one of the four major patriarchates, with Rome, Constantinople (seat of the Byzantine rite – *see* BYZANTINE CHANT) and Alexandria (from which sprang the Coptic and Ethiopian rites – *see* COPTIC CHURCH MUSIC, and ETHIOPIA, §II – and the now defunct Churches of Nubia and Cyrenaica). Like the popes of Rome, the patriarchs of Antioch regarded St Peter as their founder (cf *Galatians* ii.11). The Syrian Christians in India, despite their many theological and denominational divisions, share a further identification with the apostle Thomas, who is traditionally believed to have gone to India as a missionary and been martyred near Madras. All the Indian groups, therefore, style themselves 'St Thomas Christians'.

It cannot be said, however, that the Syrian liturgical traditions are all directly descended from a common source, such as the originally Greek rite of Antioch: Jerusalem, Caesarea (near Haifa in modern Israel), Edessa, and Seleucia-Ctesiphon (near Baghdad) were all important centres in ancient times, and each may have contributed something to the liturgical traditions as they are now to be found.

(iii) Syriac Bible and other texts. Although there is more than one Syriac translation of the Old and New Testaments (just as there were multiple Latin translations), the Peshitta ('simple' or 'common') version is the most widely used (problematically translated by Lamsa, 1957). The Syriac psalms have their own numbering system, agreeing with the Hebrew (and Protestant English Bibles) for Psalms i–cxiii, but with the Byzantine and Latin Psalters for Psalms cxvi–cl (see table in Mateos, 2/1972, p.447).

The various Syrian chant traditions also share a corpus of Syriac theological literature as well as an extensive repertory of hymns, including the works of St EPHREM SYRUS and other authors, although the liturgical arrangements for the Divine Liturgy and Office exhibit numerous

structural differences. Many Greek theological writings that were judged heterodox in Constantinople and Rome survive in Syriac translation, particularly for authors associated with the Antiochene school of biblical interpretation, which played a major role in the doctrinal controversies that fragmented Syrian Christianity.

2. History.

(i) Assyrians. The first Syrian rite to achieve its classic form was also the only ancient Christian liturgy to develop outside the Roman empire. It originated in the Sassanian or Persian empire further east, in the region of Mesopotamia or ancient Babylon (modern Iraq and Iran). It is of great interest to liturgical historians for its many archaic features, and because it is the most thoroughly Semitic (as opposed to Hellenistic) tradition of Christian worship. After the Council of Ephesus (431 CE) condemned the teachings of Nestorius, Patriarch of Constantinople, many of his supporters fled over the border into the Persian empire, so that the Church of this area came to be regarded as Nestorian by the Greco-Roman majority. Today, however, these Christians call themselves the Church of the East, or (unofficially) the Assyrian Orthodox, in view of their linguistic ancestry. Hence, in this article, the liturgical tradition will be called 'Assyrian'.

Medieval Assyrian missionaries carried their faith along the Silk Route into Turkestan, India and Tibet, and even into China, where the famous Nestorian Stone remains a monument to their activity. By the 16th century, however, active Churches remained only in the Near East and India. In 1553 part of the Near Eastern group accepted the authority of the pope and became a uniate rite of the Roman Catholic Church, adopting Catholic dogma while retaining the traditional liturgy; this community became known as the East Syrian or Chaldean rite. Most of the Assyrians in India, pressured into Roman communion by Portuguese missionaries in 1599, became known as Christians of the Malabar rite.

(ii) Syrian Orthodox. In 451 CE the Council of Chalcedon condemned the heresy that would become known as Monophysitism. The Latin, Byzantine and, eventually, the Georgian Churches opted for the Chalcedonian doctrine, but the Coptic and Ethiopian Churches rejected it, and they were ultimately joined by the Armenian Church. Syrian Christians who opposed the teaching of Chalcedon were eventually organized into a separate Church by James (Jacob) (Yaʿqūb al-Barda'ī, *c*500–78) and are thus colloquially termed 'Jacobites'. They call themselves Syrian Orthodox, the term that will be used in this article. There is also a uniate branch, recognizing the Catholic pope, which is called the Syro-Antiochene or West Syrian rite. In India, some of the Malabar rite Christians rejected uniatism and aligned themselves in 1662 with the Syrian Orthodox (notwithstanding their former antipathy to the Council of Ephesus) and adopted their liturgy, in Malayalam translation. They now call themselves the Indian Orthodox Church but in the meantime have experienced further splits. In the late 19th century a group influenced by Anglican missionaries adopted Protestantism while retaining the Syrian Orthodox liturgy; it is known as the Mar Thoma ('St Thomas') Church. In 1930 another splinter group rejoined with Rome as the Malankar rite; it too is liturgically Syrian Orthodox.

The Syrian Orthodox liturgical tradition contains many more texts of Greek origin than the Assyrian liturgy – not surprisingly since more of its members lived within the Roman empire. This material is often assumed to be derived from the early liturgy of Antioch, but at least some of it, including the eucharistic liturgy of St James, is more readily linked to Jerusalem (Jeffery, 1994).

(iii) Melkites. The Syrian Christians who accepted the decrees of Chalcedon were disparaged by the others as 'royalists' for siding with the Byzantine emperor. Thus they are known as Melkites (Melchites, following the Greek spelling) from the Syriac term *malkāyā*. This designation survives today, however, primarily among the Catholic uniates of the Melkite rite. The other Christians of this tradition now call themselves Antiochian Orthodox and are in communion with the Ecumenical Patriarch of Constantinople; only this group is recognized as truly Orthodox by the Greek and Russian Orthodox and the other Churches loyal to Constantinople.

Over the centuries, as the Melkite Church became more distant from the Syrian Orthodox (Jacobite) tradition, its liturgy was gradually aligned with the Byzantine rite, becoming what is now essentially the Greek Orthodox liturgy translated into Syriac. Incompletely Byzantinized Melkite traditions are still attested, however, in medieval manuscripts. In this article such sources will be called 'Melkite'.

(iv) Maronites. Some Chalcedonian Syrians, instead of becoming Byzantinized, formed another ecclesiastical unit in western Syria, with its leadership centred at the monastery of St Maron (*d c*410). Opinions differ as to whether they ever adopted the Monothelite heresy condemned by the Third Council of Constantinople in 681, but with the Muslim conquest they were driven into the mountains of Lebanon, where their descendents are known as Maronites. During the Crusades, in 1182, the Maronites affirmed allegiance to Rome and became a uniate rite, the only branch of Syrian Christianity with no interdenominational divisions.

If the superficial Westernizations through Roman Catholic influence are ignored, the Maronite liturgy reveals many resemblances to the Syrian Orthodox liturgy. Recent research, however, has shown that its oldest chronological layers have much in common with the Assyrian liturgy (Macomber, 1973; Spinks, 1993). It is thus a unique synthesis of disparate elements, which affords valuable perspectives on the historical development of other Syrian traditions.

3. Liturgy and liturgical books.

(i) General. The principal Offices of the Syrian Churches are *Lelyā*, *Ṣaprā* and *Ramshā*, corresponding to Matins, Lauds and Vespers respectively; *Ramshā* is also termed *Nāgah* in the Syrian Orthodox Church, which also possesses the Offices of *Tlāth shāʿin*, *Sheth shāʿin*, *Tshaʿ shāʿin* and *Sutārā*, corresponding to Terce, Sext, None and Compline respectively. Sext is also known as *Pelgāh d-yawmā* ('midday').

The texts of the Offices are divided among various liturgical books, which in Orthodox Churches are still largely manuscript but in India and in uniate Churches are often printed (to a certain extent, however, Orthodox and uniate books are regarded as interchangeable). The Syrian Orthodox *shḥimtā* ('simple', 'ferial') contains the weekday Offices, and the *bayth gazā* ('treasury') the texts

of the model stanzas of the chants for Sundays and festivals. Proper texts for these are arranged in books according to the church year, for Sundays and saints' days. The Assyrian *kitāba* (*bayt*) *daqdhām wadbāthar* ('book [house] of before and after'; see below, §3(iii)) corresponds to the *shḥimtā* but contains Sunday and other Offices as well; the Assyrian Proper Office texts are distributed among the *gazā* ('treasure') for the immovable feasts, the *ḥūdhrā* ('cycle') for Sundays and for Easter, and the *kashkul* for weekdays.

The Syrian Divine Office, like that of the Latin Church, centres on the recitation of psalms, except for the Little Hours of the Syrian Orthodox Church that correspond to Terce, Sext and None, whose texts are free poetry. The Psalter is read in its entirety in a period varying between a day (in Maronite and Syrian Orthodox monasteries) and a fortnight. Besides psalms, *qāle* ('melodies', sing. *qālā*) dominate the Syrian Orthodox Office and are important also in the Assyrian Office (see below, §5(iv) (a)). In the Offices a *qālā* is followed by a *bā'uthā* ('petition', also termed *tbārtā*). Other categories include the *madrāshā*, which plays a part in the night Office (see below, §5(v) (a)) and is answered by an *'unithā*, or choral refrain; the *sughithā*, related to the *madrāshā* and used particularly in the Maronite Divine Office (see below, §5(v) (b)); the *prumion* (derived from Gk. *prooimion*), which precedes the *qālā* and is itself preceded by the *sedrā*; and the *kārūzuthā*, a litany with choral refrains, which characterizes the Assyrian rite.

The Maronite liturgy in general resembles that of the Syrian Orthodox Church, and the same categories of hymn are found in both; but in some ways it is simpler and more regular than the Syrian Orthodox liturgy. (For details of the differences, see Husmann, 'Die Gesänge der syrischen Liturgie', 1972, pp.84ff; Taft, 1986, 2/1993, pp.225–47.)

(ii) Syrian Orthodox Divine Office. *Tlāth shā'in*, *Sheth shā'in* and *Tsha' shā'in* (the three Little Hours) are the simplest in structure of all the Syrian Orthodox Offices. They comprise the three basic elements of those Offices, *sedrā* and *prumion*, *qālā*, and *ba'uthā*, without any additions. The form of the *ba'uthā* used at Terce (with 12-syllable verses) is known as the *bā'uthā d-Yaqūb* (i.e. ascribed to Ya'qūb of Serugh, *c*500), and that used at Sext and None (with five-syllable verses) is known as the *bā'uthā d-Balai* (i.e. ascribed to St Balai, *c*400). Those with seven-syllable verses are ascribed to St EPHREM SYRUS. Introductory prayers such as the Lord's Prayer, doxology, Trisagion and Kyrie eleison precede all the Offices, as they did in the medieval Latin rite.

Lelyā, like its equivalent, Matins, consists of an introductory section followed by three nocturns (*qawme*, sing. *qawmā*), with a fourth *qawmā* added on Fridays. The introductory section contains an initial prayer followed by troped psalms (Psalms cxxxiv, cxix and cxvii; Syrian numbering: cxxxiii, cxviii and cxvi). The tropes are termed *mā'irāne* ('vigil songs'), although elsewhere in Syrian church music such tropes are usually termed *'enyāne* ('answers', 'responds'); each psalm verse is answered by a trope verse. A prayer opens the series of *qawme*. Each nocturn contains a *madrāshā*, a *sedrā* and *prumion*, a *qālā* and a *bā'uthā* (the last is 'of Yā'qub' in the first *qawmā*, 'of Aphrem' [i.e. Ephrem Syrus] in the second, and 'of Balai' in the third). The third *qawmā* contains an extensive closing section subdivided into two groups: the first forms the climax of the whole Office and contains a *sedrā* with *prumion*, the *Magnificat* with an *'enyānā*, Psalm cxxxiii (Syrian: cxxxii) with *'enyānā*, Psalms cxlviii-cl and cxvii (Syrian: cxvi) (untroped), a *ququlion* and *'eqbā* (trope); the second of these groups is shorter, containing a *sedrā* with *prumion*, *qālā* and *bā'uthā d-Yā'qub*, and concluding with the prayer of St Athanasius and the blessing.

Ṣaprā (Lauds) begins with Psalm l, Psalm lxiii with an *'enyānā*, and Psalms cxiii and cxlviii-cl (untroped). A second section contains *sedrā* and *prumion*, first *qālā* with *ququlion* and *'eqbā*, *sedrā* and *prumion*, second *qālā* and *bā'uthā d-Yā'qub*. Prayers for the censing (*'etra*) and the blessing conclude the Office.

Ramshā (Vespers) comprises an 'introductory prayer' and the Office proper; the former consists of Psalms cxli, cxlii, cxix and cxvii (Syrian: cxl, cxli, cxviii and cxvi respectively), with the Gloria and *'eqbā*. The Office itself comprises three sections: the first contains a *sedrā* with *prumion* and first *qālā*; the second an incense prayer (*'etrā*) and second *qālā*, *ququlion*, Gloria and *'eqbā*; and the third a *sedrā* with *prumion*, third *qālā*, *bā'utha d-Yā'qub*, concluding prayer and blessing. On Saturday evenings the third group also contains an alleluia and Gospel reading.

Sutārā, like its equivalents Compline and Apodeipnon in the Latin and Byzantine rites respectively, begins with Psalm iv concluding with the lesser doxology; however, an *'eqbā* is added in the Syrian Orthodox rite. The main substance of the Office follows, comprising a *sedrā* and *prumion*, *qālā* and *bā'uthā d-Aphrem*. This is followed (as in the Latin rite) by a section whose subject matter is nightfall; here it comprises Psalms xci and cxxi (Syrian xci and cxx respectively), with an alleluia interpolated between each half-verse of the psalms. A prayer of praise, the Creed and the blessing follow.

Differences from the patterns outlined above may occur: in the normal secular rite, for example, these Offices are considerably extended on feast days, notably in the singing of texts from Byzantine *kanōnes* (the so-called *qanūne yawnāye*; see below, §5(iv) (b)).

A number of medieval Syriac manuscripts, including a 13th-century *shḥimtā* (*GB-Lbl* Add.17241, from a Syrian desert monastery in north Egypt), probably reflect an early type of monastic liturgy, which also differs in a number of respects from the secular rite, for example, in the use of the *ma'niāthā* of SEVERUS OF ANTIOCH (*d* 538) and of other hymns by John bar-Aphthonius of Qeneshre and others. In *Ramshā*, Psalm lxxxvi is sung at the beginning, and the *'eqbā* after the psalms is omitted. *Lelyā* has only two nocturns, termed *teshmeshtā*. (For further details, see Husmann, 'Die Gesänge der syrischen Liturgie', 1972, esp. pp.86ff.)

(iii) Assyrian Divine Office. In their basic structure the Offices of the Assyrian and related rites resemble those of the Syrian Orthodox tradition, although there are differences of individual detail. Subsections of the Offices are often preceded and followed by the same liturgical genres, in a characteristic symmetrical structure; the books containing these forms are in consequence termed 'before and after' (see above, §3(i)). All the chants are introduced by prayers, the names of which derive from the chants they precede. Many chants have two forms, used in alternate weeks. Besides the reading of Ordinary psalms at Matins, Lauds and Vespers, the Psalter is read once a

fortnight continuously, with the two halves of the choir alternating week by week with the intonations. For this purpose the Psalter, termed *dawīdha* ('David'), is divided into 20 *hullāle*, analogous to the Byzantine *kathismata*, with a 21st *hullālā* of Old Testament canticles. Each *hullālā* contains between three and 11 psalms and is further subdivided into two or three *marmyāthā* (sing. *marmithā*), analogous to Byzantine *staseis*, each containing between one and four psalms.

Lelyā consists of a variable number of nocturns: between one for ordinary weekdays and three on feast days. Introductory prayers immediately precede the first nocturn, containing from one to seven *hullāle*; the *qālthā*, comprising more psalms, follows on Sundays. The next section is termed the *māwtbā* (meaning 'seat', like the Greek *kathisma*), and comprises an *'unithā*, a *qālā*, a *kānonā* ('refrain'), a *teshbohtā* ('song of praise', roughly analogous to the *Te Deum*), a *kārūzuthā* (litany with choral refrains) and a *madrāshā*. If there are several nocturns, the last is termed *qāle d-shahre* ('songs of vigil') and is similarly constructed from a *hullālā*, an *'unithā*, a *shubāhā* ('song of praise'), *kānonā*, a *teshbohtā* and a *kārūzuthā*.

Ṣaprā begins with introductory prayers and a characteristic group of morning psalms (Psalms c, xci, civ, cxiii, xciii, cxlviii-cl, cxvii; Syrian numbering identical with Hebrew except for the last, cxvi). This is followed on weekdays by an *'unithā* or the *lākhumārā* ('Thee, O Lord', a canticle similar to the Trisagion). The Office ends with the Trisagion, the Lord's Prayer (to which is added on weekdays the *qāle d-sāhde*, 'songs of the martyrs') and the blessing.

Ramshā consists of introductory prayers, Gloria in excelsis, the Lord's Prayer, Sanctus and 'evening prayer', followed by one *marmithā* from the Psalter (or two on weekdays). After the 'incense prayer' and the 'prayer of the *lākhumārā*', there follows the *lākhumārā*. A central group of evening psalms follows, which occurs also in the Syrian Orthodox rite (Psalms cxli, cxlii, cxix and cxvii; Syrian numbering: cxl, cxli, cxviii and cxvi); it is preceded by a *shurāyā* 'before' and an *'unithā* 'before', and followed by a *shurāyā* 'after' and an *'unithā* 'after' (with introductory prayer). (The *shurāyā*, 'beginning', contains the initial verses of psalms, but the number of psalm verses in its text varies, normally between three and eight.) The Office concludes with a twofold *kārūzuthā*, the Trisagion, a *vāsāliqe* ('royal prayer'), an *'unithā* and the closing prayer; a closing psalm (*suyāke*) and Gospel reading may be added. After the Office proper, a short section termed *Suba'a* replaces Compline.

(iv) Divine Liturgy. The Divine Liturgy (Eucharist) in the Eastern Churches corresponds in basic structure to the Latin Mass (see MASS, §I, 2), with a preliminary Liturgy of the Word, or synaxis, intended for both catechumens and the faithful, and a second section, including the Consecration and Communion, intended for the faithful only. This basic twofold structure is preceded by an enarxis, or introductory section, including prayers at the vesting of the priest and the preparation of the altar and the oblations. The lessons at the Divine Liturgy include not only the Epistle and Gospel, as in the traditional Roman Mass, but often additional Old Testament lessons (mostly from the Prophets) at the beginning. (*See* EPISTLE, §1.)

Some of the musical forms used in the Divine Liturgy are the same as those of the Divine Office. The Syrian Orthodox Eucharist, for example, prescribes before the Gospel a *sedrā* and *prumion*, Trisagion, and alleluia with verse; the Assyrian rite prescribes the *lākhumārā*, *shurāya* and *kārūzuthā*. Some, on the other hand, correspond to items of the Latin Mass: psalms, Creed, Lord's Prayer, Sanctus and the sections allotted to the celebrant in the central part of the Mass of the Faithful, such as the Preface and Words of Institution, except that in the consecration prayer the epiclesis (invocation of the Holy Spirit) is almost entirely confined to the Eastern and Byzantine Churches.

4. MODAL SYSTEM. Apart from the Melkites and Antiochian Orthodox who follow Byzantine practice, the Syrian Orthodox Church, and the parallel uniate Syro-Antiochene Church, are the only ones now possessing a system of eight ecclesiastical modes analogous to the *oktōēchos* of the Byzantine Church and the eight-mode Gregorian system. The Assyrian Church must formerly have possessed a modal system, as all oriental music did; this may have been the Byzantine system or an older Persian system. Modern Assyrian, uniate Chaldean and Maronite musicians refer to their scales by the names of Arabic *maqāmāt* and identify them with these *maqāmāt*; the Maronites formerly possessed, but no longer use, the Syrian Orthodox modal system.

(i) Syrian Orthodox. The eight modes of the Syrian Orthodox system are usually numbered consecutively from 1 to 8; however, some manuscripts (probably under Melkite influence) use Greek terminology, beginning with *protos* and concluding with *plagis ṭetarṭos*. Modes 5–8 are plagal modes, corresponding to the authentic modes represented by modes 1–4 respectively. The modes may be listed from 1 to 8 in order (i.e. first the four authentic modes, then the four plagal), in a manner similar to that of Byzantine chant. Alternatively, in some early manuscripts such as the *ma'niāthā* (sometimes wrongly termed OKTŌĒCHOS) of Severus of Antioch, they appear in the order 1–5-2–6-3–7-4–8, in a manner similar to that of Gregorian chant, with each pair of modes (authentic and plagal) sharing a common final grouped together (see Husmann, 'Hymnus und Troparion', 1971, esp. pp.46–58). Indeed, the Gregorian eight-mode system is directly related to the Syrian Orthodox system, even when the latter uses Greek terminology.

In modern practice this system shows Arab and Turkish influence: Syrian church musicians freely admit this, claiming to be Christian Arabs. In order to discover whether the original Syrian system was identical with the Byzantine *oktōēchos*, or an indigenous system to which Greek terminology was only superficially applied, it is necessary to attempt to distinguish the elements originally present in the repertory from those that derive from Arab and Turkish origins.

In the Syrian rites, as in the Byzantine, the chants are organized in an eight-week modal cycle: all the chants of a week are in a single mode, and the modes are taken in order. In the Byzantine rite the texts also vary, and thus any particular text is sung, to a single melody, once every eight weeks. In the Syrian rites, however, the texts remain the same from week to week but are sung to different melodies, depending on the mode of the week; furthermore, the authentic or plagal mode corresponding to the mode of the week is used on Monday, Wednesday and

Friday, with the main mode of the week on the remaining days.

Ex.1 shows the first two lines of a *madrāshā* in each mode as sung in successive weeks by Archbishop Kyrillos Yakobos, Syrian Orthodox Metropolitan of Damascus (from Husmann, *Die Melodien der jakobitischen Kirche*, i, 1969, pp.15–16). In the example, the 1st mode (with D as final) corresponds to the 1st Byzantine and Gregorian mode. The 2nd mode, also on D, is the first plagal mode (i.e. Byzantine 5th mode, Gregorian 2nd mode) and thus corresponds with the peculiarly Syrian order of some ancient manuscripts. The 3rd mode, however, is on F and thus corresponds to the Byzantine 3rd mode; the 4th mode similarly corresponds to the Byzantine 4th mode (here, as in modern Byzantine church music, based on C rather than on F as in the medieval system); this may be the result of Arab influence, since *rāst*, the corresponding Arab *maqām*, is based on C. The 5th mode, on F, can only be a repetition (with the same melody) of the 3rd Byzantine mode or the 5th Gregorian mode; it thus represents another example of correspondence with the Gregorian order, and with that of some of the Syriac manuscripts (the 5th Byzantine mode, or *plagios prōtos*, had already been allocated the second place). The use of the same mode and melody for the 3rd and 5th modes is a peculiarity of the individual singer here recorded. The 6th mode concludes on E, but all the sections of the melody except the last conclude on A, which seems to represent the final; the construction is, in this case, inverted, with the lower note used as a dominant and the note a 5th above as the final. This type of construction is unknown in the medieval Byzantine and Gregorian systems, but occurs in the Arab *maqām 'ajam*. The 7th mode can be regarded as the medieval 7th *barys* mode of Byzantine chant, transposed on to C, but the intervals used (e.g. three-quarters of a tone between C and D and between E and F) are modified under Arab influence. The 8th mode similarly contains C–D♭-E–F in its structure: this does not occur in modern or medieval Byzantine chant, but corresponds to the Arab *maqām ḥijāz* and *ḥijāz-kar* (the same scale pattern is part of the so-called 'gypsy' scale). It will be seen, therefore, that the eight modes as represented in the example show anomalies due, on the one hand, to nomenclature derived partly from the Byzantine system and partly from the Old Syrian system (which resembles the Gregorian), and, on the other hand, to Arab influence.

A broader view of Syrian modality, based on analyses of large quantities of material, shows that a single modal name (e.g. 1st mode) may serve at different times and places for a number of different modes; these may be indigenous Syrian or Arab modes, and may exchange places. It shows too that the Syrian modes, like those of Gregorian and Byzantine chant, have notes with special functions, comparable to the finals and 'dominants' of medieval chant. Within a mode, the final and dominant can exchange places (see Husmann, 'Eine Konkordanztabelle', 1974): for example, in the 1st mode, D can be the final and F or G the dominant at one time, and F can be the final and D the dominant at another. This exchange of functions occurs also in the modern Greek ecclesiastical modal system; in both cases it can be explained as the result of Arab influence (see above, where an example of this exchange of functions was explained as the result of the influence of the Arab *maqām 'ajam*).

Another variable factor in the modal system is that of ambitus. A single modal number may refer to scales with different ranges (e.g. mainly above, or mainly below, the final) even when the final remains the same. Thus in Syrian chant the 'authentic' and 'plagal' varieties of a mode may often be grouped as subdivisions of a single mode, rather than as two separate modes.

The following list (based chiefly on an analysis of the *qāle*; see Husmann, *Die Melodien der jakobitischen Kirche*, ii, 1971) gives details of the modes as they are used in practice; indications are given in parentheses of

correspondences with Gregorian and Byzantine modes. It will be seen that almost all the Gregorian and Byzantine modes are represented, although the numbering is different, owing partly to a confusion between the original Byzantine and Gregorian numberings and partly to the replacement of some old modes by Arabic *maqāmāt*.

1st mode: D final; occasionally F final (1st authentic and 1st plagal modes).
2nd mode: D and G finals, analogous to the Arabic *maqāmāt bayātī* and *nawā*; F is often tuned a quarter-tone sharp in the Arabic manner (Arabic scale).
3rd mode: E final, with ambitus above or below E; F often tuned a quarter-tone sharp (2nd authentic and 2nd plagal modes, i.e. Gregorian 3rd and 4th modes, Byzantine 2nd and 6th). (The 3rd mode in ex.1 is an exception to this rule, and may represent an error on the part of the singer.)
4th mode: C final, or occasionally D; leading note below C may be B or B♭; E tuned a quarter-tone sharp (4th authentic mode, i.e. Gregorian 7th mode, Byzantine 4th mode).
5th mode: E and F finals (G final as a variant) even in the same melody and with the same singer (with F as final, 3rd plagal mode, i.e. Gregorian 6th mode, Byzantine 7th mode).
6th mode: E and D finals; characteristic motif C–E, drawn from the Arabic *maqām 'ajam* (Arabic scale).
7th mode: E (or E a quarter-tone flat) and F finals; D and E both often tuned a quarter-tone flat (Arabic scale).
8th mode: C and E finals, corresponding to medieval Byzantine custom, or D final, with a scale including B♭ and C♯, in the Arabic manner; F tuned a quarter-tone sharp (partly 4th authentic mode, i.e. Gregorian 7th mode, Byzantine 4th mode; partly Arabic *ḥijāz* and *ḥijāz-kar maqāmāt*).

(ii) Assyrian. The modes of the Assyrian and Chaldean chant are given names of Arabic *maqāmāt*; it may be assumed that the church singers thoroughly understand the Arabic musical system. The great Chaldean singer Ephrem Bédé (see Husmann, 'Die Tonarten', 1969; and 'Arabische Maqamen', 1970) has claimed that Chaldean chant uses the *maqāmāt rāst*, *nihawand*, *urfalī* or *dīwānī*, *sah-gāh*, *ḥijāz* (*ḥijāz-kar*), *ṣabā*, *ṭūrānī*, *araibūnī* and *bayātī*. Of these, *urfalī* ('from Urfa', i.e. 'from Edessa'), *ṭūrānī* ('mountain *maqām*') and *araibūnī* are peculiar to north Iraq and the rest are well known in the whole Arab world, although oriental musicians claim that *araibūnī* is simply a variant of *bayātī* (*Musique arabe: Cairo 1932*, p.150).

The *rāst maqām* corresponds to the C major scale; the tuning in Iraq (as with Ephrem Bédé) is diatonic, but in Arabia includes the intervallic progression of a whole tone followed by two steps each of three-quarters of a tone. *Bayātī* is the minor scale on D mentioned as the 2nd mode of the Syrian Orthodox system. *Nawā* and *nihawand* represent the D minor scale with D, F and G as finals; again the tuning is diatonic in Iraq and includes intervals of three-quarters of a tone in Arabia. *Ḥijāz* and *ḥijāz-kar* are constructed from tetrachords comprising an interval of one and a half tones with a semitone either side of it; this tetrachord is used for both halves of *ḥijāz-kar*, whereas *ḥijāz* has a diatonic upper tetrachord.

Sah-gāh and *ṣabā* are Arabic scales, including intervals of three-quarters of a tone. *Sah-gāh* includes E and B each tuned a quarter-tone flat and has E, tuned a quarter-tone flat, as final; these notes are altered to diatonic tuning (E and B) in Turkey and northern Iraq, but with D♯ as a leading note. *Ṣabā* has D as final; its scale is C–D-E (quarter-tone flat)-F–G♯-A–B♭-C–D♯. As performed by Bédé, *urfalī* and *ṭūrāni* are also minor scales. Since 'Urfa' (derived from Syriac 'Urha') is pronounced 'Ruha' in Arabic, and 'from Ruha' becomes 'ruhawī' in Arabic, it seems likely that *urfalī* is simply a Turkish translation of the Arabic *maqām* name *rahāwī*. The latter exists, moreover, in a variant on D that may correspond with the *urfalī* (for which, see d'Erlanger, 1930–59, v, *maqām* 31; vi, ex.109, transposed on to C).

In the Assyrian system there are, therefore, major and minor diatonic modes besides Arabic scales; these diatonic modes, like those in the Syrian Orthodox modal system, may represent survivals of the ancient Syrian modal system.

(iii) Maronite. According to the great Maronite singer Mārūn Murād, the most usual *maqāmāt* in Maronite chant are the *'ajam*, *nawā*, *nihawand*, *rāst*, *jaharka* (the Pythagorean major scale on F), *ṣabā* and *sah-gāh*. These are all widely known Arabic scales; the particular frequency of the *'ajam* is noteworthy.

The extensive researches of Louis Hage, on the other hand, led him to conclude that 'the "modality" is of a special archaic type, irreducible to the Arab musical system or to that of the eight modes of Byzantine or Gregorian chant' (*Musique maronite*, ii, 1995, p.156). Maronite chant, in Hage's view, consists of essentially diatonic melodies moving within a small range of a 5th or less, and ending on one of three possible finals (called 'do', 're' or 'mi', depending on the presence or absence of half steps above or below). But Hage also recognizes the presence of 'alterations' that introduce 'habitual formulas' of familiar Arabic *maqāmāt*.

5. Musical forms and styles.

(i) Liturgical recitatives. Much of the Syrian Divine Office is chanted to a recitative, as is almost the whole of the Divine Liturgy (the latter, in a manner without parallel in the West, as a dialogue between the celebrating priest and a deacon or deacons). The particular details of the recitative are freely improvised, whether the singer uses normal speech, heightened speech or (as in the readings at the Eucharist from the Old Testament and the Epistles) a fixed reciting note with simple cadential formulae such as the fall of a tone or semitone. Even in this free improvisation, however, the singers defer to tradition, since they invariably use familiar formulae learnt from their teachers. (*See* Centonization.)

(ii) Antiphonal psalmody. In the Syrian Divine Office, the psalms are spoken, rather than sung, by the two halves of the choir in alternation (i.e. in the manner known in the West as antiphonal). Sung hymns are interpolated between the verses of the psalms, and these are also antiphonal, with the alternation occurring strophe by strophe as in Ambrosian hymns; the strophes are marked with the letters A and B in the margins of the manuscripts to indicate which half of the choir is to sing them (see Husmann, 'Die antiphonale Chorpraxis', 1972).

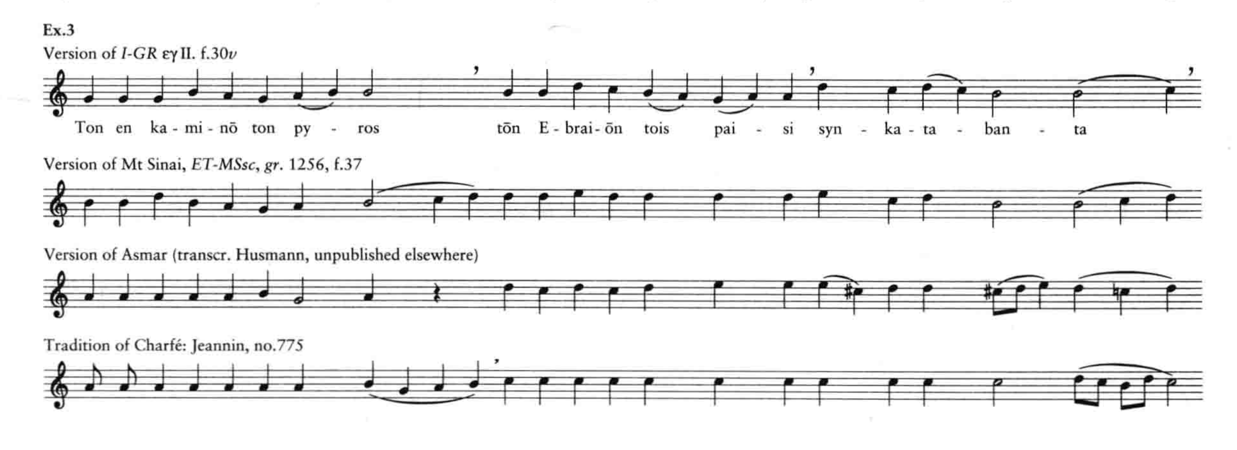
(iii) Polyphony. Both in the spoken antiphonal psalms and in the sung antiphonal hymns, primitive improvised polyphony often occurs in the various Syrian church traditions. The chant is reinforced in various ways with parallel intervals: the crudest examples use parallel 2nds, 3rds and 4ths together, but only parallel 4ths (or, rarely, 5ths) are found in the most sophisticated (see Husmann, 1966). Western polyphony, like Western antiphonal psalmody, therefore, has some parallels with Eastern practice.

(iv) Interpolated hymns. Most of the Syrian hymns are sung in alternating strophes interpolated between the verses of the psalms and canticles and are thus analogous to the Byzantine *stichēra* and *troparia*. The Byzantine distinction between the latter categories is, however, not drawn in Syrian hymnody: all these interpolations are given the name *'enyānā*, which is derived from the root *'nā* ('answer') and which thus corresponds etymologically with the Latin *responsorium* ('respond', 'responsory') and the Byzantine *antiphōna* ('antiphon').

(a) Qālā. The *qālā* is a special category of hymn that occurs extensively in the Syrian Offices (see above, §3). The strophes of a *qālā*, in most current Syrian practice, are sung between psalm verses of diverse origin; but the original pattern, in which the strophes of the *qālā* are interpolated into single continuous psalms or canticles, survives in Maronite chant. *Qāle* are found in manuscripts as early as the 9th century; the simpler Assyrian *qāle* may, however, date from as early as the 4th century. Most of those in the Syrian Orthodox rite are attributed to Simeon the Potter (*Quqāyā*, *c*500) and are cast in a developed *AABBCC* ... structure, including an alleluia and resembling that of the later Western sequence. One of the most widely known *qāle*, *'m kulhun qadishaik*, found in the Syrian Orthodox, Maronite and Old Syrian rites, is unique in being a translation of a Byzantine *kontakion* (*Meta tōn hagiōn*).

The melody of the psalm verse that precedes a *qālā* may be taken from the beginning of the strophe of the *qālā* itself (ex.2). When the versions of different singers are

Ex.2 Qālā 'Al' eṭrā dbesme



compared, the melodic variants in some *qāle* appear slight; in others, there are considerable divergences. (Even within the Syrian Orthodox rite the melodies of the older Indian tradition are sometimes more elaborate than those of the other branches of the tradition.) Indeed, the melodies may differ from one rite to another so widely that it is impossible to reconstruct their original form; the differences must result from the long separation of the traditions, but there is usually no way of discovering at what period melodies were adopted in particular rites, or in which rite they originated.

Some Syrian Orthodox *qāle*, sung on ordinary weekdays, however, have an extra 'ferial' melody besides the eight melodies, one for each mode, with which they are sung at festivals (the *qāle* for vigils have only the eight modal melodies). The ninth melody is generally simpler than the others and is normally identical in the Syrian Orthodox, Maronite and Assyrian rites. It is probably, therefore, the original melody, and the other eight were most likely composed after the introduction of the system of eight modes into Syrian Orthodox chant. It is possible that one of the eight modal melodies of the *qāle* for vigils was the original melody (being already suitable for use in one of the modes) and that the others were added; these *qāle*, and presumably their melodies, are not recent compositions since they occur in the oldest surviving manuscripts.

The normal structure of the *qālā Quqāyā*, like that of the sequence it resembles, may be subject to extension, abbreviation or interpolation. The alleluia may be omitted; the strophes of *qāle* may be preceded by short verses (*pethgāme*) summarizing the content of the strophe, although the last strophe is always preceded by the lesser doxology. In the Syrian Orthodox rite these latter are spoken, but in the Assyrian rite they are sung. The Assyrian *qāle* are simpler in style than those of the Syrian Orthodox rite, but they also exist in variants (*shuchlāfe*) whose melodies are quite unrelated to those of the *qāle*. Both *qāle* and *shuchlāfe* may have as many as 30 to 50 strophes.

(b) Qanūne yawnāye. Another special category of Syrian hymn is represented by the *qanūne yawnāye* ('Ionian [i.e. Greek] *kanōnes*'), which are translations of Byzantine *kanōnes* associated with the nine biblical canticles. Their melodies permit a particularly interesting comparison between modern Syrian and medieval Byzantine melodies (ex.3), where it can be seen – despite differences – that the melodic tradition has remained essentially the same. These *qanūne yawnāye* appear in Syrian manuscripts from the 10th and 11th centuries (e.g. in *GB-Lbl* Add.14507; see Wright, i, 1870, pp.283ff).

(c) Ma'nithā. A further species of hymn, the *Ma'nithā* (like *'enyānā*, *'unāyā* and *'unithā*; from *'na*: 'answer'; pl. *ma'niāthā*), occurs more rarely, except in manuscripts reflecting a Syrian Orthodox monastic rite. A large collection of *ma'niāthā* (often wrongly termed 'oktōēchos') for the church year is translated from a lost Greek original, the core of which was created by Severus of Antioch (see Brooks, 1909–10/*R*). (The original Greek term represented by *ma'nithā* may be *hypēchēsis*, although it is usually translated back into Greek as *antiphōna*.) Each *ma'nithā* has a single strophe in most manuscripts, preceded by a psalm verse, but in practice the strophe

may have been followed (as in Byzantine *troparia*) by the lesser doxology and then repeated or replaced by a *theotokion* in honour of the Virgin Mary. In monastic Syrian Orthodox manuscripts, the *maʿniāthā* are grouped in fours, with the first half of the lesser doxology prescribed before the psalm verse of the third *maʿnithā* and the second half of the doxology before the psalm verse of the fourth *maʿnithā*.

Manuscripts of the *maʿniāthā* had an appendix of other chants, including a Syriac version of the ancient Byzantine *troparion Hypo tēn sēn eusplanchnian*.

(v) Independent hymns.

(a) Madrāshā. The *madrāshā* is a category of independent strophic hymn whose invention is attributed to St Ephrem Syrus. Each strophe is followed by a short refrain, whose melody is generally that of the first half of the strophe. Although the *madrāshā* is commonly regarded as the ancestor of the Byzantine *kontakion*, there are structural differences between the two categories: the strophes of the *kontakion* end only at the conclusion of the refrain (the last verse of the *prooimion*, termed the *koukoulion*), which differs in metre from the strophe.

Several of the *madrāshe* are sung in both the Syrian Orthodox and Assyrian traditions (including, in each case, the parallel uniate rites); it is thus possible to compare the melodic traditions. Variations occur in the optional embellishments and in the tuning of the scales used; they also occur particularly at the beginnings of melodies, where (as in folksong and other comparable traditions) the singer is 'searching' for the melody (ex.4). These variations are not essential, however, and the rites may well share a common melodic tradition in the *madrāshe*.

At the beginning of a *madrāshā*, the incipit of the original text sung to the melody of the *madrāshā* is given. Thus *madrāshe* are in effect contrafacta. The incipits are not always consistent, however: a single melody may appear with several different titles, which may therefore represent the incipits of further contrafacta – or perhaps there was no single original. In his edition of Ephrem's hymns, Beck has investigated this nomenclature and has shown that in most of the cases where nomenclature varies, one of the titles used is also attested as the incipit of a *madrāshā* by Ephrem. It seems, therefore, that all these melodies may originally have been composed by Ephrem and subsequently used by him for constructing contrafacta; this fact may discredit the medieval tradition that early Christian hymnographers used secular or pagan melodies in order to win the hearts of the people.

Ex.4 The melody of the *madrāshā Tao nettoe harka* in three versions

(a) As sung by the Assyrian priest A. Debaz in Chicago

(b) As sung by the Chaldaic cantor E. Bédé in Cairo

[variants G or G♭ on first note]

(c) As sung by the Syrian Orthodox Archdeacon Asmar in Beirut

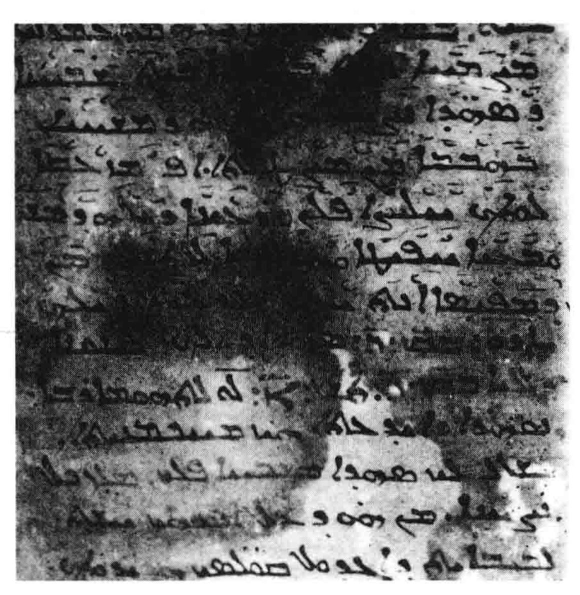
[variant of first two notes; E?–F]

Syrian musicians believe that all the *madrāshe* originally had eight melodies, although in current practice all except the 'great' four have only one. At the time of Ephrem (*d* 373), however, the church year was not divided into eight-week cycles according to the modal system, and the hymns of Severus of Antioch (*d* 538) were not originally categorized according to mode (*see* OKTŌĒCHOS); there would therefore have been no reason for each *madrāshā* to have eight melodies. Accordingly, the melodies of the great *madrāshe* (perhaps all eight of each, or seven if the original melody was retained) must have been composed after the introduction of the eight-week cycle.

(b) Sughithā and bāʿuthā. The *sughithā* (pl. *sughiāthā*) resembles the *madrāshā* in form but includes alphabetical acrostics in its text. Since its text often features dialogue in direct speech, the *sughithā* may thus be regarded as a prototype of liturgical drama. There are two *sughiāthā* in a fragment now bound into *ET-MSsc* syr.233, a Sinai manuscript to which Palaeo-Byzantine notation was later added (see Husmann, 'Eine alte orientalische christliche Liturgie', 1976).

Smaller hymn forms include the *bāʿuthā* (*tbārtā*), which is divided into three categories according to metre (see above, §3(ii)). Each text has eight melodies, whose musical style is simple; the *bāʿuthā*, like the *qālā* (see above, §5(iv)(a)), may have *shuchlāfe*. The melodies, like those of some of the other categories, are used according to the eight-week modal cycle.

(vi) Mimra. A sermon in prose or verse, the *mimra* is a particularly popular genre, of which there are examples among the works of St Ephrem Syrus. Those in verse are analogous to the rhymed sermons of the West in the Middle Ages. In current practice all of them are merely spoken, but *mimre* in verse must originally have been sung; *ET-MSsc* syr.233 contains *mimre* with musical indications, including details of the mode and terms such as 'low' and 'he declares' (perhaps meaning 'spoken'). It is remarkable that only short sections of the *mimra* remain in the same mode: there is constant modulation.



6. NOTATION. Most Syrian liturgical books lack musical notation, except in the Melkite rite. Palaeo-Byzantine notation, supplemented with some Middle Byzantine signs to clarify the size of the melodic intervals, occurs in a Melkite manuscript, *ET-MSsc* syr.261 (fig.1; facs. ed. Husmann, 1975–8; see also Husmann, 'Ein syrisches Sticherarion', 1975). This notation is used also in the *sughiāthā* of *MSsc* syr.233 (see above, §5(v)(b)). A more primitive version of Palaeo-Byzantine notation – using only a limited number of its signs – occurs in Syrian manuscripts, especially for marking melismas; it also occurs in Byzantine manuscripts, from which (on account of its lavish use of the Greek letter *thēta*) it has been termed 'theta notation' by Raasted (1962). Another Syrian Orthodox notation, discovered by Husmann in a

1. *Page with 'heōthina' (morning hymns) notated in Palaeo-Byzantine neumes, supplemented by Middle Byzantine signs, in a Melkite sticherarion copied (c1233–4) at the Monastery of St Catherine, Mt Sinai (ET-MSsc syr.261, f.195v)*

musical notebook, uses mainly *oxeiai*. (*See also* BYZANTINE CHANT, §3(i–ii).)

A distinctive Old Melkite notation occurs in Syrian Melkite manuscripts; although this is more highly developed than the notations described above using *thēta* signs

2. *Old Melkite notation in an undated MS fragment (Bibliothèque du Seminaire de Charfe, Lebanon)*

and *oxeiai*, it is still less developed than Byzantine or Latin chant notation. It was first discovered in 1898 by Parisot and published in facsimile by J.-B. Thibaut (*Origine byzantine de la notation neumatique de l'église latine*, Paris, 1907; fig.2). This notation appears also in manuscripts from Sinai (of which *MSsc* syr.80 is particularly rich in neumes), and there are good examples of it in *I-Rvat* syr.331–3.

A similar notation is used in some Syrian Orthodox manuscripts, especially those at Berlin, where there are also Assyrian and Chaldean manuscripts with neumes constructed with dots. Such neumes also occur in Chaldean manuscripts in Iraq (according to a private communication from Ephrem Bédé; for an example see Hatch, 1946, pls.CLXXI–CLXXX).

HEINRICH HUSMANN/PETER JEFFERY

Syring, Jacobus (*b* Rotenburg an der Fulda; bur. Celle, 20 April 1606). German composer. On the title-page of his works he refers to himself as 'Rottenburgensis hassiae' and 'musicum et ducalis judicii Zellae procuratorem'. It is not known where he studied law. According to town archives, he lived in Celle from 1578 to at least 1599 and was buried there on 20 April 1606. His earliest work *Cantiones poenitentiales* (Ülzen, 1582) is dedicated to Duke Wilhelm the Younger of Braunschweig-Lüneburg. In the following year he dedicated his *Te Deum laudamus Teutsch* (Ülzen, 1583) to the Duke's sons. He composed two wedding songs entitled *Epithalamia* for the marriage on 3 May 1585 of Princess Elisabeth of Celle and Earl Friedrich of Hohenlohe. In 1588 he dedicated the second edition of his *Cantiones poenitentiales* (Ülzen, 1588) to Wilhelm IV, Landgrave of Hesse. From 1589 to 1602/03 Syring is mentioned in Celle court accounts as 'componista' and in 1593 he received 20 thaler for the *Cantiones* (lost) dedicated to Duke Ernst of Celle. A *Laudes Beatae Mariae Virginis* and a *Missa Septem Volcum Super 'Ego flos campi'* survive, almost complete (in *D-Mbs*).

HARALD MÜLLER

Syrinx (Gk. *surinx*). Greek term for the type of instrument (AEROPHONE) generally referred to as PANPIPES, that is, a row of hollow pipes sounded by blowing across their tops. Originally it was made from cane pipes of equal length, joined together, to produce a rectangular raft-like shape. Changes in pitch were achieved by filling part of the pipe with material such as wax (a process described in Pseudo-Aristotle's *Problems*, xix.23). The Romans and Etruscans cut the pipes to their proper lengths, thus producing a wing-like shape. The cane pipes came to be replaced by wood, clay or bronze, and sometimes the instrument was made from one piece in which the holes were bored. Greek and Roman iconography shows the syrinx with from five to 13 pipes, approximately eight being the norm. The pipes were short, so the pitch was always high.

In mythology the instrument is the attribute of PAN, the half-goat, half-man god of shepherds. His father, Hermes, had been pictured with it in the Archaic period, but by the classical period it had become exclusively his. The central myth is related in Ovid's *Metamorphoses* (i.689–712): Pan is pursuing the nymph Syrinx, who flees to a river and begs the nymphs there for help. She is allowed to conceal herself by taking the form of a reed-bed, from which Pan subsequently picks the reeds to fashion his pipes.

In keeping with its mythology the syrinx has always had a strongly pastoral connotation. Plato, for example, excluded it from his republic while deeming it appropriate for shepherds in the field. In the Hellenistic world it gathered other associations. It probably appears in the idolatrous orchestra described in the book of *Daniel*. This purports to celebrate the royal cult of Nebuchadnezzar; the orchestra is very likely based on the practice of Antiochus IV of Syria, the Seleucid ruler of the 2nd century BCE. Parthian drinking horns from Nisa show the syrinx in Dionysian ceremonies at much the same date. The Romans kept the pastoral association, but in late classical times it also became important in the pantomime, together with such instruments as the tibia and kithara.

Syrmatikē kai teleia. Pair of signs used in Byzantine EKPHONETIC NOTATION.

Syrmen, Maddalena Laura. *See* SIRMEN, MADDALENA LAURA.

System (Ger. *Akkolade*; It. *accollatura*). In Western notation two or more staves, usually joined together by a vertical line, and/or bracket(s) and/or brace(s) at the left-hand end and often with barlines drawn continuously through them, which together present the whole of the musical texture for any one line of music on the page. In scores, successive systems on a page are often separated by two parallel diagonal strokes between them at the left-hand side. (*See* NOTATION, §III, 4 and SCORE.)

In German the word is used as an abbreviation of *Liniensystem*, meaning 'staff' or 'stave'.

RICHARD RASTALL

Systema participato (It.). *See* MEAN-TONE.

Syuni, Grigor (Mirzaian) (*b* Kedabek, Azerbaijan, 30 Aug/10 Sept 1876; *d* Philadelphia, 18 Dec 1939). Armenian composer and choirmaster. He spent much of his childhood in Shusha, where he began to study music. He then established professional musical education at the Gevorkian Theological Academy in Ejmiadsin (1891–5) under the guidance of Kara-Murza and Ekmalian; around this time he was also an associate of Komitas. He then moved to St Petersburg where, in addition to arranging folksongs and directing the choir of the Armenian church, he studied with Glazunov, Lyadov and Rimsky-Korsakov at the conservatory there (1898–1904). His first collection of Armenian folksongs – *Haykakan zhoghovrdakan yerger* – appeared in St Petersburg. He then taught at the Nersessian Seminary in Tbilisi (1905–8) and collected more folk material in Armenia itself and in Armenian provinces in Turkey and Iran. After living for a while in Erzerum (1910–14) he returned to Tbilisi where he continued to compose, teach and conduct choirs with concerts taking him to Tehran and Constantinople. In 1921 he moved to Philadelphia where he organized a choir that appeared in many American cities. He established in Philadelphia a music studio dedicated to the study of traditional Armenian music; he also served on the juries of various international competitions. Four collections of Armenian folksong, entitled *Hay yerg-pundj* ('Bouquet of Armenian Songs'), appeared in Philadelphia between 1940 and 1947.

Syuni's work as a composer followed two main courses: national folklore and music drama. Like Komitas, whose work influenced him, Syuni left a sizable legacy of choral and solo songs which bear witness to his professionalism and taste. His opera *Asli i Kyaram* is based on a folk legend, and his operetta *Aregnazan* was staged in 1907 through the efforts of the Armenian Dramatic Society in Tbilisi. He also wrote symphonic and piano compositions and, taken as a whole, his output partly determined the route taken in the early 20th century by Armenian music towards a harmonic and polyphonic style.

SVETLANA SARKISYAN

Szabadi, Vilmos (*b* Budapest, 10 March 1959). Hungarian violinist. He studied with Ferenc Halász at the Liszt Academy in Budapest, graduating in 1982. That year he won the Hungarian Radio National Competition and in 1983 the Jenö Hubay Competition in Budapest. In 1984 he was appointed professor at the Liszt Academy and the following year he took third prize at the Jean Sibelius Competition in Finland. He then began his international career. In 1988 he made his London début playing Bartók's Second Concerto with Sir Georg Solti as conductor. He was awarded the Liszt Prize in 1992. Szabadi is a first-rate virtuoso with a direct, unmannered approach to a wide repertory. His recordings include outstanding accounts of Ysaÿe's six solo sonatas, Weiner's and Enescu's sonatas with piano and the concertos of Dohnányi and Bartók's. He plays a 1778 violin by Lorenzo Storioni of Cremona.

TULLY POTTER

Szabados, Béla Antal (*b* Pest, 3 June 1867; *d* Budapest, 5 Sept 1936). Hungarian composer. He first studied composition and the piano with Erkel, later with Volkmann, Koessler and Sándor Nikolits. In 1888 he joined the staff of the Academy of Music and Dramatic Art as accompanist and coach, and in 1893 was appointed piano teacher and coach at the reorganized Academy of Music. His First String Quartet was awarded the Milleniumi Király-dij (Millennial King's Prize) in 1896. He was appointed professor of singing at the academy in 1920 and two years later he became head of the newly established department for training professors of singing. In 1927 he was appointed principal of the National Conservatory, in which position he remained until his death.

Szabados's music, at once poetic and restrained, is essentially conservative in character; his language never advanced beyond that of the late Romantics. He was principally known as a composer for the theatre and also as a singing teacher: his pedagogical works were in official use by the academy.

Szabados's brother Károly (*b* Pest, 28 Jan 1860; *d* Budapest, 25 Jan 1892) was also a pianist and composer and studied with Liszt, Erkel and Volkmann. In 1880 he was conductor at the National Theatre of Kolozsvár; later he became assistant conductor at the Royal Hungarian Opera House. His three-act ballet *Vióra* (1891) enjoyed considerable success.

JOHN S. WEISSMANN/PÉTER P. VÁRNAI

Szabelski, Bolesław (*b* Radoryż, nr. Łuków, 3 Dec 1896; *d* Katowice, 27 Aug 1979). Polish composer, teacher and organist. He studied the piano and organ with Jan Łysakowski at the Warsaw Musical Society and later with Mieczysław Surzyński at the Warsaw Conservatory, gaining his diploma in 1915. After the war, he took various posts as organist before returning to the Conservatory to study composition, first with Statkowski (until 1925), later with Szymanowski (1927–9). From 1929 to 1939 and during the period 1954–67 he taught organ and composition at the Katowice conservatory, where his most distinguished pupil was Górecki (1955–60).

Szabelski's earliest surviving composition, the Second Symphony (1932), is clearly indebted to Szymanowski in its harmonic idiom and its incorporation of themes from the same folk sources used by his teacher for Stabat mater and *Harnasie*. Other inter-war compositions show a

mastery of the *moto perpetuo*, vividly embossed with Polish folk themes or sparkling with traces of early Stravinsky (as in the Toccata and *Etiuda*, respectively). The major composition of the postwar decade was the Third Symphony (1951), which received its première in March 1953, coincidentally the day after Stalin's death. It is an impressive example of monumentalism, one of several possible responses to the demands of socialist realism. It has the obligatory gestures towards positive goals, yet the toccata style is now laborious and the climaxes sound forced and brutal. The heart of the symphony lies in the numerous introspective slow sections, where Shostakovich's influence is strongly felt, especially in the frequent two-part counterpoint.

Szabelski was wedded to Baroque practices (a passacaglia in the Third Symphony, a ricercare in the Fourth) and to neo-classical motorism. But the musical argument becomes fragmented in the Concertino (1955), with its octave displacement, increasing dissonance and a bizarre allusion to the chorale section of Berg's Violin Concerto in the central movement. The effect presages one of the most startling compositional turnabouts in postwar Polish music. Undoubtedly stimulated by the close relationship with his avant-garde pupil Górecki, Szabelski produced, in his 60s, a series of works from 1958 to 1962 which embraced serially based pointillism. The most successful of these was *Wiersze* ('Verses', 1961), where he achieved a stylistic synthesis between the solidity of earlier scores and the delicate, multi-layered textures of single events. Like Górecki, he was able to achieve forward momentum in non-tonal contexts and to mediate between earlier and newer compositional impulses.

Like many of his compatriots, Szabelski soon felt the need to free himself from serialism (the delicately scored Flute Concerto may be regarded as the point of liberation). His contribution to so-called Polish sonorism was idiosyncratic: usually short pieces, replete with ostinatos, contrapuntal layering, 18th-century figurations in an atonal context and a quixotic approach to structure (brevity was not a barrier to huge textural climaxes). The last works reinterpret abstract monumentalism as ecstatic (the climax of the Fifth Symphony) or cosmic (*Mikołaj Kopernik*), although the expression is laconic and almost postmodern. This is never more true than in the six-minute Piano Concerto, whose sequence of ideas may be interpreted either as rambling or inspired in its stylistic and structural juxtapositions.

ADRIAN THOMAS

Szabó, Ferenc (*b* Budapest, 27 Dec 1902; *d* Budapest, 4 Nov 1969). Hungarian composer. Between 1921 and 1926 he studied composition with Weiner, Siklós and then Kodály. He received surprisingly quick recognition in Hungarian musical life with the chamber works of 1926–31, in which he reinterpreted Kodály's folk style in a manner uniting lyrical reflection and sharp polytonal contrasts within strict and complex structures. Committed to left-wing politics from early youth, he joined the Communist Party, then illegal, in 1927. He enthusiastically took part in leading workers' choirs and writing music for performance by the masses, seeking new types of mediation between high art and popular culture. In this he condensed his style into small, readily practicable forms and achieved through reduced means a quality of terse contrast and complexity, while maintaining the individual character of his music. The fertility of this approach was demonstrated by the success of the *a cappella* cycle *Farkasok dala* ('Song of the Wolves'), performed at the 1931 ISCM Festival in London.

As a communist, Szabó was obliged to emigrate through Berlin (1931) to the USSR (1932). He became a respected figure in Soviet musical life, and found the opportunities to explore common ground between the concert hall and mass music-making on a far higher level. Besides composing a number of mass songs and film scores (notably for Piscator's *The Fisher's Revolt*, 1934), he transcribed the Sinfonietta, originally for chamber orchestra, for an orchestra of *domrï* (plucked folk instruments). He strongly resisted making any simplification in his style, and yet he was able to arrive at a positive human viewpoint through expressionist tension, somewhat in the manner of Bartók, Honegger or even Schoenberg, at a time when intellectuals internationally were taking an anti-fascist stance.

A new period in Szabó's work was fully revealed, and with decisive success, in the Lyric Suite for orchestra, introduced by Szenkár at Moscow in 1937. Szabó returned to Hungary in 1944 as a Red Army officer, and in 1945 he was appointed professor of composition at the Liszt

Academy of Music, of which he was made director-general in 1958. He retained both posts until his retirement in 1967, and was also president of the Association of Hungarian Musicians (1949–51). Twice recipient of the Kossuth Prize (1951, 1954), he was named Eminent Artist of the Hungarian People's Republic in 1962. In the 'folk epic' approach of his later years, most fully displayed in the triptych made up of the orchestral suite *Ludas Matyi* (1950), the symphony *Emlékezlető* (Memento, 1952) and the oratorio *Föltámadott a tenger* ('In Fury Rose the Ocean', 1955), he confirmed his individual style in music that is monumental but also deeply critical and analytical in treating his country's history. This is, however, no mere applied art: the music is on a high level, as are the late chamber works, which are full of polytonal antinomies yet moulded in a seemingly natural melodic style, their masterly complexity having the face of simplicity. Szabó's last work, an almost finished opera on autobiographical themes, is a summary of these qualities.

JÁNOS MARÓTHY

Szabolcsi, Bence (*b* Budapest, 2 Aug 1899; *d* Budapest, 21 Jan 1973). Hungarian musicologist. He studied law, literary history and philosophy at Budapest University (1917–20), musicology, history and art history at Leipzig University (1921–3) and composition at the Budapest Academy of Music with Kodály, Weiner and Siklós (1917–21) and in Leipzig with Karg-Elert (1921–3), taking the doctorate in 1923 under Abert with a dissertation on Benedetti and Saracini. From the 1920s he worked in Budapest as a publisher's reader, editor and music critic, and as co-editor of the journal *Zenei szemle* (1926–9) and (with Tóth) of the Hungarian *Zenei lexikon* (1930–31). From 1945 until his death he was professor of music history at the Budapest Academy of Music, where he founded the faculty of musicology (1951), serving as its professor and head until his death. He was on the editorial committees of the periodicals *Uj zenei szemle* (1950–56), *Magyar zene* (1960–73) and *Studia musicologica Academiae scientiarum hungaricae* (1961–7, editor 1967–73) and co-editor with Bartha of the series *Zenetudományi tanulmányok* (1953–62). In 1961 he founded the Budapest Bartók Archives, which he directed until his death, and which in 1969 became the Musicological Institute of the Hungarian Academy of Sciences.

Szabolcsi belonged among that generation of Hungarians born between about 1890 and 1900 (Molnár, Tóth, Major) who took upon themselves the task of creating a contemporary musicology in their own country. Szabolcsi's work centred on his aim to create a Hungarian literature of musical history which would fulfil 20th-century requirements, to establish publishers and a readership for it and to train others to continue his initiative. It was through him that music history, as a specialized branch of literature, became a matter of common knowledge in Hungary. His scholarship was informed by the thoroughness and highly developed methodology of German research, the historical and stylistic standards of such French scholars as Taine and Rolland, and the principles of Hungarian comparative musical research inspired by Bartók and Kodály, whose example he followed in linking East and West – his first Hungarian publications were on Mozart and his first German ones on Kodály and the problems of early Hungarian music history.

Szabolcsi's collection of early Hungarian music from the Danube region in the 1920s and 30s led to ten central studies (1928–54) of Hungarian music history from the Middle Ages to the 19th century, united as *A magyar zene évszázadai* (1959–61) and in the 1930s and 40s he made fundamental contributions to Hungarian musicology with a number of works on general musical history: *A zene története* (1940), a monograph on Beethoven (1947) and *Európai virradat* (1948). His chief work, *A melódia történet* (1950), is a synthesis of his dual interest in research of eastern and western European music. His research of phenomena of music in Hungarian literature and poetry was widely acclaimed. He was a pioneer of the literature on Bartók and Kodály and the author of the first Hungarian scholarly biography of Bartók. He also contributed to the spread of their vocal compositions by translating into German the texts of Bartók's *Cantata profana*, *Village Scenes* and *20 Hungarian Folksongs* and

Kodály's *Psalmus hungaricus*, *The Transylvanian Spinning-Room*, choral works and songs. He compiled two record anthologies: *Musica hungarica* (1965, 2/1970), a chronological survey of Hungarian music, and the posthumous *Musica mundana* (1975), an anthology of general music history arranged by type of melody.

FERENC BÓNIS

Szadek, Tomasz [Thoma a Szadek] (*d* Kraków, 1612). Polish composer and singer. On 25 June 1569, already a bachelor in the liberal arts, he was appointed a singer in the royal chapel in Kraków. He remained there until 1572 or 1574, when he was most likely ordained and became a curate of Wawel Cathedral, Kraków. From this time until 1578 he was a member of a group of singers called the Capella Rorantistarum (of the cathedral's Sigismund Chapel) and subsequently held some non-musical posts at the cathedral, including that of a penitentiary.

All his extant compositions were written to meet the requirements of the Capella Rorantistarum (an ensemble of male voices). They are in the late Netherlandish style, each based on a plainsong cantus firmus. The two masses for four voices in the Wawel Cathedral library are of the parody type: the *Officium Dies est laetitiae* (ed. in WDMP, xxx, 1957 and MAP, ii, 1993) uses the melody of the popular Christmas carol as a cantus firmus, but also employs the song *Pieśń o narodzeniu Pańskim* ('Song of our Lord's Nativity') by Wacław z Szamotuł; the other, *Officium in melodiam motetae 'Pisneme'* (ed. in Monumenta musicae sacrae in Polonia, i, 1885), is based on Crecquillon's chanson *Puis ne me peult venir*. There are also three incomplete antiphons in the Wawel Cathedral library: the gradual *Haec dies*; the communion *Pascha nostrum*; and the introit *Vultum tuum*.

ZYGMUNT M. SZWEYKOWSKI

Szajna-Lewandowska, Jadwiga (*b* Brody, Ukraine, 22 Feb 1912; *d* Wrocław, 14 March 1994). Polish composer. She began her musical education at the conservatory in Lwów and after World War II studied composition at the Wrocław State Higher School of Music, first with Szeligowski and then with Poradowski, graduating in 1956. She taught the piano, theory and composition for a time, but her main activity became composition, especially for the musical stage (ballets and musicals for children); she also composed incidental music for more than 50 plays. Her ability to characterize while using an accessible contemporary musical language ensured the popularity of her stage works among young people. Several of her works received prizes, including *Gramy w zielone* ('We Play "Green"'; All-Polish Composers' Competition, 1970); she also received national awards for her works for children, in 1974, and for *Błękitny kot* ('The Blue Cat'), in 1983.

BARBARA ZWOLSKA-STESZEWSKA

Szalonek, Witold (Józef) (*b* Czechowice-Dziedzice, 2 March 1927). Polish composer. He studied composition with Woytowicz at the State Academy of Music in Katowice, where he was later appointed professor of composition, and in Paris with Boulanger. He has received numerous awards, including an honorary doctorate from Münster University. In 1972, after his nomination as rector of the Academy in Katowice had been accepted, he resigned in protest at interventions by the political authorities. He left to become professor of composition at the Hochschule der Künste (West) Berlin. His early works draw on Polish

folk modality, but in the 1960s, with works such as *Les sons* and *Improvisations sonoristiques*, he became the most original exponent of Polish 'sonorism'. His significant research into woodwind multiphonics (from 1963) and non-Western music led to a highly individual, haunting vision, where physical properties of sound production became the source and focus of musical structure and expression. His perception-based theories anticipated much of the post-cognitive tendency in musical theory and research of the 1990s. A gradual reintegration of more orthodox procedures followed, culminating in the powerful *Musica concertante* (1977) and the B–A–C–H symphony (1979). Later works have returned to his roots in Silesian musical tradition.

CARL HUMPHRIES

Szałowski, Antoni (*b* Warsaw, 21 April 1907; *d* Paris, 21 March 1973). Polish composer. He received his first music lessons from his father, a distinguished violinist and teacher. In 1930 he graduated from the Warsaw Conservatory, where his teachers had included Lewiecki (piano), Sikorski (composition) and Fitelberg (conducting). He then studied with Boulanger in Paris (1931–6), where he remained for the rest of his life. From 1936 to 1948 he was president of the Society of Young Polish Musicians in Paris. Among the many awards he received was a first prize from the ORTF in 1960 for *La femme tétue*.

An outstanding representative of the inter-war Paris school, Szałowski was one of the leading Polish neoclassicists. He preferred strict, established forms and he employed all the contrapuntal arts, yet he succeeded in writing music that is easy on the ear, full of Parisian elegance but linked to the emotional and colourful Polish symphonic tradition. His finest achievements were the celebrated Overture, the Sinfonietta and the Music for Strings (he composed very little vocal music, most of it for the radio). In Poland he was little known except during a few years after World War II, and then principally for the Overture, whose success led other Poles, among them Lutosławski and Malawski, to compose similar works, but without reaching the distinction of their model. This, probably Szałowski's only composition of international stature, is written with such verve and skill that, within its Classical mould, it gives the impression of inevitability. It was composed in 1936 and the next year received the Gold Medal at the Paris International Exhibition. One of the very few contemporary works to be published and recorded in Warsaw shortly after the war, the Overture was Szałowski's greatest success, but this very success proved a burden. Unable to repeat it and unwilling to keep up with new developments, he proceeded to compose firmly traditional works – well crafted, straightforward, vital and motoric in rhythm, and amusing (his humour was his strongest point), but ultimately of little interest. There is great value, however, in some of the later chamber works, such as the Sonatina for oboe and piano and the Allegretto for bassoon and piano.

BOGUSŁAW SCHÄFFER

Szamotuł [Szamotulczyk, Szamotulski], **Wacław z** [Samotulinus, Schamotulinus, Shamotulinus, Venceslaus] (*b* Szamotuły, nr Poznań, *c*1524; *d* ?Pińczów, nr Kielce, probably in 1560). Polish composer and poet. He studied first at the Collegium Lubranscianum at Poznań and afterwards, in 1538, at Kraków University. From 1545 to 1547 he was secretary to Hieronim Chodkiewicz, governor of Troki, Lithuania. During this period he published a number of Latin panegyrics celebrating events in the royal family. On 6 May 1547 he was appointed a composer at the court of King Sigismund II August, his duties being to provide sacred music for the chapel choir. From about 1550 he was involved with the Polish Protestant movement, and seven Polish four-voice pieces by him intended for the Protestant service are extant. From 1555 until his death he worked at the Calvinist court of the great Lithuanian potentate Duke Mikołaj Radziwiłł and now maintained only tenuous relations with the royal court. He was a typical many-sided Renaissance figure. Much of his music has been lost. Although he composed simple pieces of popular cast in a simple note-against-note style he is more important for his sacred polyphony: indeed his mastery of late Netherlandish techniques is considered a culminating point in the development of Polish *a cappella* music.

ZYGMUNT M. SZWEYKOWSKI

Szántó, Theodor [Tivadar] (*b* Vienna, 3 June 1877; *d* Budapest, 7 Jan 1934). Hungarian pianist and composer. He studied in Vienna and Budapest, and in Berlin with Busoni from 1898 to 1901, after which he remained in Germany. Here he quickly established a reputation in demanding programmes featuring works such as late Beethoven sonatas, the Liszt Sonata and compositions of his own. In 1905 he settled in Paris, and in 1913 he moved to Switzerland, where he was based until 1921. He then resided in Budapest until the late 1920s, when he returned to Paris. During this time he continued to command respect both as a formidable exponent of the Romantic repertory and as a champion of contemporary music, in particular that of Bartók and Kodály. Szántó was also closely associated with the Delius Piano Concerto, undertaking detailed editing of the original solo part before giving the first performance of the revised version at a Promenade Concert in London in 1907. Although the composer did not agree with all the retouching, he later wrote to Grainger that Szántó had made the writing much more effective. As a composer, Szántó was particularly influenced by the folk music and traditions of Hungary and, especially, Japan, which formed the basis not only for many of his piano works and his *Japanese Suite* for orchestra (1926) but also his three-act opera *Taifun* ('Typhoon'), which was first produced in Mannheim on 29 November 1924. His most important piano work, Variations and Finale in D on a Hungarian Folk Melody, acquired a good deal of success through his own highly colourful readings of its virtuoso textures. His other works include a Symphonic Rhapsody (1917), a sonata for violin and piano (1906) and the operas *Count Romeo* (1931) and *Samum* (1933). His transcriptions of five movements from Stravinsky's *Petrushka* and, particularly, the Marche chinoise from *Le rossignol* attest his grasp of the virtuoso possibilities of piano scoring and his feeling for colouristic effect.

CHARLES HOPKINS

Szarfenberg [Szarffenberck, Scharpfenberg, Szarfenberger, Szarffemberg, Ostrowski, Ostrogórski], **Maciej** (*b* Liebenthal [now Lubomierz], nr Jelenia Góra; *d* Kraków, between 21 March and 15 June 1547). Polish printer. He established his printing house in Kraków in 1530. Among his music publications are secular and religious partsongs, liturgical books, and music treatises by Jerzy Liban (*De accentuum ecclesiasticorum exquisita ratione*, *c*1539) and Jan Spanenberg (*Questiones musicae in usum Scholae Northusianae*, 1544) which contain numerous musical examples, including some complete compositions. He used exclusively woodblock printing.

His relative Marek Szarfenberg (*b* Liebenthal; *d* Kraków, 1545) was a Kraków bookseller who first started printing in about 1543. He mainly published liturgical books with Gothic notation, using movable type in a double-impression technique, as well as woodblock printing.

Marek's grandson Mateusz Siebeneicher [Siebeneich, Sybeneycher, Zybenaicher] (*b* Liebenthal; *d* Kraków, 1582) married the widow of Maciej's son Hieronim and thus became the owner of the Szarfenberg printing house in 1557. He was one of the most eminent Polish publishers of his time and specialized in the printing of textbooks and Catholic devotional literature. He also issued many popular partsongs and psalms of Cyprian Bazylik z Sieradza, Wacław z Szamotuł and others (mostly published singly), and Krzysztof Klabon's collection, *Pieśni Kalliopy slowienskiey* ('Songs of the Slavonic Calliope', 1588), all printed from movable mensural type. After his death the firm continued until 1627.

TERESA CHYLIŃSKA

Szarth, Georg. *See* ZARTH, GEORG.

Szarzyński, Stanisław Sylwester (*fl* late 17th century). Polish composer. Extant copies of his works bear dates ranging from 1692 to 1713. His vocal music is exclusively sacred. His solo motets (with violins and continuo) are distinguished by their notably expressive melody and high technical level; the choral compositions, with the accompaniment of a large instrumental ensemble, show some carelessness in the part-writing. In these compositions Szarzyński made extensive use of melodies from popular religious songs, either as strict quotations or in stylized form. All his sacred works are in the concertato style, some of them resembling the church cantata in form. His only extant instrumental composition, a *sonata da chiesa* with some features of the canzona, is marked by its technical skill and melodic attractiveness.

WORKS

ZYGMUNT M. SZWEYKOWSKI

Szathmáry, Zsigmond (*b* Hódmezővásárhely, nr Szeged, 28 April 1939). Hungarian organist and composer. From 1958 to 1963 he studied at the Franz Liszt Academy of Music in Budapest (organ with Franz Gergely, composition with Franz Szabo). He continued his studies at the Akademie für Musik und Darstellende Kunst in Vienna (organ with Alois Forer) and at the Musikhochschule in Frankfurt, where Helmut Walcha was his teacher. From 1964 to 1966 he took part in the Cologne Kurse für Neue Musik, studying composition with Stockhausen and Henri Pousseur, and from 1964 to 1965 took part in the Darmstadt summer courses, where he studied composition with Ligeti. From 1970 to 1976 he was Kantor and organist in the Lutheran parish church of Hamburg-Wellingsbüttel, in 1972 he was made assistant organ professor at the Lübeck Musikakademie, and from 1976 to 1978 he was organist at Bremen Cathedral. In 1978 Szathmáry was appointed professor of organ at the Staatliche Hochschule für Musik in Freiburg. He has given recitals throughout the world, especially at festivals of contemporary music (including Paris, Brussels, Royan, Donaueschingen, Munich, Zagreb and Warsaw). His repertory is broad, with particular emphasis on the works of Bach, Liszt and contemporary composers. He has given over 80 premières, including works by Holliger, Zender, Ligeti, Haubenstock-Ramati, Rihm, Schnebel, Hespos, Yun, Hosokawa, Ishii, Kopelent, Ruzicka and Wittinger, and over 50 works have been dedicated to him. He has conducted numerous masterclasses in Europe, America, Russia, Japan and Korea. His recordings range from early Baroque masters and Bach to Liszt, Kodály and graphically notated works. He has also composed works for organ, solo instruments, chamber ensemble and chamber orchestra.

GERHARD WIENKE

Szczawiński, Henryk Melcer-. *See* MELCER-SZCZAWIŃSKI, HENRYK.

Szczecin (Ger. Stettin). Town on the river Odra (Oder) in Poland, formerly (1713–1945) capital of the German (Prussian) province of Pomerania. The beginnings of the town's musical life were linked with the introduction of Christianity by Bishop Otto of Bamberg and Prince Bolesław Krzywousty, ruler of the area from 1102 to 1138. Music was cultivated in monasteries, particularly those of the Benedictines and Franciscans. Szczecin became the capital of Western Poland in 1212, and joined the Hanseatic League around 1300. The city's increased importance as a trade centre in turn stimulated its cultural life. In 1390 and 1399 two municipal schools were opened, and after the Reformation (1524–34) Duke Barnim XI founded a school, the Pedagogium, for the children of the aristocracy (1543). A combined school and poorhouse was also founded (1540). Each school had cantors responsible for the standard of singing and for giving music lessons. In the first half of the 17th century the activities of the schools reached a peak. Polyphonic and frequently polychoral sacred works were heard in the churches, and much music was performed in the schools themselves. Organ music also flourished, Michael Schuwarth being the earliest known organist (1475). The finest organ, in the cathedral of St Jakub, was destroyed in 1677 during a siege; later in the 17th century it was rebuilt by Schurich and Heldt, and completed by Arp Schnitger. Many new organs were constructed in the 18th century, including four by Peter Migendt in 1751–64.

The ruling Slavonic Pomeranian princes did not influence the town's music significantly, although they employed English and Polish violinists. The princes' musicians entertained the court, played in the castle chapel, at St Mary's church and during school ceremonies. In 1630 the town fell to the Swedes and in 1637 the Pomeranian dynasty came to an end. In 1713 Szczecin became part of Prussia under whose rule musical life flourished. Travelling virtuosos visited the city, and Singspiele were performed in the coach house of the Seglerhaus. Operas by German, French and Italian composers were given at the theatre built in 1794 during the French occupation. Composers active in Szczecin from the late 16th to the 18th centuries included Philipp Dulichius (1562–1631), who composed over 250 motets, Andreas Fromm (1621–83), a priest and cantor at the Pedagogium who wrote one of the first German oratorios, *Lazarus*, Paul Lütgemann (1588–1606), J.G. Ebeling (1637–76) and Johann Fischer (1646–?1716/17). Lesser figures active in the town were P. Praetorius (1520–97), F.G. Klingenberg (1699–1720), M. Rhode (1706–38), Tobias Volckmar (1707–12), G. Klingenberg (1721–46), Friedrich Haack (1789–1827) and S.F. Brede (1792–8).

In the 19th century the leading local composer was Carl Loewe, who taught at the Gymnasium and was organist of the cathedral. He organized concert life in the town between 1820 and 1864, during which period it reached a peak; in 1827 Mendelssohn's overture *A Midsummer Night's Dream* had its première there, and Bach's *St Matthew Passion* was performed in 1831, only two years after its revival by Mendelssohn in Leipzig. In 1849 a new municipal theatre, the Theater am Königsplatz, was opened. Operettas and Singspiele were given in the Bellevuetheater, opened in 1873. The popular operetta composer Leon Jessel (1871–1942) was Kapellmeister there in 1896–7. From 1884 symphony concerts were held in the new concert hall. Pianists, singers and conductors from all over the world visited Szczecin, Arthur Nikisch, Felix Weingartner and Anton Webern conducted at the Bellevuetheater. Musical life was slow to revive after World War I, but the impetus given by the town's economic fortunes as a suburb of Berlin stimulated its cultural life. The Bellevuetheater was able to engage a permanent company, and at the end of the 1920s four performances were broadcast on the radio each season.

After World War II, during which the town was very badly damaged, the Polish Broadcasting Service became active, and musical education was improved by the foundation in 1946 of two musical schools, nationalized in 1950. Following the development of school music, a department of the Poznań Conservatory was established (1961). Concert life revived through the activities of the broadcasting orchestra under W. Górzyński. The Szczecin PO was founded in 1948 and nationalized in 1954; conductors have included F. Lasota (1948–51), M. Lewandowski (1952–7), W. Pawłowski (1954–), J. Wiłkomirski (1957–71) and S. Marczyk (1971–93). In 1957 an opera house, the Państwowa Operetka (State Operetta), was founded by J. Nieżychowski; it mainly performed operetta and occasionally modern works. In 1978 the company found a new home in the restored castle of the Pomeranian princes, and in 1985 was renamed the Państwowa Opera i Operetka. The Szczecin Musical Association, founded in 1962, organizes concerts and master classes; since 1964 it has helped to organize an annual festival of organ and chamber music in nearby Kamień Pomorski. Several local choirs have been formed, the best known being the Technical University Choir, the Hejnał, Hasło and Halka choirs, the Szczecin Boys' Choir and the Teachers' Chamber Choir. The composer Ryszard Kwiatkowski (1931–93) was active in Szczecin.

PAWEŁ PODEJKO/KLAUS JUNGK

Szczepanowski, Stanisław (*b* Kraków, 1814; *d* Lwów, 16 Sept 1877). Polish guitarist, cellist and composer. After fighting in the November Uprising of 1830 he emigrated to Scotland in 1831, where he studied with the Polish guitarist Feliks Horecki. Later he studied with Fernando Sor in Paris. He first performed in public in 1840, in Edinburgh and London. Later, in a series of concerts at the Salle Herz in Paris, he was admired by the most famous artists of the day including Chopin, Liszt and Kalkbrenner, as well as influential critics such as Henri-Louis Blanchard, who recognized Szczepanowski as the most outstanding guitarist of the day (in Przyięcki). In 1843 he began a long concert tour to such countries as Russia, Lithuania and the Ukraine, Turkey, Egypt and Spain. From about 1847 he also played the cello in his concert programmes.

As a performer Szczepanowski had a relaxed manner of playing but also a remarkable degree of imagination and technical skill, and he applied a prodigious variety of effects that were largely drawn from the techniques of bowed string instruments (flageolet, vibrato and scordatura). His repertory included music by Sor, Kurpin'ski, Chopin and Mendelssohn, as well as his own compositions, which included fantasies, variations and pieces in the Spanish style.

BARBARA CHMARA-ŻACZKIEWICZ

Szczepańska, Maria (Klementyna) (*b* Złoczów, nr L'viv, 13 May 1902; *d* Poznań, 18 Oct 1962). Polish musicologist. After piano studies at the Lwów Conservatory, she studied musicology with Chybiński at Lwów University (1922–6), where she took the doctorate in 1926 with a dissertation on Manuscript 52 in the Krasiński Library, Warsaw. From 1926 to 1939 she was a lecturer in the musicology department at Lwów University; she also lectured in theoretical subjects at the Paderewski Music School (1929–31) and at the Lwów Conservatory (1931–5). In 1940–41 and 1944–5 she was successively senior lecturer, professor and dean of the theory department of

the conservatory. From 1946 until her death she worked in the musicology department at Poznań University, becoming senior lecturer in 1956 and head of the department in 1957. She also lectured at the State Music School, Poznań (1948–51). Szczepańska's main achievement was her work on basic sources of Polish polyphonic music of the 15th to 17th centuries. She devoted considerable attention to the works of the leading Polish composer of the 15th century, Nicolaus de Radom, and prepared editions of music by a number of Polish composers, including Jarzębski, Zieleński, Reys and Pękiol. Her work formed the basis for further research on the evolution of polyphony in Poland.

ZOFIA HELMAN

Szczurowski, Jacek [Hyacinthus] (*b* 1718; *d* after 1773). Polish composer. He probably came from south-eastern Poland. He entered a Jesuit monastery as a novice on 14 November 1735 and took minor orders on 20 November 1737. During his novitiate he was a member of the excellent Kraków musical college run by the Jesuits. His notable gift for composition came to light when he was still a youth; in 1740–41 the inventories of the Jesuit college in Kraków mention 38 of his works. Szczurowski did not continue his education and as a monk served as assistant to the prefect of the musical college and as sacristan at Kalisz, Krosno, Gdańsk (where he was also *coadiutor temporalis* from 15 August 1746), Toruń, Kraków, Jarosław, Poznań and Wałcz (near Poznań). The last record concerning him comes from Wałcz.

Only a few of his vocal compositions are extant, although Szczurowski was one of the most prolific Polish composers of the 18th century. They do not exhibit consummate technical elaboration; Szczurowski composed in a style typical of the late Italian Baroque, which he handled in a stereotyped manner, though often making considerable virtuoso demands (thus suggesting that high executive standards were possible in the Jesuit chapels of the time). Some of his compositions are particularly valuable as records of the 18th-century folk motifs (for example his *Missa Emmanuelis*). Szczurowski was also one of the first Polish writers of symphonies (1740, lost).

ZYGMUNT M. SZWEYKOWSKI

Szczurowski, Jan Nepomucen (*b* Pińczów, nr Kielce, 16 May 1771; *d* Warsaw, 30 Oct 1849). Polish bass, actor and cellist. He studied at W. Sierakowski's school for singers in Kraków, and made his theatre début in the same city in 1787. From 1788 to 1792 he performed on stage with the renowned company of Wojciech Bogusławski in Dubno, Lublin, and again in Kraków. On 14 April 1793 he sang for the first time at the National Theatre in Warsaw, and on 1 March 1794 he sang in the world première of Jan Stefani's *Cud mniemany* ('The Supposed Miracle'). He took a permanent position at the National Theatre (later the Teatr Wielki), Warsaw, and sang there (except for a short break during the 1806–7 season) until 1839. With this theatre company he also gave guest performances in other Polish cities, including Kalisz (from 1801), Poznań (from 1808), Białystok (1808), Kraków (1809) and Gdańsk (1811). Szczurowski was in the front rank of Polish singers, and had a beautiful, large voice; however he was found somewhat lacking in passion and talent as an actor. He also wrote reviews for the *Kurier Warszawski* ('Warsaw Courier').

BARBARA CHMARA-ŻACZKIEWICZ

Szeged. Town in southern Hungary. Musical theatre began with school dramas staged by the Piarists, who, with an orchestra and town musicians, gave about 50 works in Latin between 1722 and 1758, thereafter performing in Hungarian. The first permanent theatre opened in 1856 with *Ernani* and Ferenc Erkel's *Hunyadi László*. A new theatre, built in 1883, burnt down in 1885 but was restored the next year and again in 1986. It is now known as the Szegedi Nemzeti Színház (Szeged National Theatre). The Szeged SO was founded in 1918; its conductors have included Fricsay, Vaszy, Oberfrank and Molnár. In 1931 an open-air festival, the Szegedi Ünnepi Játékok, was established, and in 1934 Mascagni conducted *Cavalleria rusticana* for it with soloists from La Scala. It stopped in 1939 but was revived in 1959 by Vaszy. Performances cover a month from mid-July and often include Verdi operas along with *Hunyadi László*, *Bánk bán* and *Háry János*. The Mai Magyar Zene Hete (Contemporary Hungarian Music Week) was organized annually between 1970 and 1989, and supplemented by the Szegedi Kamarazenei Napok (Szeged Chamber Music Days), also devoted to new Hungarian music, from 1978. In 1990 the former festival was replaced by the Zenei Hét Századunk Muzsikájából (Musical Week of Our Century's Music), given in the spring and devoted in 1993 to the memory of Messiaen.

DEZSŐ LEGÁNY

Szeghy [Szeghyová], **Iris** (*b* Prešov, 5 March 1956). Slovak composer. She studied composition with Podprocký, and the piano at the Košice Conservatory (1971–6), before continuing under Očenáš at the Bratislava Academy of Music and Dramatic Art (until 1981); she returned to the Academy in 1986 as a postgraduate research student in composition. During the 1990s she was awarded placements at electronic studios in Stuttgart and Amsterdam and at the University of California at San Diego. In 1995 she was composer-in-residence at the Hamburg State Opera. Her works have been performed at the UNESCO International Rostrum, at a festival of the ISCM in Warsaw and at Darmstadt summer courses. At the beginning of her career Szeghy concentrated primarily on sonority, as demonstrated by *Jarná sonáta* ('Spring Sonata') for organ, while in later works the emphasis shifted towards elaborate structures, her style becoming more lyrical and poetic, as in the String Quartet 'Musica dolorosa' (1985) or *Poetické štúdie* (1984). Generally, she followed the traditional thinking of European composers of the first half of the 20th century, in terms of contrast, evolution, harmony, modality and extended tonality; after 1993 she absorbed more elements of the avant garde, influenced by J. Cage, G. Crumb and G. Scelsi. Her selective use of such elements owes much to a desire to capture the atmosphere of particular moments in time; avant garde devices used include aleatorism, clusters and unconventional playing techniques. More traditionally, her music relies also on motivic development and expressivity (several of her works are inspired by poetry). Her musical vocabulary, an extended tonality, produces harmony that is to some extent consonant.

YVETTA LÁBSKA-KAJANOVÁ

Székely, Endre (*b* Budapest, 6 April 1912; *d* Budapest, 14 April 1989). Hungarian composer. He taught himself to compose before taking lessons with Siklós at the Liszt Academy of Music, from which he graduated in 1937. Subsequently he joined the illegal Communist Party and took part as composer and conductor in the workers' choral movement. After World War II he exercised important functions in Hungarian musical life: he was secretary-general of the Hungarian Musicians' Union and the Béla Bartók Association, and he edited the periodicals *Éneklő nép* and *Éneklő munkás*. From 1952 to 1956 he organized activities in Sztálinváros, and in 1960 he was appointed professor of methodology and theory at the teachers' training college in Budapest.

Székely's earlier works (up to 1952) are principally choral pieces and cantatas. These show at first the strong influence of Kodály; the later ones are characteristic products of socialist realism of the early 1950s. Later in that decade he made a gradual assimilation of the Bartók tradition and of the 12-note serialism of Schoenberg, Berg and Webern. This led to a period (*c*1957–64) of serial works emulating Schoenbergian expressive intensity within traditional formal patterns, but also including other features, such as Honegger-like choral tableaux. He then began to admit more novel elements, including clusters (in the Concerto of 1964) and Pendereckian string effects (in the Partita, 1965), these being associated with an abandonment of 12-note serialism. The Wind Quintet no.3 (1966), for example, is non-serially based on a three-note motif and is indicative of the direction Székely's music was taking at this time in that it alternates strict canonic movements with partly improvisatory ones. This broadening of style was summarized in the *Musica*

notturna for chamber ensemble (1968), which accommodates static or mobile clusters and expansive melodies, free and motor rhythm, and aleatory and strict forms.

F. ANDRÁS WILHELM

Székely, Mihály (*b* Jászberény, 8 May 1901; *d* Budapest, 22 March 1963). Hungarian bass. He made his début at the Budapest Municipal Theatre in 1923 as the Hermit (*Der Freischütz*). He joined the Hungarian State Opera the same year and was soon singing leading bass roles such as Cardinal Brogni (*La Juive*), Méphistophélès (*Faust*), Sarastro and King Mark. An international career developed after World War II: his Metropolitan début (1947) was as Hunding, after which he sang many Wagner and other bass roles in New York until 1949. At Glyndebourne, from 1957 to 1961, his Sarastro, Osmin, Bartolo (*Figaro*) and Rocco were greatly admired. He played Boris Godunov in Paris (1957), and Bartók's Bluebeard throughout Europe, partly transposed for his bass range by the composer (he successfully recorded the part). Székely was a major figure in the history of Hungarian opera, with a voice of intrinsic beauty and wide range (his lowest notes were of particularly powerful 'black' timbre) and outstanding acting ability. In addition to those already mentioned, his Philip II (*Don Carlos*), Fiesco (*Simon Boccanegra*), Dosifey (*Khovanshchina*) and Khan Konchak (*Prince Igor*) were all memorable portrayals. (P. Várnai: *Székely Mihály*, Budapest, 1967)

PÉTER P. VÁRNAI/R

Székely, Zoltán (*b* Kocs, 8 Dec 1903). Hungarian violinist and composer, later active in the USA. He studied the violin under Hubay and composition under Kodály in Budapest. He toured widely as a soloist and became the leader of the Hungarian String Quartet shortly after its foundation in 1935, a position that he held until the quartet disbanded in 1970. Székely was closely associated with Bartók both as his partner in sonata recitals and as an interpreter of his works; Bartók composed his Second Violin Concerto for Székely who gave the first performance in Amsterdam with the Concertgebouw Orchestra under Mengelberg in March 1939. In 1950 Székely moved to the USA, where he later became a naturalized citizen. His compositions, mainly chamber music, include a string quartet, a duo for violin and cello and a sonata for unaccompanied violin. His arrangement for violin and piano of Bartók's *Romanian Dances* has become popular.

RONALD KINLOCH ANDERSON/R

Szelényi, István (*b* Zólyom, 8 Aug 1904; *d* Budapest, 31 Jan 1972). Hungarian composer and musicologist. He studied at the Budapest Academy of Music with Kodály (composition) and Laub and Székely (piano). After a period of piano teaching at the Fodor Music School (1926–30), he lived in Paris and London as music director of a ballet company (1930–32). In 1945 he was appointed professor at the Budapest Conservatory, of which he later became director. He was also editor-in-chief of the *Új zenei szemle* (1951–6) and a theory teacher at the Budapest Academy of Music (1956–72). In 1969 he received the Erkel Prize.

The 1920s and 1930s were Szelényi's best creative period. At the very beginning of his career he provoked a press attack because of his 'incomprehensibility', a charge which prompted a lengthy defence from Kodály in support of the young composers who were his pupils. As a pianist Szelényi introduced into Hungary works by Schoenberg, Hindemith and others, and this involvement with new music, together with his contacts with the 'activist-constructivist' circle around the poet and painter Lajos Kassák, was of decisive influence. His style at that time owed nothing to Bartók or Kodály; the shrill, vivid quality of his *Ouverture activiste* and the monomotivic structures of his songs and chamber music were entirely individual. In the years around and after World War II, however, his music became increasingly diatonic and he came under the influence of Kodály. His research on Liszt also left its mark, and only in his last years did he return to his constructivist style.

PÉTER P. VÁRNAI

Szeligowski, Tadeusz (*b* Lemberg [L'viv], 13 Sept 1896; *d* Poznań, 10 Jan 1963). Polish composer and teacher. He studied composition with Wallek-Walewski in Kraków and with Jachimecki in Warsaw, subsequently studying with Boulanger and Dukas in Paris (1929–31). Returning to Poland, he taught composition briefly in Poznań before moving to Vilnius in 1932. On repatriation after the war, he worked in Lublin before resuming his teaching in Poznań (1948–62) and Warsaw (1951–62). His pupils included Bargielski, Bloch, Czyż, Koszewski, Kotoński, Markowski, Matuszczak, Penherski and Witold Rudziński. He was president of the Union of Polish Composers in the last years of socialist realism (1951–4) and received the highest State Prize for his opera *Bunt żaków* ('The Scholars' Revolt') in 1951.

French neo-classicism informs his works of the war years, such as the simple tongue-in-cheek Sonatina and the lighthearted Piano Concerto (Szeligowski returned to this world in his chamber music of the early 1950s). There were other sides to his aesthetic, as in the impassioned *Epitaphium na śmierć Karola Szymanowskiego* ('Epitaph on the Death of Karol Szymanowski') and in the sometimes stilted folk-derived works (1945–8) inspired by his stay in the Lublin region of Poland.

He is best known as the composer of the first opera in communist Poland – *The Scholars' Revolt* (1951). Although historical (it is based on events in 16th-century Kraków), it fulfilled the contemporary official need for propaganda about the value of community and the fight against injustice. Szeligowski incorporates old Polish songs and uses a primarily modal language alongside Renaissance and Baroque formal procedures, bound together by the use of leitmotifs. His cantata *Karta serc* ('Charter of Hearts'), written a year later for the proclamation of the new constitution of People's Poland, is a rousing quasi-operatic scena which owes much to the genre of the French cantata. The success of *The Scholars' Revolt* led Szeligowski to devote most of his last decade to stage works, such as a Polish version of the nutcracker fairytale (*Krakatuk*) and, more unexpectedly, a science-fiction story about cybernetics (*Teodor Gentleman*). Unlike his contemporary Szabelski, he remained impervious to the arrival of avant-garde ideas in the late 1950s.

ADRIAN THOMAS

Szell, George [Georg] (*b* Budapest, 7 June 1897; *d* Cleveland, 30 July 1970). American conductor of Hungarian birth. He grew up in Vienna where he showed prodigious musical talent at an early age, studying the piano with Richard Robert and theory and composition with Mandyczewski, Karl Prohaska, J.B. Foerster and Reger. He made his début as pianist and composer with the Vienna Tonkünstler Orchestra on 30 January 1908. Dubbed 'the new Mozart', he appeared at the age of 11 with the Dresden Königliche Kapelle and with the London Symphony and Sunday League orchestras. At 14 he signed

an exclusive publishing contract with Universal Edition in Vienna and, at the same age, performed in the première of his Piano Quartet op.1 with the Rosé Quartet. The most performed of his youthful compositions was the Variations on an Original Theme (1913).

As répétiteur at the Königliche Oper in Berlin (1915), Szell was taken under the wing of Richard Strauss. He was assistant conductor at the Neues Deutsches Theater in Prague (1919–20), the Darmstadt Staatsoper (1921) and the Düsseldorf Stadttheater (1922–4). In 1924 he became 'first conductor' (under Erich Kleiber) at the Berlin Staatsoper and taught at the Hochschule für Musik. He returned to Prague as chief conductor of the Neues Deutsches Theater (1929–37), where he also directed concerts with the Czech PO. His 1937 recording with that orchestra and Casals of the Dvořák Cello Concerto remains a classic.

Szell made his US début with the St Louis SO in 1930. As a guest he conducted the Courtauld-Sargent concerts in London, the Residentie-Orkest of The Hague (1933) and the Concertgebouw Orchestra of Amsterdam (1936), with which he had a lifelong relationship. He followed Barbirolli at the Scottish Orchestra (1936–8), dividing his time between Scotland and The Hague and appearing as guest conductor with the London orchestras. In 1938 and 1939 he conducted the celebrity concerts of the ABC. At the outbreak of World War II Szell went from Australia to America, where he conducted at the Hollywood Bowl and, in 1941, made his New York début with the NBC SO at the invitation of Toscanini. Engagements with the Boston SO and the New York PO followed. From 1942 to 1946 he had an illustrious association with the Metropolitan Opera, concurrently teaching at the Mannes School of Music and the New School for Social Research. During his tenure as musical director of the Cleveland Orchestra (1946–70), Szell built that ensemble to one of world class by combining the profound European orchestral tradition with the brilliance of the great American orchestras. US and world tours and numerous recordings confirmed that greatness. At the time of his death, in addition to his Cleveland post, Szell was musical advisor and senior guest conductor of the New York PO.

George Szell, c1968

Szell was noted above all for his insight into the Austro-German Classical and Romantic repertory from Hadyn to Richard Strauss; his interpretations of the symphonies of Robert Schumann (which he recorded with the Cleveland Orchestra) revealed a deep understanding and affection. Outstanding among his other recordings are the five Beethoven piano concertos (with Fleisher), the four Brahms symphonies and Dvořák's last three symphonies. Although less commonly associated with 20th-century music, Szell gave notable performances of works by Hindemith, Walton, Bartók and American composers including Howard Hanson, Benjamin Lees, George Rochberg, Easley Blackwood and Peter Mennin. His many world premières included Hindemith's Piano Concerto (1947), Walton's Partita (1958), Mennin's Symphony no.7 (1964), Dutilleux's *Métaboles* (1965), Liebermann's *Penelope* (1954) and Egk's *Irische Legende* (1955), the last two at the Salzburg Festival. Szell fiercely, often abrasively, upheld the highest artistic standards. Once he became furious when his Cleveland concertmaster and friend, Josef Gingold, made a rhythmic slip during a concert. Afterwards, when Gingold said, 'But George, an eighth-note is not a matter of life and death', Szell replied 'It is, it is!'.

MICHAEL CHARRY

Szeluto [Szeluta], **Apolinary** (*b* St Petersburg, 23 July 1884; *d* Chodzież, 22 Aug 1966). Polish composer and pianist. He studied initially at the Saratov Conservatory under the guidance of Stanisław Exner. From 1902 to 1905 he studied composition with Statkowski and Noskowski at the Music Institute in Warsaw (now the Warsaw Conservatory), and until 1908 continued his piano studies in Berlin under Leopold Godowski; in addition he studied law in Dorpat (now Tartu). Together with Fitelberg, Szymanowski and Różycki, he founded the Young Polish Composers' Publishing Company (1905) and belonged to the group known as YOUNG POLAND. During the years 1911 to 1917 he was a magistrate in Kazakhstan, and in 1918 returned to Warsaw where he worked for the Ministry of Justice until 1933. In his later years he was afflicted by signs of mental illness.

Szeluto's works, considerable in number but variable in quality, were seldom performed during his lifetime. In the years leading up to World War I he became known mostly as an accomplished composer of songs and piano miniatures. Despite there being some under-developed aspects of his compositional technique, he composed for a wide range of forces and in almost every genre. His music, with the exception of a few works, represents a rather shallow eclecticism. Most of his works remain in autograph manuscript only (in *PL-Wn and Wu*).

WORKS
(*selective list*)

Stage: Kalina [The Cranberry Tree] (op, 3, A. Szeluto), op.18, 1918; Pani Chorążyna [The Ensign's Wife] (op, 4, S. Krzywoszewski), op.20, 1921; Świteź [Lake Świteź] (ballet, after A. Mickiewicz), op.24, 1923–4; Faktor turecki [The Turkish Broker] (op, 3, Szeluto), op.71, 1929–30

Orch: Pan Tadeusz [Mr Tadeusz], suite, after Mickiewicz, op.17, after 1923; Cyrano de Bergerac, sym. poem, op.27, 1924; 25 syms., 5 pf concs., vn conc., vc conc.

Songs: 9 Songs (T. Miciński), op.10, 1908; Buch der Lieder von Heinrich Heine, opp.12–13, 1909, 1910; Aus den Poems (O. Wilde), op.14, 1911; other songs incl. settings of A. Mickiewicz, J. Słowacki, A. Pushkin, V.V. Mayakovsky, J. Iwaszkiewicz

Pf: 5 préludes, op.6, 1905; Sonata, B, op.8, ?1905; Variations, E, op.7, 1905; mazurkas, préludes, polonaises, nocturnes, studies

Inst sonatas, str qts, choral works

TERESA CHYLIŃSKA

Szenci [Szenczi] **Molnár, Albert** (*b* 1574; *d* 1634). Hungarian scholar and poet. He spent the greater part of his life abroad, mainly in Germany. His translation of the French Psalter with melodies, chiefly after Lobwasser's German version, was first published at Herborn in 1607 and has reappeared well over 100 times since. It is still in use, with slight modifications, in the Hungarian-speaking reformed churches in several countries and has exerted considerable influence on Hungarian folk and art music. It appears in *Régi Magyar költők tára: XVII. század* ('Collection of early Hungarian poets: the 17th century'), vi, ed. B. Stoll (Budapest, 1971), the melodies having been edited, with an essay and notes, by K. Csomasz Tóth. Further hymn texts by Szenci Molnár, partly based on Genevan psalm melodies, also found their way into hymnbooks and are still in use today.

Szendrei, Alfred. *See* SENDREY, ALFRED.

Szendrei, Janka (*b* Budapest, 14 Nov 1938). Hungarian musicologist. She studied at the Liszt Academy of Music in Budapest (1957–62), after which she became a research assistant and research fellow (1966) in the Folk Music Research Group (later the Institute of Musicology) of the Hungarian Academy of Sciences. In 1969 she became co-leader (with László Dobszay) of the Schola Hungarica. She joined the staff of the Liszt Academy (1974) teaching in the musicology department and (from 1991) in the sacred music department. She was made lecturer (1992) and professor (1997) at the Academy. She was awarded the Szabolcsi Prize in 1998.

Janka Szendrei is a prominent scholar of Hungarian and mid-European medieval music. Her initial research was in folk music, within which her interest turned to the study of ancient ritualistic material preserved in folk traditions. Between 1971 and 1978 she designed, in collaboration with Dobszay, a new system of classification for the Academy's folk music collection. In 1965 she became involved with Gregorian research, which she combined with her work on folk music. In the 1970s her research turned towards Gregorian palaeography, the first important result being the discovery, description and historical tracing of the independent Hungarian (Esztergom) notation, later enabling her to identify the notational families and individual notational directions of neighbouring peoples, and the connections between palaeography and the history of notational systems. Alongside her palaeographic research, Janka Szendrei has worked on discovering sources and on analysing medieval musical genres.

ZSUZSANNA DOMOKOS

Szendy, Árpád (*b* Szarvas, 11 Aug 1863; *d* Budapest, 10 Sept 1922). Hungarian pianist, teacher and composer. He studied the piano at the Budapest Academy of Music with Henrik Gobbi and composition with Hans Koessler. In 1883 he won the Liszt scholarship which enabled him to study with Liszt. From 1888 to 1922 he taught the piano at the Budapest Academy of Music, where from 1911 he was professor of the master class. An excellent pianist in the Lisztian grand manner, his qualities as a teacher are indicated by the technical and cultural accomplishment of his pupils and by the popularity of his educational piano works. Among his compositions are the opera *Mária* (1905), orchestral works (including *Magyar poémak* ('Hungarian poems') and *Helekoni szvit* ('Helikon Suite'), 1921–2) and chamber works, characterized by a cultivated academicism rooted in the national idiom of the turn of the century. He also published songs and piano pieces and made noteworthy revisions and editions of the standard piano repertory.

Szenik, Ilona (*b* Gherla, 7 Sept 1927). Romanian-Hungarian ethnomusicologist. She studied music education at the Academy of Music in Cluj (now Cluj-Napoca), graduating in 1953; she taught there from 1960, becoming consulting professor in 1990. In 1996 she was made professor at the Sulyok István Református Főiskola in Oradea. She took the doctorate in 1980. She has collected about 3000 Hungarian and Romanian folksongs, her main research interests being the systematization of folk styles, folksong genres, aspects of variation and improvisation, the laments, the relations between Hungarian and Romanian folk music, and methods of research.

ANDRÁS BENKŐ/FERENC LÁSZLÓ

Szeremeta, Ryszard (*b* Kraków, 5 May 1952). Polish composer. At the Kraków State Higher School of Music (1971–6) he studied conducting with Jerzy Katlewicz, electronic music with Józef Patkowski and composition with Lucjan Kaszycki. In 1982 he was a pupil of Alfred Nieman and Saxton in London. Appointed head of the Experimental Studio at Polish Radio, Warsaw, in 1985, he later studied computer music in Stockholm and Bourges. From 1977 to 1985 he was a member of the vocal quartet NOVI Singers.

Explored primarily through electronic media, his main focus has been the interaction of new music and jazz. His musical language, characterized by vibrant sounds, suggests the avoidance of compositional doctrine. The purely acoustic works, such as *Advocatus diaboli* (1981), convey rhythmic energy through syncopation, riffs and refrains, while many of the electronic pieces are notable for their use of sampling; *Pulse Rate* (1984) in particular draws

upon recordings of a soprano voice, drum kit and synthesizer. *Agent Orange* (1986) was the first work by Szeremeta to use digital sound synthesis. His later works such as *Hourglass* are more lyrical and explicitly diatonic.

ADRIAN THOMAS

Szervánszky, Endre (*b* Budatétény, 1 Jan 1911; *d* Budapest, 25 June 1977). Hungarian composer and teacher. He studied the clarinet at the Budapest Academy of Music (1922–7) and then played in various orchestras before returning to the academy for composition studies with Siklós (1931–6). Until 1941 he worked as an orchestrator for Hungarian Radio and as a theory teacher in music schools. He then taught at the secondary music school in Budapest (1941–8) and was in 1948 appointed professor of composition at the Budapest Academy.

Szervánszky first came to public attention with the First String Quartet (1936–8), but he did not follow up this achievement with anything of similar importance until after World War II, when he produced a group of works influenced by Kodály and Bartók. But the works of this period (*c*1945–53) are not merely imitative: they include some of the best examples of Hungarian music of the time, such as the Clarinet Serenade (1950) and the Flute Concerto (1952–3). The latter is among his most successful compositions, typically Hungarian in its melodic writing, and rhythmically and formally irregular. A new phase opened in 1954 when Szervánszky composed a work of grander scope than any hitherto, the Concerto for Orchestra in memory of Attila József. Each of the concerto's five movements is based on a quotation from József, the freely formed music responding in a highly expressive manner to the emotional ambit of the poetry, whether meditative, desolate or frenzied. Notably, only the fourth movement is explicitly folklike in style. The odd-numbered movements show that Szervánszky was turning in the direction of Bartók, a trend confirmed by the String Quartet no.2 (1956–7) and the Wind Quintet no.2 (1957). The quartet's first ten bars expose the material for the whole work, which shows a Bartókian concern for tight thematic unity; the quintet is more calm and simple, although it clearly shows a tendency towards serialism.

With the Six Orchestral Pieces (1959) Szervánszky produced a work that marks a significant point in not only his own development but that of Hungarian music as a whole. In these pieces he employed 12-note serialism and 'point'-type scoring, but the heritage of Bartók is still evident. The work enjoyed an enormous popular success and provided the impetus for younger composers to pursue the ideas it opened up. If its historical importance appears particularly remarkable, the work's inherent qualities are equally noteworthy: it displays a mastery of new techniques, especially in the scoring for percussion (important throughout and heard alone in the first movement) and strings, and the six pieces are sharply characterized by means of texture, colour and idea. Szervánszky subsequently composed relatively little; it was not until 1963 that he produced another work of any stature, the oratorio *Requiem*, in which the immensely difficult choral music conveys the dark chaos of Pilinszky's text on the subject of Auschwitz. The Variations (1964) and the Clarinet Concerto (1965) are more direct successors to the Six Orchestral Pieces, in matters of virtuoso scoring and in their embracing of new developments within a specifically Hungarian tradition.

F. ANDRÁS WILHEIM

Szeryng, Henryk (*b* Warsaw, 22 Sept 1918; *d* Kassel, 3 March 1988). Mexican violinist of Polish birth. He was given childhood piano lessons by his mother, but turned instead to the violin. On the advice of Bronisław Huberman he was sent to Berlin in 1928 to study with Flesch, and in 1933 he made his débuts in four European capitals. An interest in composition led him to spend six years until 1939 as a student of Nadia Boulanger in Paris. After the Nazi invasion of Poland his fluent command of seven languages brought about his appointment to the staff of General Sikorski, head of the Polish government in exile, with whom he travelled to Mexico to find homes for refugees; and during the war years he also gave more than 300 concerts for Allied troops in Europe, Asia, Africa and the Americas.

In 1946 Szeryng began teaching at the University of Mexico; he made his home there, took Mexican nationality and consistently championed the music of native Mexican composers. It was due mainly to the encouragement of Artur Rubinstein that he resumed concert touring on an international scale from 1954, gaining widespread admiration for his technical command, stylistic versatility and patrician elegance in established works of the concerto repertory. Szeryng gave the premières of numerous works written for him, including compositions by Chavez,

Henryk Szeryng

Maderna, Montsalvatge and Penderecki; and in 1971 he gave the first modern performance of Paganini's Violin Concerto no.3, thought to have been lost. Among his recordings are the complete Mozart works for violin and orchestra, concertos by Bach, Beethoven, Mendelssohn, Brahms, Tchaikovsky, Schoenberg, Bartók, Berg and Khachaturian, and much chamber music, notably an eloquent set of Beethoven's violin sonatas with Ingrid Haebler.

NOËL GOODWIN

Szigeti, Joseph (*b* Budapest, 5 Sept 1892; *d* Lucerne, 19 Feb 1973). American violinist of Hungarian birth. He was given lessons by his father and uncle, both professional musicians, until he became a pupil of Jenő Hubay at the Budapest Academy. He began to play in public at the age of ten, and made his formal début in Berlin in 1905. He earned praise from Joachim but did not accept an offer to study with him. After his London début in 1907, Szigeti remained in Britain until 1913, giving numerous concerts, including the première in 1909 of the concerto written for him by Hamilton Harty. He also appeared with Melba and Blanche Marchesi, and played sonatas with Myra Hess, Lengyel and Busoni (the last-named was a strong influence on his musical development). His career was interrupted by World War I, and from 1917 to 1924 he gave masterclasses at the Geneva Conservatoire. He then resumed his concert career, which expanded rapidly. He visited the USSR 11 times between 1924 and 1927, introducing Prokofiev's Concerto no.1 in Leningrad in 1924 after its Paris première the year before (and his own performance of it at the 1924 ISCM Festival in Prague). Equally successful was his American début at Carnegie Hall, New York, in 1925 under Stokowski.

During the 1930s Szigeti toured East Asia, Australia and New Zealand, South America and South Africa, and in 1938 he gave the world première of Bloch's concerto in Cleveland. He renewed an earlier friendship with Bartók when the latter went to the USA, appeared with him at a memorable concert in the Library of Congress in Washington, DC, in 1940, and gave many outstanding performances of his Concerto no.2, as well as the première of *Contrasts*. Szigeti settled in the USA in 1940 and became a citizen in 1951. After World War II he took part in the 1950 Casals Festival at Prades, and in 1952 gave the first performances of Frank Martin's concerto in Europe and the USA. After further tours he made his home in Switzerland in 1960 and gradually withdrew from concert activities. He turned to writing, published works on the violin and its repertory and expanded his autobiography, first published in 1947. He accepted a few pupils and served on the juries of many international violin competitions, where his wise counsel and consistent musical integrity were an example to others.

Joseph Szigeti

Although Szigeti began as a child prodigy, his career did not flourish until he was in his 30s. His was a talent that needed time to mature, and he gradually abandoned all the trappings of the virtuoso repertory. By avoiding showmanship he made virtuosity seem easy. His unaccompanied Bach playing was exemplary (and inspired Ysaÿe to write his solo sonatas, of which the first is dedicated to Szigeti). Although his playing of Mozart was somewhat lacking in charm, he fully conveyed the impassioned grandeur of Beethoven and Brahms. He played contemporary music with enormous conviction and persuaded concert managers and recording companies to accept a repertory that stressed contemporary works. Many composers dedicated works to him; these include Bartók's Rhapsody no.1 and *Contrasts*, Rawsthorne's sonata, Bloch's *La nuit exotique* and Prokofiev's *Melody* op.35*bis* no.5, as well as the concertos by Casella, Harty and Frank Martin. He revived Busoni's concerto, and was a tireless advocate of Berg, Milhaud, Ravel, Roussel, Stravinsky and others. Among his numerous transcriptions for violin and piano are Elgar's Serenade for Strings and movements from the *Capriol Suite* by Warlock; he also wrote cadenzas and edited a number of concertos and sonatas.

Szigeti's performing technique was not always flawless and his tone lacked sensuous beauty, although it acquired a spiritual quality in moments of inspiration. He played a Guarneri violin that previously belonged to Henri Petri. Szigeti held the bow in an old-fashioned way, with the elbow close to the body, and produced much emphatic power, but not without extraneous sounds. Minor reservations, however, were swept aside by the force of his musical personality.

BORIS SCHWARZ

Szirmai [Sirmay], **Albert** (*b* Budapest, 2 July 1880; *d* New York, 15 Jan 1967). American composer and publisher of Hungarian origin. Until 1906 he studied the piano with Árpád Szendy and composition with Hans Koessler at the Budapest Academy of Music, where he received the Volkmann Prize for composition, and at the same time he read political science at the university. While still a student he was second music critic of the Budapest German newspaper *Pester Lloyd*, and later he held a similar post on the Hungarian newspaper *Polgár*. In 1907 he took over the musical direction of the Budapest theatre, Modern Színpad, for which he wrote some 300 songs and the music for 12 one-act plays. After the success of his first operetta, *A sárga dominó* (1907) he remained faithful to that genre. From 1926 until his death he lived in New York as musical director for Chappell, although several visits to Hungary late in life resulted in the composition of his last two operettas and their subsequent first performances in Budapest.

Szirmai belonged, with Kálmán and Jacobi, to the trio of composers who at the beginning of the 20th century raised Hungarian operetta to international status. He was influenced chiefly by the music of Schumann and Mendelssohn. From the former he learnt depth of expression, from the latter elegant lightness of touch. The influence of German Romanticism was combined in his operettas with those of Hungarian popular music and the French chanson of the turn of the century. The resulting idiosyncrasy of style remained even in his late works: jazz was not reflected in his music, although in America he was one of Gershwin's best friends and the editor of his musical estate, as well as music editor to such leading composers of shows as Kern, Porter and Rodgers.

WORKS
(*selective list*)

STAGE

dates those of first Budapest performance unless otherwise stated

A sárga dominó [The Yellow Domino] (operetta, 3, A. Mérei), Népszínház-Vígopera, 4 Oct 1907
Bálkirályné [The Belle of the Ball] (operetta, 2, Á. Pásztor), Népszínház-Vígopera, 16 Nov 1907
Naftalin [Naphthalene] (musical comedy, 3, J. Heltai), Vígszínház, 6 June 1908
Táncos huszárok [Dancing Hussars] (operetta, 3, F. Rajna and E. Szép), Király, 7 Jan 1909
A mexikói lány [The Mexican Girl] (operetta, 3, Rajna and A. Gábor), Király, 11 Dec 1912
The Girl on the Film (musical play, 3, J.T. Tanner and A. Ross after R. Bernauer and R. Schanzer: *Filmzauber*), London, Gaiety, 5 April 1913
Ezüstpille [Silver Butterfly] (musical comedy, 3, Gábor), Vígszínház, 9 May 1914
Mágnás Miska [Magnate Miska] (operetta, 3, K. Bakonyi and Gábor), Király, 12 Feb 1916
Harangvirág [Bellflower] (ballad, 2 tableaux, T. Emőd, F. Karinthy), Royal Opera, 11 March 1918
Gróf Rinaldo [Count Rinaldo] (operetta, 3, Bakonyi and Gábor), Király, 7 Nov 1918
Mézeskalács [Honey Cake] (musical comedy, 3, Emőd), Király, 15 Dec 1923
The Bamboula (operetta, 3, H.M. Vernon, G. Bolton, D. Furber and I. Caesar), London, His Majesty's, 24 March 1925, collab. H. Rosenthal
Alexandra (operetta, 3, F. Martos), Király, 25 Nov 1925
Éva grófnő [Countess Eva] (operetta, 3, Martos), Király, 3 Feb 1928
Lady Mary (musical play, 3, F. Lonsdale, J.H. Turner and H. Graham), London, Daly's, 23 Feb 1928
Ripples (musical comedy, 2, W.A. McGuire, Caesar and G. John), New York, New Amsterdam, 11 Feb 1930, collab. O. Levant
A ballerina [The Ballerina] (operetta, 3, Martos), Budapest, Király, 7 March 1931
Tabáni legenda [The Legend of Tabán] (operetta, 3, K. Kristóf), Déryné, 1 Jan 1957
A Tündérlaki lányok [The Tündérlaki Sisters] (operetta, 3, E. Innocent-Vincze, after Heltai), Operetta, 29 Jan 1964

FERENC BÓNIS/R

Szokolay, Sándor (*b* Kunágota, 30 March 1931). Hungarian composer. Born into a musical family, he began music studies early and continued them at the Békéstarhos Music College (1947–50), a type of primary school which followed Kodály's ideas. He then studied composition

with Szabó and Farkas at the Budapest Academy of Music, receiving his diploma in 1957. After a short period with Hungarian Radio he joined the staff of the Budapest Academy in 1966. Upon retirement in 1994 he moved to Sopron. His honours include two Erkel Prizes, the Kossuth Prize (1966) for the opera *Vérnász* ('Blood Wedding') and the Bartók-Pásztory Prize (1987).

From the earliest years of his studies, Szokolay composed works for young musicians, combining his needs as a young composer with those of the young performer or listener. In the late 1950s he wrote a number of instrumental pieces, notably a sonata for solo violin and concertos for the piano and the violin, but he soon found his métier in vocal and dramatic music. He gained an impressive success with the oratorio *A tûz márciusa* ('Fiery March', 1957–8) on revolutionary poems by Ady. The same ardent tone and a similar ideological involvement distinguish his one-act ballet *Az iszonyat balladája* ('The Ballad of Horror', 1960), whose subject was taken from the World War II period. Parallel with this 'committed' attitude a definite inclination towards folk traditions developed in the work Istár pokoljárása ('Isthar's descent into hell'), *Mágikus dalok* ('Magic Songs') on ancient folk poetry, and the *Néger kantáta* ('Negro Cantata', 1962). In these compositions, though he did not move far from Hungarian national intonation, Szokolay made reference to the ecstatic rhythms and instinctive expression of certain African peoples, so creating an individual style that shows certain affinities with the work of Bartók, Stravinsky and Orff.

But all this was only a preparation for a major operatic undertaking, *Blood Wedding* (1962–4), based on Lorca's play. By excluding the colouristic elements present in the subject Szokolay succeeded in bringing the dark and tense ambiance of the drama to the music. After its première in Budapest it was quickly taken up by opera houses in Wuppertal, Zagreb, Košice, Brno, Helsinki and Tallinn. His second opera, *Hamlet*, presented in Budapest (1968) and Cologne (1970), marks a clear departure in his creative path. After the gripping and almost brutal effects of *Blood Wedding* he apparently felt it necessary to search for a more introverted style, begetting Shakespeare's drama. The manner is more limpid, the cohesive force of dodecaphonic structures (based on a fairly liberal serialism) and the refined instrumentation underlying the complexity of the action. However, Szokolay's true gifts are displayed in the bold images and frenetic dynamism of his music. It is in these that the attractive and suggestive power of his third opera, *Sámson* (1971–3), resides. The 1973 production in Budapest demonstrated the very personal conception of the biblical story contained in László Németh's drama, as well as the striking musical language of the composer.

After *Sámson* Szokolay took a 10-year hiatus from opera composition. He returned to the genre with *Ecce homo*, based on Nikos Kazantzakis's novel *Christ Recrucified*. This was followed after another decade by *Szent Margit* ('Saint Margaret'), *Szávitri* and *Bölcs Náthán* ('Nathan the Wise'). The intervening years saw the creation, alongside some instrumental compositions, of a number of oratorios and other choral works, which simultaneously prepared for and complemented the stage works comprising the primary vein of his output. Szokolay's style was regenerated from *Ecce homo* onwards: he drew more from folk music and Gregorian chant, struggled to retain tonality and preserve melody, and continued to compose highly ornate vocal parts. In place of experimentation, his last period shows signs of concentration and summation. After the dramatic conflict and tragic outcome of the first four operas, his subsequent works are suffused with an outlook directed towards nature, light, joy and faith. The problems of being Hungarian and of forming a national identity are increasingly brought to the fore in his choice of themes. By the end of the 1990s he had composed three symphonies, enriching his life's work with a new genre.

WORKS

(selective list)

DRAMATIC

Az iszonyat balladája [The Ballad of Horror] (ballet, 1), 1960; Vérnász [Blood Wedding] (op, 3, after F. García Lorca), 1962–4; Hamlet (op, 3, after W. Shakespeare, trans. János Arany), 1965–8; Az áldozat [The Sacrifice] (orat-ballet, 1), 1970–71; Extázis (ballet, 1), 1970; Sámson (op, 2, after L. Németh), 1971–3; Csalóka Péter [Cheating Peter] (fairy tale op, 1, S. Weöres), 1978; Ecce homo (op, 3, after N. Kazantzakis: *Christ Recrucified*), 1984; Szent Margit (mystery op, 2, I. Nemeskürty), 1995; Bölcs Náthán [Nathan the Wise] (op, 3, after G.E. Lessing), 1997–8; Szávitri (chbr op, 2, after E. Illés), 1998; radio ops, incid music, film scores

VOCAL

Cants./orats: A tûz márciusa [Fiery March] (Ady), S, Mez, A, T, Bar, B, nar, chorus, orch, 1957–8; Vizimesék [Children's cant.], 1957; Mesteremberek [Artisans], S, chorus, small orch, 1958; Világok vetélkedése [Rivalry of Worlds] (B. Bartók), S, A, T, B, chorus, orch, 1959; Istár pokoljárása [Isthar's Descent into Hell] (Weöres), orat, S, A, T, Bar, B, chorus, orch, org, 1960; Mágikus dalok [Magic Songs] (G. Kulifay, after ancient folk poetry), S, chbr orch, 1962; Néger kantáta [Negro Cant.] (N. Guillén, trans. E. Gáspár), A, chorus, pf and perc or orch, 1962; Déploration, 'Requiem for Poulenc', chorus, pf, chbr orch, 1964; Karácsonyi pasztorál [Christmas Pastoral] (Bible), chorus, orch, org, 1970

Magyar kórus-szimfónia [Hungarian Choral Sym.] (Ady), chorus, orch, 1970; Vitézi ének [Heroic Song] (B. Balassi), male chorus, orch, 1970; Apokalipszis (after A. Dürer), chorus, orch, 1971; Ódon ének [Ancient Song] (I. Csanádi), chorus, orch, 1972; Pünkösdi ének [Whitsun Song] (Bible), S, chorus, orch, org, 1972; Ady Cant. (Ady), Bar, chorus, orch, 1975; Gályarab kantáta [Galley-Slave Cant.] (Szencsey codex), nar, Bar, chorus, orch, org, 1975; Hommage à Kodály (G. Illyés), S, Bar, chorus, orch, 1975; Soproni akvarellek [Aquarelles of Sopron], S, orch, 1976; A minden titkok titka [The Secret of all Secrets] (Ady), S, chbr ens, 1977

Jeremiáda (Bible), S, chbr ens, 1979; Libellus ungaricus (P. Bornemissza), S, A, Bar, chorus, orch, 1979; Orbis pictus (Weöres), chbr ens, 1979; Confessio Augustana, Bar, chorus, orch, org, 1980; Luther Cant. (M. Luther), Bar, orch, org, 1983; Aeternitas temporis, S, str qt, 1988; Leben-Natur-Liebe, S, str, 1988; Magyar zsoltár [Hungarian Psalm] (J. Dsida), S, A, T, B, chorus, gykar, orch, 1990; Palme (P. Valéry), S, chbr ens, 1990; Széchény miniatürök [Széchény Miniatures], A, org, 1991; Korál Requiem (Bible), B, chorus, org, orch, 1992; Tanuságtétel [Body of Evidence] (Aron Márton), B, chorus, children's chorus, orch, org, 1992; Szabó Lõrinc kantáta (L. Szabó), chorus, orch, 1996

Other vocal works: Révélation (Musset), vv, org/6 wind, 1966; Missa Pannonica, choral cycle, chorus, 1985; Az 56-os évre [On the Year '56] (I. Csanádi), chorus, 1996; Kecskeméti magyar mise [Hungarian Mass from Kecskemét] female/children's chorus, 1997–8; 3 kórus-miniatûr (J. Arany), chorus, 1998; Te Deum (G. Nagy), chorus, 1998; other choral works, songs

INSTRUMENTAL

Sonata, vn, 1956; Conc., vn, orch, 1956–7; Conc., pf, orch, 1958; Ballata sinfonica, orch, 1968; Conc., tpt, orch, 1968; Sonata, fl, 1974; Str Qt no.1, 1976; Sonata, vc, 1979; Concertino, fl, str, hpd, 1981; Conc. for Orch, 1982; Str Qt no.2, 1984; Dublin Concert, vn, chbr ens, 1991; Sinfonia romana, str, 1991; Conc., 2 vn, orch, 1993; Ergo sum, orch, 1994; Sym. no.1, orch, 1997; Sonata [no.2], vn, 1998; Sym. no.2, orch, 1998; Sym. no.3 'Symphonia ungarorum' (G. Nagy), S, B, chorus, orch, 1999; other inst music, incl. solo kbd works

JÁNOS KÁRPÁTI/LÁSZLÓ GOMBOS

Szőllősy, András (*b* Szászváros [now Orăştie], Transylvania, 27 Feb 1921). Hungarian composer and musicologist. He began his studies in Kolozsvár (now Cluj-Napoca), then went to Budapest, where he studied composition from 1939 with Kodály and Viski at the Ferenc Liszt Academy of Music. He read Hungarian and French literature concurrently at Budapest University as a member of the Eötvös Collegium; he took his doctorate in 1943, with a dissertation on the work of Kodály. In 1947–8 he attended Petrassi's master classes at the Accademia di S Cecilia in Rome. In 1950 he was nominated professor at the Liszt Academy, where he taught music history and score reading until his retirement in 1988.

He received the Erkel Prize (1971), the Kossuth Prize (1985) and the Bartók-Pásztory Award (1986, 1998). In 1987 he was created Commandeur des Arts et Lettres by the French government, and in 1993 he became an elected member of the Széchenyi Academy of Literature and Arts. For his 50-year-long activity in music and musicology, in 1996 he was decorated with the Order of the Hungarian Republic.

In the 1950s Szőllősy's activities focused on musicology, in particular the philological aspect of Kodály's and Bartók's life work. In 1953 he compiled a list of Kodály's compositions, and three years later a complete catalogue of Bartók's; the latter has been translated into several languages and its classification is universally recognized by the abbreviation SZ. In 1967 he published a large critical edition of Bartók's essays and writings. Szőllősy also contributed articles to several Hungarian and foreign reviews, notably *La Scala: Rivista dell' opera* (1960–61).

His career as a composer began relatively late. Although some of his vocal works date from the 1950s, for a while he was paralysed by the political atmosphere in Hungary at that time and by living in the shadow of Kodály. His unfolding as a composer started only in the 1960s when his pieces for flute and piano, dedicated to Gazzelloni, met with international success. The landmark of his progressing career, however, was the Concerto no.3 (1968), which earned the title 'distinguished composition of the year' in 1970 at the International Rostrum of Composers in Paris. The Concerto was followed in quick succession by several important works in which his own instrumental style took shape: an orchestral technique involving clusters and large surfaces combined with linear structures. Szőllősy has very rarely followed any orthodox technique of composition; instead, he has created for his own use a special kind of free serialism in which musical material is organized around a series of notes, used sometimes also as a melody and as its rhythmic (i.e. temporal) projection. A distinct example of this technique is to be found in *Trasfigurazioni* for orchestra (1972). The same creative impetus gave rise to three further compositions of the same genre: *Musica per orchestra*, a commission from the capital's council for the centenary of the union of Buda and Pest, *Sonorità*, dedicated to Petrassi, and *Lehellet (Concerto no.5)*, dedicated to György Lehel.

Szőllősy's career as a composer has naturally divided into periods thanks to his systematic approach to certain genres or apparatus. While in the 1970s the orchestra and large chamber ensemble dominated, the 1980s began with vocal compositions: two significant choruses (*In Pharisaeos*, *Planctus Mariae*) and two sextets commissioned by the King's Singers (*Fabula Phaedri*, *Miserere*). Finally by the end of the 1980s and early 90s, chamber music had come to the fore.

Although he has never been drawn to the avant garde, and intentionally avoided the tendency towards overwhelming percussion or vocal lines with great melodic jumps, Szőllősy has mixed instrumental colours and experimented with special effects. In the construction of his works, for example, the progression – the gradation of one or more parameters of the music – is of upmost importance. Besides the increase and decrease, there are sudden turns and dramatic clashes. In a number of works two characteristic musical topoi recur as an *idée fixe*: the ringing of bells and a kind of transformed chorale as if it were a quotation or motto, in a very transcendental way (see Z. Farkas). Both topoi often occur together, in close correlation, giving the work a both sad and elevated atmosphere.

WORKS

(*selective list*)

Dramatic: Oly korban éltem [Improvisations on Fear] (ballet), 1963; Pantomime (ballet), 1965 [from chbr work 3 pezzi, 1964]; Diminuendo (ballet), 1977, Amsterdam, 1977 [from Trasfigurazioni, 1972]; A tűz fiai [Sons of Fire] (ballet), 1977, Pécs, 1977; incid music, incl. 28 film scores

Orch: Conc. no.1, brass, pf, perc, str, 1959; Conc. no.3, str, 1968; Conc. no.4, small orch, 1970; Trasfigurazioni, 1972; Musica per orchestra, 1972; Musica concertante, chbr orch, 1973; Preludio, adagio e fuga, 1973; Sonorità, 1974; Lehellet (Conc. no.5), 1975; Hpd Conc., 16 str, 1978; Pro sommo Igoris Stravinsky quieto, cl, bn, hn, trbn, pf, str, 1978; Tristia (Maros Lament), 16 str, 1983; Canto d'autunno, 1986

JÁNOS KÁRPÁTI

Szomjas-Schiffert, György (*b* Dunakeszi, 25 April 1910). Hungarian ethnomusicologist. He gained the doctorate in law at Szeged University in 1933, and graduated in composition and singing from Szeged Conservatory in 1935; he also attended Kodály's folk music lectures at the Budapest Academy (1937–8) and qualified as a librarian (1940). After working as librarian of the Central Office for Statistics (1936–44) and head of the music department of the Ministry of Culture (1945–8) he was a political prisoner for four years. In 1954 he joined the folk music research group at the Hungarian Academy of Sciences which in 1974 was incorporated in the Institute of Musicology. He gained his Candidatus in Musicology in 1968 and the doctorate in 1998. In 1976 he retired as an active folk-song collector and concentrated on formulating and publishing his findings. His compositions include two masses, a violin concerto and many songs. He has collected folk music in Hungary, among Czechoslovak Hungarians (from 1957) and among Sames in Finland (1966).

BÁLINT SÁROSI

Szőnyi, Erzsébet [Elisabeth] (*b* Budapest, 25 April 1924). Hungarian composer, conductor and educationist. In 1942 she entered the Liszt Academy of Music, where she graduated with diplomas in music teaching (1945), composition, conducting and the piano (1947); she deputized there for Zoltán Kodály in 1945–6, teaching his folk music classes. She received a French government scholarship to pursue graduate studies with Aubin (composition) and Messiaen (musical aesthetics) at the Paris Conservatoire (1947–8); she also studied piano accompaniment with Nadia Boulanger. During that time she was awarded the Conservatoire composition prize for her orchestral Divertimento no.1. On 5 June 1948 the première of her *Parlando és giusto* was broadcast by French Radio (RTF) with Aubin conducting.

Between 1948 and 1981 Szőnyi taught at the Liszt Academy, becoming head of the teacher-training department in 1960. During that time she published her pioneering work *A zenei írás-olvasás módszertana* ('Methods of Musical Reading and Writing', Budapest, 1953–65). It was largely owing to her efforts that Kodály's educational theories became world renowned. In addition to pedagogical works, Szőnyi's vocal compositions are among her most significant contributions. She was awarded the Erkel Prize in 1959 and is considered one of Hungary's most important musical personalities.

WORKS

(*selective list*)

STAGE

Dalma (op, 3, after M. Jókai), 1953; studio perf., Budapest, Dec 1953
Makrancos királylány [The Stubborn Princess] (children's op, 2, E. Kováts); Budapest, Kisterem, Music Academy, 10 June 1955
Firenzei tragédia [The Florentine Tragedy] (op, 1, after O. Wilde), 1957; Meiningen, 8 March 1960
Képzelt beteg [The Hypochondriac] (musical comedy, 3, after Molière), 1961; Budapest, Petőfi, 20 Oct 1961
Az aranyszárnyu méhecske [The Little Bee with Golden Wing] (children's op, 1, É. Orbán), 1974; Philadelphia, 24 May 1979
Vidám sirató [Gay Lament] (Spl, 2, S. Weöres, after A. Sütő), 1979; Budapest, Néps, 7 March 1980
Adáshiba [Break in Transmission] (op, 1, after K. Szakonyi), 1980; Szeged, National Theatre, 7 May 1982
Elfrida (madrigal op, 1, L. Arany), 1985; Budapest, Magyar Radio, 27 Oct 1987

OTHER WORKS

Vocal: József Attila kantáta, chorus, orch, 1968; Radnóti kantáta, chorus, orch, 1974; Missa misericordiae, female chorus, orch, org, 1996; orats, other choral works, vocal chbr music

Orch: Parlando és giusto, 1947; 2 divertimentos, no.1, 1948, no.2, 1951; Org Conc., 1958; Trio concertino, vn, vc, pf, str orch, 1958; Musica festiva, 1964; Allegro, 1969; Prelude and Fugue, 1969; Három ötlet négy tételben [3 Ideas in 4 Movts], pf, orch, 1980

KATALIN SZERZŐ

Szulc. Polish family of musicians.

(1) **Henryk Szulc** (*b* Warsaw, 31 Jan 1836; *d* Warsaw, 11 Feb 1903). Violinist and composer. For almost 30 years he led the Teatr Wielki orchestra and taught double bass at the Warsaw Music Institute. He had an exceptional memory for music and played almost all musical instruments. His compositions were mainly in the field of dance music, also including chamber miniatures in popular or salon styles.

(2) **Józef Zygmunt** [Joseph Sigismond] **Szulc** [Jan Sulima] (*b* Warsaw, 4 April 1875; *d* Paris, 10 April 1956). Composer, conductor and pianist, son of (1) Henryk Szulc. He studied at the Warsaw Music Institute with Noskowski (composition), and perhaps with Strobl (piano). He continued his piano studies in Berlin at the Stern Conservatory with Ernst Jedliček and also took private lessons with Herman Schramke and Ignacy Moszkowski. In 1897 he held a position as piano teacher at the Stern Conservatory in Berlin, while also working as conductor of the opera orchestra in Stuttgart. He then went to Paris, where he continued his piano studies with Paderewski and his composition studies with Massenet. After a period of several years working as a conductor in Poland, Germany and Belgium, in 1910 he settled in Paris, where he concentrated on composition.

His output consists of two symphonic works (*Esther* and *Sinai*), chamber works, piano pieces, a ballet, and above all, 19 *opérettes-bouffes* listed in *Grove5*, which received premières in Paris, Liège and Brussels. They were very popular during the composer's lifetime. The first, *Flup* (first staged in Brussels in 1913), received more than 5000 performances in various European cities. Józef Zygmunt also used the pseudonym 'Jan Sulima'.

(3) **Bronisław Szulc** (*b* Warsaw, 24 Dec 1881; *d* Tel Aviv, 17 July 1955). Conductor and composer, son of (1) Henryk Szulc. He studied at the Warsaw Music Institute with Ignacy Malinowski (french horn) and Noskowski (composition) and played horn in the Teatr Wielki orchestra (1899–1908). In 1909 he spent two years in Leipzig, where he studied music theory with Riemann and conducting with Nikisch. On his return to Poland in 1911, he resumed his career, but as a conductor, though he also taught wind instruments at the Fryderyk Chopin Academy of Music in Warsaw, sometimes performed as a horn player and also directed a wind quintet. Szulc performed as a guest conductor in many European cities and in the United States. In 1936 Szulc, whose family was of Jewish origin, emigrated to Palestine, where he was conductor of the Tel-Aviv SO until his death. He composed two symphonic poems and numerous miniatures for violin and piano and cello and piano.

(4) **Józef Szulc** (*b* Warsaw, 1893; *d* ?Cairo). Pianist and composer, grandson of (1) Henryk Szulc. He studied at the Warsaw Music Institute. At ten he made his début as pianist with the Warsaw PO in Mozart's D minor concerto. Thereafter he toured, giving concerts in many European countries. He continued his musical studies with Busoni at the Stern Conservatory in Berlin. In 1918 he was appointed teacher of piano at the Strasbourg Conservatory, after which he went to Switzerland. He then moved to Cairo where he founded the Szulc Conservatory. His compositions, the style of which is rooted in the 19th century, include songs for solo voice and pieces for piano and for cello.

ZOFIA CHECHLIŃSKA

Szunyogh, Balázs (*b* Budapest, 5 Feb 1954; *d* Eger, 4 July 1999). Hungarian composer. After studying composition with Soproni at the Bartók Secondary Music School, he attended the Liszt Academy (1972–7), where his teachers included Petrovics (composition) and Kurtág (chamber music). On graduating from the Academy he became an assistant there, and in 1985 was appointed full lecturer in composition and chamber music. A scholarship year spent in Vienna (1979–80) under the guidance of Alfred Uhl and Karl Österreicher had a decisive influence on his career.

Szunyogh's first notable success came in 1977 with the première of *Variációk kamaraegyüttesre* ('Variations for Chamber Ensemble'). Written for the Budapest Chamber Ensemble, this work displays a characteristic side to his technique: the musical material, derived from a single motif or initial chord, is propelled through use of fugato, canon or motivic development. The most important influences on his music are Bartók, Kodály, Stravinsky and Webern, though he has also drawn inspiration from traditional music of Africa and the Far East. His harmonic language is predominantly tonal though chromatically enriched. As a teacher as well as composer he has an affinity for the distant past, and possesses a facility for working with theories and techniques found in music of the last four centuries.

WORKS
(*selective list*)

VOCAL

Choral: Keserédes [Bittersweet] (cant., M. Radnóti), chorus, orch, 1978–9; Kis szvit [Little Suite], children's chorus, pf, 1979; A kín hercege [Prince of Anguish] (A. József), male chorus, 1984; 3 villanás [Flashes], girls' chorus, 1990; 3 Girls' Choruses (Bulg. folk texts, trans. L. Nagy), 1994

LÁSZLÓ GOMBOS

Szweykowski, Zygmunt Marian (*b* Kraków, 12 May 1929). Polish musicologist. He studied musicology at Poznań University under Chybiński, graduating in 1951, and he took the doctorate under Chomiński at Kraków University in 1964 with a dissertation on concertato technique in the Polish Baroque. He was Chybiński's assistant at the musicology faculty of Poznań University (1950–53) before moving to Kraków, where he was appointed editor of the Polish music publishers, Polskie Wydawnictwo Muzyczne (1954–61). Concurrently he was an assistant at the Jagiellonian University in Kraków (1954–63), later becoming assistant professor (1964–70), head of the musicology department (from 1970), reader (1971–89) and full professor (from 1990).

Szweykowski is one of the leading Polish musicologists of his generation. His interests are mainly in the historical aspects of music (especially Polish) and Italian cultural history. He worked first on the Renaissance and did intensive research into Baroque music, especially that of the 17th century, discovering many unknown Polish compositions and sources concerning Polish musical culture. He later studied style and performing practice in Florence and Rome from the late 16th to the mid-17th century. He also examined Italian sources concerning polychoral technique and the role of Italian musicians in Poland in this period. His editions of early Polish music are highly regarded; he has also initiated and edited a number of established journals. He developed Wydawnictwo Dawnej Muzyki Polskiej, which from volume li (1964) he co-edited with Feicht, and founded Żródła do Historii Muzyki Polskiej (1960), Symfonie Polskie (1964) and the *Musicalia vetera*, a thematic catalogue of early music manuscripts in Poland (1969–82). He has also edited important individual anthologies, including *Muzyka w dawnym Krakowie* ('Music in Ancient Kraków', Kraków, 1964) and such comprehensive works as *Z dziejów polskiej kultury muzycznej* ('From the History of Polish Musical Culture', Kraków, 1958–).

MIROSŁAW PERZ

Szydłowita [Szydłovita] (*fl* 15th century). Polish music theorist. His surname is derived from the town of Szydłów or Szydłowiec (Feicht, *MGG1*) in central Poland. He was the author of the treatise *Musica magistri Szydlovite*, the oldest Polish music treatise whose author is known (in *PL-GNd* 200; ed. in Gieburowski). He may be identifiable with one of four 'De Szydlov' associated with Kraków University in the 15th century, most probably Johannes Zyzno de Szydlow, son of Marcin, who was born about 1445. He was a manuscript copyist in the Benedictine abbey of Holy Cross on Łysa Góra (central Poland) and later a student at Kraków. By 1471 he was already Bachelor of Arts and in 1474 he was at the Jerusalem College where he copied Johannes de Muris's treatise *Musica speculativa* (*D-Bsb* 175). In 1475 he obtained the master's degree while a monk in the abbey on Łysa Góra. He was abbot of that monastery from 1505 and died in 1516 or shortly afterwards. The attribution of the treatise *Musica magistri Szydlovite* to Johannes Zyzno de Szydlow suggests that it was written after 1475 in the abbey on Łysa Góra.

The treatise is concerned with Gregorian chant; it contains 14 chapters and its 'intencio est scolarum in musica minus perfectorum erudicio'. Szydłowita used two chief models: a lost treatise by Theogerus, a Benedictine monk from Metz (not the text *Musica* published by Gerbert); and the work of Joannes Olendrinus (called Hollandrinus in other sources), surely identifiable with Valendrinus, author of *Opusculum monocordale* (in *PL-WRu* IV Qn 81, from Głogów, *c*1450; ed. in Feldmann). Szydłowita's *Musica* displays numerous connections with *Opusculum*. Quotations from Valendrinus appear in seven texts (including Anonymus 11, *CoussemakerS*, iii, 416–75) written in the second half of the 15th century in areas around Poland – Bohemia, Hungary and southern Germany.

MIROSŁAW PERZ

Szymanowska [née Wołowska], **Maria Agata** (*b* Warsaw, 14 Dec 1789; *d* St Petersburg, 25 July 1831). Polish pianist and composer. She studied the piano in Warsaw with Antoni Lisowski (1798–1800) and T. Gremm (1800–04). She made her début in Warsaw in 1810 and in the same year went to Paris, where she probably performed in private salons. In 1815 she began her professional career as a pianist and in 1822–3 toured many cities in the then Russian territories, including Moscow, Kiev, Riga and, especially, St Petersburg. There she performed at the Imperial Court and received the title of First Pianist. She also met Hummel and performed in a concert with him. In 1818 she visited England and from 1823 to 1826 toured western Europe, giving public and private concerts (often before royalty) in Germany, France, England (three more visits), Italy, Belgium and Holland. In London, in 1824, she played for the Royal Philharmonic Society (18 May); at Hanover Square in the presence of members of the royal family (11 June); and in private houses, including those of the dukes of Hamilton, Kent and Northumberland. Everywhere, her performances received critical and public acclaim. Frequently she performed with the most distinguished European artists of the time, including Pierre Baillot and Giuditta Pasta. After returning to Warsaw and giving concerts in Poland, she returned to Russia in 1827 and settled permanently in St Petersburg in March 1828. She continued to give concerts and taught music. She also ran a salon which attracted the artistic and social élite of the city. Among her acquaintances were Goethe (with whom she stayed in Weimar), Cherubini and Rossini. As well as her own works, she performed the music of her contemporaries, including Hummel, Field, August Klengel, Dussek, Ferdinand Ries and Henri Herz. Critics praised the delicacy of her tone production and her lyricism combined with virtuosity.

Szymanowska was a typical composer-virtuoso of her time and made a significant contribution to early 19th-century Polish music. She composed about 100 pieces, most of which are miniatures for piano in simple, symmetrical structures, usually in rondo forms or in 'lied' form. Her works exemplify the 'style brillant' of the period before Chopin. She introduced into Poland piano studies and nocturnes. In this respect she can be regarded as a link between Field and Chopin in the development of the nocturne, especially in one of her last pieces, the Nocturne in B♭, which Chopin could not have known. Her *Vingt exercices et préludes* contain many aspects of sound texture which were later developed by Chopin. For example, the ending of Chopin's study in A♭ (op.25 no.1) is clearly reminiscent of her study no.18 in E. Her 24 Mazurkas are based on elements of folk music and are inbued with the folk tradition. These works display characteristics of both functional and art music. Szymanowska was also the first Polish composer to explore the setting of ballads.

WORKS
(*selective list*)

unless otherwise stated, published in Leipzig in 1820

Chbr: Divertissement, vn, pf; Serenade, vc, pf; Thème varié, pf, vn/fl (Warsaw, 1821); Fanfara dwugłosowa [2-pt. Fanfare], 2 hn, 2 tpt, *PL-Kj*

Pf: 20 exercices et préludes (Leipzig, 1819); Caprice sur la romance de Joconde; 18 danses; Fantaisie, F; Grand valse, F, pf 4 hands; 6 Marches; 6 Minuets; Polonaise sur l'air national favori du feu Prince Joseph Poniatowsky; 4 valses, pf 3 hands (Warsaw, 1821); Cotillon ou valse figurée (Paris, 1824); Danse polonaise (Paris, 1824); 24 Mazurkas (Leipzig, *c*1825, and London, *c*1826); Nocturne, A♭, 'Le murmure' (Paris, 1825); Nocturne, B♭, ed. (St Petersburg, 1852; repr. in Belza, 1956, pp.169–76); Prelude, B♭, *Kj*; Temat wariacji [Theme for Variations], b♭, *Kj*; Valse, d, *Kj*

Vocal: 5 śpiewów historycznych [Historical Songs] (J.U. Niemcewicz): 1 Jadwiga, królowa polska [Jadwiga, Queen of Poland], 2 Jan Albrycht, 3 Duma o Kniaziu Michale Glińskim [The Muses of Prince Michal Glinski], 4 Kazimierz Wielki [Kazimierz the Great], 5 Stefan Czarniecki, nos.1–3 (Warsaw, 1816), nos.4–5, *Pl-Kj*; Le départ (M. de Cervantes); 6 romances (W. Shakespeare, Saint-Onge, F. de Berni); Mazurek [Mazurka] (A. Górecki) (Warsaw, 1822); Śpiewka na powrót wojsk polskich [Song on the Return of the Polish Armies] (L. Dmuszewski) (Warsaw, 1822); 3 pieśni (from A. Mickiewicz: *Konrad Wallenrod*): Alpuchara, Pieśń z wieży [Song from the Tower], Wilia (Kiev and Odessa, 1828); Świtezianka [The Water Nymph] (Mickiewicz) (Moscow, 1828); Śpiewka na dwa głosy [Little Song for two Voices] (Warsaw, 1829); Complainte d'un aveugle qui demandoit l'aumone au Jardin du Roi à Paris (Paris, n.d.); Romance à Josephine (Paris, n.d.); Bacchelia, *F-Ppo*; Jazmena [Jasmine], *Ppo*; Romance de la Reine Hortense, *Ppo*; W tych przedsionkach szczęście gości [Happiness Stays in this Ante-Room] (F. ZOFIA CHECHLIŃSKA

Szymanowski, Karol (Maciej) (*b* Tymoszówka, nr Kiev, 3 Oct 1882; *d* Lausanne, 29 March 1937). Polish composer.

1. LIFE. Szymanowski was born in the Ukraine into one of many families of landed gentry who settled there following the partition of Poland. His musical education took place at home in the first instance, and later (from 1896) at a music school in nearby Elisavetgrad (present-day Kirowograd), run by his relatives the Neuhauses. In 1901 he moved to Warsaw, where he had private lessons in harmony with Marek Zawirski, a professor at the Warsaw Music Institute (forerunner of the conservatory), and lessons in counterpoint and composition with the distinguished but conservative composer Zygmunt Noskowski. Szymanowski's arrival in Warsaw coincided with the establishment of the Warsaw PO, a key event in Polish music history. Yet despite its importance for Warsaw's musical life in general, the orchestra soon proved a disappointment to those younger student composers who had hoped it would encourage progressive trends in Polish music. In 1905 four of these composers (Szymanowski, Fitelberg, Różycki and Szeluto) were impelled to action, and formed themselves into the group Young Poland in Music, analogous to the Young Poland movement in Polish literature. Apart from their shared aim of updating Polish music and a common tendency to idolize Richard Strauss, these composers had little in common, and they remained together as a group for a short time only. Yet they had a powerful backer in Prince Władysław Lubomirski, and it was through Young Poland that Szymanowski's early music was published and performed, in Germany as well as Poland.

That music included Chopinesque piano preludes and études, two sets of piano variations, sonatas for piano and for violin and piano, and the first draft of a Concert Overture for orchestra. There were also numerous songs to texts by Young Poland poets such as Kazimierz Tetmajer, Jan Kasprowicz, Wacław Berent and Tadeusz Miciński. Szymanowski had great sympathy with the general outlook of these writers, Miciński in particular. Theirs was a radical aestheticism, which was influenced to a degree by French and Russian symbolism, but tinged also by the 'Messianic' themes characteristic of mid-19th-century Polish poetry. The principal spokesman for the group, Stanisław Przybyszewski, gave uncompromising

1. Karol Szymanowski, 1935

expression to their ideals in his *Confiteor*: 'Art has no aim, it is aim in itself . . . Art stands above life, penetrates the essence of the universe . . . [It] becomes the highest religion, and the artist becomes its priest'. Such views undoubtedly influenced Szymanowski at deep levels of his creative mind, and not only in the early songs. Some of his most captivating music seems to represent a hedonistic 'withdrawal from the world', an escape into an interior landscape of exotic imagery (often inspired by Greek and Arab mythologies), which was much in the spirit of Young Poland.

These early years culminated in a Warsaw PO concert of works by Young Poland composers in February 1906, sponsored by Prince Lubomirski. It was repeated in Berlin shortly after. Szymanowski composed his Concert Overture for the occasion (it was later revised and published by Universal Edition as op.12), and his Variations on a Polish Folk Theme op.10 and Etude op.4 no.3 were also performed (by Henryk Neuhaus). The concert was a remarkable success, with Szymanowski's music singled out for special praise by the leading Warsaw music critic Aleksander Poliński: 'I did not doubt for a moment that I was faced with an extraordinary composer, perhaps a genius'. It was a brief moment of acceptance from Polish critics, one seldom to be repeated; already by the following year Poliński had turned against him. In any event, the Young Poland concert marked the end of Szymanowski's apprenticeship. Following it he embarked on a period of intensive study of the New German School, and this is clearly reflected in the stylistic world of his compositions up to the outbreak of World War I. He also travelled widely during these years, often in the company of his confidant Stefan Speiss. Especially significant was his visit to southern Italy and Sicily in April 1911. With its intoxicating blend of Greek, Roman, Norman and Moorish cultures, Sicily fired his imagination, and he began to store impressions of its architecture, history and landscape which would be put to good use in the opera *Król Roger* ('King Roger').

Szymanowski spent much of 1911 and 1912 in Vienna, and he achieved notable successes when his Second Piano Sonata and Second Symphony were performed there and in Berlin (he signed a contract with Universal Edition in 1912). Yet the strongly Germanic tone of those works, and of his Straussian one-act opera *Hagith* (completed in 1913), was not to be his chosen path. In the spring of 1914 he and Spiess visited Sicily and North Africa, and the journey renewed and intensified his interest in Mediterranean and Arab cultures. This interest, together with his growing awareness of modern French and Russian music (he spent the early summer of 1914 in Paris), undoubtedly played a part in helping him shake off German influences. His new stylistic sympathies with Debussy and Ravel are instantly apparent in the music he composed in Tymoszówka during the war years. This was indeed Szymanowski's most prolific period as a composer. He was exempt from conscription by the Russian army, and developed a steady routine of uninterrupted composition which continued from the beginning of the war to the outbreak of the Russian Revolution. It was the period of the great piano cycles, *Metopy* ('Metopes') and *Maski* ('Masks'), of the *Mity* ('Myths') for violin and piano, of the song-cycles *Pieśni księżniczki z baśni* ('Songs of a Fairy Princess'), *Pieśni muezina szalonego* ('Songs of an Infatuated Muezzin') and Four Tagore Songs, and above all of the First Violin Concerto and Third Symphony. Together these two orchestral works represent the high-water mark of Szymanowski's 'Impressionism', an idiom which somehow draws together the refined sonorities of Debussy, Ravel and late Skryabin and the impassioned late-Romanticism of the New German School.

The splendid isolation of these years was rudely disturbed by the October Revolution. The Szymanowskis moved to a house in Elisavetgrad just before the uprising, and shortly after their move the family home at Tymoszówka was all but destroyed. It was a dark period for the composer, during which he was quite unable to believe in himself as an artist. The 'interior landscape', remote and beautiful, which had fed and sustained his creativity during the war years, no longer seemed adequate to the impinging realities of war and disease – the 'scoffing, cynical force of brutal facts', as he himself put it. 'Can you imagine', he wrote, 'I cannot compose now . . . I am writing a bit – of course without any literary aspirations – simply to get things off my chest'. In fact he was working on a full-length novel, *The Ephebe*, which he completed in 1919, and of which only fragments survive. Szymanowski read widely during the Elisavetgrad years, notably Euripides (*The Bacchae* was one source for *King Roger*), Stendhal, Bergson, Taine and Pater, and he became increasingly anxious to translate his metaphysical musings into prose, especially as musical creativity eluded him. Although it is given the widest possible context, erotic love, and especially 'a love which is independent of all norms (of public opinion)', is the central theme of the novel. In this respect *The Ephebe* was indeed his own *confiteor*, as was – in a less direct way – the opera *King Roger*, on which he was also musing at the time. It has been well observed by Teresa Chylińska that the ephebe, 'with a sensual mouth . . . with long curls . . . falling on both sides of the delicate and beautiful young face', was the prototype for the Shepherd in *King Roger*.

Szymanowski wrote the novel while he was in close contact with his distant cousin Jarosław Iwaszkiewicz. Around the same time, the two men discussed the opera, and Iwaszkiewicz sketched the outline of a libretto in the summer of 1918. Two years later the libretto was finished (the composer rewrote the last act), and four years after that the music too was completed, though not without a struggle on Szymanowski's part. Stylistically the work belongs with the music of the war years, and that may well explain the composer's difficulty in finishing it. By 1924 his music had taken a very different turn, in response to changes in his own circumstances and in Poland's. After more than a century without any political status, Poland regained its independence in 1918. It was a triumphant moment, and it demanded a response from Polish artists. Szymanowski's response was not, however, immediate. The family returned to Poland on Christmas Eve, 1919, having sold the property in Elisavetgrad, and from then on they were dogged by financial problems. The composer no longer had a permanent home, and he spent part of 1920 on the first of two extended visits to America with his friends Artur Rubinstein and Paweł Kochański. He had produced no major work since the *Songs of an Infatuated Muezzin* of 1918, and it was not until the song-cycle *Słopiewnie* ('Word Songs'), composed in Bydgoszcz (where his brother-in-law had rented a villa

for the family) in the summer of 1921, that he found himself again as a composer.

Having all his life stood out against the use of folk materials, he began to explore their possibilities in *Słopiewnie*, in a manner somewhat influenced by Stravinsky. A new nationalist orientation was beginning to crystallize, and it was given expression in several articles which appeared in the early 1920s, corresponding closely in ideals to the contemporary writings of Iwaszkiewicz and others connected with the Skamander movement in Polish letters. 'Let our music be *national* in its Polish characteristics', he wrote, 'but not falter in striving to attain *universality*. Let it be national, but not provincial'. He was greatly helped in this aim by his growing interest in the folk culture of Zakopane, the Tatra mountain resort which was to become increasingly important to him in his later years. From 1922 onwards he divided his time between Warsaw and Zakopane, and much of his music from this period, notably the 20 Mazurkas op.50 and the ballet *Harnasie*, was inspired directly by the highlanders' music. At the same time he spent part of each year from 1922 to 1926 in Paris, where he met regularly with the Kochańskis and Rubinstein, and with friends of Polish music such as Eduoard Ganche, Hélène Casella and the American Dorothy Jordan-Robinson. By the mid-1920s he was increasingly recognized on the international stage, thanks to major performances of works such as the First Violin Concerto and Third Symphony, prestigious commissions (the *Stabat mater* for the Princess de Polignac), and eventually an appointment as director of the Warsaw Conservatory (February 1927).

The conservatory years were far from happy for Szymanowski. His high ideals, articulated in several important articles, met with sustained and well-orchestrated resistance, though not from the students and younger professors, and in mental and physical health he was not up to the onslaught. Already in 1924 he had received treatment for depression, and this problem flared up periodically throughout the rest of his life, by no means helped by excessive smoking and drinking. In 1929 he was forced to give up the directorship and moved to the Swiss health resort of Davos, where he began an intensive period of treatment for tuberculosis in both lungs. This was a period of complete rest from music, during which he devoted himself to reading and to an important article, 'The Educational Role of Music in the Social Order', representing the fruits of his teaching experience. A year later, in June 1930, he was appointed rector of the Music Institute in Warsaw, a position which enabled him to put some of these ideas into practice, and which led in turn to a succession of honours and awards. In general this was a good year for Szymanowski. His health improved with a more moderate lifestyle, and he achieved a greater measure of domestic stability through renting the villa ATMA in Zakopane.

In contrast to the tranquillity of Zakopane, all was not going smoothly at the academy. Once more there was a confrontation, and Szymanowski was dismissed in April 1932, along with several others. During the next two years he managed to write his *Symphonie concertante* for piano and orchestra and his Second Violin Concerto, but from 1934 onwards he was unable to produce much of substance. These final years were indeed tragic. Faced with alarming financial problems and rapidly deteriorating health, he was obliged to undertake exhausting concert tours throughout Europe, culminating in a Scandanavian tour in March 1935. In the end, financial difficulties made it imperative for him to give up his Zakopane home. He spent the summer of 1936 with his sister in Warsaw, and left for Paris in November and Grasse in December. At Grasse he stayed in a kind of boarding house, without adequate medical facilities, and made his last attempt at composition, a ballet score based on the *Odyssey*. When his secretary Leonia Gradstein was summoned there in March 1937, she found the composer in a helpless state. He was immediately transferred to a sanatorium in Cannes and from there to Lausanne, where, in the presence of his sister Stasia and Leonia Gradstein, he died on 29 March 1937.

2. WORKS. The poverty of indigenous traditions after Chopin forced Szymanowski to look outside his homeland, and in some respects his development as a composer can be viewed as a series of responses – some muted, some not so muted – to German, French and eastern European styles respectively. Yet his attitude to these models changed in important respects as his creative personality matured. In the early years in Warsaw (*c*1900–06) his meticulous examination of the music of Chopin, early Skryabin and the German Romantic masters was largely a study in métier – the acquisition of a compositional technique that could subsequently be directed towards quite different stylistic horizons. Less happy was his debt to Reger and Richard Strauss in the so-called Viennese period (*c*1907–14). The major works of this period, in particular the Second Piano Sonata, Second Symphony and opera *Hagith*, demonstrate considerable technical mastery, but they do descend at times to a kind of slavish imitation that worried Szymanowski himself. It was above all *Hagith* (1912–13), clearly modelled on *Salome*, that finally exorcised the influence of Strauss, ending a long period of close involvement with German music. However, even after the break with German styles in 1914, many traces of that involvement remained, expressed in specific technical details as well as in the general emotional climate of the music. Even after 1914, Szymanowski's aesthetic remained close to the transcendentalism which marked the later stages of German Romanticism. For him, as for Mahler and early Schoenberg, music was above all an elevated, ecstatic expression of the emotions; this attitude prevailed until his expressionist crisis at the end of the war, and even to some extent survived that.

The creative deadlock following *Hagith* was released in 1915 by three major cycles which triumphantly announced a new creative period. With these cycles – *Myths*, *Metopes*, and *Songs of a Fairy Princess* – he reached full maturity as a composer, establishing the characteristic sound worlds which were to be inhabited respectively by the violin, piano and soprano voice in his music of the war years. In these works he responded above all to modern French music. 'I shall never cease in the conviction', he wrote later, 'that a true and deep understanding of French music, of its content, its form and its further evolution, is one of the conditions for the development of our Polish music.' The influence of Debussy and Ravel is obvious enough in the textural surfaces of the 1915 cycles, particularly in Szymanowski's writing for piano. But it is these works' harmonic language above all that reveals the true extent of their indebtedness to French music. Two classes of harmony might be cited as evidence of this. The first is the dialogue Szymanowski

established between tonal hierarchies and non-tonal symmetries such as the whole-tone scale, French sixth or octatonic scale: this characterises *The Lonely Moon* from *Songs of a Fairy Princess*. The second is the interplay of white-note and black-note patterns, often with the strong suggestion of conflicting pentatonic motives and an underlying tritonal bitonality (as in the first of *Myths* and second of *Metopes*).

Influences from Debussy, Ravel and late Skryabin are clearly responsible for much of the detailed working of Szymanowski's middle-period harmony. Yet, unlike his earlier music, the works of the war years remain at a safe distance from their models, drawing upon them judiciously and selectively. Two features in particular emphasize Szymanowski's independence of French music. The first signals his many years of close involvement with German late-Romantic music: there is a tendency towards a full-blooded, impassioned Romanticism, expressed technically in passages which return to a more traditional view of harmony as a means of shaping the phrase and directing it towards tonal goals, however temporary. Such passages are in marked contrast to the platforms of Impressionistic dissonance which surround them, and Szymanowski's middle-period music is in some ways a uniquely personal dialogue between these two worlds. The major orchestral works of the period, the First Violin Concerto and Third Symphony, demonstrate this duality well, and the composer's own remarks on the concerto suggest that he was aware of it. 'There is much that is new', he wrote, 'but also something of a return to the old'.

A second source of creative independence was that interior landscape of exotic imagery, material for dream and fantasy, which Szymanowski gradually formed from his nostalgic recollection of travels to Italy, Sicily and North Africa, and from his extensive reading about the history, geography and culture of Greece and the Arab lands. It was in part the strength of these allegorical worlds, in which the imagined might become momentarily concrete, that enabled him to absorb and transcend the musical influences he clearly needed, for the imagery itself, through its musical stylization, created a unique world of sound. The key to this lies in Szymanowski's surrender during these years to the Dionysian impulses of song and dance, both coloured by orientalisms and both refined and stylized to a point where modal and metrical norms respectively are often threatened. Many of the middle-period works are explicitly about song and dance – 'The Nightingale' from *Songs of a Fairy Princess*, the songs of Allah in *Songs of an Infatuated Muezzin*, 'Song of the Sirens' from *Metopes*, 'Don Juan's Serenade' from *Masks*, 'The Dance is Divine' from *Love Songs of Hafiz*, the garden dance in *Songs of a Fairy Princess*, the dance of the Phaecian maidens in 'Nausicaa' from *Metopes*. Underlying these archetypal songs and dances it is possible to detect a dual impulse – a return to ancient cultural roots as a sane counterpart to the century's political and psychological traumas, and a parallel Nietzschean return to the 'vital life forces' sapped by an enervating civilization.

The Third Symphony, certainly the major work of these years, summarizes these tendencies. The violin and vocal melodies of the first part are really a single song, now hovering far above the richly dissonant harmonic background, now surging towards impassioned climaxes. The extended middle section, on the other hand, is a glorification of the dance – a series of clearly-defined tableaux which intercut in mosaic-like fashion. The characteristic melody of the symphony, and of other middle-period works, is quite different from anything in Debussy and Ravel. Closely associated with the soprano voice and the violin, and undoubtedly inspired by the voice of Stasia Szymanowska and violin playing of Kochański, it is characterized by its chromatic flexibility and its richly decorative melisma. As such it evokes appropriately sophisticated harmonic supports, and these, as noted, are often indebted to French models. But the harmony, however complex, is always subordinated to the song. The distinctive, highly personal character of the songs and dances is enhanced, moreover, by the recurrence of specific fingerprints of style. These are often trivial enough in themselves, but they are woven so consistently into the fabric of the middle-period music that they acquire connotative values through cross-reference from one work to the next.

In some of the later works of the war years, notably the Third Piano Sonata and First String Quartet, there are indications that this interior landscape, however intrinsi-

2. Scene from Szymanowski's 'King Roger', Act 1, Wielki Theatre, Warsaw, 1926; sets designed by Wincenty Drabik

cally beautiful, would fail to satisfy Szymanowski permanently. The intrusion of the events of 1917 destroyed it completely, leaving the composer creatively bankrupt. Against this background *King Roger* takes on special significance, dramatizing the crisis which Szymanowski experienced after 1917 and sublimating that crisis in musical terms. The theme of the opera is the conflict between the Christian church in medieval Sicily and a pagan creed of beauty and pleasure proclaimed by a young shepherd-prophet (fig.2). Roger reluctantly follows the Shepherd as a pilgrim, but in the end stands alone against his influence. This provides a framework for a Nietzschean reworking of Euripides in which Roger emerges 'strong enough for freedom', having overcome the enriching but dangerous Dionysian forces within himself. In the final act he pays homage to Dionysus but goes on to salute Apollo as the sun rises and the final curtain falls. This ending marked a crucial modification by Szymanowski himself of Iwaszkiewicz's original version of the libretto – a rejection, with obvious autobiographical resonance, of the hedonistic creed of the Shepherd as an end in itself. At the same time the opera makes clear the need for Dionysus, and in musical terms its richness lies precisely in the fact that the exoticisms of earlier works, far from being eliminated, are rather placed within a new and broader perspective.

By 1924, when *King Roger* was completed, Szymanowski's music had taken on a distinctly nationalist tone. It was above all the inspiration of Stravinsky that triggered off a new phase of creativity, suggesting new ways of treating folk materials which did not merely rehash the empty provincial gestures of the past. *Słopiewnie* was the first product of the new influence, and the process of regeneration was completed by Szymanowski's growing interest in the exotic culture of the Tatra highlands, including its colourful folk music and dance. This Tatra music, with its primitive rhythmic energy, informed a great deal of the music of his final period, which he himself described as 'a new period in my creative life'. It is most obvious in the op.50 Mazurkas, a 20th-century response to Chopin, and in the ballet *Harnasie*, but it is also present in a more sublimated form in the Stabat mater (his most sustained attempt to recreate a 'lechitic' or ancient Polish quality), in the Second String Quartet and in two orchestral works, the distinctly Bartókian Second Violin Concerto and *Symphonie concertante* for piano and orchestra, both composed at the very end of his creative life.

In the nationalist climate of the 1920s many Polish artists managed to persuade themselves that the undoubted creative energy of Tatra culture was the residue of a once vital Polish style, suppressed elsewhere by political vicissitudes. Yet the real appeal of the region – for Szymanowski, and perhaps for others – was its exoticism, its existence as a world of presumed innocence and vitality which could stand muster as an alternative reality, again suggestive both of ancient roots and of Dionysian escape. This, rather more than Tatra's dubious capacity to speak for the nation, helped liberate Szymanowski from his creative paralysis. There was no phoney nationalism. The ideological input served here its legitimate and customary purpose, which is to trigger rather than determine the creative impulse, even if the composer himself may have assigned it greater privilege. And in this respect Szymanowski fell into line with more general developments in eastern central Europe in the early years of the century. Nationalism was indeed the essential agent of a musical 'awakening' throughout the region, but once awakened this music very soon entered the wider world.

WORKS

Edition: *Karol Szymanowski: Dzieła*, ed. T. Chylińska (Kraków, Paris and Vienna, 1973–) [s]

STAGE

op.	
—	Roland (op, collab. F. Szymanowski), 1898, lost
—	Złocisty szczyt [The Golden Summit] (op, collab. F. Szymanowski), 1898, lost
—	Loteria na mężów [Lottery for a Husband] (operetta, 3, J. Krzewiński-Maszyński), 1908–9, unperf. unpubd
25	Hagith (op, 1, F. Dörmann), 1912–13; Warsaw, 13 May 1922, unpubd
43	Mandragora (pantomime, 3 scenes, R. Bogusławski, L. Schiller, after Molière: *Le bourgeois gentilhomme*, Act 3), 1920, Warsaw, 15 June 1920
46	Król Roger [King Roger] (op, 3, J. Iwaszkiewicz, K. Szymanowski), 1920–24, Warsaw, 19 June 1926
51	Kniaź Patiomkin [Prince Potemkin] (incid. music to Act 5, T. Miciński), 1925, Warsaw, 6 March 1925
55	Harnasie (ballet-pantomime, 3, Iwaszkiewicz, J.M. Rytard), 1923–31, Prague, 11 May 1935

CHORAL

37b	Demeter (cant, Z. Szymanowska, after Euripides), A, female chorus, orch, 1917, reorchd 1924, Warsaw, 17 April 1931
39	Agave (cant, Szymanowska), A, female chorus, orch, 1917, inc.
53	Stabat mater (trans. J. Jankowski), solo vv, chorus, orch, 1925–6, Warsaw, 11 Jan 1929
—	Pieśni kurpiowskie [Kurpie Songs], chorus, 1928–9
57	Veni creator (S. Wyspiański), S, chorus, org, orch, 1930, Warsaw, 7 Nov 1930
59	Litania do Marii Panny [Litany to the Virgin Mary] (J. Liebert), S, female chorus, orch, 1930–33, Warsaw, 13 Oct 1933

SONGS WITH ORCHESTRA

6	Salomé (J. Kasprowicz), S, orch, *c*1907, reorchd 1912
18	Penthesilea (Wyspiański), S, orch, 1908, Warsaw, 18 March 1910, reorchd 1912
26	Pieśni miłosne Hafiza [Love Songs of Hafiz] (trans. H. Bethge), lv, orch, Paris, 23 June 1925 [incl. op.24/1, 4, 5, orchd]
31	Pieśni księżniczki z baśni [Songs of a Fairy Princess] (Szymanowska), 1v, orch, 1933, Warsaw, 7 April 1933
42	Pieśni muezina szalonego [Songs of an Infatuated Muezzin] (J. Iwaszkiewicz), 1v, orch, 1934
46b	Słopiewnie [Word Songs] (J. Tuwim], 1v, orch, 1928

SONGS WITH PIANO

2	Six Songs (K. Tetmajer), 1900–02

JIM SAMSON

Szymański. Polish family of organ builders. They were active in Warsaw between about 1861 and about 1920. Józef Szymański (1828–92) was apprenticed to Mateusz Mielczarski, and later succeeded him in Warsaw in 1869. Earlier, Józef had set up his own firm in Częstochowa in 1861. He continued to build good organs in the tradition of Mielczarski, and is considered to be one of the best and most prolific organ builders in that part of Poland, producing more than 120 organs and winning gold medals in three consecutive national competitions. A measure of the quality of his instruments is that many of them are still in use in churches in the Warsaw area, for example Tarczyn (1872). Notable organs which are no longer extant include the sanctuary chapel, Jasna Góra (1874), St Hiacinth, Warsaw (1880), and the Długa Kościelna, (1881); the latter two were destroyed in World War II.

All of Józef's three sons – Mateusz, Jan and Antoni – followed in his footsteps, operating jointly for a time, then separately; together they took the total number of organs built by the family to nearly 300. A smaller percentage of these are ascribed to Jan (*d* 1909), whose organs still survive in several churches around Warsaw, including the Church of the Holy Spirit, Warsaw (1894), and Kutno (1896). Antoni (*d* 1920) was more prominent and prolific, and set up his own firm in Piotrków Trybunalski in 1878. Although rooted in the older tradition of the Warsaw school of Mielczarski and his father, he was open to new ideas in organ building and was one of the first Polish builders to introduce the cone-chest (*c*1880), tubular-pneumatic action (*c*1900), crescendo pedal (before 1900) and the swell-box (*c*1890). A good example of a 'modern' and durable organ by him is in the church of the Nuns of the Visitation, Warsaw. Built in 1909 it is still in good playing condition and displays fine tonal qualities, in spite of a subsequent shortening of two 16′ pedal stops of cedar wood. A number of Antoni's organs were exported to Russia. Mateusz (*d* 1889) worked only with his father and never as an independent builder. For further information see J. Gołos: *Polskie organy i muzyka organowa* (Warsaw, 1972; Eng. trans., 1992, as *The Polish Organ*, i: *The Instrument and its History*).

JERZY GOŁOS

Szymański, Paweł (*b* Warsaw, 28 Mar 1954). Polish composer. He studied composition with Kotoński and Baird at the Warsaw Academy of Music (1973–8) and with Haubenstock-Ramati in Vienna (1984–5). He then worked in Berlin on a scholarship from the Deutscher akademischer Austauschdienst (1987–8). He has won prizes at home (Polish Composers' Union award, 1993) and abroad (England, Germany, UNESCO) and has received many foreign commissions from 1986 onwards.

While still a student, Szymański developed a highly individual style whose features, including repetitive motifs, contrapuntal layering and tonal structures (often based on the tritone), are revealed within a fractured continuum and with a cool and quirky regard for the gestural and instrumental conventions of earlier eras. His Sonata (1982), for nine violins, doublebass and two percussion, is an excellent example: notwithstanding its partial origins in Szymanowski's *Mazurka* op.62 no.2 (it was written to commemorate the centenary of his predecessor's birth), its motivic fragments seem to spring from an otherwise unheard 18th-century passacaglia in a manner which is designed to tease the ear into involuntary participation in a musical jigsaw puzzle. His intentions are not, however, neo-classical; rather, he emphatically exaggerates certain aspects of the past in the creation of what he and his fellow composer Krupowicz have called 'surconventionalism'.

Szymański's output includes a number of non-functional sacred pieces such as the impassioned, almost Romantic *4 Liturgical Pieces*, a strong contrast to the extreme asceticism of the later *Miserere*. Each piece, in its different way, demonstrates his ability to achieve a strong personal voice whilst alluding to or employing a range of stylistic means. Szymański's basic material dates most frequently from the Baroque era, although in reflective mode his textures often assume many of the properties of Renaissance fantasias. In some cases, as in the Sonata, he has referred to pre-existing material, such as the medieval melody 'L'homme armé' in *Lux aeterna*. In most cases, his music sublimates these sources and styles, sometimes approaching total abstraction, as in the impressionistic *A Study of Shade*. Nonetheless, he shows a mischievous streak in his more homophonic 'cut-and-paste' approach to Classical idioms in *Quasi una sinfonietta* and *Recalling a Serenade*.

While he maintains a fondness for sets of chamber miniatures (*Limeryki*, Five Pieces), his larger frameworks are typically binary: the *Gloria* is an early prototype, the Piano Concerto a more developed model. Characteristically, these two-part structures present a clear sequential dialectic between the active–passive, dynamic–reflective and vertical–linear, with a durational ratio between the two segments of approximately one to three. Although both sections are habitually created through canons, their full texture is rarely revealed; instead, Szymański proposes a perceptual duality, with the canonic material glimpsed only in a fragmentary manner or in sequences and imitations. In the sustained sections, he elongates the note-values of the canons out of recognition, gilding the slow-motion polyphony with glissandi, trills and quarter-tones (*Partitas*).

ADRIAN THOMAS

T

T. *See* TUTTI.

Ta. The flattened form of TE in TONIC SOL-FA.

Taarab. A musical genre, the term *ṭāarab* comes from the Arabic *ṭārab* (from the root *ṭrb*), meaning pleasure, rapture, entertainment, or these emotions as evoked by music. In East Africa it denotes a style of popular entertainment music played at weddings and other celebrations along the Swahili coast. The style contains the features of a typical Indian Ocean music, combining influences from Egypt, the Arabian peninsula, India and the West with local musical practices. Musicians generally agree that *taarab* was introduced to the island of Zanzibar from Egypt during the reign of the third Omani sultan, Sultan Barghash bin Said (1870–88). Since its introduction, the style has spread throughout the East African coastal region and has become stylistically and ideologically entwined with Swahili identity.

The original instrumentation and repertory is based on the Egyptian *takht* tradition featuring *'ūd*, *qānūn* (plucked zither), *nāy* (end-blown flute), *riqq* (small frame drum), violin and *darabūkka* (goblet drum), with a solo singer and chorus. This core has expanded to include electronic keyboard, piano accordion, bongos, cello, double bass, electric guitar and several violins. But *taarab* takes different forms: orchestral *taarab* is played by large ensembles; *taarab ya wanawake* ('women's *taarab*') is performed by clubs with exclusively female membership and smaller instrumental ensembles; and ***kidumbak*** is played by small, informal groups along the lines of other local music and dance styles (*ngoma za kienyeji*) with more of a percussive quality and characteristically features two ***kidumbak*** drums (local versions of the *darabukka*) and *sanduku* (one-string tea-chest bass).

JANET TOPP FARGION

Tabachnik, Michel (*b* Geneva, 10 Nov 1942). Swiss composer and conductor. He studied at the Geneva Conservatoire and attended the 1964 Darmstadt summer courses. In 1965 he was a member of Boulez's class at the Basle Musikakademie; he then became Boulez's assistant until 1971. His earliest published compositions show the influence of his mentor in their harmonic conception, their use of open forms and their concern with comprehensive serial order. He was also influenced by his 1969 encounter with Xenakis. The première of *Fresque* at the 1970 Royan Festival initiated Tabachnik's independent career as a conductor (he had already taken part with Boulez in performances of *Gruppen*). From 1976 to 1977 he directed the Ensemble InterContemporaine in Paris and from 1975 to 1981 the Lorraine PO in Metz. Since 1983 he has regularly conducted the National Opera Company of Canada. Specializing in 20th-century music, he gave the first performances of Xenakis's *Synaphaï*, *Aroura*, *Linaia*, *Eridanos* and *Cendrées*; he also gave the first performances of Boucourechliev's *Concerto pour piano*, Boulez's *Messagesquisses* and Grisey's *Modulations* and *Jour, Contrejours*. Returning to composition in 1981 after a six year break, he took a greater interest than before in religious and esoteric subjects, frequently employing a synaesthetic approach. *Le pact des onze* (1985), which grew out of a study of connections between text, image and music, sets the apocryphal Gospel of St Thomas in the ancient Coptic language and is more tonal than his earlier works, taking up ideas from spectral music. In 1994, his interest in the occult and cosmology brought about a life crisis, when he was suspected of taking part in the cult of the Solar Temple, whose members committed collective suicide. After he was cleared of any liability, he published an extensive work in his own defence, *Le bouc émissaire: Michel Tabachnik dans le piège du Temple solaire* (Hauts-de-Seine, 1997), which includes a foreword by Boulez.

PAUL GRIFFITHS/ROMAN BROTBECK

Tabakov, Emil (*b* Ruse, 21 Aug 1947). Bulgarian composer and conductor. He graduated in 1978 from the Bulgarian State Academy of Music having studied three subjects: double bass (under Todor Toshev), conducting (under Vladi Simeonov) and composition (under Marin Goleminov). In 1977 though, he had won the Nikolay Malko competition in Copenhagen and he had been conducting the Ruse SO since the age of 17. He conducted the Ruse Philharmonic (1975–9) before directing the Soloists of

Sofia ensemble with whom he appeared internationally (1980–89). He was appointed conductor of the Sofia Philharmonic in 1985 and was made its general music director three years later. With this orchestra and as guest conductor with others he has performed all over the world; he has enjoyed particular associations with orchestras in Brazil, California, Germany, Japan and South Korea. Under his baton the Sofia Philharmonic recorded a large amount of the Romantic repertory. From his earliest days as a composer, he has shown an affinity for large-scale works and during the 1980s and 90s this disposition gave rise to monumental compositions such as the *Requiem* and his four symphonies. But despite this complex and philosophical approach he has always paid attention to orchestral colour and to the delicate use of timbral nuance, especially in his concertante works. During the 1990s his harmonic palette was broadened by an awakened interest in Bulgarian folklore; the resultant language is notable for its laconic bareness and rich pictorial allusion.

ANDA PALIEVA

Tabakov, Mikhail Innokent'yevich (*b* Odessa, 6 Jan 1877; *d* Moscow, 9 March 1956). Ukrainian trumpeter. He studied at the Odessa Music Academy (1889–92) and performed in various orchestras between 1891 and 1896. From 1897 to 1938, with interruptions, he was a member of the Bol'shoy Theatre Orchestra, becoming first trumpet in 1908 when Brandt became first cornet. From 1910 to 1917 he was the manager of Koussevitzky's virtuoso symphony orchestra, in which he played first trumpet, and he was a founder-member and manager of the Persimfans Orchestra (1922–32), an orchestra without a conductor. From 1914 until his death, Tabakov taught the trumpet at the Academy of Music and Drama (later combined with the Moscow Conservatory), where he also taught military band conducting from 1928; from 1944 he was in charge of the department of specialist orchestration (later of military band orchestration). In addition, in 1947 he became head of the department of wind instruments at the Gnesin Institute.

The first 20th-century Russian concerto for trumpet (as opposed to cornet), by Shchelokov (1929), was dedicated to Tabakov. His tone was highly praised, notably by Skryabin; as a teacher he emphasized the importance of good tone, calling it 'the valuable capital of the artist'. He wrote *Progressivnaya shkola dlya trubi* ('Systematic guide to trumpet playing') in four volumes (Moscow, 1946–53).

EDWARD H. TARR

Tabart [Tabaret, Thabart, Tharbart], **Pierre** (*b* Chinon, bap. 8 Jan 1645; *d* Meaux, 1716). French composer. He was the son of Yves Tabart, a tanner, and Anne Gaultier, and was baptized in the parish of St Etienne, Chinon. According to Sébastien de Brossard, he studied music with Burgault, 'the best contrapuntist of his time', as a choirboy at Tours, and was then active as *maître de musique* at the cathedrals of Orléans (until about 1683) and Senlis (1683–9). He was defeated in the competition for the four positions of *sous-maître* at the Chapelle Royale in 1683, but he succeeded Nicolas Goupillet, one of the winners, as *maître de musique* of Meaux Cathedral. His nine-year contract (signed on 10 June 1689) was not renewed, but when Brossard took over the position in April 1699 Tabart was still at Meaux as titular head of a *grande chapelle*. Brossard thought highly of him and consulted him about the selection of a *maître de musique* for Evreux Cathedral in 1711. His 'excellent counterpoint' is exemplified by a six-voice mass (on Christmas carols), a requiem, *Te Deum*, *Magnificat* and two motets (*Veni sponsa Christi* and *Valerianus nobilis romanus*) which were included in Brossard's library (now in *F-Pn*).

WILLIAM HAYS, JEAN-PAUL MONTAGNIER

Tabel [Table, Tabell], **Hermann** (*b* Low Countries, *c*1660; *d* London, before 8 May 1738). Flemish harpsichord maker. He may have learnt from the Couchets, successors to the Ruckers of Antwerp. Probably about 1700 he settled in London, where both Shudi and Kirkman worked for him. In 1738 Kirkman married Tabel's widow. Only one of Tabel's instruments survives, and is now in the County Museum, Warwick; the top key of the lower manual is inscribed 'No. 43 Herm Tabel Fecit Londini 1721' (see Mould).

Tabel's one surviving harpsichord caused Russell to think it 'likely that the standard large harpsichord made in this country derived from his designs', Hubbard to suggest it 'likely that the traditional role ascribed to Tabel and his posthumous fame were the fabrication of both Kirkman and Shudi in their dotage' and Mould to point out that in any case 'there is no element of this disposition which is not found elsewhere on earlier English harpsichords'. Nonetheless, the 1721 instrument is one of the few extant English double-manual harpsichords to have been built before 1730, and its dogleg upper-manual jacks and original lute arrangement (perhaps both familiar in Flanders by 1720) did become normal. Burney called him 'the celebrated Tabel', and an advertisement in the *Evening Post* for 30 May 1723 noted that he had three harpsichords for sale, 'which are and will be the last of his making'. Nevertheless, on 8 May 1738, Kirkman

advertised 'several fine harpsichords', made by 'Mr Hermann Tabel ... the famous harpsichord maker, dead'. In short, his historical position is uncertain, as are the details of his work, known from one, much altered instrument. For a more detailed account of Tabel's life and work see Boalch, 3/1995 (pp.188–9).

Ṭabl. Arabic generic term for drums. It is particularly applied to double-headed cylindrical drums in the Arab Middle East, including North Africa (especially Egypt, Tunisia, Algeria, Morocco and the Sudan). It may occur in combination with other words, indicating drums of the same type with regional differences of size or drums used in different regional combinations of instruments. The term *ṭabl* can vary from region to region; it is sporadically found as *tabīl* in Osmanli, and in modern Turkish the term *davul* is most commonly used for the double-headed cylindrical drum. The *ṭabl baladī* ('people's drum') is regarded as the smaller version of the *ṭabl turkī* ('Turkish drum', *davul*).

Cylindrical drums were known in classical antiquity, and various different sizes of such instruments are still in use. The cylindrical drum is central to Islamic musical cultures; it is used in military bands and is also played at village ceremonies such as weddings, circumcisions and funerals and on religious occasions. During Ramadan, the month of fasting, the drum and *zurna* (*surnāy*) signal the time when a meal can still be eaten before sunrise. In Islamic countries the cylindrical drum is often played with the shawm in rural music and in military bands; trumpets, kettledrums and cymbals may be added to create larger ensembles.

The body of the *ṭabl* is a wooden cylinder. A head made of cowhide is stretched over each end of the cylinder and fixed in place with a wooden hoop; the edges of the skins are wrapped around the hoops, and the two hoops are linked with a tensioning lace made of string or gut. The size of the cylinder varies; drums used in military music are not always larger than those played in rural music. The *ṭabl* is played either with two sticks or with a stick and a bundle of thongs.

MICHAEL PIRKER

Tablā. Asymmetrical pair of small, tuned, hand-played drums of North and Central India, Pakistan and Bangladesh. The *tablā* are the principal drums of modern Hindustani music. They accompany vocal (*khayāl, ṭhumrī, ghazal* etc.) and instrumental music, as well as the dance style *kathak*. They are also found today in various popular and devotional musics (*bhajan, qawwālī*). The word *tablā* is a Persian and Urdu diminutive of the Arabic generic drum-name *ṭabl*.

1. History. 2. Structure. 3. Technique.

1. HISTORY. The modern *tablā* pair comprises a treble drum (the *tablā*, on the right), its body a tapering wooden cylinder, and a bass kettledrum (*ḍuggī*, or *ḍaggā*, on the left), with a body of clay or chromed copper. This pairing cannot be documented before the late 18th century, but it probably results from a combination of the two separate types which are found, themselves paired, in northern court paintings from *c*1745.

In Delhi, Rajasthan and Avadh, miniatures of this period show small, hand-played kettledrums, played standing with the drums held at the waist, accompanying dance. This type survives today as the *ḍuggī* of the *śahnāī* ensemble of eastern Uttar Pradesh. Its origins seem reasonably clear: smaller, hand-played versions of the ceremonial drum-pair NAQQĀRA were evolved for these more intimate musical occasions.

In the north-west, especially the Punjab, however, contemporary painting shows two cylindrical drums, similarly played. This type also survives in its region today, in the Punjabi *dukkaṛ* and Kashmiri *dukrā* (both terms mean simply 'the pair'), also called *jorī* by the Sikhs in the context of their religious music *śabad*. The origin of this, the modern *tablā* right-hand type, is harder to trace. It may represent a remodelling of the *ḍuggī* type under influence of the *pakhāvaj*.

The bringing together of the north-western *tablā*-type and the north-central *ḍuggī* would have occurred in the latter half of the 18th century. The evolving *tablā* probably incorporated aspects of technique and repertory from the *dukkaṛ* and *ḍuggī*. Tradition allows seniority to the school of Delhi and to its founder, Siddhar Khan (thought to have been born *c*1710–20).

There are two principal influences on the older Delhi playing style and repertory (*bāj*): that of the *ḍholak* (which the *tablā* was to replace in the accompaniment of the quieter styles of northern court and chamber music); and that of the stick-played treble- and bass kettledrum pair *nagāṛā*, or *naqqāra*. The influence of the *ḍholak* has been seen chiefly in finger-strokes. The main contribution of the *nagāṛā* has been in the compositional and elaborative organization of certain sound-categories – pitch (the 'high-low', *zir-bam*, structures familiar in Islamic musics), resonance, variation in timbre and, to a lesser extent, force of attack – into a distinctive metrical system, characterized by a nucleus of pitch, stress and timbre-oriented metres, primarily symmetrical, and variational and extensional procedures.

Early in the 19th century a Delhi player, Bakshu Khan (*b* *c*1780), is credited with founding the Lucknow *tablā* school. This added not only a further layer of *nagāṛā* techniques, but also an overlay of *pakhāvaj* strokes. The latter was taken much further by the Banares school (founded by Ramdas Sahay, *b* *c*1810). The Lucknow and Banares schools are known as the 'eastern' (*pūrab*) *baj*, in opposition to the Delhi, 'western' (*pachāo, pachvā̃*), style.

2. STRUCTURE. The name *tablā* denotes the right-hand treble drum (also called *dāyā̃, dāē, dāhinā*: 'right'), and also the pair (the plural *table* is rarely used in this sense). The left-hand bass drum is called *ḍuggī* or *ḍaggā* (or *bāyā̃, bāē*: 'left'). Only the *bāyā̃* is a true kettledrum, a

Faiya Khan playing the tablā

roughly hemispherical bowl somewhat straightened at the top and tapering at the base. Today, it is usually of cold-spun copper, chromed on the outside, but *bāyā̃* of terracotta can still be found, although their fragility makes them less common (they are usually said to give an excellent sound). The right-hand *dāyā̃* is a lightly upward-tapering, or truncated conical, wooden cylinder about 1 cm thick; at its base is a shallow (about 2 cm), round, solid wooden stem, integrally carved. Different woods are employed, the best being dense and heavy: *bījīsār* or *bijyaisār* (a kind of *sāl*-wood) and *śīśam* or *sīso* are often recommended.

Absolute sizes cannot be given, since *tablā* players (*tabaliyā*, *tablāvādak*) purchase drums to suit the size of their hand and also have a selection, to suit different pitches according to the requirements of the accompaniment. The *dāyā̃* is generally a little longer (about 26 or 27 cm) than the *bāyā̃* (about 25 or 26 cm). Three main sizes can be seen with professionals: an older type, with a very large *dāyā̃*, played by masters of the older generation and still found in manufacture, with a *dāyā̃*-head diameter of 16·5 cm or more, fully as large as the *pakhāvaj*; the medium-sized Bombay type, with a *dāyā̃* diameter of 14 cm or more, often considered the mellowest of modern *tablā*; and the modern small Calcutta *tablā*, around 13 cm or less on the *dāyā̃*, developed in this century, when Calcutta was the centre of patronage for instrumental music, and reflecting the rise in instrumental system-tonic pitch in recent decades. The *bāyā̃* is about 22 cm across.

The drumheads are similar to those of the older *pakhāvaj*. Each head (*purī*: 'skin'; in Bengali also *chāuni*: 'covering') has two main membranes, of goat, the upper cut away to leave an outer ring. These are attached to a plaited, four-ply leather hoop (*gajrā*), wider than the diameter of the wooden shell which lies about half to 1 cm below the rim when fitted. Inside the flange formed, two thick pieces of rough leather are also stitched to the hoop beneath the main membranes, to protect the playing-skins from the wooden rim. Both right and left heads are laced by a long leather strap (*davāl*, *dvāl*; *siṅgār*), about 1 cm wide and 2 mm thick and of untanned buffalo hide, in a V pattern through 16 holes in the hoops and running round a multiple leather hoop (*guḍrī*) at the narrow base of each drum. Under each W is a wooden cylindrical block (*gaṭṭā*), about 6 cm long and 3 cm wide, which raises the pitch when hammered downwards. On the similar *bāyā̃* lacing there are generally no tuning blocks, though some use thin wooden dowels or metal tuning-rings. Fine-tuning is done with a small metal hammer (*hāṭhauri*) on the drumhead hoops.

In the centre of the exposed main skin of the *dāyā̃* is a round, hardened, black tuning-paste (*siyāhi*, *syāhi*: 'black'; or *gāb*: 'mangosteen tar') applied in five or more progressively smaller concentric layers, each allowed to harden and smoothed down before the next is deposited. The essential ingredients are said to be iron-oxide ash, glue, wheatflour paste (some say rice), soot and copper vitriol (*nīlathotthā*). When the paste is dry and the drumhead stretched, the drum has a bright, sonorous and pitched tone. The *dāyā̃* head is thus divided into three main concentric areas: the outer, upper skin ring (*kinār*, *cā̃ṭi*), most of which lies over the wooden rim of the shell; the exposed lower main skin (*maidān*, *sur*, *lav*), these two occupying about a quarter each of the drumhead area; and the central black spot, occupying about half the drumhead. The outer ring, when tuned to the soloist's tonic, struck with the forefinger and partly damped by the third finger on the edge of the black spot, gives a ringing tone, rich in first harmonics; the central lower-skin area, similarly played, gives a pitch in which second harmonics, or upper-octaves, dominate; the central black circle, when struck by the fingers and held, gives a dry, unpitched, wooden sound; and the whole drumhead, when struck and released, gives a ringing tone roughly a 2nd above the fundamental.

The *bāyā̃* head is similarly constructed, but here the outer upper ring is proportionally much smaller (it is not struck functionally), and the black tuning-paste, about 8 cm across, is placed eccentrically on the exposed main skin. This positioning of the paste results in a less precisely-pitched tone for the head, distinguished by its darker timbre, but it often appears to be at around the subdominant below the fundamental of the right-hand drum. In this, the *tablā* differs from the *mṛdaṅgam* of the South and the northern *pakhāvaj* and compares more with the kettledrum *nagāṛā*. The *dāyā̃*, like the *mṛdaṅgam*, has two qualities of system-tonic, but the *bāyā̃* has not. The *syāhi* of the *bāyā̃* is also a development unique to the *tablā*, showing that its pitch-timbre relationship to the treble *dāyā̃* is carefully controlled.

3. Technique. The composite development of the *tablā* is reflected not only in its physical structure but also in its playing technique. The major sources of influence are the Hindustani *pakhāvaj* (*see* Mṛdaṅgam) and *ḍholak*. *Dhrupad tāla*s are performed on the *tablā*, often retaining the original *pakhāvaj* syllabic formulae but modifying the actual execution, the predominantly open-handed strokes of the *pakhāvaj* giving way to the edge tones of the *tablā* or *dāyā̃*. The difference between *dhrupad*-related and non-*dhrupad* (*khayāl*, *ṭhumrī*) *tāla*s lies both in the mnemonic syllable drum patterns (*ṭhekā*) of the various *tāla*s and in the repertory of compositions. *Pakhāvaj*

syllables (*bol*) retain their prominence in some essentially non-*pakhāvaj* compositions (e.g. *gat*).

Tablā playing is approached essentially through the means of mnemonic syllables translated into a variety of strokes which are underlined by the metric structures of composition. The two drumheads of a pair (*jorī*) of *tablā* accommodate a limited number of strokes and combinations, which are given a variety of syllabic interpretations. The *dāyā̃*, unlike the *bāyā̃*, utilizes all three concentric areas of the drumhead; the edge (*kinār*), the middle or sounded area (*sur*, *maidān*) and the black tuning-spot in the centre (*siyāhi*, *gāb*). Though there are similar areas on the *bāyā̃* head, here the black spot is placed towards the top right-hand edge, and is usually played across, rather than on. The *kinār* on the *bāyā̃* does not have any syllabic content.

The pair are placed upon their rings before the player; the *bāyā̃* is usually kept with its head horizontal, the *tablā* is nearly always tilted slightly outwards. The *dāyā̃* is tuned to the tonic with the aid of a tuning hammer, but the *bāyā̃* is tuned to a suitable tension, rather than a pitch. Here the *bāyā̃* and *dāyā̃* are taken in their literal sense, as 'left' and 'right' (drums), respectively (there are, of course, left-handed *tablā* players).

Each head has two basic tone-qualities, closed or open (the latter with dampening or without). The open tones are produced by the first (index) finger, with a few exceptions, striking along various portions of its length, such as the stroke/syllable *nā/tā* (whole-hand, whole-head) on *kinār*. Closed syllables are mostly those struck on the *siyāhi*. Whenever possible the third finger acts as an anchor, resting gently on the bottom right-hand edge of the *siyāhi*. There are two basic stroke-qualities on the *bāyā̃*. Two strokes of the tip of the second and first fingers at the top of the skin, between the *siyāhi* and the *kinār*, produce the open and resonant tones (*ghe*, *ga*, *ghen*). The third stroke is played with the flat of the hand, producing *kā*, *ke*, *ka*, *ki* or *kat*, a closed or dampened tone.

The two resonant stroke-syllables on the *bāyā̃* are added simultaneously to the unvoiced ones on the *dāyā̃* to produce voiced and aspirated syllables (e.g. *tā* + *ghe* = *dhā*). The voiced syllables epitomize the notion of *bhārī* ('heavy', 'full') and the unvoiced *khālī* ('empty'). These notions play an important part in the breakdown of a *tāla*. Syllabic phraseology (*bol*) is central to the mnemonic approach to *tablā*, presented as known formulae of various sizes. These permute and combine to form various compositions and so constitute the foundation of the *tablā* repertory.

Tablature (Fr. *tablature*; Ger. *Tabulatur*; It. *intavolatura*). A score in which the voice-parts are 'tabulated' or written so that the eye can encompass them. In practice, scores in staff notation with one voice-part per staff are not usually called tablatures unless they are for a solo keyboard instrument (see §2(v) below). The term is more often used for a condensed score in which two or more voice-parts are written or printed on a single staff or comparable area of the page, although when this consists entirely of staff notation it is more often called 'keyboard score' or (for concerted music) 'short score'. The common use of the term 'tablature' therefore excludes these; the following article thus discusses any notational system of the last 700 years that uses letters, numbers or other signs as an alternative to conventional staff notation. Such systems were chiefly used for instrumental music; dance tablatures are beyond the scope of this article. For a discussion of tablature in its historical context, *see* NOTATION, §III, 5(i).

1. GENERAL. Systems of tablature have been in use in western European music since at least the early 14th century, most of them deriving from the playing technique of a particular instrument. Whereas staff notation shows in one symbol both the pitch and duration of a note, tablature systems in general use one symbol to show how to produce a sound of the required pitch from the instrument in question (which string to pluck, which fret to stop, which key to press, which holes to cover and so on) and another to show its duration. Staff notation was developed for, and is primarily associated with, single-line music, whereas tablature's speciality is part-music. Each was originally at its maximum effectiveness in its own field. Although staff notation has now superseded most tablatures, it gained much from its long contact with its rivals, and many of its most valuable features derive ultimately from one or other of them. In tablature systems, for instance, each note or rest was worth two of the next smaller value, and a dot after a note had only one meaning: that it increased the note's duration by half its original value. Regular barring, too, was frequently adopted, especially in lute tablatures. The simplicity, clarity and logic of such common features of tablatures were considerably in advance of staff notation. The most important categories of tablature are those for keyboard (usually organ) and lute. A large proportion of the keyboard pieces copied between 1320 and 1520, many of which are of German origin, survive in tablature form. The various types of lute tablature, on the other hand, represent a more direct form of instruction to the player,

1. *The earliest known example of keyboard tablature: the Robertsbridge Codex, c1360 (GB-Lbl Add.28550, f.43v, detail)*

and these have been used for virtually all lute music from the early 16th century to the present day.

2. KEYBOARD.

(i) Germany, 14th century. The earliest known example, the Robertsbridge Codex (*GB-Lbl* Add.28550; fig.1), dates from about 1360 and was almost certainly intended for the organ, but some scholars consider that it may have been for clavichord. Although some of its contents are French, and the manuscript itself comes from an English abbey, its rightful place in a discussion of tablatures is under German keyboard tablature since many of its characteristics are, in embryo, those of later German ones. It is a part-tablature only, however, since the top voice of the music is notated on a five-line staff (no explanation has been suggested for this illogical feature of early German tablature). The notes of the lower voices are written in letter notation beneath the notes on the staff; their length and the beat on which they are to be played is determined by their position with respect to the staff-notes and their octave by considerations of part-writing. The word 'sine' (or simply the letter 's') denotes a rest. The black notes of the keyboard are regarded as belonging to the white note on their left (B♭ and B♮ taking the normal forms of ♭ and ♯ however): thus the black note between C and D is regarded as 'the black note of C' or, for short, 'of-C' and, in vulgar Latin, 'Cis'. In the Robertsbridge Codex this is shown by a wavy line following the letter, and the chromatic scale thus appears as in ex.1; later scribes used the normal abbreviation for terminal '-is', ꝭ. Although the compass of these pieces does not exceed *c–e″*, it is interesting that, in the middle octave at least, all 12 notes of the octave are in use, even at this early date. Organ pedals were in existence in Germany by the time the manuscript was written, yet these six pieces do not appear to require their use.

(ii) Germany, 1432–1570. The above system of tablature had been considerably improved in many respects by the time it is next encountered, a century later. The top part was written on a six-, seven- or eight-line staff (a retrograde step, perhaps: five-line staves were not in

Ex.1

b c~ d~ f~ g~
a ♯ c d e f g a, etc.

general use again for keyboard music until the 17th century); a downward stem, with or without a dash through it, indicated chromatic alteration (♭ or ♯ as appropriate), and a loop to such a stem denoted an ornament, perhaps a shake or a mordent (Arnolt Schlick's *Tabulaturen etlicher Lobgesang und Lidlein* of 1512, however, used the loop for chromatic alteration). Each lower voice was shown as a row of letters, the sharp affix now taking the form of a loop; the letters b and h signified B♭ and B♮ respectively. The middle octave consisted of plain letters, the ones above it of doubled letters or letters with a dash or dashes above them (cc, c̄, c̿) and the one below it of capital letters or letters with a dash beneath them (C, c̱). Each letter had a rhythm sign above it to show its duration; these signs were derived from their staff notation equivalents as in ex.2. For rests, staff

Ex.2

loop denotes mordent
loop denotes sharp

= or

= or

= or etc.

notation signs or slight variants of them were used. Many of the tablatures dating from this period were barred regularly. Some, such as the 'Ileborgh' tablature (formerly *US-PHci*, but now in a private collection), contain what appear to be indications for two-note chords in the pedals, although not all scholars agree with this interpretation (fig.2). When possible, notes and rhythm signs of like value were grouped together, as in ex.3. The extract of

Ex.3

for ... for ...

Ex.4

music which in staff notation would appear as in ex.4*a* would have been shown in this tablature as in ex.4*b* (all the music examples in this article show the first two bars of Dowland's ayre *Flow my tears*).

(iii) Germany, 1570–1750. From about 1570 the above system continued in use, but with two substantial changes: the top part no longer used staff notation but was written in letter notation like the other parts; and the value of the rhythm signs was doubled in conformity with contemporary lute tablature. The modern tie sign appeared for the first time, although its use in staff-notation keyboard scores was already well established. This modified form of the earlier German keyboard tablature remained in widespread use, especially in northern Germany, until the mid-18th century, and it is last mentioned in Johann Samuel Petri's *Anleitung zur praktischen Musik* (Leipzig, 2/1782). J.S. Bach used it occasionally in the *Orgel-Büchlein* as a space-saving device when insufficient allowance had been made for the length of a chorale prelude (*see* BACH, fig.7). An example of this later German keyboard tablature is shown in ex.5.

(iv) Spain, 1550–1700. Nothing is known of Spanish keyboard music before 1555, when Juan Bermudo explained two new systems of notation in his *Declaración de instrumentos musicales*; the systems he proposed may well have been his own inventions. The first assigned a number, from 1 to 42, to each key of the organ, the numbers proceeding in unbroken sequence from left to right of the keyboard (*C–a″*, but fully chromatic *A–a″* only). The number of lines to a 'staff' in the resulting tablature corresponded to the number of voices in the composition, and the music was barred regularly. The apparent suitability of this system for contrapuntal music was more than outweighed by the ambiguities that inevitably resulted from the absence of rhythm signs and from the inability to indicate ties in the inner parts (see ex.6). This system was quite unsuited to music that included cross-rhythms, considerable independence of parts, or a free-voiced texture. Its use was apparently confined to Bermudo's book.

Bermudo's second system, also used for certain Italian publications, assigned a number, from 1 to 23, to each white note of the keyboard (because of the 'short octave' the *E* key, assigned the number 1, was tuned to C, numbers 2 to 23 representing *F* to *f″*). The black notes were all considered as sharps, and were shown by a sharp sign above the appropriate number. Thus a sharp over a 6 was *c*♯, a sharp above a 10 was *a*♭ or *g*♯, according to context, and so on; the letter 't' above a figure denoted an

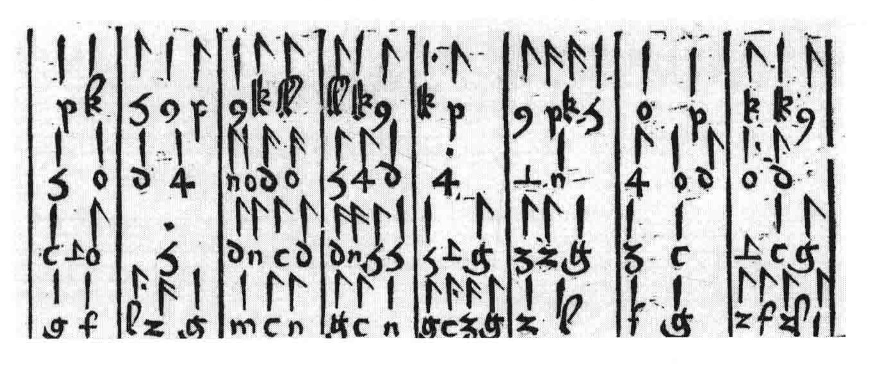
ornament. The right-hand and left-hand parts were shown above and below a horizontal line. The durations of individual musical events were indicated as in lute tablature by signs above the right-hand part; each rhythm sign above the staff applied to all the figures in the column immediately below it and remained valid until contradicted by another sign. These were supplemented by original signs (; : ⁝ and ? for $1\frac{1}{2}$, 2, 3 and 4 minims), placed after the figures to which they refer, which modified the durations of the individual notes, thus clarifying the part-writing (ex.7).

Ex.7

A third numerical system of Spanish keyboard tablature was used also for the harp or the vihuela. It was first used by Venegas de Henestrosa in his *Libro de cifra nueva* (Alcalá, 1557), and later in Cabezón's *Obras de música* (Madrid, 1578) among others. It emphasized the division of the scale into a repeating octave pattern of seven white notes: the middle octave from *f* to *e′* was assigned the numbers 1 to 7; pitches one or two octaves lower were shown by one or two dashes through the number, pitches one or two octaves higher by a superscript dot or comma (fig.3). Each voice (from two to six) had a line of its own, chromatic alteration was indicated by sharps or flats placed after the note they affected, and rhythm signs of staff notation were added where required. Since these rhythm signs were valid for all the figures in the column below, the value of only the shortest of the notes to be played simultaneously could be precisely notated. A comma by itself indicated a tie from the preceding note, an oblique stroke or the letter 'p' a rest, and the letter 'R' an embellishment. Time and key signatures were given before the beginning of the piece, with B and ♮ standing for B♭ and B♮ respectively (ex.8). An early 17th-century extension of this tablature for vocal music is discussed in §8 below.

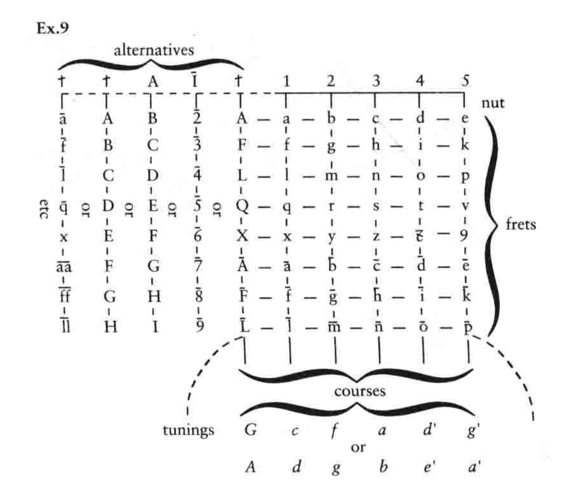
Ex.8



All these numerical systems, *cifras* ('ciphers') as they were called in Spanish, had the great advantage that they could be set up in any printer's shop from standard or near-standard founts of type by unskilled compositors. Founts of music type were expensive; they could be adapted to keyboard music only with great difficulty and labour and they needed experienced and skilled typesetters. The engraving and punching of plates was ultimately to prove the best method of printing music, but it was still in its infancy when these numerical systems were developed. Derivations of them were in use for psaltery and dulcimer music as late as 1752 (in Pablo Minguet's *Academia musical*). Many variants have been put forward by a legion of theorists from the 13th century (*GB-Ob* Marsh 161) to the present day (see Wolf).

(v) Other forms of keyboard notation from 1500. Words like 'intavolatura' and 'tabulatura' were loosely used in many 16th- and 17th-century sources to describe music in staff notation or (at a slightly later date) in keyboard partitura. In Italy this can be seen in two of the earliest surviving printed sources of keyboard music, Andrea Antico's *Frottole intabulate da sonare organi, libro primo* (Rome, 1517) and Girolamo Cavazzoni's *Intavolatura cioè recercari, canzoni, himni, Magnificati* (Venice, 1543). In France a parallel can be seen in the *Dixneuf chansons musicales reduictes en la tablature des orgues espinettes manicordions* (Paris, 1530), the first of several such collections of keyboard music published by Pierre Attaingnant in the 1530s. In the early 17th century the use of the term 'tabulatura' to describe staff notation spread to Germany, an early example being Johann Ulrich Steigleder's *Ricercar tabulatura* (Stuttgart, 1624). Some early

3. Spanish keyboard tablature with numerals for diatonic notes in each octave: 'Susana un jur' from Antonio de Cabezón, 'Obras de música' (1578)



4. The earliest known printed example of German lute tablature: Sebastian Virdung, 'Musica getutscht' (1511); each numeral refers to an open string and each letter or other symbol refers to one position on the fingerboard (each is given a rhythm sign)

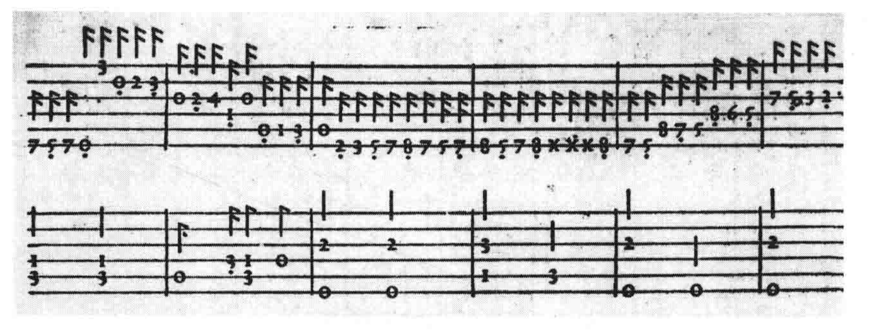
17th-century German sources of keyboard music use words such as 'Tabulatur' or 'Tabulaturbuch' to describe the form of notation more properly known as keyboard partitura. These include Samuel Scheidt's *Tabulatura nova* (Hamburg, 1624) and Johann Ulrich Steigleder's *Tabulatur Buch darinnen dass Vater Unser* (Strasbourg, 1627). (*See* INTAVOLATURA and PARTITURA.)

3. LUTE. Although the German system of notating lute music is possibly the oldest, it appears that the three principal systems of lute tablature were developed almost simultaneously in the second half of the 15th century. Their basic principle was to guide the fingers of the player's left hand over the lattice, formed by courses and frets crossing at right angles, on the fingerboard. (In the following explanations 'course' will have its standard meaning. The usual 16th-century lute had seven frets and six courses of strings, usually tuned *G–c–f–a–d′-g′* or *A–d–g–b–e′–a′*; in general, France and England used the G tuning, Italy, Spain and Germany the A tuning. Each course consisted of either a single string or a pair of strings, the strings of a pair being tuned either in unison or at the octave; later instruments acquired extra frets and more strings: *see* LUTE). Each intersection of fret and course corresponded to a specific note, and an efficient system of notation therefore needed to identify each such intersection clearly and unmistakably. Even on a 15th-century lute with only five courses and five frets there were 30 such intersections (including the open strings) and on an early 17th-century theorbo-lute there might have been seven courses, up to 12 frets, and also six or seven 'diapasons' (open strings running clear of the fingerboard). The tablature for such an instrument needed to be capable of directing the player to form almost 100 notes. Moreover, the lute was required to give the impression of polyphonic part movement, so the tablature symbols needed to be capable of being grouped together two, three or four at a time. One area of inadequacy that lute tablatures share with Spanish keyboard tablatures is that the value of only the shortest of the notes to be played simultaneously could be notated precisely.

(i) Germany, 1511–1620. Although the earliest known printed example of the cumbersome German tablature, in Sebastian Virdung's *Musica getutscht* (fig.4), dates from 1511, the fact that the system was clearly designed for a five-course lute with five frets shows that it must have been invented considerably earlier. According to Virdung the system was attributed to the blind organist Conrad Paumann (1410–73). The open courses are numbered 1 to 5, with 1 corresponding to the bottom course, and each intersection of fret and course is denoted by a letter of the alphabet running across the fingerboard from bottom course to top. In order to provide the 25 symbols required, the common abbreviations for 'et' and 'con' were added to the 23 letters of the German alphabet; for higher frets the alphabet was repeated either in doubled letters or in letters with a dash above them (aa or ā, bb or b̄ etc.). When a sixth course was added below the original five it was not possible to extend this closed system in any logical way, and several compromise solutions were used. The German tablature, with the most important of its alternative forms, is given in the diagram shown as ex.9.

Ex.9

In practice, symbols intended to be played simultaneously were grouped in vertical columns; rhythm signs were placed above each note or group of notes, often grouped in twos or fours. The music was usually barred regularly (ex.10).



The German tablature was strongly criticized as early as 1528 by Martin Agricola, although the alternative system he proposed was not adopted anywhere. Melchior Neusidler tried to introduce Italian lute tablature into Germany in the mid-16th century, but he met with much opposition.

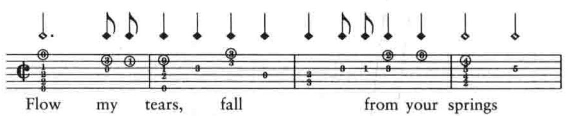
5. Italian lute tablature: Francesco Spinacino, 'Intabolature de lauto, libro secondo' (1507); the lowest line of the 'staff' corresponds to the course highest in pitch

6. Spanish vihuela tablature: Luis de Milán, 'El maestro' (1536); the lowest line of the 'staff' corresponds to the course lowest in pitch, and the top line carries the vocal melody printed in red

(ii) Italy, 1500–1650. The Italian system was more logical than German lute tablature since it was a visual representation of the fingerboard. Its clarity and ease of application remained, however many courses or frets the instrument possessed. Each course was represented by a horizontal line, the bottom course corresponding to the top line (fig.5; in the playing position the bottom course of the lute is nearest to the player's eye). The 'staff' formed in this way normally had six lines (i.e. as many as there were courses). The open course was represented by a figure 0 on the appropriate line, the first fret by 1, the second by 2 and so on, the 10th, 11th and 12th frets being represented by the special single symbols x, ẋ and ẍ, since a double symbol like 10 might be confused with the two separate symbols 1 and 0. Rhythm signs were shown above the notes; at first they were repeated for each note or chord (ex.11), but from about 1530 onwards a more

Ex.11



(accompaniment only: in A tuning)

(| = o, ⌈ = 𝅗𝅥, etc.; in the earliest sources the following also occur: ⌈ = ⌈⌈ = $\frac{1}{3}$ o; ⌈ = ⌈⌈ = $\frac{2}{5}$ o)

economical system prevailed whereby each rhythm sign remained valid until it was replaced by another. In later sources, both printed and manuscript, the normal staff notation rhythm signs tended to replace the traditional lute ones. Diapasons were shown as numbers (from 7 to 14) set between the 'staff' and the rhythm signs. Italian tablature was used for some books printed in Kraków, Lyons and Strasbourg in the second half of the 16th century, and a few English and Austrian manuscripts are known (e.g. *GB-Lbl* Add.29246–7 and 31992); but it was mainly confined to Italy.

(iii) Spain, 1530–80. The indigenous Spanish instrument of the lute family was the vihuela, tuned and played like a lute, but shaped and strung slightly differently. Spanish tablature closely resembled Italian, although exceptionally, as in Milán's *El maestro* (1536), the six-line 'staff' was inverted so that the top line represented the highest course of the vihuela (fig.6). Occasionally a vocal line was included in staff notation above the tablature, as in Germany and Italy; or it might be incorporated in the tablature itself in red numerals. In some collections of Spanish lute music the compositions are barred in units of one semibreve, a system of barring that differs from that of most barred lute sources. Ordinary staff notation rhythm signs were used (see ex.12).

8. Abbreviated alphabetic notation for 'rasgueado' in guitar tablature introduced by Montesardo: Girolamo Montesardo, 'Nuova inventione d'intavolatura' (1606)

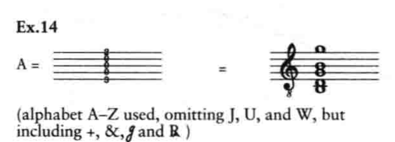
(iv) France, 1500–1815. The French form of lute notation, adopted by English composers, was the most successful of all lute tablatures, and it eventually superseded the others (although not for guitar music). It used a five- or six-line 'staff' in which, as in Milán's book, the top line represented the highest course. The frets, however, were lettered and not numbered, the open string being 'a' or 'A', the first fret 'b' or 'B', and so on. To assist the eye in distinguishing between similar letters these were soon given special forms; the commonest lute alphabet is shown in ex.13. The letters were placed either on or above the

Ex.13

line to which they referred. Lute and, later, staff notation rhythm signs were used, placed as usual above the 'staff'. Letters or figures beneath it denoted diapasons (fig.7); their tuning sometimes varied according to the key of the piece, but they usually descended diatonically (a, /a, //a, / //a, ////a …; 7, 8, 9, 10 or X, 11 …). In English lute music plain letters below the 'staff' often denoted a seventh course running over the fingerboard and tuned a 4th below the sixth course.

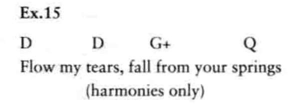
(v) Supplementary signs. Many of the niceties of lute playing were indicated by special signs, the most important of which are listed here. A dot beneath a symbol sometimes meant that the chord was to be struck from above instead of, as normally, from below; it was more likely, however, to have been a fingering indication for the right hand (· = 1st, ·· = 2nd, ∴ or ∵ = 3rd, ···· = little finger). A vertical line facilitated orientation when the components of a chord were widely spaced. An asterisk, cross or oblique stroke by the side of a symbol showed that the stopping finger must be held down on its fret for as long as possible, thus sustaining the note or notes in question. A numeral by a symbol showed left-hand fingering. Slurs joining two symbols indicated a special kind of legato playing, only the first of the two notes being plucked. A wide variety of special signs was used to indicate trills and ornaments (see Dodge and Spencer).

4. Guitar.



(i) Tablature proper, 1549–1741. Throughout this period a certain amount of contrapuntal guitar music was written and published using French, Italian or Spanish lute tablature, and it needs no special discussion. Music for four-string or for five-string guitar can be identified by its tunings and the number of 'staff' lines, corresponding to the number of strings. The first steps towards a new type of notation were made by Joan Carlos Amat in his *Guitarra española* (Barcelona, 1596, and later edns); he assigned a single arabic numeral to each of the most frequently used chords (i.e. positions of the left hand), arranging them in a systematic order.

(ii) 'Alphabets' (alfabeto), 1606–1752. An important innovation was introduced by Girolamo Montesardo in his *Nuova inventione d'intavolatura* (Florence, 1606; fig.8) – although the system is used in at least one earlier source (*I-Rvat* Chigi L.VI.200, from 1599). It was a new shorthand notation for *rasgueado* playing, sweeping the



7. French lute tablature: a presto by Silvius Leopold Weiss in Telemann, 'Der getreue Music-Meister' (1728–9); the lowest line of the 'staff' corresponds to the course lowest in pitch, and extra diapasons are indicated by //a, ///a etc.

hand back and forth over all the strings at once, as distinct from *punteado* playing, in which the strings were plucked individually according to the lute technique. In Montesardo's system each left-hand finger position for the 27 most usual chords was denoted by a single letter. Thus 'A' stood for the finger position which in five-line Italian tablature would have been shown as in ex.14 according

(alphabet A–Z used, omitting J, U, and W, but including +, &, ℊ and ℞)

to the tuning *A–d–g–b–e′*. These symbols were arranged above or below a horizontal line according to one of the following plans: a symbol above a line meant a chord struck upwards, below the line a chord struck downwards, and note values were shown by capital or small letters; or upward and downward dashes above or below the line showed the direction in which a chord was to be struck, and note values were shown by rests and staff notation notes or by the spacings between the dashes. Sometimes bar-lines were used, sometimes the horizontal line was broken up into a number of short equal segments, each representing a bar of music. Numerous modifications, additions and improvements were made to this primitive but adequate shorthand by the leading 17th-century guitar players such as Foscarini and Millioni (most are given in Wolf). Their most important single feature was the introduction of symbols for discords. The system was obviously easy to learn and extremely cheap to print, and a considerable amount of music in these 'alphabets' is still extant, most of it dating from the 17th century. Many manuscript collections of popular Italian poems of this period have 'alphabets' above the words as in ex.15, so

(harmonies only)

that they may be sung to a strummed guitar.

Combinations of *alfabeto* and staff notation are found in some sources of the period. However, the most worthwhile guitar music of the period, for example Foscarini's and Corbetta's, is written in an unusual combination of conventional tablature and *alfabeto*; once the principles of each have been grasped it is not difficult to transcribe (see ex.16). After about 1750 guitar music was written in conventional staff notation an octave above the sounding pitch, the guitar like the double bass being regarded as a transposing instrument.

(accompaniment only)

5. Other string instruments.

(i) Plucked instruments. Most plucked instruments (angelica, chitarrone, cittern, colascione, gittern, mandolin, orpharion, pandora, theorbo) used either French or Italian lute tablature, and once the tuning is known the transcription presents few difficulties. It is often impossible to tell for which instrument a tablature was intended until, by process of elimination, the tuning has been discovered, and this can sometimes be a lengthy process. Special harp tablatures were used in Ireland and Wales during the Middle Ages, and some features of their notation show surprising analogies with neumatic or ancient Greek notation; one of them (*GB-Lbl* Add.14905) purports to be a 17th-century copy of music played at a bardic congress of the late 11th century, but the music itself and its notation make this extremely unlikely (*see* Robert ap Huw, and Notation, fig.143). The surviving sources are too few and too meagre to deserve detailed description of their tablature systems. The Spanish keyboard tablature used by Arauxo, Cabezón, Venegas and Ribayaz was also suitable for the guitar, harp and vihuela (perhaps bowed), according to the title-pages of many of their works. 17th-century sources containing tuning instructions such as '(high) harpway sharp' or 'ton de la harpe par b mol' are for lyra viol or perhaps lute, but not for harp.

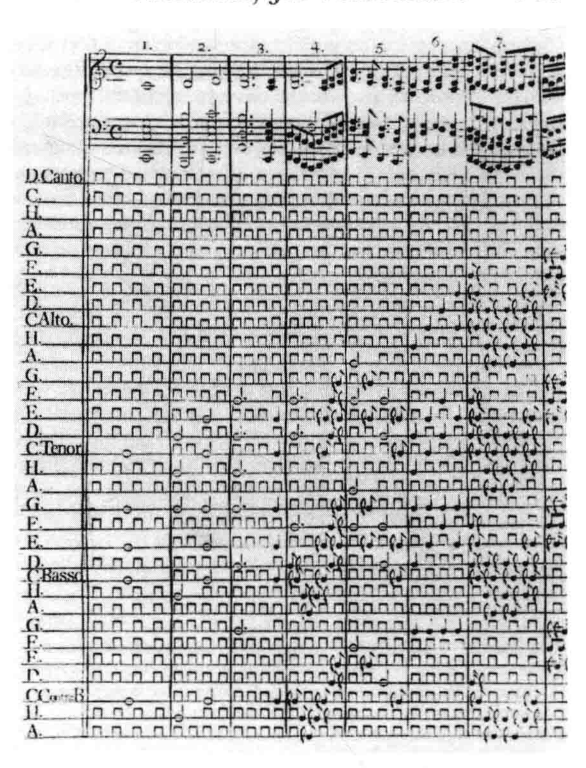
(ii) Bowed instruments. Much 17th-century lyra viol music was written in French lute tablature, and since some of the many lyra viol tunings were identical with contemporary lute tunings the question sometimes arises as to the instrument for which a certain composition was intended. There are usually two clues: in lyra viol music there are no gaps between the component letters of a chord, since it is impossible on a bowed instrument to omit one string when playing those on both sides of it; and all lyra viol music uses staff notation rhythm signs. Lyra viol tuning is often indicated at the beginning of a piece, the first letter of a pair shown for a string being the fret required to be stopped for that string to be in unison with the string above (ex.17).

(accompaniment only)

A certain amount of early viol and violin music is found in Italian tablature and there is a little 16th-century viol music in German tablature. Its mainly homophonic texture readily distinguishes it from lute music. *Lira da gamba* and baryton (*viola di bordone*) music is occasionally found in French tablature; as with music for lyra viol it may be identified by its tuning and by the disposition of the chords. A number of systems using figures have been used during the last two centuries for instruments such as the English guitar, zither, autoharp, balalaika, guitar and accordion, none of great interest or importance. One rather unexpected modern example of true tablature should be mentioned, however; it is for the ukelele, and is a schematic representation of the strings and frets of the instrument, with dots marking the position of the left-hand fingertips (*see* Notation, fig.141).

6. Wind instruments. Diagrams representing the finger-holes of wind instruments such as the clarinet, fife, flageolet, galoubet, oboe, recorder and so on showing which holes should remain open and which should be closed to produce certain notes and trills, have been a common feature of instrumental tutors since 1535 and have never lost their value and appeal. Mersenne's *Harmonie universelle* (1636–7) is a valuable source of a wide variety of such diagrams. Many tablatures of this nature ought more accurately to be described as 'fingering

charts', since their use for the notation of music was at best limited, and mainly confined to late 17th-century music. Sufficient pictorial evidence exists to suggest that, for players of such instruments, the use of staff notation was very much the rule rather than the exception. Even so, 'dot-way' notation, as it was called, was in widespread use among English enthusiasts of the flageolet, and it survived into the 18th century. Six lines represented the six finger-holes of the instrument; a short vertical stroke on a line indicated that the hole in question was to be closed, a horizontal line through a stroke that it was to be played an octave higher, and a large comma that a grace note was called for. Rhythm signs, one to each note, were placed above the 'staff', and the music was barred regularly. Articulation, when shown, was notated by slurs (ex.18).



Ex.18

(tune only)

Another tablature, for recorder, is found in Sebastian Virdung's *Musica getutscht* (1511), but as it was apparently not used for practical music it does not justify detailed explanation; a dot in a circle indicated that all the holes were closed, 1 that the bottom hole was open, the figure 2 with a diagonal stroke through it that the second was open, 2 that the bottom two holes were open and so on. A derivative of this system was in use in 17th-century music for the musette, but at no time did it completely replace staff notation. A special system of tablature was used by the Russian horn bands of the late 18th century; a band consisted of ten to 50 players, and as each was required to produce a note of only a single pitch all he needed to know was the rhythm and dynamic markings of his part. This was shown in staff notation on a single line with special signs for rests (fig.9). Other systems for notating rhythms alone have been used for hunting horns, trumpets and drums, but since they ignore the element of pitch they do not rank as true tablatures.

7. Figured bass and similar chordal notations. A distinction must be drawn between the accumulations of figures found in textbooks on figured bass and harmony, and those found in actual musical practice. The latter may be considered as a part-tablature, since their use constituted a valuable system of musical shorthand, conveying a great deal of information clearly and succinctly. The figured bass principle still fell short of a true tablature in two important respects: it required the retention of staff notation for the bass line; and a figured bass part was never intended to convey the detail of a continuo part but merely its most important harmonic and melodic features – only in exceptional cases, for instance, did the figures delineate the octave in which the various intervals above the bass were to be placed. Even so, it probably remains the only tablature which, although long since discarded for the notation of music, is still used in performance (for a full discussion *see* Thoroughbass). Certain other systems of chordal notation must be classed as true tablatures, for example Gottfried Weber's system of upper- and lower-case letters to indicate major and minor chords, or roman numerals to indicate root-position chords on various degrees of the diatonic major scale, a system first expounded in his *Versuch einer geordneten Theorie der Tonsetzkunst* (1817–21). Hugo Riemann's functional harmony notation, proposed in his *Vereinfachte Harmonielehre* (1893), is another important tablature and is of great value in the analysis of classical harmony. It uses a combination of capital letters and signs of various kinds to denote the principal chords of a key and their variants. Numerous new systems of musical notation and shorthand have been proposed during the last three centuries, but only those that dispense completely with the conventional five-line staff can be classed as true tablatures. Most, in any case, were too short-lived or too fanciful to be dealt with in detail here (but *see* Notation, §III, 5(iv), 6). The Braille system of musical notation for the blind (1829–34) must be mentioned, however. Its basis is a frame of six dots grouped as a rectangle; a large number of different and distinguishable symbols are available by embossing any dot or combination of dots on the paper, and by the use of various ingenious contractions and abbreviations both melody and harmony can be speedily notated and equally quickly deciphered (*see* Braille notation).

9. Russian horn band notation in score: J.C. Hinrichs, 'Entstehung, Fortgang und … russ. Jagdmusik' (1796)

8. Vocal music. Attempts at devising vocal tablatures had been made as early as 1600 or so, but none of them was very successful or important, nor were they true tablatures, since they did not completely dispense with the five-line staff. An extension of Venegas's system of Spanish keyboard tablature (see §2(iv) above) was used

Ex.19

z 6·5 4 3 1 7 6 a 5

(Treble clef) Flow my tears, fall from your springs

for vocal music in William Braythwaite's *Siren coelestis* (London, 1638), an illegally printed English edition of

Catholic motets by Georg Victorinus which had first been issued in Munich in 1616. Braythwaite's system (ex.19) was both complex and unattractive, being based predominantly on minor modifications of a single typographical fount of the numerals 1 to 7; the system required no fewer than 231 symbols, and must have proved extremely unpopular with singers if it was ever used for music-making. Its only advantage was that it required no music type and nothing that an adventurous jobbing printer would not have had in stock.

Tonic Sol-fa, which dates from 1812, is the only other vocal tablature of any importance (*see* TONIC SOL-FA).

Table, Hermann. *See* TABEL, HERMANN.

Table-book. A manuscript or printed book of the 16th or 17th century in which the vocal or instrumental parts of an ensemble composition are displayed in such a way that the performers can read their parts while seated across or around a table. It is an extension of the choirbook system in which one volume suffices for all the performers, as opposed to the partbook system in which each performer is allocated an individual book. The Lyons printer Jacques Moderne was probably the first to issue a collection in which parts were disposed in inverted positions on the upper half of each side, *recto* and *verso*, of an opening (*Le parangon des chansons*, 1538). A similar system, but with the complete *recto* page inverted, was adopted by Pierre Phalèse for lute duets (1568). The continental sources in table-book format are considerably outnumbered by the English sources, which include most of the books of lute airs and such works as Dowland's *Lachrimae*

Pavan no.7, in table-book format, from John Dowland's 'Lachrimae' (London, 1604)

(1604; see illustration) and Sir William Leighton's *The Teares or Lamentacions of a sorrowfull Soule* (1614).

Although printed music books account for the majority of table-books this principle was also adopted for a small number of manuscript sources, such as *GB-Lbl* Add.31390 (for illustration see SOURCES OF INSTRUMENTAL ENSEMBLE MUSIC TO 1630, fig.4) and *Och* 45. The latest sources in table-book format are certain English prints of the 1630s. These systems were later modified to cater for up to six performers, and exceptionally for as many as 12, although there are obvious practical difficulties for so many musicians.

JOHN MOREHEN/RICHARD RASTALL

Table d'harmonie (Fr.). *See* SOUNDBOARD (i).

Table entertainment. A peculiarly British species of performance, consisting generally of a mixture of narration and singing delivered by a single individual seated behind a table facing the audience. The material was often satirical. It seems to have originated about the middle of the 18th century. G.A. Steevens gave table entertainments in Dublin in 1752 and actors and singers such as R. Baddeley, G.S. Carey and J. Collins mounted them with great success in 1775–6 at many towns in Britain.

From 1789 to 1809 CHARLES DIBDIN gave a series of table entertainments in London in which song was the prominent feature. Dibdin united in himself the functions of author, composer, narrator, singer and accompanist. Impersonations were added by comedians who took up the genre, which had much in common with the techniques of music hall in the Victorian period. The Edinburgh singer John Wilson gave table entertainments with a Scottish flavour from 1841 to his death, the first of which was entitled 'A Nicht wi' Burns'. The solo performances of Joyce Grenfell and others may be seen essentially as a modern survival of the tradition.

MICHAEL TILMOUTH

Tablettes [cliquettes] (Fr.). Medieval (and later) French term for CLAPPERS.

Tabor. A side drum with one or more snares. *See* PIPE AND TABOR and DRUM, §II, 2.

Tabor, June (*b* Warwick, 31 Dec 1947). English folk, contemporary and jazz singer. Educated at the University of Oxford, she began her musical career as a part-time folksinger, becoming a full-time musician only in 1988, 12 years after recording her first album. Her first solo albums, *Airs and Graces* (1976) and *Ashes and Diamonds* (1977), showed the strength of her unaccompanied singing of traditional songs. She also recorded a series of duets with MADDY PRIOR as *Silly Sisters* (1976), a partnership repeated with the album *No More to Dance* (1988). The early folk albums were followed by *A Cut Above* (1981), including songs by contemporary writers such as RICHARD THOMPSON and Bill Caddick. Tabor continued to explore modern songs in a minimalist setting on *Abyssinians* (1983) and *Aqaba* (1988), and in 1989 recorded an album of jazz standards, *Some Other Time*. This was followed by a much acclaimed partnership with the folk-rock group the OYSTER BAND with whom she recorded *Freedom and Rain* (1990).

In the 1990s her musical horizons continued to expand with albums that included *Angel Tiger* (1992) and *Against the Streams* (1994) on which appeared 'I want to vanish', a song written for her by ELVIS COSTELLO. *Aleyn* (1997) was followed by a further period of experimentation, this time with the Creative Jazz Orchestra.

ROBIN DENSELOW

Taborowski, Stanisław (*b* nr Krzemieniec, Volhynia [now Kremenets, Ukraine], 1830). Polish violinist and composer. He studied music under Fenz and Billi at Odessa and St Petersburg University from 1847. He played his own compositions with success at a concert in Odessa in 1853, and then undertook a concert tour of Poland, Volhynia, Podolia and the Ukraine. From 1854 he studied in Brussels with Léonard (violin) and Damcke (composition), and returned to St Petersburg in 1859. He gave concerts in Warsaw in 1860, Kiev and Zhitomir in 1861, Kraków and Poznań in 1871–2, Breslau, the spa of Ciechocinek, as well as many European cities, including Berlin and Paris. He was also a professor at the Freie Deutsche Hochschule der Musik, founded in Berlin in 1872 by Tyszkiewicz, and from 1878 he was in charge of the music school of Kronstadt (now Braşov) in Transylvania.

IRENA PONIATOWSKA

Táborszky, Nándor [Ferdinánd] (*b* 1831; *d* 1888). Hungarian music publisher. He was the son of János Mihály Táborszky, for whose benefit Liszt gave a concert in Pest on 8 January 1840. He opened his shop in 1868 as a branch of Rózsavölgyi és Társa, but soon became independent and, with József Parsch, set up as Táborszky & Parsch. As early as 1873 they received a letter of commendation at the Vienna Weltausstellung. Their publications are marked with the letters 'T & P' or 'T és P' followed by the plate number (usually accurate). Táborszky not only had business relations with Liszt, between 1871 and 1886 publishing more than 18 of his works; he enjoyed the composer's personal friendship, as Liszt's correspondence in Hungarian collections shows. The firm ceased in 1895 with the death of József Parsch, after more than 25 years of activity. The legal successor was Kálmán Nádor; since nationalization it has been Editio Musica Budapest.

ILONA MONA

Tabourot, Jehan. *See* ARBEAU, THOINOT.

Tabret. *See* TAMBOURINE. *See also* DRUM, §I, 2(vi).

Tabuteau, Marcel (*b* Compiègne, 2 July 1887; *d* Nice, 4 Jan 1966). American oboist of French birth. At the age of

six he began to study the violin with his brother-in-law, Emile Létoffé, changing later to the oboe. In 1902 he was admitted to the Paris Conservatoire as a pupil of Georges Gillet, and he received the *premier prix* in July 1904, at the age of 17, for a performance of *Légende* by Diémer. In 1905 Tabuteau was invited by Walter Damrosch to play the english horn in the New York SO. From 1908 until 1914 he was first oboist of the Metropolitan Opera, playing for Toscanini, Alfred Hertz and, briefly, Mahler. He joined the Philadelphia Orchestra as solo oboist under Stokowski in 1915, remaining there until his retirement in 1954.

From 1924 he taught at the Curtis Institute of Music, where he passed on the best traditions of 19th-century French wind playing. Known for his mastery of phrasing, Tabuteau cultivated a distinctive quality of tone and playing style which crucially influenced his students, many of whom became first oboists in major US orchestras. Among his recordings are Mozart's Sinfonia Concertante, K297b, and concertos by Bach and Handel, as well as of *Marcel Tabuteau's Lessons*, a 'masterclass' with his own explanations and illustrations.

LAILA STORCH

Tacchinardi, Nicola [Niccolò] (*b* Livorno, 3 Sept 1772; *d* Florence, 14 March 1859). Italian tenor. After playing the cello in the orchestra of the Teatro della Pergola, Florence, he studied singing, appearing in various Italian cities in 1804. In spring 1805 he made his début at La Scala in Paer's *Griselda* and Farinelli's *Odoardo e Carlotta* for the celebration of Napoleon I's coronation as king of Italy; during Carnival 1805–6 he sang at the Teatro Carcano, Milan, in Gnecco's *Le nozze di Lauretta*. He then established himself in Rome, Bergamo, Bologna (summer 1809) and Turin (Carnival 1810–11); his greatest successes were in Rome, at the Teatro Valle (1806–7) and the Teatro Argentina (1809–10) in Morlacchi's *Le danaidi*, Giuseppe Nicolini's *Traiano in Dacia* and Zingarelli's *La distruzione di Gerusalemme*. His performance of the last-named at the Paris Odéon on 4 May 1811 brought him tumultuous applause; he remained in Paris until 1814 at the Théâtre Italien, singing in Paer's *Didone*, *Don Giovanni* (with the title role transposed), Cimarosa's *Gli Orazi ed i Curiazi* and Pucitta's *Adolfo e Chiara*, and, most successfully, in Paisiello's *La molinara*. He sang in Spain, 1815–17, and in Vienna in 1816. In 1818–19 he sang at the Teatro Argentina and elsewhere in Italy, in Mayr's *Le danaidi* (as Danao), Nicolini's *Cesare nelle Gallie* and Rossini's *Ciro in Babilonia* and *Aureliano in Palmira*. In April 1820 he sang Rossini's *Otello* (which became his warhorse) at the Teatro del Giglio, Lucca, and in 1820–21 appeared in *Il barbiere di Siviglia* and *La donna del lago*.

Tacchinardi was made principal singer of the grand ducal chapel in Florence in 1822, but was free to continue his operatic career; he appeared again in Vienna (1823), Barcelona (1826) and throughout Italy (1827–8); in 1825 he sang at the Teatro Ducale, Parma, in *Il crociato in Egitto*, which Meyerbeer composed for him. He retired from the stage in 1831. He wrote an essay on contemporary opera in Italy (*Dell'opera in musica sul teatro italiano e de' suoi difetti*, Florence, 2/1833). Short and stocky, though with a noble, expressive face, Tacchinardi had a voice that was mellow, powerful, extensive in compass and almost baritone in colouring. His technique was masterly, especially with regard to breathing, phrasing, agility in vocal flourishes and ease in passing from chest to head voice. A marble bust of him by Canova is in the Museo Teatrale alla Scala in Milan.

FRANCESCO BUSSI

Tacchinardi-Persiani [née Tacchinardi], **Fanny** (*b* Rome, 4 Oct 1812; *d* Neuilly-sur-Seine, 3 May 1867). Italian soprano, daughter of Nicola Tacchinardi and wife of the composer Giuseppe Persiani. She made her début in Livorno in 1832 in the title role of Giuseppe Fournier-Gorre's *Francesca da Rimini*. Singing in *Tancredi*, *La gazza ladra*, *Il pirata* and *L'elisir d'amore* (Carnival 1832–3, Venice) and in *L'elisir*, *Beatrice di Tenda* and *La sonnambula* (summer 1833, Milan), she made a deep impression as an interpreter of Bellini and particularly of Donizetti, who wrote for her the title roles of *Rosmonda d'Inghilterra* (1834, Florence), *Lucia di Lammermoor* (1835, Naples) and *Pia de' Tolomei* (1837, Venice). She triumphed further in 1834 at the Teatro del Fondo, Naples, in Valentino Fioravanti's *Le cantatrici villane* and again in *L'elisir* and *Beatrice*, and in 1836 at the Teatro Comunale, Bologna, in Persiani's *Ines de Castro*; her frequent appearances in her husband's operas contributed to their success.

She first sang in Paris at the Théâtre Italien in autumn 1837 in *La sonnambula* and *Lucia*, and distinguished herself as Carolina in *Il matrimonio segreto*. She remained there for 13 years, appearing also in *Le nozze di Figaro*,

Fanny Tacchinardi-Persiani in the title role of Donizetti's 'Lucia di Lammermoor', Her Majesty's Theatre, London, 1838: lithograph by Edward Morton, 1839

Don Giovanni (as Zerlina), *Il barbiere di Siviglia*, *Linda di Chamounix* (1842) and her husband's *Il fantasma*. She sang in London almost every year between 1838 and 1849, first at the King's Theatre (where she made her début in *La sonnambula*) and later at Covent Garden, appearing in, among other operas, *Lucia* with Rubini. She also appeared in Vienna (1837, 1844) in *Torquato Tasso*, *Lucrezia Borgia*, *I due Foscari* and *Ernani*, in the Netherlands (1850) and at the Italian Opera in St Petersburg (1850–52), where in her last performances she showed signs of decline with a 'hoarseness' which, according to Fétis, had been noticeable in London in 1843.

Called 'la piccola Pasta', she had a small and delicate voice that was sweet, polished, distinct by virtue of good placement, and had a compass of *b♭* to *f‴*. Her technique was almost impeccable, with an extraordinary agility in embellishing. A lack of fullness of tone and passion was compensated for by exceptional bel canto purity and near-instrumental virtuosity. Tacchinardi-Persiani's ethereal presence and fragile build fitted her for identification with her roles of the early Romantic 'amorosa angelicata'. She was less effective in comic roles (in which she nevertheless triumphed) than as a dejected, tremulous heroine of a gloomy Romantic tragedy.

FRANCESCO BUSSI

Tacchino, Gabriel (*b* Cannes, 4 Aug 1934). French pianist and teacher. He began his studies in Nice and received a *premier prix* in the class of Jean Batalla at the Paris Conservatoire in 1953. He also studied with Marguerite Long, Jacques Février and Francis Poulenc. He won prizes at several competitions, including Vercelli (1953), Bolzano (1954), Geneva (1955) and Naples (1956), and has subsequently enjoyed a distinguished international career. From 1975 to 1994 he taught a piano class at the Paris Conservatoire, and he has also taught at the Nice Summer Academy. He founded two festivals in Cannes, the Nuits Musicales du Suquet (1975) and an international festival of classical music (1992). He has been active as a chamber musician with such artists as Isaac Stern, Jean-Pierre Rampal and Jean-Pierre Wallez. Tacchino is a pianist of gentle but disciplined temperament, praised for his interpretation of a wide repertory from Bach to Gershwin. His numerous recordings include excellent accounts of the five concertos of Prokofiev and a fresh and stylish exploration of the complete piano works of Poulenc.

DOMINIC GILL/CHARLES TIMBRELL

Tacet (Lat.: 'he is silent', pl. *tacent*). An indication found in vocal and instrumental parts, mainly when a performer is silent for a whole movement. *Tacet al fine* shows that the performer is not required for the rest of the piece.

Tachezi, Herbert (*b* Wiener Neustadt, 12 Feb 1930). Austrian organist and harpsichordist. He studied at the Vienna Music Academy under Karl Wolleitner (piano), Alois Forer (organ), Ernst Tittel, Alfred Uhl and Karl Schiske (composition) and Otto Siegl (musicology), while doing a course of German studies at Vienna University. From 1952 to 1967 he taught music in secondary schools in Vienna. In 1958 he began teaching the organ and composition at the Vienna Music Academy (now the Hochschule für Musik), where in 1972 he became a professor. After taking harpsichord lessons from Fritz Neumeyer, in 1960 he began to play with the Vienna Soloists and the Solisti di Zagreb. In 1964 he became permanent organist and harpsichordist with the Viennese ensemble Concentus Musicus, and in 1974 organist of the Hofmusikkapelle in Vienna. His many awards include first prize in the 1958 Innsbruck International Organ Competition and the Viennese Theodor Körner prize in 1965. He has given concerts in many European countries and in the USA, and has performed frequently with the Concentus Musicus. Tachezi's repertory is based on Bach, Handel, contemporary works and improvisation. His recordings include the organ concertos of Handel and the complete organ works of C.P.E. Bach. He is also known as a composer of lieder, chamber music, and piano, organ, orchestral and vocal works (including choruses and masses). He has written an introduction to the playing of contemporary organ music entitled *Ludus organi contemporarii* (Vienna, 1973); he edits early music and contributes to Austrian music journals.

GERHARD WIENKE

Tactus. (1) The 15th- and 16th-century term for a beat, i.e. a unit of time measured by a movement of the hand, first discussed in detail by Adam von Fulda (*De musica*, 1490). One *tactus* actually comprised two hand motions, a downbeat and an upbeat (*positio* and *elevatio*, or thesis and arsis). Each motion was equal in length in duple time (*tempus imperfectum*); in triple time (*tempus perfectum*) the downbeat was twice as long as the upbeat.

In theory the *tactus* in 16th-century music measured a semibreve of normal length (*integer valor notarum*), a breve in diminution (*proportio dupla*), and a minim in augmentation. Gaffurius (*Practica musice*, 1496) wrote that one *tactus* equalled the pulse of a man breathing normally, suggesting that there was an invariable tempo then of M.M. = *c*60–70 for a semibreve in *integer valor*. However, in the 16th century (as Dahlhaus, 1960, pointed out), it was possible for the tempo of the *tactus* to vary, depending on the interpretation of the mensural conditions. The diminution in *tempus perfectum diminutum* (⦶), for example, was understood as a reduction of the time value of the notes by one third and not by half, so that the *tactus alla semibreve* became two thirds of the usual length. Furthermore, there are some isolated cases in which verbal instructions indicate a change of the speed of the *tactus*: for example, in Luys Milán's *El maestro* (1536) he indicated that the *tactus* should be fast or slow with the expressions *apriessa* and *espacio* respectively. From the possibility to divide the *tactus* while the value of the notes was retained (i.e. to beat twice as fast) there followed the distinction between a larger and a smaller *tactus* (Martin Agricola, *Musica figuralis deudsch*, 1532). Hence in *tempus imperfectum diminutum* (¢) the *tactus maior* constitutes a breve and the *tactus minor* a semibreve; in *tempus non diminutum* (C) the unit is correspondingly able to contain a semibreve or a minim. At the turn of the 16th century the *tactus* was seen primarily as a measure of the semibreve, which could by

now be faster or slower: according to Michael Praetorius the *tempus imperfectum diminutum* corresponded to a *tactus celerior*, the *tempus non diminutum* to a *tactus tardior* (*Syntagma musicum*, iii, 1618, 2/1619). The mensural concept of *tactus* continued to have an effect on music theory until the 18th century; Mattheson especially held unwaveringly to the definition of *tactus* as a dual unit of thesis and arsis.

See also CONDUCTING, §1 and PERFORMING PRACTICE, §I, 4 and TEMPO.

(2) The verb *tangere* was used from the Middle Ages onwards to mean 'to touch an organ' or, more generally, any keyboard instrument. From this, *tactus* came to mean a formulaic musical unit that was particularly constitutive for cantus firmus settings, determining the progress of such keyboard pieces. German organ treatises of the 15th century (e.g. *D-Mbs* Clm 7755, ed. in Göllner, 1961) teach how a musical work may be constructed on a given tenor by the use of prewritten ornamented figures, in a rhythmic-melodic movement from one concordance to another, the initial harmony being emphasized and the final sonority prepared each time. In so far as each *tactus* represents, in its relationship to a single note of the cantus firmus, a metrical unity whose length is determined by the prescribed 'beats' of the movement (e.g. *quatuor* or *sex notarum*), which is also marked by analogous tablature-lines, this instrumental structure is closely related to the modern concept of metre. In some sources the sample exercises as a whole – and in the Buxheimer Orgelbuch (*D-Mbs* Cim.352b) even entire pieces – are called *tactus*. After Conrad Paumann, organ teaching became more influenced by vocal composition and the elementary *tactus* procedure was replaced by new techniques of formulation; however, the principle of working to such formulae remained important for instrumental music. Thus, in terms of musical history, it is likely that the modern bar system is also related to these older practices of instrumental performance.

(3) Giorgio Anselmi (*De musica*, 1434), used the word to mean the FRET on a lute or clavichord, and also the keys of a clavichord or organ (*see* KEY (ii)). Gaffurius (*De harmonia musicorum instrumentorum opus*, 1518) followed Anselmi's example.

HOWARD MAYER BROWN/CLAUS BOCKMAIER

Tacuchian, Ricardo (*b* Rio de Janeiro, 18 Nov 1939). Brazilian composer, conductor and writer on music. He earned bachelor and graduate degrees in piano, composition and conducting from the Federal University of Rio de Janeiro (UFRJ). As a Fulbright scholar (1987–90) he earned a doctoral degree in composition at the University of Southern California in Los Angeles. He was professor of composition at UFRJ (1965–95), was a visiting professor at SUNY-Buffalo (1998), and since 1996 has been teaching at the University of Rio de Janeiro (UNIRIO).

He has been active as a conductor of several Brazilian orchestras, as a member of editorial boards of the main Brazilian music journals and as an adjudicator in several music contests. From 1993 to 1997 he was the President of the Brazilian Academy of Music. His music has been commissioned, published and broadcast in Brazil and other countries, and commercially recorded in Brazil and the USA.

After showing neo-classical and nationalist tendencies in the 1960s and going through an avant-garde period in the 1970s, Tacuchian's aesthetic outlook since 1980 has been based on a postmodern style with a cosmopolitan and urban flavour. He overcomes polarities such as national/international or old/new, achieving a synthesis of 20th-century techniques. In the late 1980s he evolved what he called the 'T' system, a form of pitch control derived from a nine-pitch scale, a serial setting and a pitch-class set. His output totals more than 120 works.

GERARD BÉHAGUE

Taddei, Giuseppe (*b* Genoa, 26 June 1916). Italian baritone. He studied in Rome and made his début there in 1936 as the Herald in *Lohengrin*. He sang regularly in Rome, where his repertory included Alberich, Germont and Rivière (Dallapiccola's *Volo di notte*), until he was conscripted into the army in 1942. Engaged in 1946 for two seasons at the Vienna Staatsoper, he scored particular successes in Verdi roles. In 1947 he sang Scarpia and Rigoletto at the Cambridge Theatre, London, and in 1948 Mozart's Figaro at the Salzburg Festival. At La Scala

(1948–61) his roles included Pizarro, Malatesta, the four villains in *Les contes d'Hoffmann* and parts in operas by Nino Sanzogno and Ferrari Trecate. Elsewhere in Italy he sang (in Italian) Hans Sachs, Gunther, Wolfram and the Dutchman. Later he specialized in Mozart, singing Papageno, Figaro and Leporello. He appeared at Covent Garden between 1960 and 1967 as Macbeth, Rigoletto, Iago and Scarpia and also sang in San Francisco, Chicago and at the Bregenz Festival (1968, 1969, 1971) as Falstaff, Dulcamara and Sulpice (*La fille du régiment*). Taddei had a warm, subtly coloured voice and intelligently inflected diction, and was successful in both comic and dramatic roles. He made notable recordings of his Verdi roles as well as his Figaro, Guglielmo, Dulcamara and Scarpia.

HAROLD ROSENTHAL/ALAN BLYTH

Tadei, Alessandro (*b* ?Graz, *c*1585; *d* Gandria, nr Lugano, 1667). Italian composer and organist, possibly of Austrian birth. From 16 March 1604 to 16 September 1606, at the expense of Archduke Ferdinand of Inner Austria, he studied in Venice with Giovanni Gabrieli, whom he visited again in 1610. At the end of 1606 he was appointed court organist at Graz. When the archduke became emperor as Ferdinand II in 1619, Tadei moved to Vienna with other musicians of the Graz court, and there is evidence that he was organist to the imperial court until 1628. From 11 November 1628 to 20 May 1629 he acted as Kapellmeister at the abbey of Kremsmünster in Upper Austria. It may well have been soon after this, as he was then a widower, that he entered the Carmelite monastery in Venice; Ferdinand II had written a letter of recommendation to the head of the Carmelite order in 1633, and he was certainly there in 1640. On 22 May 1642 he became second organist of Udine Cathedral, but his successor was appointed on 29 May 1647. He may then have retired to Gandria, though nothing is heard of him until his death.

Like his predecessors at Graz, Annibale Perini and Francesco Stivori, Tadei transplanted to Austria elements of Gabrieli's style, including polychoral techniques, as in his *Missa sine nomine* for 16 voices (*A-Wn*; Lugano, 1937) and the motet *Hodie beata virgo* for 10 voices (*A-KR* L13). His only known collection, the *Psalmi vespertini integri* for eight voices and continuo (Venice, 1628), contains simple homorhythmic psalm settings for two choirs. There is also a motet for three voices and continuo, *O beatum Carolum*, in G.B. Bonometti's anthology *Parnassus musicus Ferdinandaeus* (RISM 1615[13]). According to Gerber, Tadei was 'a famous contrapuntist and composer of church music' in Italy, which may indicate that he continued to compose after 1630 although no music by him from his later years is known.

HELLMUT FEDERHOFER/STEVEN SAUNDERS

Tadinghen, Ja [Jacob] (*fl* late 15th century). Composer. His name suggests Netherlandish origin. His only extant works are two secular pieces published by Petrucci in the *Odhecaton* and *Canti C*. The first of these, *Pensif mari*, bears an attribution (undoubtedly mistaken) to Josquin in a late manuscript. The lost text would appear to have been a rondeau and Tadinghen's setting is competent but unremarkable. The other work consists of a contrapuntal voice added to the superius line of the well-known chanson *Le serviteur*. The added voice, employing busy scalar contrapuntal figures as well as sesquialtera, provides a continuous running accompaniment to the slow-moving superius that closely resembles the counterpoints against chant given as examples in Tinctoris's *Liber de arte contrapuncti*. In its only source, *Canti C*, it is followed by an even more complicated counterpoint to the same melody by Martin Hanart. (*Vander StraetenMPB*, vi)

RICHARD SHERR

Tadolini [née Savonari], **Eugenia** (*b* Forlì, 1809; *d* Naples, after 1851). Italian soprano. She studied with Giovanni Tadolini whom she married, and made her début in 1828 in Florence. She first appeared in Paris at the Théâtre Italien in Rossini's *Ricciardo e Zoraide* (1830). During the next 12 years she sang at La Scala and in Venice, Vienna and Florence. Her repertory included Donizetti's Jane Seymour, Anne Boleyn, Lucia, Adina, Antonina (*Belisario*), Parisina, Fausta, Maria Padilla (see illustration) and Norina, as well as Bellini's Amina, Elvira and Norma. She created the title roles of *Linda di Chamounix* (1842) and *Maria di Rohan* (1843), both in Vienna. After singing Elvira (*Ernani*) in 1844, she created the title role of Verdi's *Alzira* in Naples (1846), and sang Odabella (*Attila*) at La Scala and Lady Macbeth at Naples in 1848, the year she made her London début at Her Majesty's Theatre as Linda; she also sang Léonor (*La favorite*) and Paolina in the Italian première of *Poliuto*, both at Naples. She retired in 1851. She had a large,

Eugenia Tadolini as Maria Padilla: lithograph by J. Carlo after Delfini, 1844

flexible voice, which Verdi considered too beautiful for the role of Lady Macbeth.

ELIZABETH FORBES

Tadolini, Giovanni (*b* Bologna, 18 Oct ?1789; *d* Bologna, 29 Nov 1872). Italian composer and singing teacher. He studied with Stanislao Mattei and Matteo Babbini at the Liceo Musicale in Bologna, and became répétiteur and later chorus master at the Théâtre Italien, Paris (1811–14). He returned to Italy, where his eight operas were produced between 1815 and 1827. The soprano Eugenia Tadolini was his wife. He was a member of the Accademia Filarmonica di Bologna and *maestro di cappella* of the cathedral (1825). In 1829 he returned to Paris to become musical director of the Théâtre Italien. He is said to have composed six sections of the *Stabat mater* commissioned from Rossini which was performed in Madrid on Easter Saturday, 1833. In 1839–41 Tadolini was in Italy; he founded a singing school at Bologna, went back to the Théâtre Italien in 1841, then returned to teach singing at his school in 1848.

2 sinfonie, orch; Concertone, ob, bn, orch; chamber music for wind insts

ELIZABETH FORBES

Taegio [Taeggio]. *See* ROGNONI.

Taegŭm. Large transverse bamboo flute of Korea (*tae*: 'large'; *gŭm*: 'flute'). It is also called *chŏ* or *chŏttae*. The standard *taegŭm* is about 80 cm long and has six finger-holes plus the blowing-hole and a membrane-covered hole. It gives the pitch *b♭* with all finger-holes stopped and has a range of over two octaves. Folk instruments, generally pitched a tone higher, are somewhat shorter.

Since the blowing-hole is large, the performer can obtain gradations of pitch by varying air pressure and by altering the angle of embouchure; the wide vibrato characteristic of Korean music is produced by simultaneously bobbing the head up and down and rotating the instrument slightly. The finger-holes are also large and nearly equidistant. Between the blowing-hole and the first finger-hole is an aperture covered with a thin, fragile reed membrane; a curved metal plate laced to the instrument can be slid over the membrane hole for protection.

Taegŭm (transverse bamboo flute) of Korea

Towards the far end of the flute are two to five unstopped holes which define the maximum sounding length and decorate the instrument. Owing to its large size the *taegŭm* is awkward to play. The performer supports the extension of the blowing-hole end on the left shoulder and in reaching the finger-holes must bend the left wrist sharply backward (illustration).

The *taegŭm* sounds in three basic registers. The middle register is obtained by overblowing the low register at the octave (these two registers each having the compass of an octave), and the four notes in the high register are obtained by overblowing at the 12th: thus the same fingering yields *e♭'*, *e♭''* and *b♭''*. In its lower range the sound is both gentle and full, but the membrane imparts a piercing buzzing quality to high or loud notes.

The *taegŭm*, together with the *chunggŭm* ('medium flute') and *sogŭm* ('small flute'), is mentioned as one of three important flutes of the United Silla period (668–935 AD), and it has remained a dominant instrument in Korea. The treatise *Akhak kwebŏm* (1493) gives the full length of the instrument as 86·4 cm (but maximum sounding length about 70 cm) and goes to the trouble of demonstrating seven sets of fingerings for different modes; it also reveals that the *taegŭm* was an important member of numerous ensembles.

Today the *taegŭm* is used in a variety of ensembles and as a solo instrument in both court and folk traditions. In the court tradition it appears in *hyangak* ('native music'), such as the long suite *Yŏngsan hoesang*, and in *tangak* ('Chinese music'), such as *Nagyangch'un*. A particularly favoured court solo is *Ch'ŏngsŏng chajin hanip*. In the folk tradition it is used in shaman ensembles (*sinawi*) and the virtuoso solo genre, *sanjo*. It also serves as a tuning instrument in ensembles.

ROBERT C. PROVINE

T'aep'yŏngso. Conical wooden double-reed pipe of Korea (*t'aep'yŏng*: 'great peace'; *so*: 'flute'). It is also called *hojŏk*, *swaenap* or (onomatopoeically) *nallari* and is related to the Chinese SUONA. About 47 cm long, it has eight finger-holes, the second of which is in the rear. Unlike the bamboo P'IRI, it is made of hardwood, has a broadly conical bore, and uses a short, narrow double

T'aep'yŏngso player at the Korean Village near Suwŏn, Korea

reed. There is a small circular metal lip disc below the reed and a large metal bell at the lower end of the instrument. The *t'aep'yŏngso* is capable of the compass of a 12th but is mainly restricted in use to an octave. The performer places the entire reed in his mouth, pressing his lips against the metal disc below the reed (see illustration). Intonation is extremely difficult to control and no overblowing is used. The instrument produces an extraordinarily loud and piercing sound and is normally played out of doors.

The *t'aep'yŏngso* is thought to have been introduced to Korea about the turn of the 15th century, and the treatise *Akhak kwebŏm* (1493) indicates that it was used then, as now, in military processional court music (*Taech'wit'a*). Nowadays it is also played in three pieces performed at the Royal Ancestral Shrine (*Chongmyo*) and as the only melodic instrument in *nongak* ('farmers' music').

ROBERT C. PROVINE

Tafall y Miguel, Mariano (*b* Lérida, 27 Sept 1817; *d* Santiago de Compostela, 26 Sept 1874). Spanish organist, organ builder and composer. Tafall began his career as an instrumentalist. In 1836 he was already conductor of an important military band, but resigned the post within a year to become an instrumentalist at the Cathedral of Burgos. In 1854 he went to Santiago as an instrumentalist for the cathedral there; he was later appointed organist and made and repaired organs. As an organ builder Tafall was active in the provinces of Galicia, repairing and constructing organs in various cathedrals and churches. By 1855, he had fully repaired one of the two main organs of the Cathedral of Santiago.

In his last years, he assembled the knowledge gained from his long experience as an organ builder in his four-volume treatise: *Arte completo del constructor de órganos, o sea guía manual del organero* (Santiago de Compostela, 1872–6). This book is still valuable, for it is extraordinarily clear, practical and complete, although Tafall was more an artisan than a theoretician.

Tafall left some fine compositions including a mass, a complete office for the dead and a psalm setting, *Miserere*. Both his sons, Rafael and Santiago Tafall Abad, were good organists and composers.

JOSÉ LÓPEZ-CALO

Tafelklavier (Ger.). *See* SQUARE PIANOFORTE.

Tafelmusik (i) (Ger.: 'table music'; Fr. *musique de table*). A term used since the 16th century for music at feasts and banquets, both in noble and middle-class circles, and as a title for printed and manuscript music anthologies. Musical presentations at feasts were common in antiquity, and written and pictorial accounts of musical compositions and performances *in conviviis et festis* survive from the Middle Ages (see illustration). However, the expression 'Musik zur Tafel', 'Tafelmusik' or 'musique de table'

Tafelmusik: 'Banquet of King Ahasuerus', panel from the Corpus Christi altarpiece by ? Wilm Dedeke, 1496 (St Annen-Museum, Lübeck); two shawms and a sackbut can be seen in the musicians' gallery

(with related compounds) came into use only in the mid-16th century, when it delimited a genre equivalent in stature to sacred or chamber music. Appointment records and descriptions of duties in chapel archives from the second half of the century frequently refer to vocal and instrumental performance *zur Taffel* ('at the table').

Michael Praetorius (*PraetoriusSM*, iii, 130 [*recte* 110]) reported that vocal and instrumental music was performed at feasts as at intermezzos ('Also und dergestalt kan man es mit anordnung einer guten Music vor grosser Herrn Taffel oder bey andern frölichen conventibus auch halten'). In 1617 Samuel Schein published his *Banchetto musicale*, and paraphrases of the expression 'Tafelmusik' soon became common, for example in Isaac Posch's *Musicalische Tafelfreudt* and Thomas Simpson's *Taffel Consort erster Theil* (both 1621). During the 17th century vocal works (often with continuo) and instrumental suites alike were published under the title 'Tafelmusik' or 'Musique de table'. In J.V. Rathgeber's collections (1733–46) instrumental works in several genres appear alongside songs and polyphonic vocal pieces; Telemann's three sets (1733, published as *Musique de table*) each consist of an overture and suite, a quartet, a concerto, a trio sonata, a solo sonata and a 'conclusion'. In the second half of the 18th century *Tafelmusik*, which had always tended to be light and entertaining, approached the character of the DIVERTIMENTO and was given such alternative titles as *Musicalische Blumenlese*, *Musikalisches Magazin* or *Musikalischer Blumenkranz*. The importance of the genre soon diminished and even the purpose met with disapproval. Zelter's *Liedertafel*, although based on nationalist political elements, partly restored the original function of *Tafelmusik* to the 19th century. Male-voice choral societies called Liedertafel continued the practice of singing and dining until the mid-20th century. (For further illustration *see* NUREMBERG, fig.4.)

HUBERT UNVERRICHT

Tafelmusik (ii). Canadian period-instrument orchestra, based in Toronto. It was founded in 1979 under the leadership of the violinist Jeanne Lamon, who has remained the orchestra's musical director. Admired from the outset for its spirit and technical polish, Tafelmusik has achieved an international reputation through its tours (including annual visits to Europe) and its numerous recordings. The precision and vitality of its playing are heard to particular advantage on discs of Bach's Brandenburg Concertos, Handel's concerti grossi and Vivaldi's 'Four Seasons', and in an invigorating series of Haydn symphonies under Bruno Weil, who regularly directs the orchestra in performances and recordings of Classical repertory. Tafelmusik has been the orchestra-in-residence at the Klang und Raum Festival in Irsee, Bavaria, since 1993, and gives an annual concert season at Trinity-St Paul's United Church in Toronto. In 1981 the Tafelmusik Chamber Choir was formed to complement the orchestra.

RICHARD WIGMORE

Taffanel, (Claude) Paul (*b* Bordeaux, 16 Sept 1844; *d* Paris, 21 Nov 1908). French flautist and conductor. Taffanel was the founder of the modern French school of flute playing which has since been widely adopted throughout the world. He studied at the Paris Conservatoire with Louis Dorus (who imposed the new Boehm flute there), winning a *premier prix* in 1860. For the next 30 years he pursued a brilliant career as a soloist and as an orchestral player at the Société des Concerts du Conservatoire and the Paris Opéra. He pioneered a new expressiveness of tone and sensitivity of musicianship which proved the flute to be capable of emotional depth. He was a founder member of the Société Nationale de Musique in 1871, and in 1879 created his own influential Société de Musique de Chambre pour Instruments à Vent which he directed for 15 years. This stimulated a whole new chamber music repertory for wind instruments, including Gounod's *Petite symphonie* (1885) dedicated to him. At the age of 45 Taffanel adopted a new career, becoming principal conductor of the Société des Concerts in 1892, where he expanded the repertory to favour contemporary music, and of the Paris Opéra in 1893, where he conducted the first French productions of operas by Verdi and Wagner. He was also professor of flute at the Conservatoire from 1893 until his death. As a composer Taffanel produced a prize-winning Wind Quintet in 1876 and various transcriptions and original works for flute and piano, notably the *Andante pastoral et Scherzettino* of 1907 which demonstrated the new lyricism of the French school. That year he also wrote an article on conducting for Lavignac's *Encyclopédie de la musique et dictionnaire du Conservatoire* (Paris, 1913–31). He began a history of the flute and a *Méthode* elaborating his principles of the instrument as a 'singing voice'. These projects were completed after his death by his pupils Louis Fleury and Philippe Gaubert.

EDWARD BLAKEMAN

Tag, Christian Gotthilf (*b* Beierfeld, 2 April 1735; *d* Niederzwönitz, nr Zwönitz, 19 July 1811). German Kantor and composer. In 1749, through the assistance of G.A. Homilius, he was awarded a scholarship to the Dresden Kreuzschule, where he studied for six years. In 1755 he became Kantor and schoolteacher in Hohenstein-Ernstthal, where he remained until his retirement in 1808, having established an outstanding reputation as a Kantor and organist.

Tag was a prolific composer of *Kantorenmusik* in a style combining elements of the Baroque and *Empfindsamkeit*. At the centre of his creative output were his sacred cantatas; written between 1760 and 1780, predominantly to Pietist texts, they reflect the influence of Hasse and J.G. Naumann (a personal friend of Tag's) and are particularly striking for their conservative adherence to fugue and their penchant for tone-painting and symbolism. The masses, of the two-movement *missa brevis* type with

recitatives and arias, closely resemble the cantatas. After 1780 Tag emerged as a fashionable composer of lieder and keyboard pieces in a style heavily indebted to J.A. Hiller and the Berlin lied school. In his organ compositions he used orchestral and keyboard music techniques of the Rococo and *empfindsamer Stil*. An *Orgelprobe* and a series of 26 letters formerly in the archives of Breitkopf & Härtel (1795–1806) are now lost.

WORKS

Sacred: 115 cants., solo vv, chorus, insts [3 with only texts extant], most in *PL-GD*, some in *D-ABG*, *BNms*, *Bsb*, *CR*, *HOE*, *LST*, *ZE* and elsewhere (details in Vieweg, 1933); 6 masses, 4vv, 3 with insts, *Bsb*; Mass, 4vv, insts, *HOE*.; motets, hymns, other sacred works, *ABG*, *Bsb*, *BIT*, *HOE*, *LÜb*, *MLHb*, *RUS-KAu*; Melodie zum Vaterunser und zu den Einsetzungsworten des Abendmahls, org acc. (Penig, n.d.)

Lieder collections: [17] Lieder beim Clavier zu singen (Leipzig, 1783); [16] Lieder beim Clavier zu singen nebst einer melodramatischen Scene, ii (Leipzig, 1785); [3] Lieder der Beruhigung (F. von Matthisson, S.G. Bürde) (Leipzig, 1793); 24 Lieder nebst einer 4-stimmigen Hymne . . . beim Klavier zu singen, iii (Dresden, 1798)

Other vocal: Auf den Borschberg bei Pillnitz (Leipzig, 1783); Pilgerlied (C. Overbeck) (Leipzig, 1787); Volksgesang an die Chursächsische Armee (J.F. Dietrich) (Dresden, 2/1795); Urians Reise um die Welt . . . und Urians Nachricht von der neuen Aufklärung (Leipzig, 1797); Wörlitz, eine Ode . . . nebst einem Vorberichtung des Dichters (Dietrich) (Berlin, 1802); Todtenopfer unserm vollendeten Naumann (Dresden, n.d.); many lieder in contemporary anthologies; secular cants., incl. 3 in *D-Dl*, 1 in *Bsb*, 1 in *A-Wn*; 2 arias, S, orch, *PL-GD*; miscellaneous lieder, *A-Wn*, *D-Dl*

Kbd: 6 Choralvorspiele nebst einem Trio und Allabreve, org (Leipzig and Dessau, 1783); 70 Veränderungen über ein Andantino fürs Klavier (Leipzig and Dessau, 1784); Der Glaube, mit einer neuen Melodie für die Orgel (Leipzig, 1793); 12 kurze und leichte Orgelvorspiele nebst einer Orgelsinfonie, org, pf, i (Leipzig, 1794); 6 kurze und leichte Parthien für kleine Anfänger . . . mit darüber gesetzter Applikatur und einer Ausführung der Manierung nach Bachischen Grundsätzen, i (Meisser, 1804); several pieces in contemporary anthologies; chorale preludes and arrs., org, 11 in *D-LEm*, 2 in *Bsb*; Kurtze und leichte Clavier Stücken durch alle Tone Dur und Moll, *LEm*; Divertimento II, hpd, *LEm*

Sym., qt, other kbd sonatas and divertimentos, other works, lost, mentioned in Tag's letters, *GerberNL* and Vieweg (1933)

DIETER HÄRTWIG

Tag, Christian Traugott (*b* Hohenstein-Ernstthal, 2 June 1777; *d* Glauchau, 12 July 1839). German Kantor and composer, nephew of Christian Gotthilf Tag. He received his early education from his uncle, then attended the Leipzig Thomasschule for eight years, where he was encouraged by J.A. Hiller. After studying philosophy and theology at Leipzig University he became Kantor in Jessen (1803). In 1805 he went to Glauchau as Kantor, director of music and schoolteacher. Unlike his uncle, he composed few works; his known publications include two sacred choral pieces (*Worte der Beruhigung bey unverschuldeten Schicksalen*, 1813, and the litany *Ewiger, erbarme dich*, 1815) and 12 variations on *Gaudeamus igitur* for keyboard and flute, all published in Glauchau. A Gloria for chorus and instruments survives in manuscript, and his *Hosianna! Davids Sohn* for Advent was mostly transmitted orally until its publication by Walter Hüttel.

DIETER HÄRTWIG

Tagelied (Ger.: 'day song'). A German strophic song announcing or praising the break of day, cultivated notably by Minnesinger in the late Middle Ages and strongly influenced by the Provençal ALBA, which dealt with similar subjects. Early polyphonic examples include one attributed to the Monk of Salzburg in the Mondsee-Wiener Liederhandschrift, in which the lower part is the song of a nightwatchman while the upper part is a trumpet prelude followed by a dialogue between parting lovers. Wolfram von Eschenbach and Oswald von Wolkenstein are other important composers of *Tagelieder*. The tradition of the *Tagelied* was eventually incorporated into German folksong and especially into popular hymns, as in Philipp Nicolai's 16th-century chorale *Wachet auf, ruft uns die Stimme*. It was revived by Wagner in the warning 'Habet acht! Schon weicht dem Tag die Nacht', with which Brangäne wakes the lovers in Act 2 of *Tristan und Isolde*.

Taglia, Pietro (*fl* Milan, 2nd half of the 16th century). Italian composer. He was *maestro di cappella* at S Maria presso S Celso, Milan, in 1565. Taglia was a madrigalist of cultivated taste, a member of the circle of noble connoisseurs who, during the period when Milan was reduced to a province of Spain and was dominated by the spirit of the Counter-Reformation, nevertheless kept alive the love of secular music. In his two books of madrigals Taglia followed the new and daring harmonic technique of Cipriano de Rore; indeed, one of his madrigals is included in Rore's *Quarto libro di madrigali* (RISM 1557[23]). The poetry he set is taken from some of the finest writers: Petrarch, Ariosto, Boiardo, Sannazaro and Giraldi. Taglia's style is rich in harmonic and rhythmic alternations and contrasts, but he could adapt it to the direct and the popular when the text so required. The extent to which his compositions were appreciated is demonstrated by the large number of collections in which they appear. The greater part of these anthology pieces are new compositions as distinct from those included in

the three books published by Taglia himself. Einstein had high praise for Taglia referring to him as 'a genius of high order'.

MARIANGELA DONÀ

Tagliabue, Carlo (*b* Mariano Comense, 13 Jan 1898; *d* Monza, 5 April 1978). Italian baritone. He studied with Gennai and Guidotti and made his début at Lodi in 1922 as Amonasro. After appearances at provincial theatres and in Florence, Palermo and the Verona Arena he was engaged at La Scala, where he sang regularly from 1930 to 1953. As well as the Italian repertory, his roles included Telramund, Wolfram, Gunther and Kurwenal. At the Teatro Reale dell'Opera, Rome, he created Basilio in Respighi's *La fiamma* (1934), and he sang Scedeur in the first performances at La Scala of Pizzetti's *Lo straniero*. He sang at the Teatro Colón (1934), at the Metropolitan (1937–9), where he made his début as Amonasro, and in San Francisco (1938). He made his Covent Garden début in 1938 as Rigoletto and returned in 1946 as Germont with the S Carlo company. In 1953 he sang Don Carlo (*La forza del destino*) at the Stoll Theatre. He continued to sing until 1960. Tagliabue's resonant, well-produced baritone was ideally suited to Verdi roles, as can be heard in his Don Carlo from a wartime recording of *La forza del destino*.

HAROLD ROSENTHAL/ALAN BLYTH

Tagliaferro, Magda(lena) (*b* Petrópolis, 19 Jan 1893; *d* Rio de Janeiro, 9 Sept 1986). French-Brazilian pianist. After early studies in São Paulo she went to Paris and studied with Antonin Marmontel at the Conservatoire, where she received a *premier prix* in 1907. She also studied regularly with Cortot, whose musical aesthetics she perpetuated throughout her life. In 1910 she was chosen by Fauré to perform several of his works with him on tour. She enjoyed a brilliant career in Europe and South America, appearing with such conductors as Furtwängler, d'Indy, Weingartner and Paray. She gave the first performance, or was the dedicatee, of works by Villa-Lobos, Hahn, Migot, Rivier and Pierné. Tagliaferro taught at the Paris Conservatoire from 1937 to 1939 and in Brazil, where she lived during the war years. She re-established her European career in 1949, founded a piano competition, and gave masterclasses in Europe and the USA. Her students included Władysław Kędra, Cristina Ortiz and James Tocco. At the age of 90 she performed acclaimed concerts in Paris, London, New York and South America. Her recordings include masterly interpretations of Fauré's Ballade, Saint-Saëns's Fifth Concerto and Mozart's Concerto in D K537. She wrote an autobiography *Quase tudo* (Rio di Janeiro, 1979).

CHARLES TIMBRELL

Tagliafico, Joseph (Dieudonné) (*b* Toulon, 1 Jan 1821; *d* Nice, 27 Jan 1900). French bass of Italian parentage. He studied in Paris and made his début there in 1844 at the Théâtre Italien. On 6 April 1847 he sang Oroe in the performance of *Semiramide* that inaugurated the Royal Italian Opera at Covent Garden, and he appeared there every season until 1876. He sang Oberthal in *Le prophète* (1849), Sparafucile in *Rigoletto* and Fieramosca in *Benvenuto Cellini* (1853), Ferrando in *Il trovatore* (1855), the High Priest of Brahma in *L'Africaine* (1865) and Friar Lawrence in *Roméo et Juliette* (1867), all first London performances. Although his voice was neither large nor remarkable in quality, his extreme versatility made him one of the most highly valued singers of his day. His enormous repertory included many other roles in the operas of Mozart, Rossini, Bellini, Donizetti, Halévy, Meyerbeer, Gounod and Verdi. He was the stage manager at Covent Garden from 1877 to 1882, composed some songs, and wrote criticism for *Le ménestrel* under the name of De Retz.

ELIZABETH FORBES

Tagliapietra, Gino (*b* Ljubljana, 30 May 1887; *d* Venice, 8 Aug 1954). Italian composer, pianist and musicologist. He studied in Vienna and under Busoni in Berlin, and taught the piano at the Liceo Musicale, Venice (1906–40). A promising career as a concert pianist was soon undermined by recurrent neuritis in his right arm. As a composer Tagliapietra has attracted little attention, even in Italy, though his piano music has remarkable qualities. A loyal disciple of Busoni, he showed in his best pieces (e.g. the two sets of *Tre pezzi*, or the tough, uncompromising *Otto preludi*) that he could use a basically Busonian language with a vitality that is not merely second-hand: these pieces sometimes have a distinctive, rugged hardness that has led one writer to see aptness in Tagliapietra's name ('stone cutter'). Similar qualities may be found even in his didactic works, notably the *40 studii di perfezionamento*: technical exercises whose musical intensity and exceptional harmonic enterprise call to mind those in Busoni's *Klavierübung*.

JOHN C.G. WATERHOUSE

Tagliato (It.). *See* CUT TIME.

Tagliavini, Ferruccio (*b* Reggio nell' Emilia, 14 Aug 1913; *d* Reggio nell' Emilia, 29 Jan 1995). Italian tenor. He studied in Parma with Brancucci and in Florence with Amadeo Bassi. He made his début in October 1939 in Florence as Rodolfo in *La bohème* and first sang at La Scala, as Rossini's Almaviva, in 1942. By the end of World War II he had established himself as one of the leading tenors of the Italian stage; he then appeared successfully at the Metropolitan (1947–54 and 1961–2). During the visit of the La Scala company to Covent Garden in 1950, he sang Nemorino in *L'elisir d'amore*, revealing his vocal achievements as well as a considerable talent as a comic actor. He made further appearances in London as Cavaradossi (1955–6, Covent Garden) and as Nadir in *Les pêcheurs de perles* (1958, Drury Lane). He retired from the stage in 1966.

Essentially a *tenore di grazia*, Tagliavini excelled in the bel canto operas of Bellini and Donizetti and in the title role of Mascagni's *L'amico Fritz*, which he recorded under the composer's direction, with his wife, the soprano Pia Tassinari, as Suzel. Many regarded him as the successor of Tito Schipa; Tagliavini's style, however, was less dependable. He could spin out a sustained note until it became a mere thread of tone, and he sang florid passages more accurately than was usual in the postwar period; but he also relied on abrupt transitions between *fortissimo* and *pianissimo* to the neglect of the intermediate shades, and in later years permitted his louder tones to develop a harsh quality. His art is best represented in his early Cetra discs, which have been reissued on CD.

DESMOND SHAWE-TAYLOR/R

Tagliavini, Luigi Ferdinando (*b* Bologna, 7 Oct 1929). Italian organist, harpsichordist and musicologist. He studied at the conservatories of Bologna and Paris (1947–52) under Ireneo Fuser and Marcel Dupré (organ), Napoleone Fanti (piano) and Riccardo Nielsen (composition). He took the doctorate at the University of Padua in 1951 with a dissertation on the texts of Bach cantatas. He taught the organ at the Bologna Conservatory from 1952 to 1954 and had charge of the conservatory library from 1953 to 1960. In 1954 he became organ professor at the Bolzano Conservatory and taught there until 1964, when he was appointed organ professor at the Parma Conservatory. From 1959 to 1984 he taught regularly at the summer organ courses at the Haarlem Organ Academy. In 1991 he was awarded the Italian music critics' 'Massimo Mila' prize. He became a member of the Accademia Nazionale di S Cecilia in 1992, and in 1996 he was granted the honorary doctorate from Edinburgh University.

Tagliavini's academic career began in 1959 with his appointment as an external lecturer in music history at the University of Bologna. He was visiting professor at Cornell University in the summer of 1963 and at the SUNY, Buffalo in the autumn of 1969. In 1965 he became reader in music history and director of the Institute of Musicology at the University of Fribourg, and in 1971 was appointed professor there. Since then he has divided his time between Bologna, where he has made a fine collection of old instruments, and Fribourg.

Tagliavini has taken a pioneering interest in organ restoration based on historical research, and in his official capacity on Italian and Swiss state commissions he has rescued a number of valuable organs from neglect and destruction. He has also contributed three volumes to the Neue Mozart-Ausgabe and is editor of Monumenti Musicali Italiani and of *L'organo*, which he founded in 1960 with Renato Lunelli. He is a well-known and widely recorded performer on the organ and harpsichord; his concerts have taken him to nearly every European country and to North America. His performances of older music, particularly Italian, combine his talents as musicologist and practical musician to produce lively, yet authentic interpretations. Taking advantage of the Italian placement of organs in the choir, he has frequently explored the two-organ repertory and has made several such recordings with Marie-Claire Alain.

ETIENNE DARBELLAY/TERESA M. GIALDRONI

Täglichsbeck, Thomas (*b* Ansbach, 31 Dec 1799; *d* Baden-Baden, 5 Oct 1867). German violinist and composer. He received his first violin lessons from his father, Johann Täglichsbeck, who settled in Voigtland, Lower Saxony, in 1800. In 1816 he was a fellow student of Molique with Rovelli in Munich; a mass of his, written under the supervision of Josef Gratz, was performed in 1817. That year Täglichsbeck became a violinist in the Isarthortheater orchestra, and, despite his youth, succeeded Lindpaintner as music director two years later. In 1822 he became a solo violinist at the Munich court, a post which allowed him more time to give concert tours and to compose; his first opera, *Webers Bild*, and the variations on *La gazza ladra* date from this period. In 1824 he made an extensive tour of Germany, Switzerland and northern Italy; he joined the Società Filarmonica of Bergamo, where Rovelli then lived. Reviews of his concerts in the *Allgemeine musikalische Zeitung* (1825–32) are laudatory, although his playing in Munich in 1832 was described as 'more charming than exceptional'.

In 1827 Täglichsbeck became the Kapellmeister to Prince Hohenlohe-Hechingen. Under Prince Constantine (1838–48) the court became a well-known musical centre which was visited by Berlioz (1842) and Liszt (1848). When political changes in 1848 eliminated the principality Täglichsbeck was pensioned and the musicians were given paid leave. Constantine recalled Täglichsbeck from Stuttgart in 1852 and reconstituted his orchestra at Löwenberg. Five years later Täglichsbeck was pensioned and succeeded by Max Seyfriz. He subsequently taught composition at the Dresden Conservatory for two years, then lived for a while in Munich before retiring to Baden-Baden in 1866.

The climax of Täglichsbeck's career as a composer came with the performance of his Symphony no.1 in E♭ at the Paris Conservatoire in 1836. It was a popular success, though Berlioz dismissed it as 'academic music, and nothing more'; reviewing a performance a year later, Berlioz wrote more graciously: 'works of this kind gain 100% on rehearing'. The opera *König Enzio*, produced in Karlsruhe in 1843, did not establish itself in the repertory. Täglichsbeck was an excellent Kapellmeister, a good if not brilliant violinist and a skilled if not very original composer.

ALBERT MELL

Taglietti, Giulio (*b* Brescia, *c*1660; *d* Brescia, 1718). Italian composer, violinist and violin teacher, probably brother of Luigi Taglietti. He taught at the Jesuit Collegio dei Nobili, Brescia, from at least 1702. His music was popular in the first decades of the 18th century and was published in Italy at a time when the printing of instrumental music there was becoming comparatively rare. The Amsterdam

publisher Pierre Mortier, in a 1709 list of his publications, placed him and Luigi Taglietti second only to Corelli, and they were indeed important in the development of the concerto and sonata. His concertos have more in common with the concerto grosso than with the solo type, though his op.8 features four solo violins, antedating by a few years the publication of Vivaldi's op.3, which contains some concertos for the same scoring. Occasional solo passages, including some for the viola, do, however, occur. He was among the first composers regularly to limit his concertos to three or four movements only. He shows a marked preference for only one solo treble line in his non-concerto works, witness his numerous instrumental arias (opp.3, 6 and 10) and the powerful melodic lines of his op.13 sonatas. His scorings for violoncello and violone, either together or as alternatives, have been cited as evidence of the co-existence of independent instruments.

ROBIN BOWMAN/PETER ALLSOP

Taglietti, Luigi (*b* 1668; *d* ?Brescia, 1715). Italian composer, trumpet marine player and teacher, probably brother of Giulio Taglietti. He was associated with the Jesuit Collegio dei Nobili, Brescia, from at least 1697; in 1702 he was recorded as *maestro di tromba marina* there. Like that of Giulio Taglietti, his music was popular in the early 18th century and was published in Italy at a time when the printing of instrumental music was becoming comparatively rare. The Amsterdam publisher Pierre Mortier, in a list of his publications dated 1709, placed the two composers second only to Corelli, and they were indeed important in the development of the concerto and sonata. Like Giulio's, his concertos have more in common with the concerto grosso than with the solo type, and he too was among the first composers to write concertos with only three or four movements. Some of his movements show a remarkably clearcut and enterprising ritornello structure.

ROBIN BOWMAN/PETER ALLSOP

Taglio (It.). *See* LEAP.

Taglioni, Filippo (*b* Milan, 5 Nov 1777; *d* Como, 11 Feb 1871). Italian dancer and choreographer. In 1794 he became first dancer at the Teatro dei Nobili, Pisa, where his father Carlo was ballet-master. After touring Italy, 1796–8, he went to Paris to study with J.-F. Coulon, making his début at the Opéra in *La caravane* (1799). He worked at the Royal Opera, Stockholm, in 1803–4, and at the Hoftheater, Vienna, in 1805, before undertaking an extended European tour. Taglioni's importance lies mainly in his choreography for the premières, all at the Paris Opéra, of Auber's *Le dieu et la bayadère* (1830) and *Gustave III* (1833), Meyerbeer's *Robert le diable* (1831) and *Les Huguenots* (1836), and Halévy's *La Juive* (1835). That for *Robert*, including the famous 'Scène des nonnes' in which 50 dancers dressed in white wafted through the ghostly cloister, made theatrical history: the first *ballet blanc*, it proclaimed a new aesthetic, combining an airy style of dancing with the mysterious atmosphere of the spirit world. Soon afterwards, Taglioni gave up his artistic projects to devote himself to his daughter Marie's career, choreographing ballets to display her genius.

Marie Taglioni (*b* Stockholm, 23 April 1804; *d* Marseilles, 22 April 1884), among the first ballerinas to capture the spirit of Romanticism in dance, incorporated astonishing *pointe* techniques into an individualistic and highly poetic style that was unusual for its modesty and spirituality. Among her greatest operatic successes were *Guillaume Tell*, *Le dieu et la bayadère* and *Robert le diable*, though the ballet most closely identified with her was *La sylphide* (1832). Her brothers Salvatore (1789–1868) and Paul (1808–84) were also active as dancers and choreographers.

MAUREEN NEEDHAM

Taglioni, Marie (*b* Stockholm, 23 April 1804; *d* Marseilles, 22 April 1884). Italian dancer. She was the daughter of the dancer and choreographer Filippo Taglioni (1777–1871). *See* BALLET, §2(ii).

Tagore, Rabindranath (*b* Calcutta, 7 May 1861; *d* Calcutta, 7 Aug 1941). Bengali poet, writer, teacher, painter and composer. Of his manifold artistic creations, Tagore correctly predicted that his songs would remain best loved

by his countrymen. Known as *Rabindrasaṅgīt* ('Rabindra-music'), they number about 2500 and have become the national music of West Bengal and Bangladesh. Songs by Tagore have been adopted as the national anthems of India and Bangladesh.

Tagore encountered a variety of musical influences in the aristocratic household in which he grew up. Classical Indian musicians were frequent visitors or teachers there, but Tagore did not master any instrument or vocal style. This may have limited his technical range as a composer, but it fostered in him a spirit of experiment. Most of his songs have a four-part structure derived from *dhrupad*, but he also drew from other traditions including *kheyāl*, *ṭappā*, *kīrtan*, Bengali traditional songs and the songs of the wandering Baul singers of Bengal. He created several new *tāla* and was never a purist in his use of *rāga*; his famous song *Kṛṣṇakali* (1931), which celebrates the beauty of a dark-skinned, 'deer-eyed' maiden, changes the *rāga* from verse to verse.

Tagore was not greatly influenced by Western music, but an illustrated edition of *Moore's Irish Melodies* enchanted him as a child, and his elder brother Jyotirindranath Tagore enjoyed playing the piano. After his first visit to England in 1878, Tagore wrote Bengali words to the melodies of songs such as *Auld Lang Syne*, *Ye Banks and Braes*, *Robin Adair* and *Drink to Me Only*. His first musical play, *Vālmīki pratibhā* ('The Genius of Valmiki', 1881), was inspired by his knowledge of Western opera and operetta, and his interest in combining song, drama and dance led him to compose *nṛtya-nāṭya* ('dance-dramas') for performance by staff and students at the school and the university which he founded at Santiniketan in West Bengal.

His special talent as a songwriter was his ability to blend words with melody. He composed tunes in his head and relied on others, particularly his brother Jyotirindranath and later his grand-nephew Dinendranath Tagore, to notate them. The emotional range of his songs is wide; his works include songs of love and religious devotion as well as celebrations of nature and the seasons. His songs are at their most effective when performed by voice alone or with *tambūrā*, *esrāj* and sparing use of *tablā*. However, the popularity of the songs has inevitably led to their vulgarization, and accompaniment by harmonium and other instruments, both traditional and modern, has become common.

Tagore won the Nobel Prize in 1913 for his English versions of his poems and songs, and books such as *Gitanjali* (1912) and *The Gardener* (1913) were quickly translated into other languages. Western musical settings of Tagore's work include Alexander von Zemlinsky's Lyrische Symphonie, op.18 (1922–3) and three songs by Frank Bridge, *Day After Day* (1922), *Speak to Me, my Love* (1924) and *Dweller in my Deathless Dreams* (1925). The Australian composer Raymond Hanson was fascinated by Tagore's poetry and set 28 of his poems from *Gitanjali*, *The Gardener* and *Lover's Gift*. More recently, translations by William Radice have been set, notably by Param Vir in *Brahma, Vishnu, Shiva* (1988) and by Knut Nystedt in *The Conch* (1993), both of which works are for unaccompanied voices. Param Vir's chamber opera *Snatched by the Gods* (1992), with a libretto by William Radice, is based on a narrative poem by Tagore.

WILLIAM RADICE

Tagore, Sir Sourindro Mohun [Ṣaurīndramohana Ṭhākura] (*b* Calcutta, 1840; *d* Calcutta, 5 June 1914). Indian musicologist, educationist and patron of Indian music. He was a descendant of one of the wealthiest and most influential families of 19th-century Calcutta; his grandfather, father and elder brother were all renowned for their patronage of the arts. (Rabindranath Tagore belonged to another branch of the family.) He was educated at Hindu College, Calcutta, the leading centre for British-style education, which had been founded by his grandfather, Gopi Mohun Tagore. Subsequently he made an intensive study of Indian music with K.M. Goswami and L.P. Misra, specializing in the *sitār* (1856–8). In order to prepare himself for studies in comparative musicology, he engaged two Europeans (names unknown) as his instructors in Western music.

Tagore sponsored or co-authored the production of some of the first general music treatises in Bengali (Goswami's *Saṅgīta sāra*, 'The Essence of Music', 1868) and music instruction books (*Yantra kshetra dīpika*, 1872). Such vernacular publications, produced and promoted by the Calcutta élite, were an important part of the renaissance in Bengali culture which took place in the 19th century. Tagore founded several schools of music in Calcutta beginning in 1871, and supplied music teachers and books to these and other public and private schools at his own cost. His publications ranged from music treatises in Sanskrit and Bengali to explanations of Indian music for a colonial audience. These publications were aimed at British and European orientalists both in India and in Europe as well as the Bengali intelligentsia centred in Calcutta.

Tagore was also instrumental in promoting interest in Hindustani music among the middle-class educated élite of 19th-century Calcutta. He endeavoured to promote Indian music in the West as a symbol of India's classical heritage, comparable to European art music in artistic and academic value. As part of his efforts to disseminate Indian music, he maintained extensive correspondence with learned societies, museums, scholars and monarchs in Europe and the United States.

He is known to have influenced the work of the pioneering Belgian organologist V.-C. Mahillon and he donated collections of instruments to museums throughout the West, manufactured in accordance with his theories in the *Yantra kosha* (1875). There is still continued controversy as to whether these instruments

reflect historical or contemporary practice. One of his most useful works, *Hindu Music from Various Authors* (1875), is a compilation of English writings on Indian music. It has kept scarce items, including writings by Sir William Jones and Augustus Willard, available to scholars. Although he never left India, Tagore's work was internationally recognized and he received an honorary doctorate from Oxford in 1896.

DAVID TRASOFF

Tahiti. *See* POLYNESIA, §II, 3(i).

Tahourdin, Peter Richard (*b* Bramdean, Hants., 27 Aug 1928). British composer and educationist, active in Australia. He studied composition with Richard Arnell and trumpet with Rowland Dyson at Trinity College of Music, London (1949–52), and for the next 12 years he worked as a freelance composer, mainly in films and television. His first important premières were those of the overture *Hyperion* in Leeds in 1952, the First Sinfonietta (Netherlands and Canada, 1952) and his first television ballet, *Pierrot the Wanderer*, broadcast by CBC in Toronto in 1955. In 1965 he was appointed visiting composer at the University of Adelaide, then taking a course in electronic music at the University of Toronto (MMus 1967). He returned to Adelaide in 1969 as teaching fellow in electronic music; in 1973 he was appointed lecturer in composition at the University of Melbourne, retiring in 1988. He chaired the Composers' Guild of Australia (1978–9). While his early works were tonal and intentionally accessible, from the late 1960s he developed a more personal style of angular, atonal writing in linear textures, employing elements of classic serial technique and less conventional formal structures. The influence of trips to Bali (1981) and India (1985) is seen in works such as Symphony no.4, *San Diego Canons* and the *Raga Music* series. He is interested in electronic music both for the dramatic possibilities exploited in his stage pieces and for its educational value as a bridge between technology and the arts.

WORKS
(*selective list*)

Dramatic: Inside Information (op, 1, C. Landon), 1955; Pierrot the Wanderer (TV ballet), 1955; Illyria (ballet), 1965; Pacific Rape (music theatre), tape, 1970; Parrot Pie (children's op, B.K. Wilson), 4 solo vv, pf, tape, 1972; Ern Malley: a Dramatic Testament (music theatre), S, Bar, 2 actors, ens, tape, 1975–6; Graffiti: an Entertainment (music theatre), S, Mez, T, Bar, ens, tape, slide projections, dancers, 1980; Heloise and Abelard (chbr op, 2, Tahourdin), S, T, Bar, ens, tape, 1991

ELIZABETH WOOD/PATRICIA SHAW

Taiber. *See* TEYBER family.

Tailer, Daniel. *See* TAYLOR, DANIEL.

Tailer, John (*d* after 1569). English choirmaster and ?composer. He was probably master of the singing boys of St Anthony's Hospital, London, in 1557, and certainly, from 1561 to 1569, master of 'the children of the grammer schoole in the colledge of Westminster', where he succeeded Robert Lamkyns at an annual salary of £10. During the years of his association with the college the choristers engaged in occasional dramatic activities for which they and their master received monetary rewards: singing and playing in a Lord Mayor's Day pageant, 1561; providing 'speches and songes' for the Ironmongers' pageant, 1566; and presenting plays, including pieces by Plautus and Terence, at court in 1564, during Shrovetide 1566 and at Christmas 1568. Tailer not only trained the boys but may on occasion have taken part in the entertainments himself: when the boys played at Putney before Bishop Grindal in 1567, the choirmaster received

2s. to pay 'for the conveiance of ... his attyre fro London to puttneie and from thence to London againe'; another time the payment was for conveying the 'Masters apparell and instrumentes'. Some time after 18 June 1569 Tailer left Westminster and appears to have moved to Salisbury where, in July of that year, a John Tailer is listed in the cathedral records as lay vicar, and in September as master of the choristers. Whether the choirmaster is the same 'mastyre taylere' to whom a pavan is ascribed in the Dublin Virginal Manuscript (ed. in WE, iii, 1954, 2/1964) or the 'Mr Tayler' to whom a motet, *Christus resurgens*, is ascribed in *GB-Och* 948–88, is an open question.

JOHN M. WARD

Tailhandier [Taillandier], **Pierre** [Talhanderii, Petrus; Talhienderi, Petrus] (*fl* 1390). Composer and theorist. It is not known whether he was related to Antoni Tallander (1360–1446), who was in charge of horns and trumpets in the service of the kings of Aragon, or to Leonard Tallander, choirmaster of the chapel of Fernando I of Aragon (1412–16), though it seems certain that he was not Antoni's grandson Pere, the son of Antoni's eldest son. He could, however, have been Petrus Taillenderoti, a priest of the diocese of Nantes who was a student of law in Avignon in 1393. Tailhandier is the author of a three-voice Credo known in five versions (three of them anonymous) with two different contratenor parts (ed. in CMM, xxix, 1962; MSD, vii, 1962; PMFC, xxiii*b*, 1991); the text is carried only by the highest voice, which is characterized by the use of melodic progressions and repetition of motifs. The manuscript *F-CH* 564 attributes the three-voice ballade *Se Dedalus an sa gaye mestrie* to 'Taillandier', who can probably be identified with Petrus, for lack of a better candidate (ed. in CMM, liii/1, 1970; PMFC, xix, 1982). Petrus Talhanderii is named as the author of a short treatise on musical theory found incomplete in *I-Rvat* lat.5129 (ed. A. Seay, Colorado Springs, CO, 1977). From its title, *Lectura per Petrum Talhanderii tam super cantu mensurabili quam super immensurabili*, one would expect the content to relate to mensural music, but the part that survives deals only with certain aspects of plainchant.

MARICARMEN GÓMEZ

Taille (Fr.: 'tenor'). A middle part (usually a tenor) of a vocal or instrumental piece of music. The origins of the word in this sense are obscure. 'Taille' was used to mean a tenor voice by the mid-16th century, though in published partbooks of both vocal and instrumental music in France the nomenclature was almost invariably Latin. Philibert Jambe de Fer, in his *Epitome musical* (1556), named the four voices *dessus*, *contrehaut*, *teneur* and *bas*, but he switched from 'teneur' to 'taille' in describing instruments of the viol, violin and flute families. The first published partbooks to use French nomenclature were those of the *Dodécacorde* (1598) by Claude Le Jeune, the foremost composer of the Académie de Poésie et de Musique, whose goal was to elevate the status of the French language. Mersenne (*Harmonie universelle*, 1636–7) used French terminology in describing musical instruments, equating 'taille' with 'ténor' 'because it holds the plainchant'.

'Taille' remained the standard term in France for a tenor instrument throughout the 17th and 18th centuries. In Bach's scores it refers to an oboe in F. Brossard (*Dictionaire*) described the *taille naturelle* (with range normally *e*–*f*′) as 'the voice in which almost all men can sing'; for the *haute-taille* he extended the range to *a*′. In Baroque opera *taille* was most often used to refer to chorus tenors, leading male roles being assigned to the *haute-contre*; Rousseau remarked in his *Dictionnaire* (1768) that 'almost no *taille* roles are used in French operas'. Towards the end of the 18th century both 'taille' and 'haute-contre' were superseded by the word 'ténor', and one of the last mentions of 'taille' as a contemporary term is in Gilbert Duprez's *L'art du chant* (1845). Duprez equated 'taille' with 'ténor limité' (range *c* to *g*′, with a falsetto extension to b♭′), contrasting this with the new 'ténor élevé' (range *e* to b♭′, with a falsetto extension to *d*″).

French organ composers of the Baroque era frequently used the term 'en taille' for pieces that featured a particular stop (e.g. Tierce, Trompette or Cromorne) for a solo melody in the middle of the texture. Among numerous examples is the 'Tierce en taille' from the *Messe à l'usage ordinaire des paroisses* by François Couperin (ii).

Taille (de hautbois) (Fr.). A tenor oboe in F. *See* OBOE, §III, 2(ii) and 4(i).

Tailleferre, Germaine (Marcelle) (*b* Parc-St-Maur, nr Paris, 19 April 1892; *d* Paris, 7 Nov 1983). French composer. Despite her father's opposition and her equal skills in art she entered the Paris Conservatoire in 1904, her formative studies being undertaken with Eva Sautereau-Meyer. As a pianist prodigy with an amazing memory she won numerous prizes, and in 1913 she met Auric, Honegger and Milhaud in Georges Caussade's counterpoint class. In 1917 Satie was so impressed with her two-piano piece *Jeux de plein air* that he christened her his 'musical daughter', and it was he who first brought her to prominence as one of his group of Nouveaux Jeunes. She then went on to become the only female member of Les Six when it was formed in 1919–20. Her career was also assisted by the Princesse Edmond de Polignac, who liked her ballet *Le marchand d'oiseaux* (1923) enough to commission a Piano Concerto (1923–4), which proved similarly successful and demonstrated her natural affinities with the 18th-century *clavecinistes*. Tailleferre's talents fitted in perfectly with the prevailing spirit of Stravinskian neo-classicism, though she was also influenced by Fauré and Ravel, remaining in close contact with the latter throughout the 1920s.

Unfortunately, Tailleferre never regained the acclaim she had enjoyed through her early associations with Les Six. Two unhappy marriages (to the caricaturist Ralph Barton in 1926 and to the lawyer Jean Lageat in 1931) proved a considerable drain on her creative energies, and her continual financial problems led her to compose mostly to commission, resulting in many uneven and quickly written works. Also, her natural modesty and unjustified sense of artistic insecurity prevented her from promoting herself properly, and she regarded herself primarily as an artisan who wrote optimistic, accessible music as 'a release' from the difficulties of her private life. However, her concertos of the 1930s enjoyed a measure of success, as did her impassioned *Cantate du Narcisse* (1938, words by Paul Valéry), and she was much in demand as a skilful composer of film music. After a fallow period in the USA (1942–6) she produced the superb Second Violin Sonata (1947–8) and turned her attention towards opera – her lighthearted approach being epitomized in the four short comic pastiches written with Denise Centore in 1955 ('Du style galant au style méchant'). She also gave successful concert tours with the baritone Bernard Lefort, for whom she wrote the *Concerto des vaines paroles* (1954), and in 1957 she experimented briefly with serial techniques in her Clarinet Sonata. Although she continued to compose prolifically and teach until the end of her life, she resorted increasingly to self-borrowing and familiar formulae (like the *perpetuum mobile*), and the circularity of her career can be seen in the stylistic ease with which she was able to complete her 1916–17 Piano Trio in 1978. Meeting the conductor Désiré Dondeyne in 1969 led to a new interest in composing for wind band and she also remained devoted to children and their music, a link which helps explain the spontaneity, freshness and charm that characterize her best compositions.

ROBERT ORLEDGE

Tailler [Taillerus], **Simon** [Symon] (*fl* ?*c*1240). ?Scottish music theorist and reformer of church music. According to THOMAS DEMPSTER, he was a Dominican, who had been personally recommended by St Dominic to Alexander I of Scotland at a (mythical) meeting in Paris, and who came to Scotland with Clement, Bishop of Dunblane (himself a Dominican); he wrote numerous treatises, of which the best, *De cantu ecclesiastico corrigendo*, *De tenore musicali*, *Tetrachordorum* and *Pentachordorum*, were still extant in the 16th century. Dempster did not claim to have seen the treatises himself but supplied a reference to the *Historia* of George Newtoun, an early 16th-century Archdeacon of Dunblane. (This work, if it ever existed, is unknown.) Dempster's evidence is as usual suspect, and it is doubtful that Tailler existed or that there were any early Dominican musical treatises of Scottish origin. The legend was, however, widely diffused, rationalized and embellished through the accounts of 18th-century authorities such as Mackenzie, Quétif and Echard, Fabricus, and Tanner, and more recently Forkel, Eitner, Placid Conway OP (in an unsigned article in *Analecta sacri ordinis fratrum Praedicatorum*, ii, 1896, p.485), Fétis, Farmer (articles 'Tailler' in *Grove's Dictionary*, 5th edn and *MGG1*) and Elliott and Rimmer.

GEOFFREY CHEW

Tailour, Robert. *See* TAYLOR, ROBERT.

Tailpiece (Fr. *cordier*, *tirechordes*; Ger. *Saitenhalter*; It. *cordiera*). A string-holder to which the strings are attached at the lower end of a string instrument. It consists of a piece of wood (generally ebony, sometimes boxwood) or, for high-tension metal strings, metal, secured by a piece of gut (or wire) looped over a button projecting from the ribs at the bottom of the instrument (*see* VIOLIN, fig.1). In viols the tailpiece is secured by a kind of block that projects out from the ribs at the base of the instrument.

DAVID D. BOYDEN

Tailpin. An ambiguous term, infrequently used, sometimes meaning the ENDPIN of the cello and double bass, and sometimes the 'button' that is let into the bottom block of instruments of the violin family to which the tailpiece is attached by a gut or wire loop.

Taïra, Yoshihisa (*b* Tokyo, 3 March 1937). Japanese composer, active in France. After studying composition with Ikenouchi at the Tokyo National University of Fine Arts and Music, graduating in 1965, he studied with Jolivet, Dutilleux and Messiaen at the Paris Conservatoire; remaining in Paris, he gained a teaching post at the Ecole

Normale de Musique. His work has been performed at the Domaine Musical and the Itinéraire, at festivals in Avignon, Darmstadt, Berlin, Tanglewood and Tokyo, and by the Ensemble InterContemporain. Among his awards are the Lily Boulanger Prize (1971), the SACEM Grand Prix de Composition (1974), the UNESCO International Composers Tribune award (1982), and the Prix Florent Schmitt from the Paris Academy of Fine Arts (1985); he was made an Officier of the Ordre des Arts et des Lettres. Throughout his music, Taïra maintains a thoughtful balance between traditional Japanese and Western contemporary music and aesthetics. His treatment of time and space, sonority, poetic lyricism, silence and many idiomatic techniques such as precise articulation, abrupt dynamic contrasts and glissandi are derived from traditional Japanese music and art, and are compatible with a French modernist aesthetic.

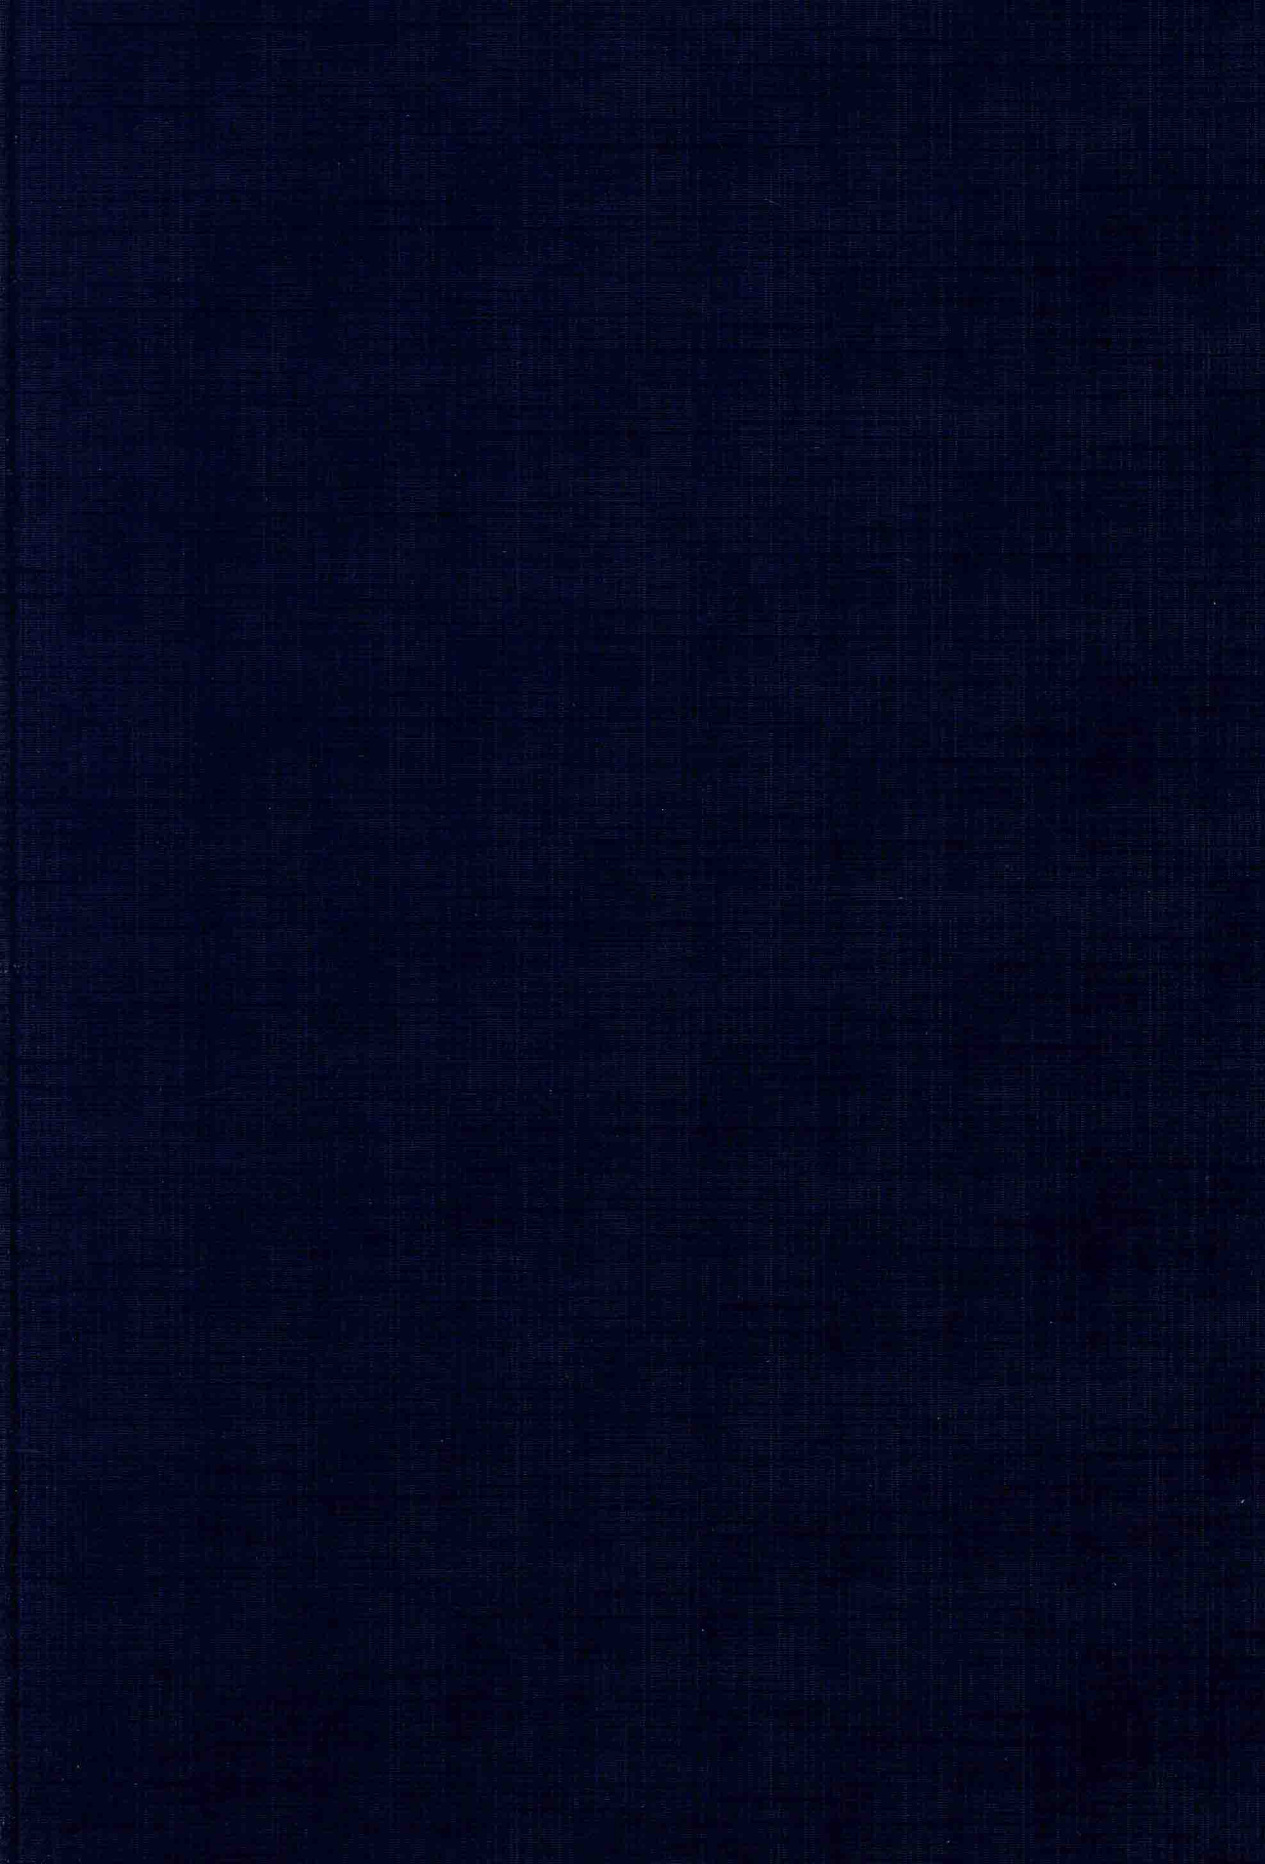
JUDITH ANN HERD



Tait, Andrew (*b c*1710; *d* Aberdeen, 11 June 1778). Scottish organist and church musician. He was for many years a leading figure in Aberdeen's musical life. He was organist of St Paul's Episcopal Chapel from about 1735 to about 1775, master of the Aberdeen music school from 1740 until its closure in about 1755, and a founder of the Aberdeen Musical Society in 1748. He collaborated with the printer James Chalmers over *A New and Correct Set of Church Tunes* (Aberdeen, 1749), contributing a manual on choir training and a psalm tune 'Aberdeen, or St Paul's' of his own composition, which has survived to the present day (e.g. in *English Hymnal*, 1933, no.561). Samuel Johnson praised Tait's organ playing during his visit to Scotland in 1775.
